VOL. LXV NEW YORK, THURSDAY, JULY 2, 1908 No. 3109

Survey of the World

Death of Ex-President Cleveland

Ex-President Grover Cleveland died at his home in Princeton on the 24th ult. A little more than three weeks earlier he had returned to Princeton from Lakewood, where he had been detained by illness. On the day before his death he seemed to be regaining his health, but in the night he was attacked by heart failure and he died at 8:40 o'clock in the morning. Dr. Joseph D. Bryant and two other physicians were in attendance. Mr. Cleveland, they said in a brief statement to the public, had suffered for years from attacks of gastro-intestinal origin; he had had long-standing organic disease of the heart and kidneys, and the immediate cause of death had been "heart failure, complicated with pulmonary thrombosis and œdema." Mrs. Cleveland was with him in Princeton; the four children were at the family's summer home in Tamworth, N. H., and their parents had intended to join them there in a few days. President Roosevelt, then at Oyster Bay, at once issued a proclamation, in which he said:

"In his death the nation has been deprived of one of its greatest citizens. By profession a lawyer, his chief services to his country were rendered during a long, varied and honorable career in public life. As Mayor of his city, as Governor of his State, and twice as President, he showed signal power as an administrator, coupled with entire devotion to the country's good and a courage that quailed before no hostility when once he was convinced where his duty lay. Since his retirement from the Presidency, he has continued well and faithfully to serve his countrymen by the simplicity, dignity and uprightness of his private life."

He also directed that the flags on the White House and the departmental buildings be displayed at half-mast for thirty days and that suitable military and naval honors be rendered on the day of the funeral. In a similar proclamation Governor Hughes spoke of Mr. Cleveland as follows:

"He personified civic virtue and exalted the ideal of public office as a public trust. Firm, resolute, incorruptible, unseduced by flattery and unshaken by fear, just and tenacious of conviction, he enriched the nation with a noble example of strength and fidelity."

At the Yale alumni dinner, that afternoon, President Hadley said:

"Only one shadow is cast over today's celebration, and that is caused by the death of one who has come to be regarded alike by all Americans apart from party affiliations as one of the great figures in American history. It were not fitting that Yale men should meet on a day like this without a tribute to the name of Grover Cleveland."

At the same dinner Secretary Taft spoke as follows of the dead ex-President:

"I join with your president in an expression of sorrow, deep sorrow, at the death of Grover Cleveland. He was a great man and a great President. He had the highest civic ideals, a rugged honesty, a high courage. These things make him now happy in his death. As he leaves the world he is revered, loved and respected by his countrymen. There is no more fitting place where a eulogium could be pronounced than in a meeting of Yale men imbued with the Yale spirit."

President Roosevelt, when he heard of Mr. Cleveland's death, at once decided not to attend the college boat races at New London. Thousands of messages were received by Mrs. Cleveland. They came from all parts of the world. The funeral, on the afternoon of the 26th, was a very simple one. There was no military display, no sermon, no eulogy.

The pallbearers were Mayor McClellan, Paul Morton, E. C. Benedict, Richard Watson Gilder, President John H. Finley, Prof. Paul Van Dyke, Dean Andrew F. West, Prof. John G. Hibben, Prof. Howard McClenahan, Archibald D. Russell, Junius S. Morgan and Bayard Stockton. Four clergymen—the Rev. Dr. Henry Van Dyke, the Rev. Dr. William R. Richards, the Rev. Sylvester W. Beach and the Rev. Maitland V. Bartlett—took part in the services. Dr. Van Dyke read Wordsworth's poem, "The Character of the Happy Warrior." "Such a man was our friend," said he at the end of it. In Princeton Cemetery Mr. Cleveland's grave is by the side of his daughter Ruth's. Among those present at the funeral were President Roosevelt, Governors Hughes, Fort and Hoke Smith, Chief Justice Fuller and eight of the surviving members of Mr. Cleveland's Cabinets. At all American embassies and legations the flag was half-masted, and at all military and naval stations there were salutes. On flagships guns were fired every half hour during the day, with a salute of forty-five guns at sunset. Among the tributes from abroad none was so notable as that of Brazil, whose President ordered his flag half-masted thruout the country, and had naval salutes fired. He also directed that three wreaths be sent to Princeton, one for the Brazilian nation, one for her Minister of Foreign Affairs and one for Ambassador Nabuco. We can make only brief reference to the tributes of prominent Americans, in addition to those already mentioned. Vice-President Fairbanks spoke of Mr. Cleveland as "the very best type of public servant and private citizen," whose "influence was always for good." Speaker Cannon called him "one of the greatest of our Presidents." To Secretary Straus he was "one of the great fathers of the republic, a mighty giant of political righteousness." Said Secretary Cortelyou: "I know of no man in our history more unflinching in the performance of what he believed to be his duty; no man realized more fully the ideal of an incorruptible public servant." Mr. Bryan said:

"He was one of the strongest characters known to the political world during the present generation. Like every commanding figure, he had zealous supporters and earnest opponents, but those who differed from him were as ready as his warmest friends to concede to him the possession of elements of leadership to an extraordinary degree. He was deliberate in action, firm in conviction, and ever ready to accept responsibility for what he did. Few men have exerted a more positive influence upon those associated with them. We are not far enough from the period in which his work was done to measure accurately his place in history, but the qualities which made him great are a part of the nation's heritage, and universal sorrow is felt at his death."

National Politics

Secretary Taft will go to Virginia Hot Springs this week, and he intends to remain there until September 1st. He was in New Haven the greater part of last week, being a member of the Yale Corporation and of the Yale class whose thirtieth anniversary meeting was held this year. On the 27th ult. he met the President at Oyster Bay, and it was expected that a chairman for the national committee would then be chosen. But a decision was deferred until July 8th. It is reported that the place was offered to Secretary Loeb and declined by him. Mr. Loeb intends to engage in business after March 4th. Mr. Sherman, candidate for the Vice-Presidency, on his way eastward from Chicago, was taken ill at the home of ex-Governor Herrick, in Cleveland. This was on the 22d ult., and on the following day he was placed in the hospital. For some days his condition caused much anxiety, but at the end of last week his physicians said he would be able to leave the hospital on July 1st and might return to Utica on the 5th.——At Mr. Bryan's headquarters it is asserted that he has the support of at least 751 delegates, or 79 more than the required two-thirds. The platform to be adopted by the Democratic convention will probably be almost a repetition of the one made at the State convention in Nebraska. Theodore E. Bell, of California, will be the temporary chairman, and the permanent chairmanship will be held by Congressman Clayton, of Alabama. John Mitchell, having decided that he will not enter the field of politics, declines the support of labor organizations for the Governorship in Illinois or the Vice-Presidency.

Trusts in the Courts

In the case of the Manila Paper and Fiber Manufacturers' Association, recently indicted in New York for violating the Anti-Trust law, the 23 companies that pleaded guilty, and one that had gone out of business, were fined last week only $2,000 each, because they had dissolved the combination and acknowledged their guilt. Action is still to be taken concerning one company, which may be found guilty of contempt of court in entering this combination, because it was one of the corporations bound by the order issued when the combination known as the General Paper Company was broken up by the Government in the Northwest, some time ago. This later combination was formed in September, 1906. John Norris, who represents the American Newspaper Publishers' Association in its investigation concerning the manufacture and sale of paper, says that the 25 companies at once reduced their output by about 22 per cent., and then, by successive additions, increased their prices by $16 per ton, or about 40 per cent. His estimate of the amount taken from the public by the increase of price is $2,000,000.——In an attempt to collect the penalties imposed in Texas upon the Standard Oil Company (a little more than $6,000,000), the Attorney-General of that State has seized several million barrels of oil and much other property of companies said to be controlled by the Standard, and has garnisheed funds due to it in several places.——Additional testimony was taken last week in the Government's suit for the dissolution of the Standard Oil Company. C. B. Morrison, who represents the Government in the proceedings, said that dissolution would cause a large reduction of the price of oil. The revival of competition would, in his opinion, reduce the price in many places by about 50 per cent.

Railroad Topics

A decree was issued last week by the Massachusetts Supreme Court forbidding the New York, New Haven & Hartford Railroad Company, its officers, directors, agents or employees, to hold stock of the trolley roads in that State which were named in an information recently filed by Attorney-General Malone. The six named have their main terminals in Worcester and Springfield. The company has one year in which to dispose of the property. In its suit against the company, the Federal Government alleges that the acquisition of these trolley roads (and others in Connecticut and Rhode Island) was a violation of the Anti-Trust law.——In San Francisco, on the 26th, the Southern Pacific was indicted (nineteen counts) by a Federal grand jury for paying rebates to the Nevada Pine Box and Lumber Company, and the latter company was also indicted for receiving the unlawful concessions.——The Toledo Ice and Coal Company has pleaded guilty on three counts of an indictment charging the acceptance of rebates from the Ann Arbor Railroad Company and has paid a fine of $3,750.——The Iowa Commission's new classification of freight rates, going into effect on July 1st, makes a general but slight reduction.——Exporters complain that high rates on grain from Chicago and Buffalo eastward are diverting the export trade from New York to Montreal, rates having recently been reduced on Canadian water and rail routes. They have asked for reductions on the routes to New York, but the railroad companies have declined to lower the rates.

Relations With Venezuela Severed

Diplomatic relations between the United States and Venezuela were severed on the 23d by the withdrawal from Caracas of Jacob Sleeper, who has been chargé d'affaires since Minister Russell came to this country, some time ago. Under instructions from our Government, Mr. Sleeper, accompanied by the military attaché of the legation, sailed from Porto Cabello on the gunboat "Marietta." It is understood that our Government's action was due to President Castro's attitude concerning the pending claims of American corporations and citizens and to a conviction at Washington that it was unwise to risk the lives of our diplomatic representatives in a plague-stricken country where they could be of no service. It is asserted that no further movement on our part is intended. Plague has spread

from La Guayra to Caracas, where there have been ten fatal cases, several of them in the heart of the city, where the deaths of three employees have closed a fashionable restaurant. According to Castro's decree, the disease was stamped out in Venezuela several weeks ago. Reports from Caracas say he has done very little to stay its progress. On the 27th his Government withdrew its suit against Ambrose H. Carner, receiver of the New York and Bermudez Asphalt Company for an accounting and approved his accounts. Some regard this as an indication that Castro desires to conciliate our Government.

The San Francisco Cases

President Roosevelt recently sent a letter of encouragement to Rudolph Spreckels, the chief supporter of those who are prosecuting the "graft" conspirators in San Francisco. Parts of it are as follows:

"Now and then you and Mr. Heney and the others who are associated with you must feel downhearted when you see men guilty of atrocious crimes who, for some cause or other, succeed in escaping punishment, and especially when you see men of wealth, of high business and, in a sense, of high social standing, banded together against you. My dear sir, I want you to feel that your experience is simply the experience of all of us who are engaged in this fight. There is no form of slander and wicked falsehood which will not as a matter of course be employed against all men engaged in such a struggle.

"Now, I do hope that you and your colleagues will treat all this bitterness with entire disregard. It is of small consequence to you or to any of us who are engaged in this work, whether men think well or ill of us personally; but it is of very great consequence that we should do the work without flinching, on the one hand, and, on the other hand, without losing our good humor and common sense, without becoming angered and irritated to a degree that will in any way cause us to lose our heads.

"You have heart-breaking difficulties with which to contend. You have to fight not only the banded powers of evil, but, alas! that it should be said, the supineness and indifference of many good men whose zealous support you had a right to feel you could rely upon. Do not be discouraged; don't flinch. You are in a fight for plain decency—for the plain democracy of the people who believe in honesty and in fair dealing as between man and man. Do not become disheartened. Keep up the fight."

——At the trial in Harrisburg, Pa., of the Capitol conspiracy cases, all the defendants were acquitted. In charging the jury, Judge Kunkel directed the acquittal of ex-Auditor General Snyder, ex-Treasurer Mathues and ex-Superintendent of Public Buildings Shumaker. The jury also acquitted the remaining defendants, Congressman H. Burd Cassel and Architect Joseph M. Huston.

Revolutionists in Mexico

Revolutionists attacked two or three towns near the northeastern border of Mexico last week. At Viesca, in the State of Coahuila and about 100 miles from the Texas line, 300 of them, on the 25th ult., overcame all resistance, released the jail prisoners, and robbed the bank and post office. Several men were killed. On the following day a similar attack was made upon Las Vacas, which is 100 miles north of Viesca and on the Mexican bank of the Rio Grande, near Del Rio, Tex. There was sharp fighting at the custom house and the garrison's barracks. The revolutionists were repulsed, and it is said that forty of them were killed. Troops were promptly sent to the disturbed district. On the 27th fifty revolutionists were captured near Las Vacas and 1,000 guns secreted by them were found in a cave. It is asserted by the Mexican Government that those who made the attacks are bandits, but there is evidence that they were organized revolutionists directed by leaders living in Texas. A revolutionary junta was established some months ago in Austin, and a revolutionary paper has been published there. Eleven Mexicans said to be revolutionists have been arrested at El Paso. Some of them had letters from Villareal, the revolutionist leader, the extradition of whom Mexico has sought. Our Government has taken steps for the enforcement of the neutrality laws. Marshal's deputies, sheriff's deputies and Texas Rangers are patrolling the American bank of the Rio Grande.

College Races

On the Thames course at New London, last week, Harvard won two of the boat races, and one of these was the great race of the meeting. Yale won easily and by three lengths the contest for four-

oared crews. The race for freshmen eights went to Harvard by two lengths. At the finish the winners were so exhausted as to be near collapse. In the university eight-oared race, on the 25th, Yale's stroke fell in the boat from exhaustion in the third mile and was taken away by a launch. Another member of the crew was disabled for a time, but seven men drove the boat to the finish. Harvard led by about 3½ minutes, but Yale's time was not officially recorded. Harvard has also won two of the series of three games of baseball with Yale. In the intercollegiate regatta on the Hudson, on the 27th, most of the glory was won by Syracuse University, whose oarsmen were victors in the four-mile race for university eights and the two-mile race for university fours. Cornell led in the race for freshmen eights, with Syracuse second. The long race was a fine one. At the end of the first three miles the five boats (Syracuse, Columbia, Cornell, Pennsylvania and Wisconsin) were nearly abreast. Syracuse won by only fifteen feet, and Columbia (second) was only a length in advance of Cornell.

Cuban Revolutionists' Ammunition Seized

Upon information said to have been given by the Cuban Minister at Washington, Treasury Department agents recently seized boxes containing 10,000 rounds of ammunition, a part of the cargo of the Ward Line steamship "Seguranca," which was about to sail from New York to Cuban ports. These boxes, whose contents were misrepresented by labels indicating that they were pianos and other merchandise, had been consigned to Santiago. It is asserted that the ammunition was to be used there by revolutionists. Reports from Governor Magoon and from Washington say, however, that there is no indication of revolt in any part of the island. ——Governor Magoon was recently instructed by the War Department to proceed with the construction of the aqueduct at Cienfuegos under the Reilly contract. The Cuban Supreme Court, however, has decided that the action of the Cienfuegos Council, in rescinding this contract, was legal. Owing to the attitude of the people of Cienfuegos, no decree ordering construction will be issued until after the municipal elections. ——In Porto Rico the Supreme Court has confirmed the sentence of two years' imprisonment in the case of Julio Aybar, editor of the organ of the Federation of Labor. It had been held that Aybar was guilty of libel in attacks upon judges and courts.

Persia

The troubles in Persia have various causes. In the first place, there is the general unrest in Asia, beginning with the uprising of the Empire of Japan, which proves that an Asiatic Power can be the match in both civilization and war for a European. Then there is the example of Russia in inaugurating a constitution and establishing a Duma; for if Japan and Russia can have a Parliament, why not Persia? With this is the general awakening in the Moslem world, seeking to meet modern political and intellectual conditions. And, finally, the agreement between Great Britain and Russia, by which the two Powers have divided their interests in Persia, so that the northern shall be assigned to Russia for exploitation and the southeastern to Great Britain, has awakened fear and hostility among the people of Persia. They do not see in it a protection of Persia from aggression by either nation, but a step toward absorption. There has been great disturbance in Persia for the past two or three years, and it is said that 30,000 people have been killed in that time. Two years ago the Shah, who is a weak and irresolute man, granted the people a Parliament, called a Mejliss. This was demanded by the priests, who seemed to be the leaders of revolutionary opinion. But there grew up a difference between the Shah and the Mejliss, and there were successive changes of the Ministry, the Mejliss charging the Ministers with using arbitrary power. A list was drawn up of the breaches of the constitution, and the Shah was asked to correct them and restore confidence. But he declared himself the friend of the constitution and charged the leaders in the Mejliss with conspiring against the throne. The great majority of the people have apparently been with the Mejliss and against the

Shah; but the latter had organized a strong body of Cossacks, after the Russian style, and commanded by Russian officers. So it seemed that the Shah was in sympathy with Russia, and it was even charged that it was Russian money that had paid the cost of arming the Cossacks. This naturally did not please the people, who were suspicious already of both Russia and Great Britain, and the disturbances extended over a large part of Persia, particularly in the north and at Tabriz, and some Russians were attacked, but the Shah made haste to make what reparation he could. When the Shah sent his soldiers to the Parliament House to arrest those leaders whom he charged with conspiracy the Mejliss refused, and the crowds about the building and on the neighboring roofs fired upon them and a bomb was thrown and several soldiers killed. Then the Cossacks attacked the Parliament House itself and when resisted cannonaded it, destroying it, and it is said that hundreds of the crowd and of the soldiers were killed. Many of those threatened or who feared arrest fled to the various embassy grounds, but the German Minister refused to receive them. Three of the leaders of the Mejliss were on a committee to confer with the Shah, but were held, notwithstanding they had been invited to meet him, and were hanged. Not only was the Parliament House bombarded, but the mosque attached to it, and, one after another, the residences of leading men, where it was thought that some might have taken refuge, and these buildings were looted by the Cossacks and the populace. This show of force by the Shah seems to have quieted, or controlled, the situation, for the popular party is lacking in ammunition, and the Shah has required that all shall give up their arms on pain of death, and martial law has been proclaimed, and the Russian general of the Cossacks has full control. The Shah has dissolved the Mejliss, but declares that he will have new elections in two months. As in Russia, the autocratic ruler has gained the victory by means of his Cossacks, and he proposes to have a more yielding Mejliss. While he thus has at present full control in Teheran, it is by no means certain that such is the fact in other portions of Persia. Great Britain and Russia both assert that they will not interfere with the internal affairs in Persia, but there is not a little dissatisfaction in England with the working of the treaty which gives Russia so free a hand in the northern portion and so much influence in Teheran. Meanwhile there is further trouble in the Nestorian region of Urumia, which is invaded by the Kurds from Turkey, aided by Turkish troops, which have taken possession of territory in dispute between Persia and Turkey. Even Urumia has been in great danger from the Kurds, and the American missionaries have appealed to the Powers concerned to keep the peace. It is said that Turkey has agreed to withdraw her soldiers just over the disputed border. Among the incidents that have created concern is the suicide of an aunt of the Shah. Her husband had been arrested and severely flogged, and her house bombarded and looted. The act of the Shah in putting soldiers in front of the British Embassy, with orders to arrest any one going in for protection or going out, has given occasion to a strong British protest against the insult. The sympathy of Great Britain seems to be with the revolutionists, and that of Russia with the Shah. By the last report fighting is renewed at Tabriz, and the mob has plundered the arsenal and secured arms.

Clemenceau's Narrow Victory

During the past week Prime Minister Clemenceau's Ministry narrowly escaped defeat. The question whether the country should purchase the Western Railway has been for a long while before the Senate, and the critical vote supported the Government by a majority of only three. Clemenceau, who never lacks courage, made it a question of confidence, and said:

"We have taken power for a time and we have chosen reforms which seem to respond to the ideas of justice and liberty. The purchase of the Western Railway gives the state security against abuses by companies. It is said there are Senators here who are desirous of voting against the purchase who would be unwilling to cause our fall from power. We cannot give them satisfaction without weakening our dignity and authority. If you believe negotiations can effect anything vote in all liberty. Whatever may have been said you are free. I exercise no pressure."

He derided the idea that the state could

not manage the Western Railway. The state already, he said, manages 4,000 kilometers, and why not 9,000 as well? It manages all great public services, and why not this railway? He did not defend this as a measure for Socialism, but for the public interest, so that the state can make its will felt in these great organizations. In taking possession of the Western Railway it will be able to make other companies accept its reforms as to wages and hours of labor.——There is a report of reverses to French troops in Senegal, on the west coast of Africa, and it is said that two detachments of soldiers, one of 32 and the other of 47 men, were destroyed.——The increased number of murders has led a parliamentary commission to revise its report on the abolition of the death penalty. By a vote of eight to two it has revoked its decision, and will recommend the retention of the death penalty.

English Events

The meeting of the Pan-Anglican Congress in London has been the event of the past week, meeting in Albert Hall. At the session at which sociological questions were discussed the speakers, with one exception, all tended toward Socialist views, and the idle rich were roundly scored. Among the speakers were Mr. McBee, editor of *The Churchman*, of this city, the Bishop of Utah, and the Rev. C. B. Wilmer, of Atlanta. The sessions closed with a thanksgiving service at St. Paul's Cathedral, with a procession of over two hundred bishops and archbishops, in their rich robes, who marched two by two up the center aisle and laid on the altar gifts from their dioceses amounting to $1,666,040.——The birthday of King Edward was celebrated with the usual list of honors. Four peers were created. The names that interest Americans include those of J. J. Duveen, the art dealer, who has given $200,000 for a building to hold the Turner paintings, made a knight, and the same honor to J. A. H. Murray, editor of the Oxford Dictionary.——The marriage of the daughter of our Ambassador, Whitelaw Reid, to the Hon. John Hubert Ward, has been the social event of the week. The King and Queen and all the diplomats were present, and after the wedding there was a grand reception at Dorchester House.——The new patent law requires that foreigners who are allowed patents in Great Britain must manufacture patented goods in that country. This shows already great results, altho the law does not go into effect until July 28. German and American firms are either opening factories on British soil, or make agreements with British firms to manufacture on royalties. It has resulted in the employment of many thousand workmen, and it is estimated that it has secured the investment of no less than $125,000,000 for the manufacture of articles formerly made abroad.

The Diamond Fake

M. Henri Lemoine, who has been on trial in Paris for obtaining money on false pretenses, claiming to be able to make diamonds, has reached the end of his career and ran away when he could fool the public no more. It has been the sensation of Europe, and he has been called the modern alchemist. Papers received by mail tell us that the magistrate who has been dealing with this case informed M. Lemoine that Sir Julius Wernher, his accuser, would be in Paris on the 17th, and summoned him to meet his prosecutor, bringing the diamond for the manufacture of which he had been let out on bail. Sir Julius Wernher and Mr. Feldenheimer, with their counsel and various witnesses, were at the rendezvous, but the party waited in vain for M. Lemoine. He had gone away and a warrant for his arrest was issued. There had been no effort to exercise surveillance over him, and his whereabouts were unknown. Thereupon the magistrate entered his cabinet with the above-mentioned gentlemen and took out the sealed formula for making diamonds, which read somewhat as follows:

"I, the undersigned, Henri Lemoine, declare that to make artificial diamonds, it is sufficient to employ the following process: (1) Take a furnace; (2) take some powdered sugar carbon; (3) place the carbon in a crucible; (4) place the crucible in the furnace and raise the temperature from 1,700° to 1,800° Centigrade in order to obtain crystallization; (5) when this high temperature has been attained, apply pressure to the cover of the crucible. The diamonds will then be made, and it remains only to take them out."

All scientific people allow that this adds

nothing to what was before known, and that M. Lemoine had no secret process, but was one of those impostors who occasionally make great pretensions and defraud credulous millionaires.

Anglo-Tibetan Trade Treaty

It was expected that the British expedition to Lhasa in 1904 would be promptly followed by the opening of the Forbidden Land to trade, but the international complications which that action precipitated have been difficult to straighten out. At last, however, a commercial treaty has been signed in Calcutta by the representatives of the British, the Chinese and the Tibetan governments, for the purpose of opening the markets of Tibet to the trade of India. The new treaty and the negotiations which led up to it have had the curious effect of increasing the power of China over Tibet. At the time of the British invasion the Grand Lama of Lhasa was practically independent, for the Chinese Resident or Amban had little real influence in the affairs of the country. But the attempt to negotiate directly with Tibet was resented and prevented by China, and according to the present treaty the Chinese Government obtains control of the points of vantage gained by the British expedition. The telegraph line and the rest-houses built by the British on the route from the Indian frontier to Gyangtse are to be taken over and maintained by the Chinese.

Various Matters

The Russian Government has in view a plan to relieve Jews from some of their disabilities regarding the Pale, to which they are confined. This was one of the subjects discussed between King Edward and the Czar at their late meeting.——The Minister of Public Instruction has expelled all women students from the nine universities of Russia——A deputation of the Duma visited Minister Stolypin to protest against various iron, steel and other trusts that have begun organizations. M. Stolypin promised that their views should receive consideration.——An appropriation of $42,500,000 for naval expenditures is assured, of which $5,500,000 is to lay down four battleships.——A bitter strike is in progress at Parma, where 50,000 peasants demand better wages from the farmers. The latter have armed themselves to protect their "blacklegs" who are working the fields. The strikers have barricaded the streets and destroyed the lamps, so that the city is in darkness. The censor has stopt details, which are therefore hard to get. The same action is taken by the censor at the Calabrian village of Olivadi, where there has been a bad fight with the troops, following a demonstration against the authorities for neglect to carry out the arrangements planned to rebuild after the earthquake.——In Portugal the parliamentary commission has been reporting on the improper advances of funds from the treasury to members of the royal family. One example is of an official who has drawn advance salary sufficient for a hundred years. The report led to a violent debate in the Chamber of Deputies, in which Deputy Braga had a wordy encounter with Finance Minister Espregueira and challenged him to a duel. The uproar was such that the President was compelled to adjourn the Chamber until June 30th. Friends intervened, and the duel will not be fought. The advances to the court and its friends amount to $11,000,000, and led to a monster Republican meeting on Sunday last, when speeches were made urging that King Manuel should abdicate and the discredited monarchy come to an end. Resolutions to that effect were past with enthusiasm.——By steady progress the pretender to the throne of Morocco, Mulai Hafid, is gaining strength. He has actual possession of Mekinez, Alkazar, Tetuan, and the capital itself, Fez; while Abdul Aziz has scarcely any troops left, and is practically a fugitive under the shadow of French arms. If Mulai Hafid does not hold any of the ports, that is because they are held by French cruisers. The French are very careful not to give any technical advantage to Mulai Hafid, but probably the succession of a strong man would help them. At Fez, Mulai Hafid found the palace filled with all sorts of Western goods that had been purchased, but never used, and he is said to have destroyed all, even to the electric lamps. He has been proclaimed Sultan at Tetuan.

The Great American Fleet

BY L. H. BAILEY

DIRECTOR OF CORNELL COLLEGE OF AGRICULTURE, EDITOR OF "ENCYCLOPEDIA OF AGRICULTURE," ETC.

THE great fleet with its sixteen battleships and about a dozen auxiliaries and torpedo boats is now sailing around the world. It is a source of pride and center of interest for some millions of persons. We regard this circumnavigation of the globe as a great achievement, and we dwell on the power and perfection that these great ships express. More than 12,700 enlisted men are on the ships. Nearly 350,000 indicated horse-power is represented in them. They will plow the seas and will carry the flag to leading ports of the world.

As these ships are about to plow across the Pacific, some ten million implements drawn by beasts and held by men are turning out to plow and till the fields; and twenty million horse-power is involved in the operation. More than ten millions of persons are directly engaged in the tilling work that these implements represent. In every corner of our country the plows are at work turning furrows during the year that, if placed end to end, would be equivalent to seventeen round trips to Mars, or some 70,000 circumnavigations of the earth. This is the great American fleet.

The significant thing about this fleet is the fact that all the men are captains and all are certain of victory. Every plow is officered by a man whose one aim is to make the earth more fruitful. These men wage a silent warfare, without press notices or much concern of their neighbors, with no expectation of glorification, and even without much consciousness on their own part that they are of any particular consequence to the world.. They are doing a plain work, because it is their part to do it; and they are doing it well, with no thought of any reward or profit other than what they earn.

These persons are not much in evidence. This is important: they are not working for honor or acclaim. They are remote. This also is important: they are near the sources.

The memorable conference of the Governors has left us with a new appreciation of the importance of our natural resources and the necessity of saving them. Much was said about the development of water power, the preventing of land erosion, the importance of governmental regulation of forests. A number of the Governors declared that they would appoint forest commissions on their return; this may be of value in some cases, but of itself it is not likely to accomplish much. The man who stands at the sources is the one on whom we must in the end depend for any work of preservation. The instincts of the settled farmer are all for preservation and betterment, not for exploitation or sales of stocks: he is the natural conservator of the native resources of the earth.

There are many persons who are waiting to know what forces the great conference will set in motion to reach and quicken the man at the sources; that is, how we are to get to the real bottom of the question. It was most interesting to follow the discussions on the means of

developing water power; the Mississippi, Niagara, and other great streams were mentioned. This development, of course, is necessary. But rivers are not born as rivers. They originate from a little lake in the mountains and a rill in a forest and a spring in the pasture lot. To a great extent, they originate or are supplied from sources on some man's land. This man has the first use of the water. Every farm supplies something to the rivers. Many of them supply living lakes and streams. There are more than five millions of farms in the United States. Every good farm will in time have its own mechanical power. Much of it will be water power. When the farmer develops his water power, he will also protect his stream or spring. On all accounts, it is more important that we develop small power on a million farms than that we organize power companies or harness Niagara.

The great American fleet sets sail every spring. It is getting larger. It stays at home. It represents all the activities of its regions. It is as native as the trees. It must be reckoned with continuously. Its tracks would extend around the world 200 times every day. The smallest variations in its movements are reflected in all the important business in the nation.

Our natural resources are of three kinds: those of the mining order, the supply of which we can prolong only by saving; those growing directly or indirectly out of the earth or sea, as all forests and other crops and all animals, the supply of which may not only be conserved, but may be greatly increased; the streams and lakes, the control of which depends very directly on the crop-cover of the earth.

Probably no man really appreciates the marvelous fecundity of the earth. The extent and variety of the stuff that grows out of it every year surpasses all imagination. One acre of good wheat yields about 200 miles of straw. It yields also some twenty million kernels, each one complete in its intricate microscopic structure. How to secure these yields and at the same time to increase the producing power of the earth, is the great problem of mankind.

In the last analysis, the utilization of the powers of the earth depends on the man who raises the crops, whether of forests or cotton or wheat. The solution of the problem is to reach this man. This man is coming to a new sense of his responsibilities. We often say that the farmer feeds all the people. He must do more than this: he must leave his part of the earth's surface in more productive condition than when he received it. This he will accomplish by a better understanding of the powers of the soil and the means of conserving them, for every well managed soil should grow richer rather than poorer; and, speaking broadly, the farm should have within itself the power of perpetuating itself. The enrichment of land by the mere purchase of mined fertilizers—which is transportation, or the exploitation of one place for the benefit of another—will not accomplish this. Every young man going on the old farm should feel that he has practically a new farm to begin on; and every good farm should pay for itself, buildings and all, in every generation of men, wherever the farm may be. A farm youth, as well as any other youth, should be able to start anew, if he wants to, even though he does not go West.

It is not only important to farming, but absolutely essential to the nation, that the man at the sources be reached. The farther removed the man, the nearer the sources he is likely to be, and the greater may be the necessity of reaching him. We must not overlook any man.

Government can go into farming—that is, into forest farming—on its own account, and this it must do. But the one great thing that government can do for the man on the land, that it does not do for all men, is to increase his sense of responsibility to the land and to give him power to use the land. This is education by means of agriculture—using the word agriculture broadly for man's occupational contact with the surface of the earth. This is the real solution of the problem of the saving and increasing of our natural resources. This lies beyond and behind all commissions and conventions. Perhaps the commissions and conventions will help to bring this about more rapidly.

ITHACA, N. Y.

Grover Cleveland

BY JOEL BENTON

BRING cypress, rosemary and rue
For him who kept his rudder true;
Who held to right the people's will,
And for whose foes we love him still.

A man of Plutarch's marble mold,
Of virtues strong and manifold,
Who spurned the incense of the hour,
And made the nation's weal his dower.

His sturdy, rugged sense of right
Put selfish purpose out of sight;
Slowly he thought, but long and well,
With temper imperturbable.

Bring cypress, rosemary and rue
For him who kept his rudder true;
Who went at dawn to that high star
Where Washington and Lincoln are!

POUGHKEEPSIE, N. Y.

Grover Cleveland

BY EVERETT P. WHEELER

[Mr. Wheeler is a lawyer in active practice in New York City, who has felt it a duty to give part of his time to unofficial public service. He was one of the Committee of the Civil Service Reform Association who drafted the Pendleton bill, and the bill establishing the merit system in the service of the State and cities of New York. From 1881 to 1897 he was chairman of the executive committee of that association, and was brought into frequent association with Mr. Cleveland, not only while the Reform bill was pending in the New York Legislature, and various amendments to it were under consideration in 1884, but also during Mr. Cleveland's Presidential terms. During the Presidential campaign of 1888 he was chairman of the Tariff Reform Committee of the Reform Club of this city. He became president of that club in 1889, and during the whole tariff campaign, which went on actively from that period until 1894, he was brought into constant association with Mr. Cleveland in dealing with the subject of the tariff. At a later date he was a member of the Committee on Sound Currency of the Reform Club, of which Charles S. Fairchild was chairman. He was one of the delegation sent to Chicago by the Reform Club in 1892 to urge the nomination of Mr. Cleveland, and took an active part in the joint debates there, mentioned in his article.—EDITOR.]

THE Lord Almighty gave to Grover Cleveland the opportunity to become the leader in campaigns for three essential reforms—civil service, tariff, currency. In every instance he rose to the situation, and led the hosts of righteousness with unflinching courage and unfailing devotion.

His remarkable career is typical of one of the best sides of our political institutions. The son of a country clergyman, brought up religiously, accustomed from earliest childhood to the simplicity and self-denial that small incomes compel, he acquired at an early age faith, courage, capacity for persistent and unwearied labor. Many a night at the Executive Mansion he spent in the consideration of papers that came officially before him, and saw the sun rise over the Capitol before his task was completed. His power to do this, the conscientious fidelity with which he did it, he learned in a country home and at a humble fireside.

His enemies often accused him of dealing in commonplaces. It is true that he frequently had occasion to restate in a plain and simple manner some of those elementary principles that we all recognize when we hear them, but which are so often forgotten in practice. The characteristic of the man was that he meant them and lived up to them. What in so many public men is a glittering generality to him was a rule of life. He was frequently a disappointment to poli-

THE ROOM IN WHICH MR. CLEVELAND WAS BORN. CALDWELL, N. J.

ticians; but his loyalty to his convictions of duty won for him the confidence of the plain people of this country.

Civil Service Reform.—Dix and Tilden had made the people of New York familiar with Governors of high character and unblemished conduct, who were leaders of men. When he who had been chosen Mayor of Buffalo as a reform candidate was in 1880 elected to be their successor, our people had before them a high standard of official life. Yet in no State had the practice been more systematic of using appointments to public office as a reward for political activity. The evils of this system of appointment had long been the subject of condemnation by citizens of both parties and by leading statesmen. The death of a President at the hands of an office seeker was an object lesson that impressed our people more than a hundred arguments.

It led directly to the enactment of the Pendleton bill, which was the first Federal Civil Service law. Immediately the friends of civil service reform brought forward a bill introducing that system in the State of New York. This was one of the first important public measures that Mr. Cleveland prominently advocated. He signed the act of 1883, and prescribed the first rules for the application of the merit system to the civil service of the State. Of this reform he was ever afterward a consistent friend.

During his second administration the system of appointment for merit, to be ascertained by competitive examination, was extended to embrace 84,230 positions in the public service. Practically almost all of the places in the employ of the Government, except postmasters of the fourth class, were brought under the operation of the merit system.

Tariff.—During Mr. Cleveland's first administration the country was prosperous, business was active. The then existing tariff, which had been framed by Congress upon the report of a tariff commission, yielded a revenue far more than enough for the expenses of the Government; and the result was a constantly increasing surplus. The Government exhausted its power to purchase

outstanding bonds; and in the summer and fall of 1887 the locking up of money in the Treasury, and the stringency in the money market of which this was the partial cause, gave rise to grave apprehension. Thus brought face to face with a condition which actually required legislation, the President sent to Congress the famous tariff message of 1887. To use his own expression:

"Unnecessary taxation is unjust taxation. The surplus revenue now remaining in the Treasury not only furnishes conclusive proof of unjust taxation, but its existence constitutes a separate and independent menace to the prosperity of the people."

The tariff bill which was introduced into Congress and reported by the Ways and Means Committee, of which Mr. Mills was chairman, provided for a reduction of the duties upon many articles imported and put many raw materials upon the free list. It did not, however, become a law; and in November, 1888, a Republican President and Congress were elected who rapidly disposed of the surplus by passing a bill which increased the rates of duty on many articles, but diminished the revenue of the country, because of the check upon imports which it produced and because also of the repeal of the duty upon raw sugar.

At the same time the expenditures were increased, particularly those for pensions, and during the administration of President Harrison this surplus was converted into a deficit.

The change in public opinion during the administration of President Harrison elected a Democratic House of Representatives in 1890, and re-elected Mr. Cleveland in 1892. In 1893, for the first time since the War, the President and both houses of Congress were of the Democratic party, and a tariff bill was enacted which certainly was very far from a free trade measure, but which reduced materially many of the rates of duty of the McKinley bill. The bill was amended in the Senate by increasing the rates of duty on many articles and by putting back in the dutiable schedules some of those, notably iron ore, which the bill as it came from the House, had placed upon the free list. Moreover, the Senate amendments were favorable to the great sugar refining interest of this country, which is largely under the con-

Mayor of Buffalo, 1881.

trol of a trust, and the bill for these reasons failed to receive the approval of the President. He allowed it to become a law without his signature. From the standpoint of the tariff reformer it was a great improvement upon the McKinley Bill. Cleveland's refusal to sign it was characteristic. It was put distinctly on the ground that he could not approve the methods which had been resorted to in the Senate to amend the bill in the interest of special industries or particular favorites, and that he would not sanction them by signing the bill, even tho he considered it on the whole to be an improvement upon the existing system.

Currency.—Meanwhile, another question had arisen which attracted public attention to an even greater degree than the tariff.

During the administration of Mr. Harrison a bill was passed, known as the Sherman Silver Purchase Act, which provided for the compulsory purchase by the Government of 4,500,000 ounces of silver per month, and the issue of paper in payment for it. The Government, in the same act, pledged itself to maintain the parity of the two metals at the ratio of sixteen to one. But our creditors abroad and American holders of accumulated property began to fear that it would be impossible to keep this pledge. The silver coinage partisans continued their agitation. American securities were constantly returned from Europe to be sold. Mortgages were called in. A gradual but steady drain upon the resources of the country ensued. When Mr. Cleveland took office in March, 1893, he had to confront a business situation very different from that which existed when he became President in 1883, or left that great office in 1887. The Treasury reserve was steadily diminishing. It had been given even a nominal existence only by a change in Treasury accounts which brought into the reckoning all the small change in the Government till, and treated the fund for the redemption of national bank notes as an asset instead of a liability. Bankers and merchants were failing. Gold was no longer paid into the Treasury, which was receiving almost all its dues in silver and paper, and it became evident that unless a speedy change should be made in our financial system the pledge of the Act of 1890, to maintain the parity of the two metals, would be dishonored, and the Government would be compelled to redeem its obligations only in discredited silver coin or irredeemable paper.

Mr. Cleveland was one of our first prominent public men to take decided ground upon this subject. In February, 1891, while many were led astray by the apparent popularity of free silver coinage, he wrote that memorable letter to the president of the Reform Club, which was read at the Cooper Union mass meeting. In this letter he said:

"If we have developed an unexpected capacity for the assimilation of a largely increased volume of this currency, and even if we have demonstrated the usefulness of such an increase, other conditions fall far short of insuring us against disaster, if, in the present situation, we enter upon the dangerous and reckless experiment of free, unlimited and independent silver coinage."

This letter came like a clarion call, arousing those who were disheartened by the cowardice of many of our public men and the aggressive onset of the free silver advocates. Probably no letter to a public meeting ever produced a more marked

effect. There were those who warned Mr. Cleveland that if he sent the letter it would probably be fatal to any hope he might entertain of a renomination for the Presidency. He was unmindful of these suggestions, which did deter some other men from taking the same manly and courageous stand, and he satisfied our people that on this subject, as well as on that of the tariff, he had the courage of his convictions.

The silver agitation went on; leading men in both parties espoused the cause of free silver coinage, and it is not surprising that in both political platforms for the campaign of 1892 a certain degree of tion in the platform of a pledge

Nevertheless the conservative men in the Democratic party secured the insertion in the platform of a pledge

"to insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets and in payment of debts; and we demand that all paper currency shall be kept at par with and redeemable in such coin."

Persistently thruout his second administration Mr. Cleveland fulfilled the pledge of the Act of Congess of 1890, which was repeated in the platform on which he was elected. The distrust in the power of the Government to do this, and the continuance of the agitation for the free coinage of silver, intensified by the fact that a majority of the Senate favored the latter policy, not only impaired the reserve of one hundred million dollars, which, since the resumption of specie payments, it had been our declared policy to maintain in gold in the Treasury for the redemption of Government paper, but brought the stock of gold coin on the twelfth of February, 1894, more than a million dollars below the outstanding gold certificates. At this time, therefore, there was not gold enough in the Treasury to pay these outstanding gold certificates, and we had none at all with which to pay the United States notes, amounting to $347,681,016, not to speak of the coin notes, amounting to $152,584,417, which had been issued under the Sherman Act of 1890. Including the gold bullion in the Treasury, the net reserve against over four hundred and fifty millions of paper in circulation, and payable on demand, was only $41,340,-181. During the ten weeks previous to

GROVER CLEVELAND.
First term as President of the United States, 1888.

this date our own people had drawn out in gold from the United States Treasury, exclusive of that which was exported, $43,933,913. The rate at which gold was going out was rapidly increasing. If something had not been done to prevent the draft, the whole amount in the Treasury would have disappeared within a month, and the Government would have had nothing with which to pay its ordinary debts but silver dollars and paper promises, which would have been discredited as soon as issued.

Here was a situation enough to daunt the most courageous. The free silver sentiment in Congress, the violence of party feeling in some and personal pique in others, combined to prevent that body from authorizing the sale of bonds specifically payable in gold, which would have saved the people $16,000,000, or of any bonds different in form from those which had been authorized by an old act, past at a time when rates of interest were higher and ill-adapted to meet the requirements of the situation. However, the power which did exist proved adequate to the emergency. Bonds author-

ized by the old act were sold. Gold to the amount of $65,000,000 was purchased with them, and the great banking houses who sold the gold to the Government agreed to exert

"all financial influence and make all legitimate efforts to protect the Treasury of the United States against the withdrawals of gold, pending the complete performance of this contract."

Had it not been for this contract the Government would have gone into bankruptcy, and paid its debts at fifty cents on the dollar. Our credit, individual and national, would have received a blow from which it would not have recovered for years. The greatest sufferers would have been laboring men, wage-earners, pensioners, depositors in savings banks, and the like.

If Mr. Cleveland had rendered no public service but this, he would be entitled to the lasting gratitude of the American people.

It was not only by exercising to the utmost the powers already conferred, and thus maintaining the credit of the Government, that Mr. Cleveland deserved well of the country. He recognized the need of constructive legislation. He knew that in many parts of the South and Far West banking facilities under existing laws were inadequate, that the scarcity of currency and credit thus produced were a constant injury to small farmers and compelled them to pay exorbitant rates of interest. The discontent thus caused found expression in the free silver agitation. During the first Congress of Mr. Cleveland's second term a bill providing for greater freedom in our banking system and offering facilities far exceeding any then afforded, was recommended by the Secretary of the Treasury and introduced in Congress. Unfortunately, it failed to pass. Congressmen did not seem to realize that a local bank is as much a labor-saving machine as a harvester or a reaper. The reforms in our currency system since adopted have substanially followed Cleveland's recommendations.

GROVER CLEVELAND, THE ANGLER.

Revenue.—It has often been said that the administration of Mr. Cleveland failed to provide revenue sufficient for the expenses of the Government. This is one of those half truths that are more misleading than falsehoods. It is possible for any nation, or for any individual, to spend more than its income. When an individual does this he is called a spendthrift. Is not a national Legislature that does the like subject to the same censure? It is true that, owing to the decision of the Supreme Court that the income tax was unconstitutional, the revenue bill which past Congress during

the first session of Mr. Cleveland's administration did not yield the revenue that was expected. It certainly was not due to Mr. Cleveland that the expenditures of the Government were not brought within the limit of the remaining income. On the contary, he struggled to reduce expenditure, not only by recomendations but by unavailing vetoes, notably that of the extravagant River and Harbor bill of 1896. It certainly was not due to him that business depression, caused by the uncertainty in regard to the financial condition of the country, continued, and that this diminished our trade with foreign countries, and consequently the imports upon which duties are levied. Nor can it be imputed to him that Congress refused to provide for the deficit by the levy of so simple a tax as a dollar a barrel on beer.

Foreign Policy.—And now it is proper that we should deal briefly with the foreign policy of the Cleveland administration. The result of the Bering Sea Arbitration certainly justified the course of his first administration, and showed that negotiation would have been a more effective method of protecting the seals from extermination than the unfounded claim to exclusive sovereignty over that portion of the North Pacific west of Alaska. This contention of Mr. Cleveland and his first Secretary, Mr. Bayard, was often criticised as unpatriotic. But his second administration showed that while he would ask nothing but what he thought was right, he would submit to nothing that was wrong. The celebrated Venezuelan message drew down upon him a storm of censure from those who before had been his steadfast friends. But if success is any test of the merit of the measure, it certainly has justified the message in question. What Evarts, Frelinghuysen, Blaine and Bayard had failed to accomplish was at last achieved. The Venezuelan Treaty was one of the most honorable conclusions of a controversy between two great nations ever reached. Each obtained what it rightfully asked. The United States had long demanded that this question of boundary between a European power and an American republic should be submitted to arbitration, and that the right of the United States to extend its friendly offices to these small republics should be recognized. Great Britain insisted that its citizens who had been in possession for many years of land in the disputed territory should not be driven from their homes and property by an unfavorable award. Title by prescription is in all countries held legitimate. These claims of both nations are recognized by the treaty, and it marks a distinct advance in civilization.

It will never be forgotten that the first general arbitration treaty with our mother country was negotiated and signed during the administration of Grover Cleveland.

After the expiration of his second term of office, he retired to private life, and found in the heart of his family, to whom he was devotedly attached, compensation for the sacrifices which he had made in the public service. He continued his interest in the affairs of his country, and from time to time, by lectures at Princeton University and by articles in magazines, endeavored to impress upon our people some of the lessons he had learned during his official career.

Democracy to him meant the fundamental American principle of equal opportunity, as far as the law can give it, to every citizen, free from the special privilege of class legislation. In the spoils system he had seen the offices of the Government conferred as the reward of party service or personal friendship. In the tariff he had seen the taxing power of the Government exerted to enrich a few favored classes. In the currency system which he found in existence at the beginning of his second term he saw that the first essential of equal opportunity in trade—that is to say, a fixt standard of value—was imperiled by legislation which discriminated in favor of the producers of silver and the communities where they did business.

This whole system of favoritism was odious to him. He knew it was opposed to the fundamental principles of the American Republic, as Washington and Jefferson alike conceived them. From first to last Cleveland was the representative of true American democracy.

"Our greatest, yet with least pretense:
And as the greatest only are,
In his simplicity sublime."

New York City.

The Republican Convention

BY CHARLES MOREAU HARGER

[Mr. Harger was the assistant secretary of the Republican National Convention at Chicago, and therefore has had exceptional opportunities to study the workings of the convention from the inside. We are glad to say that he will attend the Democratic Convention in Denver for THE INDEPENDENT and contribute an article about it. Mr. Harger is editor of the *Reflector*, of Abilene, Kan., and has for some years been one of our most valued contributors.—EDITOR.]

WHAT the public sees of a national convention is the grand free street pageant, the spectacle, the plume-waving parade of leaders and policies. When the chairman called the Republican Convention to order he simply started the display. The real beginning was much earlier and of it the public knew little.

Weeks before had been conferences at Washington; every temporary officer was chosen by the national committee a month previous. The platform, even, was in a trusted delegate's pocket.

When the secretaries conferred two days before the opening they had a well-defined idea of what would be done, who would do it, and what would be the effect. After that it was routine. Probably no national convention ever had so many of its details worked out in advance. It was a triumph of political planning in its most modern form, the outcome of new conditions and new ways of doing things.

Yet the radicals were not easily subdued. As I watched their determined eagerness in committee sessions and their dogged persistence on the floor it seemed to indicate a future struggle of smaller odds. The so-called "progressive" movement was in this convention confined to Western delegations, but so many Easterners gave private approval of these ideas that in the next convention it may be that planning will not accomplish so much in maintaining tradition. There was a variance of ideas and ideals that must widen. With increase to a fair-sized minority, instead of being against overwhelming odds, this faction would have accomplished something definite. I was impressed by this undercurrent, which showed small on the surface, but will not die away easily.

The delegates were a remarkably well-dressed company of men. It was difficut to distinguish the New Yorkers from the Kansans—both had headquarters on the most expensive floor of the biggest hotel. The Westerners had money to spend this time—in contrast with some earlier sessions. Nor was it furnished by railroads—they paid fare and were at home. The cosmopolitanism of the delegates from interior States was noticeable. Chicago sold postal cards representing the country delegates as wearing chin whiskers and carrying carpet bags, and these were gleefully purchased and sent home by correctly garbed bankers and landowners as a merry jest.

Also there was less difference between North and South than formerly. The "New South" is coming to the conventions, and only here and there is one who typifies the war era. The Southern delegates were mostly young business men, eager and earnest.

But when the 980 delegates were gathered before the speaker's desk and the proceedings became interesting, it took no philosopher to distinguish sections. The New Englanders sat dignified and reserved; the Pennsylvanians were more cheerful; Wisconsin arose and gave united hosannas on small provocation, while away back at the rear Oklahoma, in the exuberance of its Westernism, hailed every new event with vociferous yells and exaggerated rejoicing. Was it the outpouring of emotion or was it assumed, in accordance with a preconceived idea of Oklahoma tradition? To me it was the latter—a sort of hysterical fulfilling of extreme frontier type, rather than a natural outburst; for the Oklahoma and Southwest delegates were neither wild nor woolly. Some delegates apparently feel called upon thus to vindicate their State's picturesqueness.

For the first time in a Republican Na-

tional Convention the negro was eliminated. Threats of disaffection did not avail, and the delegates seemed satisfied to go on with the work and take up the negro question later. The narrow margin by which the old rule of representation was saved showed this new sentiment toward the colored man. In the next convention the proposal to base the number of delegates on Republican votes will prevail. It was a white man's convention in that it refused to be frightened by what the negro voter may do.

It was inspiring as a token of our national greatness to hear the roll call include Porto Rico, Hawaii, Philippine Islands, Alaska. It gave a world-touch that appealed to delegates and audience, as was manifest by the applause greeting votes from these far-off possessions. The diplomatic corps from Washington, sitting close behind the speaker's platform, watched this feature closely—the whole convention evidently absorbed the foreigners' attention; it should have been to them a lesson in American greatness.

Neither did the delegates and their friends who journeyed Chicagoward behave like "Reubens" on their first visit to the city. The man from Arizona, like the men from Indiana and New Jersey, seemed familiar with electric signs and moving pictures. The evenings were marked by a good deal of visiting at headquarters and little "taking in the sights." Most of the delegates seemed as much at home as did the Chicagoans themselves. It is probable that as large a percentage of the Nebraska, Kansas and Colorado delegates as of the New York representatives own touring cars. They looked like it and talked like it. It was a high class personnel, a type of the prosperous new American businessman, be he from East or West, admirably exemplified. It was a far different body of men than was gathered twelve years ago; it was even better dressed, more familiar with civilization's ways and more cosmopolitan than even four years ago. Perhaps this is because younger men are sent. The old soldiers, once so great a proportion of the council, are few today.

Naturally such an organization would do business in a crisp, businesslike way. The details that were left to be worked out were handled shrewdly and well. The advance planning was accepted as a matter of course. Twenty years ago there would have been a temptation to start a revolution on the floor of the convention. But these men were different. Probably half the delegates—maybe more than that, judging from my personal knowledge of some delegations—are members of boards of directors in their home towns. They help manage banks, mills, investment companies, transportation lines and manufacturing concerns. They have learned in this sort of business operation that there must be a head to the conduct of big concerns. They understood the need of forethought in large affairs. They looked on the convention as a business undertaking, not as a feverish ebullition—hence they were not to be "stampeded" by mere gallery shouts.

The temper and the proceedings of the session were thus marked by a significant, businesslike spirit, an exposition of business development in the interior as well as in the cities, a broad acceptance of business methods in every branch of active life. The idea of doing things decently and in order was dominant; it was an orderly and self-restrained company.

So it was not altogether the delegates' instructions that held them to a formal transaction of routine work in regular order nor that made the much-heralded "Roosevelt demonstration" a failure. The "demonstration" was deliberately planned, unquestionably. I was confidentially told that the man had been selected to place the President in nomination; that the seconding speech was arranged—but that, too, failed. The forty-nine minutes of cheering was about twenty minutes real and twenty-nine minutes just noise—the kind of intermittent rambling, catcalling noise that small boys let loose in the galleries of the village "opera house" when the campaign orator makes a "point." The provincialism of the audience in the galleries and in the rear of the hall was in striking contrast with the delegates' reasonable actions. The people of Chicago, who occupied one-fourth of the 14,000 seats, displayed the same characteristics as the auditors in the Plainville town hall—and had less respect for the chairman. The visitors from the far Southwest, the far Northwest and the remoter South must have

gone home with a poor opinion of Chicago manners—for there was no indication that the "demonstration" was entirely a Roosevelt tribute. It was a carnival of noise for noise's sake—which is a different matter.

To be frank about it, the Western delegates, presumably the excitable and strenuous element in politics, showed more businesslike methods than some Eastern commonwealths presented. The New Yorkers were the politicians of the convention; Oklahoma, the thunderous applauders; Wisconsin, the reactionary trouble-makers—and the other delegations were there for business.

If Chicago showed its provincialism in its disrespect for convention formalities, what shall be said of its rubber-necking proclivities when night came? Some hundred thousand or so thronged the hotels, the boulevards, the sidewalks. Arm in arm they mobbed every "headquarters," entering a flag-decorated room, gazing hastily around and moving on. The country town turns out on band concert night, and a steady procession passes the "Last Chance" restaurant, the tawdry drug store, and the porch of the Continental Hotel. So did all Chicago inspect the lake front exhibit. It might be thought that never before had been seen a flag over a hotel room entrance, an electric sign on a doorway or a drum-major with a white chapeau two feet high. The delegates went home with a feeling of equality between Plainville and Chicago.

The fact that hotel rates were boosted about 100 per cent. did not prevent many delegates from bringing their wives—and a well-gowned, self-contained company these were. They came in from the plains of Kansas, the mountains of Colorado, and the Southland cities equipped with up-to-date garments and apparently as familiar with cafés, where the waiter and the hat holder must be tipped, as if they were accustomed since childhood to the Pompeian room of the Auditorium annex. At least, if they were not at ease none discovered it. They evidently cared more about what Mrs. Longworth wore and how she looked than for the injunction plank of the platform. Their home communities for many a day will be regaled with descriptions of the "Princess Alice." Not the least attraction of the great hall's picture was the fluttering garniture of feminine hats, fans and gowns—another indirect result of the nation's prosperity. The effectiveness of the feminine presence in adding courtesy and dignity to the Chicago pilgrimage was commendable. The women should be encouraged to attend conventions—local as well as national.

A national convention is simply a State convention on a large scale, just as a State convention is a county convention on a larger scale. In the minor gatherings there is inevitably confusion and interference. So in this national affair was the impossibility of keeping order. Herein the businesslike management had its weakness. Despite the presence of scores of policemen and nobody knows how many "assistant sergeants-at-arms," the system of control was frequently disturbed. Those who had no business on the platform insisted on being there to the confusion of those whose duties were assigned. One lordly newspaper man with the appearance of being the Minister to Brazil leaped to the platform and took from a bewildered speaker a copy of an important resolution, sending it to his paper well in advance of his rivals—and the rivals were justly indignant thereat. One New York paper secured a complete copy of the platform, practically as it finally appeared, five hours before it was given out and the platform was sent from New York back to Chicago over six wires at 2 o'clock in the morning for Chicago papers.

The secretaries worked two days making complete lists of the delegations' selections for committee memberships. These lists were sent to the national secretary's room—and like a flash two disappeared. The secretaries put in another day replacing them. All of which goes to show that even the best arrangements will not always serve to restrain the American newspaper man when he is really after first-hand news.

The speeches, which are a part of the grand entry of the quadrennial pageant, were not exceptional. There was no "Plumed Knight" oratory such as Ingersoll delivered in Blaine's behalf; the speakers with one or two exceptions could be heard by only one-fourth the audience,

which is a pity; for why speak a piece unless it can be appreciated by those in the congregation?

Perhaps one of these days a national convention will be held that will exclude from the hall all but the delegates. Then it will accomplish things uninfluenced by the galleries, which in this instance as in many others have been vociferous in dictating action while all the time unable to deliver any delegate votes.

After all, the pageant is a nation-wide affair at which twelve million voters look in perspective and whose effect is counted on to affect the election. It does not seem worth while to amuse an audience that will not be courteous toward the proceedings. Probably Chicago was not entirely responsible, probably outsiders shared in the noise-making—but the American people should be on good behavior at such times, which certainly was not the case.

And on the other hand why will political speakers—and other speakers, too—talk after their message is complete? Some of the most astute political orators in America harangued the convention long after the delegates began calling "time," the last desperate resource to secure relief. They thus injured their own standing and the cause for which they spoke. More bad judgment was exercised in the length of speeches, considering the conditions, than is known in the average convention, tho a long-suffering public has enough to bear in this sort of affliction. Somehow the desire for the spot-light seemed abnormally intense and willingness to leave its precincts lacking.

For the work of the convention was not done at the convention proper. The committees settled it all—or rather the sub-committees, which is another example of business ways in politics. This procedure is not new, to be sure, but it never was carried to so fine a state of perfection in a national convention as here.

The picture was that of a meeting of a board of directors in conference and not that of a town-meeting in session. Nothing short of a tornado could "stampede" such a gathering—and, tho some persons and some papers predicted cyclones the political barometer did not indicate serious storms at that period. Was the Taft sentiment real or forced? Both—real in the sense that the delegates seemed to respect their candidate as a man and a leader, forced because none but a great general or a long-time leader of a great faction can bring the real thrill to his partisans' cheers. This is not disparaging the sanity of the convention's actions—it was in accord with the session's history.

So the pageant was interesting but not thrilling, with plenty of bands and abundance of fireworks. Now the rival parade takes place—will it be as typical of this business age? The campaign main shows ought to be foreshadowed somewhat by these preliminaries.

CHICAGO, ILL.

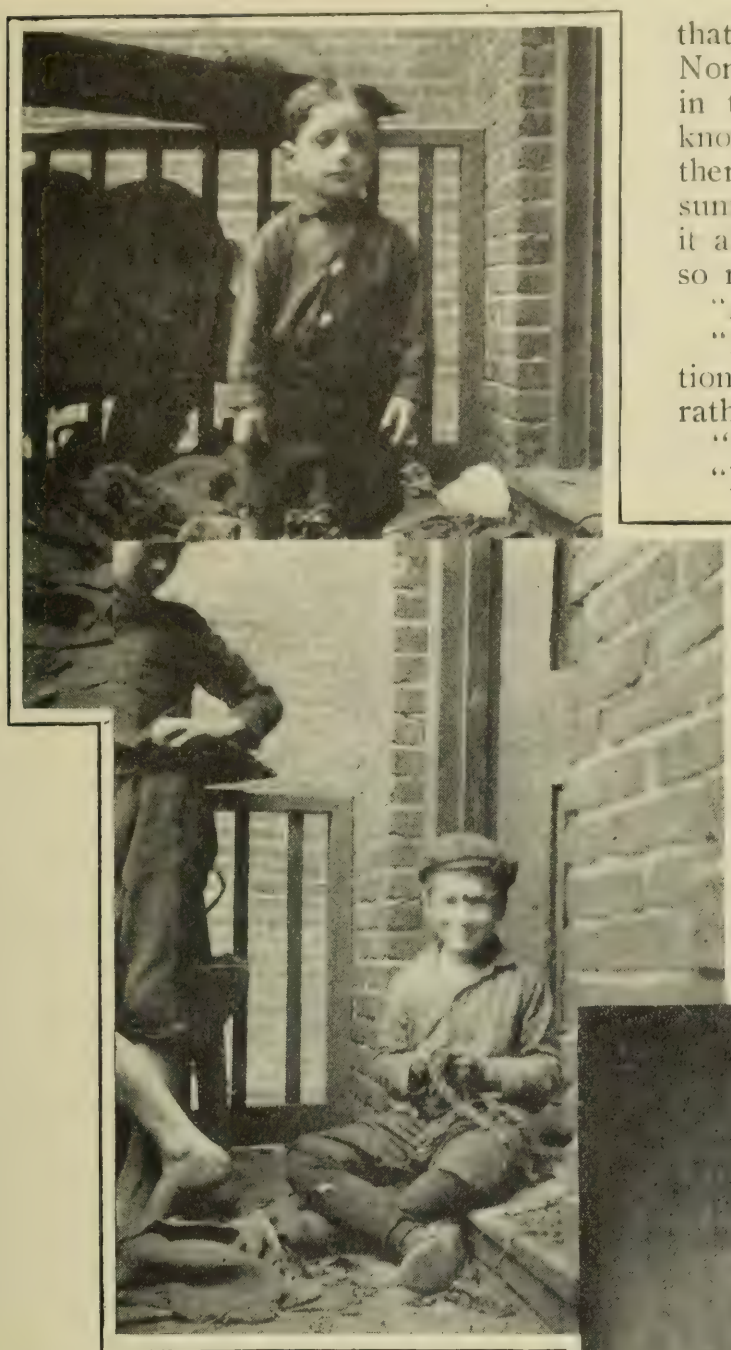
On the Trail of the Pittsburg Stogie

BY SCOTT NEARING

SECRETARY OF THE PENNSYLVANIA CHILD LABOR COMMITTEE.

THE sun glared down fiercely from the July sky. It was a close day. On the doorsill of a Pittsburg tenement house a boy sat, and past some light brown leaf-like things rapidly thru his bands—he was stripping tobacco. The warmth of the day and the closeness of the atmosphere made the odor of the leaves nauseating.

"What, Charlie, stripping again?"



"Yes, sir, me father got some more leaves yesterday and we all got busy."

"Isn't this your birthday, Charlie?"

"Yes, sir, I'm ten today."

"Have the children all been stripping? You have the ground littered up with stems."

"Sure they have—Sam, too. Sam's only four, you know, but he strips fine. Yesterday he stripped ten handles, and

"Sam's only four, you know, but he strips fine."
On the doorstep of a Pittsburg tenement.

there is four handles to the pound. That makes more'n two pounds he stripped in a day. That's fine fer a kid of four. Sam is great at strippin'; he likes it, too. Me father says he'll make the best stripper of the bunch."

"Does Sarah strip?"

"Sure; she ain't so good as Sam, tho she's older—most seven, but it makes her sick. Her stomach ain't no good and she can't stand the smell of the tobac'."

"But you don't like to strip, either, do you?"

"Me? Oh! I don't mind much, and then there's them that's worse off'n me. Take our cousin Nome, what lives next door. She strips in the cellar on Webster street—you know the one I mean—and it's dark there and wet, and she gets cold all summer, and her eyes hurt 'er. Here it ain't like that at all, so I don't mind so much."

"Are you going to school now?"

"Nope, not since June; this is vacation, when we get our fun, but I'd rather go to school 'n strip tobacco."

"How's your mother today?"

"Ma's good enough, it's pa what is so bad. He ain't sick, you know, but his mind wanders all the time. He talks about Wyoming—says we'll all go there some day. If pa would only work, us kids wouldn't have to strip, but pa, he jest sits and talks about Wyoming and how to get there and what we'll do after we gets there, and all about it, and ma, she can't get pa to do nothin'. It's hard for ma, ma and the kids, but I guess there ain't

"Our cousin, Nome—she strips in the cellar on Webster street."

nothin' to do. Ma does all she can and tells pa to do some stogie rollin', but pa rolls fer about a minute and then he begins to talk Wyoming."

"What will you do when you grow up, Charlie?"

"Oh, I'll give ma a new hat, and I'll take the kids to the park every day and I'll take Nome out of the cellar what's killin' of her, and I'll—well there ain't no use talking about it. I could stop strippin' if pa would only go to work—if he only would."

PHILADELPHIA, PA.

Game Law Crimes

BY DWIGHT W. HUNTINGTON

[This concludes the series of articles by the author of "Our Feathered Game" that has been running in THE INDEPENDENT for some months. We are glad to say they have excited wide interest thruout the country—have already, we understand, led to the revision or reversal of the game policy of several of our States.—EDITOR.]

CRIMES and misdemeanors are defined as public wrongs, since they affect not only the individual, but likewise the community. A brief inquiry into the nature of modern criminal statutes indicates that they are usually founded upon natural laws or upon principles which appeal to mankind as right.

"In proportion to the importance of the criminal law," Blackstone says, "ought also to be the care and attention of the legislature in properly framing and enforcing it. It should be founded on principles that are permanent, uniform and universal, and always conformable to the dictates of truth and justice, the feelings of humanity and the undeniable rights of mankind." It is, evidently, undesirable to increase the number of crimes and criminals. Crime is a very serious matter.[1] New crimes never should be created unless there is an absolute necessity for their creation, and when such necessity clearly appears, the law creating the new crimes should be permanent, and not subject to change from year to year.

The necessity for creating new crimes is fairly measured by the good accomplished by the laws defining the new public wrongs. Applying this measure to our game laws, we observe that the game has diminished with startling rapidity, notwithstanding the creation of hundreds and possibly thousands of game law crimes. Without fear of contradiction I say that no man living can say how many crimes there are, and Blackstone, were he writing today, would be appalled at the number, and would despair of listing them. It is evident there must be a better way of making the game abundant than by the further increase of the number of game law crimes. I believe when the 3,000,000 guns in the United States are told that they must look after the game, and that it is neither disgraceful nor criminal to do so, many will undertake the necessary work, and that all will be benefited.

When we observe that the game seen in our Eastern markets is imported, for the most part, from countries which have not created these new crimes, we are forced to admit that an abundance of game without any crimes[2] is far better for the community than an abundance of crime without any game.

The wild food-birds evidently are intended for food, and, as I have said before,[3] cheap food for the people is more

[1]The California Commissioners say: "We have investigated *hundreds of complaints*, not all of which were made in good faith. Some we found grew out of spite work and there was not sufficient evidence to warrant a prosecution. We have strongly insisted on this point: we regard the *arrest of an individual as an important matter* to him, as well as to ourselves." Rep. California State Board of Fish Commissioners, 1905-1906.

[2]Save those due to trespass laws and laws protecting property which are clearly founded on right principles and have stood the test of ages. We have the trespass laws in the United States in addition to the wonderful assortment of criminal game laws.

[3]"The State and the Game." INDEPENDENT, October 10th, 1907.

important than indifferent sport, and the food question should, therefore, be first considered by the State. It follows that laws which prohibit the rearing of the wild food-birds for the market and which define such transactions as public wrongs or crimes, altho they may be urged by some sportsmen as being in the interest of sport, cannot be said to be "conformable to the dictates of truth and justice, the feelings of humanity and the undeniable rights of mankind." Any one who is at all familiar with our game laws must admit that they are not founded on principles that are permanent, uniform and universal. The legislature is asked to change the game laws every year. That which is criminal one year is not criminal the next, and the reverse is equally true. The number of crimes, the character of each crime, the term of imprisonment and the amount of the fine are not only different in different States, but they differ often in many counties of a State, and the most intelligent lawyers will decline without careful and oft-repeated examinations of the statutes to say just what is criminal and what is not criminal, and their difficulties are always increased while the assemblies are sitting and for some time after their adjournment. Dr. Palmer, of the United States Department of Agriculture, who, in all probability, can name more game law crimes than any one in the United States, refers in a bulletin to the increasing complexity of the laws and the prevalence in some States of county laws, and says "but *as some are inaccessible and others are likely to be changed at any time, a complete and accurate summary of them is impracticable.*" He also says: "In the number of bills introduced and in the *general demand for change* of some sort, the record of 1907 is second to that of no previous year, altho the number of bills actually passed was equaled by the legislation of 1905."

Mr. Harry V. Radford, whose good works in restoring the "elk," moose and beaver to the Adirondacks are well known to sportsmen and naturalists and who was active in helping to build up the present system of game laws, says in a letter which came while I was engaged in writing the foregoing lines:

"You have converted me fully to your theory of game preservation. . . . The incubus of innumerable laws is a kill-joy to sport. We are worried to death while shooting for fear we may be breaking some law. There are so many, not even a sporting editor can hope to remember them all. We must carry a big book. There is no fredom, no democracy, no Americanism about it.

"And this State is at this moment revising (no, has just revised) the entire code of game laws. It seems to think the secret lies in fixing up the *law.* Legislatures juggle with and mix and muddle it every year, making it worse and worse; but they seem to think they are reaching the golden mixture of perfection—a kind of modern alchemism."

I had written that the Colorado laws protected the last herd of buffalo at all times, but that the last buffalo in the Colorado herd was dead. Mr. Radford evidently had the buffalo in mind at the same time, since in his letter he says:

"No amount of restriction has saved the buffalo. But he is increasing steadily, tho slowly, within large preserves. In the future I shall see that no moose, wapiti and beaver, in which I am so much interested, are released on preserved lands in the Adirondacks—not on State or public lands. I find they thrive best on the former. I held the opposite view once, presuming the public would be more interested in their safety if released on State lands, but I find the public is a poor factor to count on."

It would be impossible within the limits of this paper to enumerate the crimes due to the game laws in the United States, if they were known to any one. A description of them would be of little value, since it is absolutely certain that they will be much changed within a year. There are, however, certain crime groups which we may profitably examine in order to determine if the laws creating the new crimes are founded on principles which are permanent, uniform and universal and always conformable to the dictates of truth and justice, the feelings of humanity and the undeniable rights of mankind, and to determine, further, if the laws creating the new crimes are absolutely necessary and if they are beneficial or harmful.

One group of crimes may be designated as the "game-hog" group, since the laws creating these crimes had their origin in the repeated assertions of an editor that all who shot many birds in one day were "game-hogs." These laws are intended to increase the game by limiting

the number of animals which can be taken legally in a day by each gun. We observe that the daily bag limit for each species of game is different in many States and frequently is different in many counties of a State. We find upon an examination of the statutes for a series of years that the bag limit laws are ever changing to suit the whims of those who are engaged in deciding for others whether it would be best for them to take three or five or some other number of grouse or quails or woodcock in a day, and we find that those who suggest this kind of legislation are especially fond of variety, since they have different numbers for each species of game, and juggle them yearly to gratify their fondness for change. This kind of lawmaking has grown to be an annual industry of vast and ever increasing proportions. One hundred and thirty ill-assorted game laws were presented to the legislative committees of one State last year.

A punishment for violating the bag-limit laws is uncommon. At a meeting of the Harris County (Texas) Game Protective Association, one member, a prominent building contractor, stated he would do his best not to fracture the law, but if he had killed the limit and a deer came within gunshot he didn't believe he would be able to resist the temptation to take a shot at it. Another member thought under those circumstances *a man would be excusable,* but that after violating the law he should walk up to the captain's office like a little man and pay his fine.[4] This means of enforcing the law is evidently unreliable. Bag-limit laws are especially harmful, since they prevent the increase of game by individuals and by syndicates of sportsmen and farmers. Why should anything be increased, at some expense, when it cannot be utilized? It should no longer be a crime to shoot and market game from preserves. If the bag-limit laws are not repealed, they should at least be amended, so they will not restrict those who wish to make the game plentiful. The crime area can be largely reduced. In some places where it has been reduced the game is wonderfully abundant.[5]

Another group of crimes has been created by laws prescribing the seasons when the different species of game may be taken. These laws, we observe, vary much in the different States and often in counties of a State; they are changed much from year to year, and usually end in a prohibition of shooting at all times or for a period of years. They are in no wise permanent, uniform or universal. The laws which prohibit the taking of game in the spring are an exception. These laws easily can be made permanent and uniform thruout the country, and when once made, in all probability they will not be changed. They quickly become known and are easily understood and remembered, since the entire season when the birds are nesting or when they are too young for the gun is included. The shooting of game in the breeding season is clearly *mala in se,* and all, excepting a few persons who for years have been accustomed to shoot game out of season, readily agree that the laws prohibiting spring shooting are "conformable to the distates of truth and justice, the feelings of humanity and the undeniable rights of mankind."

The open season for game naturally begins in the early autumn when the birds are strong on the wing and in excellent condition for the table; "when the frost is on the pumpkin and the fodder in the stock," and when it is a pleasure to be out of doors with dog and gun. Under ordinary circumstances there should be nothing criminal about the taking of grouse and wild fowl in September and partridges or "quails" in October and as late as the end of the year or even until February 1st. The laws which prohibit shooting save for a short season beginning when the late autumn storms mar the pleasure of the outing, or when the ducks have deserted the marshes on account of the ice,[6] are only justifiable on account of the necessity of

[4] *American Field,* October 12th, 1907. See also account of the illegal killing of a turkey in Indiana, INDEPENDENT, April 2d, 1908. See Mr. Shields' letter on this point in the paper on "Prejudice," INDEPENDENT, May 7th.

[5] Pheasants are abundant on preserves which have been excepted from the game laws in New York (two counties), in Vermont, etc. See observations made at American Preserves (*American Field,* April 11th, 1908). The laws removing crime from preserves can easily be made uniform, since all preserves can be excepted; those who wish to have game will be content to have the exception permanent.

saving the game from extinction. Since they provide for fines or imprisonment they should be uniform and permanent. It certainly should not be legal to shoot in one county and illegal to shoot in another county at the same time.

Another group of crimes which seriously affect all of the people is created by laws which prohibit the sale of game during the open season or during certain portions of the open season and after certain dates following the close of the season. These laws, like the others, are constantly changed and are often different in counties as well as in States.

At first glance the sale of any food which is wholesome, seasonable and palatable does not appear to be a felony. It is an old and well-established legal principle that altho game belongs to the State or crown when alive it becomes the personal property of the person shooting it when it has been legally taken. In the United States, however, it is held that the dead bird, altho legally taken, belongs to the State, and the number of crimes, of course, has been multiplied.

The incentive to propagate and increase game disappears at once when it becomes known that the game cannot be legally owned or handled even after it is shot. It seems remarkable that a single bird has survived since it is well known that game cannot exist long in populous regions without some individual care and attention.

Again we observe that the game has rapidly diminished since the laws were enacted prohibiting its sale and creating many new crimes. This legislation, therefore, has not caused the best results obtainable for all of the people, who are said to own the game, and no one can deny that if the remnant of game now living can be quickly multiplied so as to reduce appreciably the cost of meat, to increase the value of the farms, to give employment to many people in the country and if, at the same time, crime can be much diminished and, in all probability, it can be made a thing of the past, so far as shooting game in the autumn and the sale of it are concerned, our legislation should be so shaped in the future as to bring about such good results.

There can be no doubt that land values have rapidly decreased during the past twenty years in the United States, and that many farms have been abandoned. There can be no doubt that practical game preserving by individuals quickly makes game plentiful and that all lands where game is made abundant rapidly increase in value, are always tenanted, and that agreeable employment is provided for many people in the country. In Scotland, during the period referred to, land values have been tremendously increased by shooting. Lands which a few years ago were practically worthless now yield millions of dollars annually because the game has been properly looked after,[7] and a good part of the money comes from America.

There are many game law crimes which are fanciful; some even cause a smile whenever they are mentioned. It is a crime to photograph a deer without paying $10 in Wyoming. It is a crime to sail on the bay on the Lord's day to see what the ducks are doing or "to locate them for a future day," as a North Carolina statute reads.

It requires a wide stretch of the imagination to regard a person as a criminal (who has paid a non-resident license fee of $25 and who has shot a partridge) because he attempts to take the bird home for consumption. The transaction is criminal, however, in all States which absolutely prohibit the export of game.

Another group of crimes has been created by laws prohibiting the killing of certain predaceous animals at all times or during certain seasons. Skunks, crows, minks, foxes and other animals which destroy game and poultry are said by naturalists to do a certain amount of good—catching mice, grasshoppers, etc. They do not deny that these animals take game birds and their eggs, and in part it is well known that they must be controlled in places when it is thought de-

[6]The Ohio Legislature passed a law a few years ago prohibiting duck shooting until November 10th. The marshes were frozen on the 12th; the ducks, of course, went South, and many valuable properties in Northern Ohio where the ducks are protected were rendered practically useless.

[7]See statement as to this in "Our Feathered Game." Since "Our Feathered Game" was written the large figures given there have been much increased. I have referred to the fact that the Englishmen have complained in their magazines of the Americans who come to shoot where there is more "*freedom*" than there is in the United States.

sirable to have game for the gun.[8] There is a great variety of opinion about the amount of damage caused by each species of vermin and the laws are often changed to meet the views of those who are engaged in deciding if it would be best for others to have skunks, crows and other vermin on farms which they own or rent for the shooting. One or more crimes is created in the interest of each nest robber, but the majority of the people, I am sure, would decide in favor of leaving the matter to the game preserver so far as his lands are concerned.

To be consistent, those who urge this kind of legislation should insist that wolves be not destroyed on sheep ranges; but such laws would not appeal to many as conformable to the undeniable rights of mankind. I doubt much if a jury of farmers, *de vicinitate,* would convict a farmer for killing a skunk if the evidence disclosed the fact that it was shot while engaged in robbing a henroost. The constable of Chippewa County, Ia., however, was sent to jail for shooting without a license when he killed the mink which destroyed his hens and geese.[9]

In the last report of the California Commission[10] one and one-half dozen owls are included in a long list of seizures, and their disposition is given as "donated to hospitals and asylums." Some owls are noted game destroyers and possibly these were caught red-taloned by the person who became a criminal on their account. Our sympathies are aroused for him who sought to save the game and also for the halt and blind who dined on owl. This, however, is more game than many hospitals have seen in recent years.

There are many laws making it a criminal offense to export game or even to transport it within the State. The moving of desirable food is, of course, not wrong in itself, and as I have pointed out[11] it seems a poor way to increase anything by making it contraband. The game rearer must be excepted from such legislation if the increase of game is desirable.

The best that can be claimed for this kind of legislation is that it may have delayed the extermination of the game. We insist that it has prevented the increase of game by many who would increase it provided it seemed profitable to do so. Now that the ruffed grouse has become a rare bird, worth $3 and perhaps more in the market, the temptation to ship and sell it is large and the slight investigations which I have made to ascertain what is going on indicate that the birds are shipped and sold without much danger of arrest and will be, in all probability, until they become extinct. A gamekeeper would certainly prevent the taking of many of the birds in his charge and would make them so plentiful that those taken hardly would be missed.

Laws which make the trapping and sale of live birds for propagation criminal offenses, of course, tend to diminish the game since they prevent its sensible increase. Laws of this character certainly are not founded on the principles above mentioned, which should underlie all criminal enactments. The California Commissioners, observing the folly of such laws, say:

> "While the letter of the law forbids the sale of pheasants or quail it is our contention that the spirit of the law is to prevent the sale of dead birds for market purposes, but that permits should be freely issued for transferring the birds from one party to another who desires to propagate them."

It is not likely, however, that many officers who make their living sharing the penalties collected in game law cases would entertain such liberal views. The laws really should not be violated even by intelligent game officers. They should at once be made uniform and permanent thruout the country—permitting the utmost freedom in the handling of game for propagation.

It is eminently proper that the State should prohibit the shipping of thousands of birds to be scattered by the State officers of another State in places where no one properly will look after them since, as we have observed, vermin will take the larger part of them.[12] And it is a self-evident proposition that the sportsmen and gunners who have exterminated the indigenous game will quickly dispose of any remnant of the imported stock which may be left after vermin has freely dined

[8] Game cannot survive the destruction by vermin and shooting at the same time. See "Game Bird Enemies," INDEPENDENT, March 5th, 1908.

[12] "Game Bird Enemies." INDEPENDENT.

for a good part of the year. A tremendous waste is prevented by the laws prohibiting such transactions which are evidently *mala in se*.

With all the foregoing facts in mind it seems unfortunate that the game officers are required to make many small arrests; to rummage continually in the ice boxes of hotels (without search warrants in many States) and to make many personal enemies (and enemies of the State) not only of those arrested but of sympathizing friends sometimes, when the arrest seems to be prompted by a desire to share in a fine or for other reasons which may not seem good.[13] It is most unfortunate that they must rely much upon informers who share the penalties and that the number of people engaged in this business is large.

We must expect our present excellent game officers to be rapidly replaced by politicians now that large State game funds are created and now that the patronage must be much increased to handle a multitude of crimes. The Minnesota State Board, in its last report, well says:

"The board's opinion, Governor, is that politics and game protection, like oil and water, will not mix, and wherever tried, game and fish protection suffer and no one is really benefited."[14]

In Minnesota the sale of trout from preserves is permitted and crime so far as the fish is concerned has become a thing of the past. The executive agent of the Minnesota board, in a letter to the writer, says the markets are supplied with trout and, so far as they can observe, without loss to the public waters. Why should not the people have game in abundance from similar sources if the crimes due to the game laws thus can be made to disappear?

A New York woman wrote to me some time ago saying she wished to go to the country and rear pheasants; she asked if, in my opinion, it would be profitable. I wrote to her that she would be a criminal (!) if she sent one to a New York dealer or hotel. The letter of this woman (a stranger) prompted me to write much that I have written for THE INDEPENDENT. I care very little about big bags of game or the sale of it. I really belong to the modern landscape school of sportsmen, since I regard the health-giving exercise and the pleasures of the ramble in the autumn woods and fields as fully as important and entertaining as the shooting is. The game, however, is the incentive which takes us out of doors, and the shooting undeniably is a pleasure, excelled by none, for those who shoot.

I regret, as every sportsman must, the end of field sports, which clearly is approaching. I regret, as every citizen must, that crime due to the game laws evidently is increasing. California "IS PROUD TO SUBMIT" a tabulated statement showing "the increase in the number of arrests from year to year and the amount of fines during the past ten years."[15]

The making of new crimes seems to be in its infancy. Many fanciful restrictions of sport are being considered. The prohibition of the use of pointers and setters seems to be the most important of the new fancies which have come to the writer's notice. The desire for this change, with its attendant crime, has appeared in several States. One game officer recommends it in his report.[16] The necessity for new restrictions increases rapidly as the game vanishes. The laws for the most part are amateurish in character; they usually, as we have observed, are not founded on principles which should underlie criminal enactments, and it certainly is unwise to continue this reckless crime making.

In concluding this series of papers, the writer again urges those who wish to perpetuate field sports in America to undertake the sensible propagation of game under some agreeable arrangement with the farmers. The society of game preservers, I am sure, will insist that all restriction be removed from those who make game plentiful.

There is danger of the State game departments becoming governmental sideshows, exhibiting many curious crimes, with special police to look after them. They should be changed to advantage and made largely civil departments, with officers engaged to look after the increase of game. They should distribute

[15]Report State Board Commissioners, California, 1906.

[16]Oregon Report.

any seed they may have for distribution to those who will agree to multiply it in places where the new criminal laws are neither needed nor wanted. The people must bear the burden of making game plentiful, just as they bear all other burdens when anything is increased. America quickly can be made the largest game producing country in the world. I believe it will be.

YONKERS, N. Y.

The Peacemaker

BY PARK BENJAMIN

THE United States battleship "Oklahoma" had voyaged around the world, and had taken part with her sisters of the fleet in the visits to Australia and Japan, and then by way of the Suez Canal had entered the Mediterranean. There her share in the cruise came to an end, because something went wrong with her boiler tubes; wherefore she was detached and ordered directly to New York, with no stop save at Gibraltar. Thus it happened that on the evening of October 20, 1908, great joy pervaded the ship; for, having accomplished her coaling with unprecedented speed, because the wives and babies and sweethearts, three thousand miles away, were helping with all their might, she was now weighing her anchor, to drop it next time in New York Bay. Naturally, the prevailing delight translated itself into a rousing cheer as the band struck up "Home, Sweet Home," and the homeward-bound pennant, 400 feet long, broke out from the masthead and the great vessel majestically gathered way, sweeping past the grim crouching lion that guards the Straits, and heading for the open Atlantic and the setting sun.

Captain Grindle, of the "Oklahoma," was not of an emotional temperament. He had seen the long pennant hoisted many a time in his career of over forty years, and, besides, there was no one especially waiting for him at home. He was a widower, his children had married and scattered, and to return from a cruise meant, to him, merely to resume his lodging in Washington and his favorite corner at the club, if he preferred a few months' leave of absence; or to keep bachelor's hall in Government quarters at some navy yard until his time came to go to sea again. The newspapers were not acquainted with Grindle. He had never done nor sought to do anything spectacular, he had no gifts as a story-teller, no taste for "society" life and still less for navy gossip. He had always accepted, without growling, whatever duty had been assigned to him, and had done it without winning particular commendation on the one hand or blame on the other. He was not a specialist in any branch of the naval profession, but simply a quiet, safe, all 'round officer who had spent twenty years of his life as lieutenant, and now found himself a captain on the wrong side of sixty, with the certainty that when he left the "Oklahoma" on her arrival at New York he would never be sent to sea again. This was what he was thinking about when, the ship having cleared the bay, he left the deck for his solitary meal in the cabin. The knowledge that here began his last voyage necessarily came more sharply home to him now than ever before. It oppressed him, and he sat there moody and silent long after his servant had taken away the scarcely touched food. What a narrow life his had been after all; the long years of dull routine; the brief glimpses of home; the endless self-denials and sacrifices in order to support and educate the family on his slender pay; the tedious, disheartening wait for promotion—all made tolerable only by the secretly cherished dream—or was it an article of faith?—that some day a "glorious hour of crowded life" would come for him—he knew not how—when fame and honor and his country's—even the world's—acclaim would be his. Now there was nothing to come; or, at best, only a year or so's perfunctory work at

a desk ashore, and then idleness, with the little cemetery at Annapolis at the end of the perspective. The thoughts hurt. He shook them off with an effort, and went back to the bridge.

The ship was beginning to curtsey to the great Atlantic surge, which rolled in heavily, for a southwest gale had prevailed the day before. The moon shone brightly thru the cloud rifts, altho the horizon ahead was somewhat murky, and the barometer threatened more blow, tho not immediately. The lights on Tarifa Point shone clearly just abeam, and one could see other lights twinkling along the Spanish coast trending to the north and west until the haze blotted them out.

The officer of the deck was so intently watching an approaching sailing vessel thru his night glass that he did not notice the captain's arrival until spoken to. Then he turned quickly with a word of apology, and said:

"That fellow is carrying a big spread of canvas, sir. He doesn't look much like the usual merchantman!"

To the practised eye of the older seaman a glance at the towering sails was sufficient, even without the revelation, as the "Oklahoma" passed by, of the white riband checkered with gun ports, which surrounded the black hull.

"Don't you know," began the Captain —he was about to add "a sailing frigate when you see her," but bethinking himself that to the youngster he was addressing, a sailing frigate was about as archaic as a Roman trireme, he stopped short and substituted, "that all sorts of ships come thru the Straits? That craft is now probably a schoolship or a storeship, but once she was a British man-of-war."

"Warship, sir?" asked the other, somewhat puzzled.

"No—man-of-war."

"Well—is there a difference, sir?"

"Yes, there is—to me, anyhow. When I joined the service, we went to sea in ships like that—real ships—and we were part of them and they of us, and they were living things under our feet as long as God let the wind blow and the sea heave. Those were men-of-war. What you call 'warships' nowadays are nothing but machines with all their life in the coal heap. Ah, youngster, it took sailormen, then, bred to the sea, to handle a man-of-war. Look at the crew we have got aboard here—mechanics in blue overalls."

The lieutenant, who privately regarded the Old Navy and everything pertaining thereto or reminiscent thereof as a bore, had already mentally resolved to change the subject, even to the ever engrossing one of boiler tubes, when an orderly handed the captain a folded paper, with the words:

"Wireless message, sir!"

The captain opened it in the pilot house.

"Ask the navigator to come here," he said shortly, and, upon the arrival of that officer:

"Collins, this sends us to Cadiz."

"Cadiz, sir?" echoed the other, surprised.

"Yes. It says nothing but 'Look in at Cadiz tomorrow morning, communicate with Consul.' Admiral sends it from Toulon to Gibraltar, where it missed us."

"Shall I lay course direct to Cadiz, sir?"

"No. Stand off and on to the westward to clear the shoals hereabout, and reduce speed to five knots thru the night. What's that furthest light just awash to starboard?"

"Cape Trafalgar, sir," replied the navigator, now bending over the chart.

"Tell the deck to keep that in sight. Good-night."

Grindle had a cabin fitted for sea use communicating with the chart house, and, in accordance with his habit, when near shore, he threw himself on the berth therein without undressing. The glimpse of a coast light through a port jogged his memory as he lay dozing.

"Trafalgar," he thought. What a fight that was! The British came down in two columns—and the French were to leeward—as usual—and—— I wonder do their ghosts fight that battle over again when the day comes 'round."

And with this reflection he dropped asleep.

An instant later he leaped to his feet with every muscle of his body rigid and tense. For the fraction of a second the benumbed brain refused perception; then the ringing blare of the bugle calling "clear ship for action," the thunder of

hurrying steps, the strident commands, the blazing up of the electric lights in his cabin, and some one saying

"The enemy is in sight, sir!"

Instinct directed his rush for the bridge, up the ladder above the conning tower without a misstep, and left him breathlessly grasping the rail and staring at the little group of stern-faced men gathered around him. Then reason asserted itself.

"What does it mean?" he demanded.

Some one pointed, and his eyes followed the extended arm.

The day was just breaking. To landward, outlined in shadowy masses against the red sky appeared many vessels—a long line of them losing itself over the northern horizon, and all heading to the north. There were ships of many sizes, some lofty above the water with sails close hauled to the wind. Their flags could not be recognized because of the way the wind blew, and because they were full ten miles distant from the "Oklahoma." To seaward, there was still some haze now gathered into scattered fog banks, above which loomed more sails—great canvas pyramids bellied out by the breeze astern—and these were near enough to the battleship for the captain, following the pointing hand, to see flying over them the red cross of St. George.

Now and then as the fog banks parted, the high yellow hulls of the ships revealed themselves, showing tier above tier of guns. There were apparently two squadrons, in parallel, but irregular, columns, about a mile apart, both heading to the eastward, with the more southerly one somewhat in advance. Pitching deeply in the swell, they forged slowly but steadily toward the distant waiting line of vessels, which, as the sun rose higher, could be seen gradually curving into crescent form.

The "Oklahoma" had evidently been concealed by the fog from the nearest squadron of British ships, until she herself had discovered them. For it was not until after Captain Grindle had reached the bridge that they seemed to recognize her presence. As the haze cleared away, ship after ship became visible until fifteen were counted, the leader not more than two or three miles off the "Oklahoma's" bow. Then a great commotion among them followed. Signals were rapidly hoisted, whereupon every ship, save that which wore an admiral's flag, swung up into the wind and lay motionless with her main topsail to the mast, their battle line now converging to the direction in which the "Oklahoma" was steaming.

Grindle saw all this in bewilderment. Then he looked down upon his own decks, stripped of everything. He could feel the throb of his engines, hear the whirr of the dynamos and the swash of the water alongside as the ship moved slowly ahead, rolling slightly in the trough of the sea. Otherwise, silence; not even a sound to indicate that hundreds of men were below, eagerly waiting. And from the masts above him flew two great ensigns of the United States.

"Why is it? Why is it?" he asked again, this time with a ring of agony in his voice, for he knew that he saw without understanding, and he feared for his own mind.

A hand on his arm drew him away from the group, and he heard the voice of his second in command say:

"For God's sake, captain, pull yourself together. Don't flinch, man; in heaven's name, don't flinch!"

Grindle looked at him in still deeper amazement.

"But I don't understand it, Wilson, I——"

"You do," ground out the other, thru his teeth. "You do. You got the Commodore's order last night to cover Villeneuve."

"I got a wireless message to go to Cadiz."

"Well, Cadiz is over there with the French and Spanish fleets in front of it! Do you understand now?"

"No, I don't," repeated the captain, almost helplessly.

The younger officer beckoned to one of the group who stood curiously watching them.

"Doctor," he said, "it is my duty to ask you at once to state Captain Grindle's condition. If he is——" (the rest was in a quick whisper).

The surgeon nodded, and essayed to grasp Grindle's pulse, only to be pushed rudely aside.

"Stand back, sir! I am not ill! Answer me! Is the United States at war?"

"Yes," replied the surgeon.

"With what nation?"

"Below there! On the bridge!" The interrupting call came from the fire-control station far overhead. "The leading ship of the enemy is getting ready to fire!"

"Aye, aye!" shouted back Wilson; then rapidly to the surgeon, "Get him below, man! He's not sick—damn him! I'll take charge of this ship and fight her! This comes of——"

A puff of white smoke from the side of His Majesty's ship "Royal Sovereign," the sharp clang of the shot as it struck the turret of the "Oklahoma" and flew into fragments, and the headlong plunge of Wilson, dead, with his breast torn open by the pieces, came all at once.

Grindle's figure seemed to dilate. The color rose to his face, a grim smile played across his lips, and when he spoke it was simply:

"Gentlemen, to your stations!"

And with that he stepped to the entrance of the conning tower.

A moment after, the five great turrets of the "Oklahoma" turned and directed the muzzles of the huge twelve-inch guns toward the British fleet. The "Royal Sovereign" had filled away, and was now coming straight for the "Oklahoma" and entirely alone, as if the task of disposing of the audacious stranger who had ventured between the British lion and his prey was hers—and hers only. Suddenly she yawed and delivered her broadside squarely against the battleship, which had stopped to await the onslaught. The iron shot again flew into fragments or rebounded from the "Oklahoma's" armor. The battleship remained silent, and the "Royal Sovereign," after the great white smoke clouds had cleared, stood off and reloaded her guns. This time she decided to rake, and maneuvered for a position across the battleship's bows; a proceeding which Grindle did not oppose. Again came the thundering discharge of the "Royal Sovereign's" broadside, which, as before, clattered harmlessly on the "Oklahoma," which now, in answer to the signal sent by Grindle to her engine room, began to move ahead, first slowly, then faster, faster, and faster, and then her 20,000 tons of steel ripped thru the "Royal Sovereign" as easily as thru a fog wreath. The lofty masts came crashing down, the sails flattened on the water for a moment and disappeared, and in place of the proud three decker there floated astern of the "Oklahoma" a tangle of wreckage and rigging, some of which for a time fouled her port screw. That was all, save the drowning men clinging to whatever they could clutch.

Now Grindle, watching calmly thru the peepholes of his conning tower, said a few words to the quartermaster at the helm, and the battleship began her maneuver. With a wide sweep, she described a circle around the devoted fourteen, and before she closed it the thunder of a twelve-inch gun rose high above the ear-splitting racket. The shell struck the "Belle Isle," and tore the sides out of her, the decks literally leaping into the air, and the great fragments of steel hurtled over to the "Mars" and to the "Tonnant," and sank them both. The fire of the remaining ships slackened. The "Oklahoma," still circling, narrowed her orbit gradually, huddling the British ships into a confused mass—a very vortex of destruction—and into the midst of them she delivered now and then a bursting projectile, which burned them and rent them piecemeal.

Meanwhile the wind had driven all of the British vessels toward the French and Spanish line. The French, unable to account for the tremendous fight which seemed to be going on among their assailants, tacked and began to beat to windward, in order to get nearer; and they were soon followed by the Spanish ships. This brought about their speedy meeting with the northern British column, and thus it happened that while the "Oklahoma" was leisurely destroying one squadron of British vessels, the other squadron became hotly engaged with the French and Spanish fleets.

Grindle, in his conning tower, did not discover this until after resistance on the part of the ships which he was attacking had ceased; for the smoke was so dense that he could see nothing, and for some

time past he had been guided in delivering his own fire solely by the reports and flashes of the nearby guns. When these were silent, the roar of the distant broadsides asserted itself.

The "Oklahoma" sped rapidly out of the smoke cloud and then stopped, while Grindle, mounting to the bridge, gazed in astonishment at the scene. Ships wearing the tricolor of France, ships flaunting the red and yellow bars of Spain, and ships bearing aloft the red cross of England, were looked in inextricable confusion.

Soon the smaller vessels showing the Spanish colors began to drop out of the *melée*, disabled or on fire. Then came a heavy explosion, and then another.

"The two largest French ships have blown up, sir!" shouted an officer from the fire control station aloft.

"The British are getting the best of it," remarked the navigator, who was standing beside Grindle, somewhat anxiously.

A word to the helmsman headed the "Oklahoma" straight for the combatants. These, as if by some joint impulse, took the "Oklahoma" to be a common enemy, for the guns of not only the British, but also of the French and Spanish ships, were directed upon her, and the balls again began to patter like giant hail against her turrets.

Without discriminating English ships from French ships or French from Spanish, the "Oklahoma" returned five-inch shell in great bunches from her secondary battery, which smothered her antagonists in fire, until ship after ship shot up in flames, and their exploding magazines scattered them in blazing brands far over the ocean.

Suddenly out of the dense smoke which again thickly encompassed the "Oklahoma" came the bow of a great and lofty vessel. Something — some force he could not resist—made Grindle give the signal to cease firing, and he came to the entrance of the conning tower and watched this ship drift slowly toward him. Some one on her forecastle was waving a white flag, and so he came up on the bridge and walked over to that end of it which was nearest to her. As she approached, he saw two men standing apart from the rest, one a tall burly person, the other a slender man with his long hair in a queue and his right sleeve empty and pinned to his coat, the breast of which was covered with decorations; and he heard the smaller man say, taking the trumpet from the other's hand:

"Do you let me speak to him Hardy!" Then there came to Grindle a high voice calling:

"In God's name, who and what are you—and what is this thing you command?"

Grindle answered for his ship.

"A battleship of the United States!" repeated his questioner in even shriller tones of amazement; "of our late rebellious colonies, here, at Trafalgar, striving to destroy His Majesty's fleet—to snatch from my brows the laurels of the sea? Sir, finish your work! I have brought the 'Victory' within your danger, for she alone remains. Sink her, sir! and with her sink Nelson!"

Then the white flag vanished and other flags on the "Victory" blew out with the breeze, and Grindle somehow read from them, "England expects every man to do his duty"—and he looked up at his own colors, for which men die joyfully and without reminder, if so God will and he hailed back:

"Will you surrender?"

And Admiral Lord Nelson answered from his flagship:

"The day is yours, sir! The greatest sea battle of the age falls to you! Sir, I will not surrender! I have done my duty! Do yours!"

Then Grindle flashed the order to clear away a torpedo and to direct it on the "Victory." From far down below the water line came back the report that all was ready.

The captain of the "Oklahoma" poised his finger over the fatal button, a touch on which would release the deadly bolt, and hesitated. Then the stern mandate of the law inflicting disgraceful death upon the servant of the republic "who does not do his utmost to capture or destroy" burned in his brain. Facing the figure of the great Admiral he raised his cap high above his head in salute. Then he pressed firmly down upon the key—an instant of silence—a mighty roar, a great uprush of water—a shock which hurled him from his feet, and then——

* * * * * * *

"It has gone four bells, captain," said somebody. "We are just off the harbor, and it's a fine morning."

Grindle sat upon the edge of his berth and stared first at the midshipman of the watch who had called him, and then at his steward, who handed him his morning coffee.

"Very good, sir," he replied mechanically, not trusting himself to say anything else.

Lieutenant-Commander Wilson, at breakfast with him in the cabin, a couple of hours later, rallied him on his taciturnity.

"What's the matter with you, sir?" he laughingly demanded of Grindle. "Yesterday you were growling about those boiler tubes and berating the Admiral for sending us to sea with no spare ones to replace that leaky lot; and here he forwards to Cadiz no end of them, and the Consul has saved you even the trouble of entering the harbor by sending them off in a tug."

"I'm not bothering over the tubes," said Grindle, lighting a cigar and pushing the box to his companion. "Just listen to this."

Then he told his subordinate all that has already been set down, omitting, of course, the scene on the bridge preceding the killing of Wilson—an event which merely elicited a smile from that individual, with the remark that if he lived until a chunk of solid shot "got him" Methuselah would be nowhere; which was a safe prediction, seeing that, as projectiles, solid cannonballs are nowadays about as obsolete as crossbow quarrels.

"But, captain," added Wilson thoughtfully, "do you know that I believe that before another fifty years goes by, the men who follow us will have a ship which will make just as short work of the battleship fleet of today as you did last night of Nelson's three-deckers."

"Wilson," said his superior, "it isn't your business to make pictures. If you do, some day you'll act on them, and the country will be the worse for it."

"Won't you let a fellow have his dreams, sir?"

"Not where you are on the active list, with the best years of life ahead of you. When your work is over—as mine is—dream then if you like. Live in your dream as I did—ten thousand lives—for ten thousand lifetimes could not efface the memory, yes, the glory of it, for then," here the veteran's eyes flashed and a note of triumph rang in his voice, "then—*I defeated Nelson!*"

New York City.

Saturnalia

BY JUNE E. DOWNEY

Riot of sun and of blossoms,
(Heart o' me, flee them!)
Wilderness rampant with high weeds—
(Weeds? Yes, but see them!)
Thistles, the sting of whose fingers
(Nay, but I care not!)
Wields yet the royalest scepter:
(What shall I dare not?)
Red of the ragged tomato;
(Happy rapscallion!)
Blue flaunting banners of larkspur;
(Lordly battalion.)
Tangle of wild honeysuckle;
(Breath o' it, honey!)
Yellow blooms garish with gold dust;
(A fig for your money!)
Riot of butterflies whirling;
(Who is it that's doubting?)
Puffs of brown smoke o'er cleome;
(Wings of mine sprouting!)
Gilt wings that dip to the wine-vat;
(Plunge that's delirious!)
Scarlet spots, reeling with sunshine;
(Dost thou dare, Soul, be serious?)
Butterflies, tiny and azure,
(Think not of capture!)
Gray wings enfold them, they vanish;
(Oh, but the rapture!)
White wings innumerable whirling,
(Lovers, what madness!)
Midair to dance tarantella!
(Two by two, gladness!)

Laramie, Wyo.

HARRY H. KEMP.

The Story of a Young Poet

BY HARRY H. KEMP

[This article is written at our request. Mr. Kemp we knew first as a boy tramp whose passion was to read and write poetry. Some verses came under our eyes, and we urged him to seek an education. He went to Mount Hermon School at Northfield, Mass., earning his own living, and from there tramped and beat his way to the State University at Lawrence, Kan., where he has pursued special courses in science and classic languages for three years. He has published verses in various other magazines, as well as in THE INDEPENDENT. We believe he has in him the enthusiasm and ambition that give promise of a real poetic career. From unpublished verses by him in our hands we select the following as illustrating the scope of his aims and present accomplishment. They illustrate the canons of art he has indicated below as guiding him.—EDITOR.]

WHEN I was twelve years of age and a factory boy I had my attention first directed toward poetry by coming across a copy of Byron which belonged to my father. My father was a foreman in the factory and I worked in his department. I had left school because its routine was too dull and unimaginative and because they compelled me to do commercial problems in arithmetic.

From my twelfth to my sixteenth year my life was a varied one; part of that time I worked in the factory and studied evenings, but most of it I spent tramping about the country, always carrying one or two books with me. It was in this way, beneath trees and along grassy road-

sides, that I studied the elements of Greek and Latin.

In my sixteenth year came what I consider a genuine conversion to poetry, and it was as real a conversion as any which ever took hold of a worshiper at an old-fashioned revival, for it changed the course of my life, made me see the world as thru other eyes, and gave me a definite purpose in life. It came about thru reading Keats. The daily miracle and wonder of things came upon me as a sunrise, and then for the first time I realized what poetry meant; I learnt the value of the adequate adjective; the power of a perfect technique. "The aching passion for the perfect word" became mine.

But still my mind lacked somewhat. I had not as yet gotten the right turn to my poetic imagination. I loved too much to haunt the dead twilights and ruined castles of the past. I dallied with the olden gods and walked as in a dream, ignoring the splendid age I lived in.

But I now began to yearn for a regular education; I saw that to be a poet of any spiritual dimension it was necessary to have the culture and thought of the ages at one's disposal, and that the best place to get started toward such knowledge, systematically and with the least waste of time, was at college. So I persuaded my father to send me to high school, where I became a special student. But here I could not endure the teaching in English; they required me to write like Addison and a score of other dead and innocuous worthies, and I insisted on writing like myself and none other. I saw that style could hardly be taught, that it was but the reflex of the writer's spiritual temperament.

While I was having these academic difficulties there again swept over me the desire to travel and adventure. So I put my schooling by, my aims forgotten for a while, and sailed as cabin boy on the German bark "Pestalozzi" to Sydney, Australia. Then I beat, tramped and worked my way around the world, visiting China, the Philippines and Japan, and finally landing at San Francisco, whence, after walking to Los Angeles, I rode freights back East.

It was to this trip that I owed my final and sanest impulse as regards poetry. For the first time I realized the magnificence, the glory, the poetry of modern life. I was at least freed from my slavery to the Greek gods and myths.

And now my sole ambition is to interpret the age I live in to the best of my ability; for poetry is not a criticism, it is an interpretation, a mirroring forth of life. I think I have found myself. I am glad that I have tramped and have knocked about the world, for only thus could I have had real contact with life. I believe that I am in the midst of a great literary movement, one which will convert poets and writers to the interpretation and picturing forth for the eyes of posterity the age they live in. What will the future reader think when he reads the imaginative literature of today and finds that the poets have nearly all ignored our feats in engineering, the struggles between the classes, the spectroscope, etc? Yes, nowadays the writer of special articles and the average newspaper man are higher up on Parnassus than the majority of poets, who are content to embroider conventional and pretty themes with word-frills and laces, but with no passion and sincerity back of the words. And sincerity is, after all, the surest foundation for art.

What an abundance of poetic material this age affords to the poet who has awakened to its poetry! What a field modern science spreads before one, not its formulæ, its tables, its barbaric, hybrid Latin-Greek jargon, but its visual reaches and the vast vistas it affords the eye of the imagination. For science must, as all other things, be transmuted into poetry, must take on the clothing of the poetic imagination. All things to become poetic must go thru the process of the poet's mind, the spear as well as the machine gun, the war galley as well as the submarine, excepting that the spear and galley have already received this poetic treatment, so to speak, while the machine gun and submarine have not yet been clothed in the poetic glamour, and are as yet the raw material for poetry; hence lazy poets, book poets, can easily convey ("convey the wisest call") spears and chariots from the earlier poetry into their verse. It is already prepared for them; a mistake can hardly be made; and so the magnificient modern inventions are passed by. But we no

longer want the poetry of the past; that has been given us once and for all; the poetry of the present and of the future is what we want.

And last and most important of all to poets of today should be the great moral and humanitarian renaissance which is now taking place. The great tides of an uncharted ocean are now bearing out into illimitable horizons the nations of the world; the old moorings are being cut loose, and some despair at the change. But the larger souls see a new dawn and another day not far ahead; the true poet should be the herald of this, should be the star shining on the forefront of advancing day. A renaissance did I call this movement? It is to be more than a medieval renaissance which was a rebirth, a revival, a digging up again of buried beauty and learning. This is to be a new birth rather than a rebirth, and one not along esthetic lines merely, but along all lines. Mainly, it will be industrial and humanitarian. The great undertrampled masses of the world are coming to their own, nor will art and literature, ever again have to flatter kings and wealthy men and established ideas for a mere parasitic existence; they will in the future be encouraged in healthy independence by the direct patronage of a people. I hear the onward march of humanity like the tread of ten thousand armies. And are there no poets who will sing their battle hymns for them,

Their feet on living earth,
Beneath the living skies,
With sunrise in their souls
And morning in their eyes?

As for the oft-repeated statement that poetry has no longer any power to grip the heart of the world, it is not true that the love of poetry has been lost. If so, the fault lies with the poets, not with the readers, as he who has anything to say bearing on vital problems will find a larger audience than was ever found before.

Let the poets awake to the glory of the here and now, let them no longer sigh for the romance of the past, but accept the nobler romance of the present. The world is growing better, not worse, and it is more worthy of a poet's songs today than it ever was.

The Stellar Outlook

Shuttled athwart with dark and dawn,
This world, a crystal sphere,
Across some other planet's sky
Swings luminous and clear.

And many a Martian maid, forlorn,
And lover in despair,
Says "Would to God my lot were cast
On yonder planet, fair."

And, after battle, dying men
Yearn upward to our star
And whisper "Thither would I go,
For there God's glories are."

And poets sing, "Tho here base ways
And uses vile perdure,
On yonder star bright seraphs dwell,
And every heart is pure."

And many a young reformer, tired
Of demagogic tricks,
Cries, "Would I dwelt out yon, for there
They have no politics."

Poor fools! We are the same as they
Who dream this earthen clod
Is as a flushed ethereal rose,
Brimmed with the dew of God.

Stay! Mayhap they are right, I wrong—
Yea! Can God's wonders be
Around us, which we have nor ears
To hear, nor eyes to see?

And we who crown their distant star
With fancy's diadem—
Our blindness to the heavenly truth,
Perhaps, we share with them?

But, ne'ertheless, let this console
The pessimistic view—
To many a distant star-man's gaze
We shine in heaven, too!

The Sculptor

With hair tost back in many a tangled lock,
In the inevitable artist's frock,
The human soul creative, rapt he stands
And gives birth to his visions with his hands;
A deft touch here, a rapid finger there,
Lays some rich unsuspected beauty bare;
From formless block a rounded limb takes shape;
From chaos order drags its slow escape;
The solid marble to the vision gives,
And lo! the statue all but breathes and lives!

Nor he alone creates: the engineers
Who baffle many seas with moles and piers,
Who fling from ridge to dizzy mountain ridge
The trestle and the slender-cabled bridge,
And those betwixt the stones of Labor ground
Who dig and delve; for whoso plan and found
The cities of the world—these also know
The lust to do and the creative throe.

Meseems it renders God great joy to see
Hands striving after His creatively,
Yea, that He even left a part undone
That we might finish that by Him begun
And help Him with our efforts to erect
His House, as masons help an architect.

If this be true, that He of us hath need,
Oh, then are we the sons of God, indeed.

The Song of Israfel

The poet-seraph Israfel, chief player on the lyre—
I dreamed he came to me last night with words like leaping fire;
Then time became eternity, then grew my vision whole;
I took his hand; he led me forth to God, a naked soul.
I saw a boundless universe where worlds of souls do find
Freedom to bend and guide their growth as after God's own mind.
The frightful night flashed full of suns as thick as sparks when fall
A city's roofs in, beam on beam, wall upon crashing wall—
Around them little jeweled worlds like emerald insects' drove
Which spread and close in phalanx small within some shady grove.
From heaven's awful parapets I viewed the mighty scene
While rose the seraph's silvern voice, majestic and serene:
"God's eye alone can count these suns—He knows nor space nor bound—
And tributary worlds, alive with beings, gird them round;
And thru all space, from deep to deep, above the blinded throng,
Great poets coin their labored thought into a golden song;
And sculptors chip the stubborn stone; and artists dream, and dare
To give the inner vision birth with colors rich and rare;
Musicians woo the infinite, half into finite clasp,
As children reach for butterflies just poised beyond their grasp.
Five peep-holes for the soul has earth; . . . but other worlds have more,
Or not as many—mayhap two, or three, or half a score.
Some stellar eyes more colors see where larger spectrums thrill;
In some worlds music's silver sighs a wider gamut fill:
And thus unnumbered lives build souls, a million earths are trod
By living things which, in their way, have their dim dream of God.
Nor reach ye aught beyond their grasp. Your eyes, too, vague and dim,
Clutch at the rainbow of His face and fumble after Him.
Strange bodies souls inhabit sure round Algol's sullen suns
Where thru tremendous-archèd skies the lightning shoots and runs
And Alpha of the Centaur thralls what worlds bizarre and fair?
And who can limn the hidden life which circles 'round Altair?
And earths have perished, on which God had builded up the soul;
While more earths thru eternity must seek the selfsame goal."
No more I heard. The crystal globe of speech unuttered broke.
The vision faded from my brain and in the night I woke;
But not in vain the Wonder came: God wot, my soul had heard
The song that soars, the song that leaps beyond the written word.

Lynch-Law

THE deed he had done was a terrible one
And the wrath-roused countryside,
Pale, silent bands of resolute men,
Scoured every wood and swamp and glen
Where a desperate man might hide;

And at last they struck his straggling trail
By the shores of a reedy lake;
They followed with bloodhounds all night long,
They ran him down like a snake,
And dragged him forth when the dawn was red
From the tangled canes of a brake.

They pinioned his arms behind his back,
With buffets his head was bowed,
And the mob rushed roaring at his side
Like a storm-blown thunder cloud.

And the victim shook like grass in a brook—
His soul was shaken with dread—
For his was a deed for which men swing,
And swing by the neck till dead.

They hurried him on in a farmer's cart
Where the road wound rough and brown, . . .
And silence fell like a hush from hell
Over the outraged town

As the populace thronged the paven streets,
With never a word to say,
To behold a mob of maddened men
Take another man's life away.

They dragged the victim across the park,
They threw him down on the square;
They noosed the halter around his neck,
Muscular, swart, and bare—
And a hundred men rushed back with the rope
And he shot straight up in the air.

All day it swung from the telegraph pole,
In the eyes of an angry town;
As tho the body still held the soul,
All day it swayed from the telegraph pole,
But at even they cut it down.

For the deed he had done was a terrible one,
A deed without a name,
For which men mete a winding sheet—
A winding sheet of flame.

So they let it swing, the horrible thing,
In the eyes of the sullen town,
Till the sheriff came with tardy shame
At eve, and cut it down.

The President

HUNTER and soldier stalwart to the core,
Statesman and Writer versed in that rare art
Which feels with mind and thinks with all the heart;
Not his the craven biding safe ashore
When the loosed whirlwinds down the heavens roar,
But his the outward sailing with a chart
Clear-drawn and open, free, in every part,
From hypocritic wile and quibbling lore.

What tho he sometimes fail to round his plan?
He who makes no mistakes does naught beside;
Life is too short to wait for wind and tide;
God help this man, who does the best he can,
In spite of those who strive to keep him there,
A sawdust puppet in a gilded chair.

Unrest

BY all the inconstant gods of change
I cannot to one land belong;
My heart is full of rainbow song
And my head packt with visions strange!
Lord, when I die, cramp my soul's range
Back to earth-measure, eons long.
As butterfly in dalliance
Then shall my soul forever flit
From India to vineyarded France,
O'er forest mead and heather dance,
And never once grow tired of it.

With Psyche wings I'll travel far,
To lands swept clear of fog and mist,
Where the eternal verities are
Like sun-clad dwellers of a star,
Or virgins with white brows unkist.

I thank thee, Lord, for daily change;
What wondrous things to man belong!
Thankful I am for visions strange,
And my heart full of rainbow song!

UNIVERSITY OF KANSAS, LAWRENCE, KAN.

Literature

Books on Palestine

It is often confidently asserted that the present generation is not so familiar with the Bible as were its forbears, and college professors have adduced, in proof of this assertion, numerous and melancholy examples from examination papers in English of total ignorance on the part of the examined of the simplest allusions to Bible narratives and Bible words. We venture to think that there is much the same ignorance with regard to all the English classics, except only those portions which have been directly studied by the student in school in preparation for college, or in college itself, and that the lack of knowledge of the Bible in the college world is not due only and perhaps not chiefly to a falling off in interest in the Bible as such, but to a change in the reading habits of the people, and to a change in the character of the collegeable classes (if we may coin such an adjective), due to the increase in the number of persons possessing worldly means sufficient to secure a college education. But if the present generation of college men is not as familiar as its predecessors with the text of the Bible, at least the community at large would be better informed about the Bible today than ever before. Certainly the output of books on Bible themes—Palestinian life, geography, customs, folklore, archeology and the like—in the last few years has been very large, and the publication of such books would seem to show that there is a demand on the part of a considerable public for literature on these topics.

The two books which have called out these reflections and which now lie before us, are entirely different in character. One of them, a quiet, modest looking little book, almost puritanical in garb, published by the Pilgrim Press, deals with the peasantry of Palestine.[1] The author of this work, the Rev. Elihu E. Grant, now associate professor in the Department of Biblical Learning in Smith College, was, for some three years, the head of the Friends' School in Ramallah, a village about ten miles north of Jerusalem, from which, as a center, he had also the oversight of educational and religious work in several smaller villages, in the same general neighborhood, the ancient territory of Bethel. He observed carefully and minutely the customs and the language of the people of the land, noted their sayings, their dress, their games, their songs, their methods of building, spinning, weaving, baking, their marriage and burial customs, their religious practices and expressions, feasts, fasts, superstitious usages; in fact, everything that constitutes the everyday life of the people came under his observation and has been jotted down in this book with a literary felicity which makes it both pleasing and profitable reading. Moreover, he used his camera freely and his pictures both illustrate and elucidate the text. The book is provided, besides the general index, with an index of passages of scripture cited, while further footnotes to the pages contain references to the scripture illuminated by the text. It constitutes a really valuable addition to the literature on Palestine, and the Bible scholar will find it helpful in the study and the classroom. It is the more welcome because conditions are rapidly changing in Palestine, and before many years many of the customs and usages, the dress, utensils, and the like, which have been handed down from time immemorial and belong as much to Bible times as to the present day, will have been superseded in the rapid advance of modern Occidental civilization.

In striking contrast with this modest little book is Dr. Merrill's stately volume, archeological and historical in character, on *Ancient Jerusalem*.[2] Dr. Merrill has been acquainted with the country since 1869, first as explorer and then as consul, having served in the latter capacity at Jerusalem some sixteen years in all.

[1] The Peasantry of Palestine. Life, Manners and Customs of the Village. *By Rev. Elihu E. Grant, B. D., Ph. D.* Boston: Pilgrim Press. Pp. 255. $1.50.

[2] Ancient Jerusalem. *By Dr. Selah Merrill.* Fleming H. Revell Co. Pp. 419. $6 net.

This volume is concerned entirely with his observations in that city, and contains his views regarding the location of the wall, the Holy Sepulcher, the tombs of the kings, etc. Toward the higher criticism and, to some extent, toward scientific archeology, Dr. Merrill maintains the hostile attitude of an earlier generation. Contrary to the generally accepted view of scholars of today, he holds that the original city of Jerusalem, the City of David, was not located on the Temple Hill and the continuation of that hill southward, known as Ophel, but to the northwest of this hill, in the neighborhood of the present Church of the Holy Sepulcher. The western hill, now commonly called Zion, was divided from the Temple Hill, as will be remembered, by the formerly deep valley of the Tyropoeon. This valley, according to Dr. Merrill, divided into two branches opposite the Temple, one extending northward and the other westward. The latter valley, following approximately the line of the present David Street, separated Zion from a smaller hill northward. This latter hill, at the forks of the Tyropoeon Valley, was the original Jerusalem of the Jebusites and of David. Here stood David's Millo, and here were the tombs of David and a number of his successors, which Dr. Merrill identified with the tombs found beneath the present Church of the Holy Sepulcher. Here also at a later date was the Acra, which played so important a part in the contests between the Jews and the Antiochians. Once a prominent hill, overlooking the Temple, the Acra, after its capture by the Maccabees, was cut down, hence its present relative insignificance.

One of the considerations which has led modern scholars to identify Ophel with the ancient Jerusalem is the proximity to it of the Virgin's Well, the only spring known today in the neighborhood of Jerusalem, and which has been generally identified with Gihon of the Old Testament. Dr. Merrill scouts this identification and supposes Gihon to have been the present Birket-Mamilla, to the northwest of modern Jerusalem. In his discussion of the topography Dr. Merrill starts from Josephus's description of the city at the time of the siege by Titus. More than half the volume is occupied with the discussion of the location of the walls, fortresses, palaces, etc., mentioned in Josephus.

"CHINANTEC WEAVING; SAN JUAN ZAUTLA."
In Starr's 'In Indian Mexico."

Few scholars probably will accept Dr. Merrill's general conclusions, and in details he contributes little to our knowledge of Jerusalem not already available in other volumes. To those who are not scholars, the book is not likely to appeal, for, considered in itself, it cannot be said to be particularly interesting. It is abundantly provided with maps of Jerusalem, many of which are so nearly identical that it requires rather careful examination to ascertain wherein they

differ. There are also a number of photographic reproductions, fragments of walls and various localities in and about the city. The book is handsomely published, with broad margins, short chapters and special second headings in the margins to facilitate reference.

The Real Mexicans

Most of the numerous books and magazine articles about Mexico and Mexicans deal mainly or entirely with the larger towns or places on and near the railroad, and they give us a picture of the upper-class Mexican of more or less pure Spanish blood and of the half-caste people of the plateau generally. Here and there they may bring us face to face with purely Mexican customs or institutions, but usually these are set forth in a way that may well leave the reader in a confused state, since the author has no clear comprehension of the history of institutions or of racial conditions in Mexico. If American readers think of Mexico as a sort of helter-skelter combination of progress and barbarism, and all Mexicans are jumbled in their minds under such a conception, it is no wonder.

In a new book* by Professor Starr, of Chicago, the line is for once clearly drawn, the author confining himself strictly to the Indian communities of Central and Southern Mexico, among whom he labored for a short time each year from 1896 to 1901. The results of his scientific work among them have some time since been made known to the technical world in a dozen papers, monographs and albums of views. This book is put forth as a popular narrative of his experiences in these (for the most part) out-of-the-way places. His publishers, however, hardly have the right to advertise it on the cover as "the first book describing that interesting region [Southern Mexico]."

The book promises, in fact, from its bulk and the scope of the author's experiences, much more than it fulfills. It is but a scrappy compilation from notebooks of hasty trips—far too hasty, one would say, for the best scientific work. The author jumps from one chapter to another, frequently at the same time from one year to another, with the barest phrases of introduction, or no explanation at all, and gives us a succession of details about his own experiences, important and unimportant, interesting and uninteresting, in notebook style. His troubles with local officials and natives are constantly to the front, and raise doubts as to his apparent conviction that he is especially qualified to deal with Mexicans, not to say also doubts as to the soundness of scientific work done under such circumstances. To cap the climax, no map is provided, for a narrative of "unknown" regions, and one so disconnected as is this.

In short, the value of the book is not great. Had more pains been taken in preparing it, had we been given more of the author's summaries of observation with a notebook narrative much more condensed than this, the material at hand would have provided a quite valuable book of about half this size, which at the same time would have been far more readable.

*In Indian Mexico. A Narrative of Travel and Labor. *By Frederick Starr.* Chicago: Forbes & Co., 1908. Pp. xii, 425. $5.00.

Narcissus and Other Poems. By Grace Denis Litchfield. 16mo, pp. 60. New York: G. P. Putnam's Sons. $1.00.

Two-thirds of the volume is given to the story, in rimed pentameters, of the Greek youth who fell in love with his image in a lake. Those classic myths have a fascination we cannot escape, and have been repeated by every poet from Ovid to Swinburne, and will be till rimesters rime no more. Miss Litchfield gave Narcissus a more spiritual passion than did the old myth, but still he fades languorously away into the flower which

> "bearing at its heart a burning flame,
> Grew, and was called thenceforward by his name."

Included is a very pretty lyric:

> "'Tis spring-time, 'tis wing-time."

The shorter poems are from The Independent and other magazines, which must vouch for our judgment of their worth. While we regret to see such belated spelling as "arboured," "jewelled" and "height" on the three first pages, we are relieved to find "whir" and "fixt" in the later pages.

To the Top of the Continent. By Frederick A. Cook. New York: Doubleday, Page & Co. $2.50.

The story of the ascent of Mount McKinley, the highest peak of the North American continent, is a thrilling narrative of adventure and hardship. The first expedition in 1903 only tested and confirmed the difficulties of conquering this lofty summit. Mount McKinley, situated far inland, in the heart of a trackless and desolate country, rises to a hight of 20,930 feet above the sea. To reach the foot alone required months of toil and suffering. The party met with all the trials of arctic explorers and endured the discomfiture of Alpine climbers in rare-

TOTEM POLES, SITKA.
From Cook's "To the Top of the Continent."

fied atmospheres. The first expedition reached a hight of but 11,000 feet, where they were stopped by unscalable cliffs. The expedition of 1906, equipped with a forty-foot motor boat to carry supplies to the base of the mountain, made a start early in the summer. It was not until September that the party started from the last camp, two thousand feet below the summit, for the final struggle. The temperature was fifteen degrees below zero, and the atmosphere so rarefied that not over one hundred feet could be covered without falling exhausted in the snow. The last stretch to the top was accomplished with a rest between every twenty steps. The conquerors were rewarded by a magnificent spectacle, the southern part of Alaska, from the Yukon to the Pacific, lying at their feet. An American flag with a record of the ascent was left in a protected nook on the summit. The appendix contains some very interesting information about the natural resources of Alaska. The book is beautifully illustrated, and if a folding map in colors had been added the volume would be beyond reproach.

Victoria the Woman. By Frank Hird. New York: D. Appleton & Co. Pp. xiii, 410. $2.50.

In spite of the recent publication of the three large volumes of Queen Victoria's letters, there is a distinct place for Mr. Hird's little book on *Victoria the Woman*. The appeal it makes is to the large constituency who admire the great Queen, while they care nothing for English politics. Mr. Hird has based his volume very largely on the "Letters," which were published last year, and the greater part of his work is concerned with the period from the Queen's accession to the death of the Prince Consort, which is covered by the "Letters." Mr. Hird gives, however, three chapters to the forty years of the Queen's widowhood; and in these chapters, as well as in numerous details in the earlier portion of the book, he supplements on the domestic and personal sides of the Queen's character the full revelations of the "Letters." The sweet "commonness" of the Queen's nature is amply brought out by Mr. Hird —that touch of nature which made her so closely akin to the mass of her people; and along with this "commonness" the other characteristic which gained her the esteem of great and small—her absolute sincerity—the utter absence of all pretense or hypocrisy. These qualities it was, far more than her able grasp of European politics or her indefatigable diligence in the fulfillment of her duties as sovereign, which endeared her to the hearts of the English people, and set her throne on a foundation of loyalty such as no sovereign before or since her reign has been able to boast as the basis of his rule.

The Historical Evidence for the Resurrection of Jesus Christ. By Kirsopp Lake, M. A., New York: G. P. Putnam's Sons. $1.50.

The habit of reading the four Gospels promiscuously without careful observance of distinctions between them, has kept most people from noticing that the accounts of the resurrection differ from one another in important particulars. It surely cannot be wicked to observe this fact, nor to study it in a calm and reverential spirit, with endeavor to ascertain in how far the narratives are dependent on one another, and just what one should accept as the result of their united testimony. This has been done with much ability and thoroness by Professor Lake, who has sought diligently to arrive at the earliest tradition and the actual facts upon which it is based. The results may appear radical, but they are at least far more conservative than the Biblical studies put forth by Van Manen, Professor Lake's predecessor at the University of Leiden, who denied the Pauline authorship of the major portion of the Epistles. In the present study Paul's account of the resurrection in I Corinthians is accorded full credence, and among the Gospels preference is accorded to the narrative in Mark. Every passage in the New Testament referring to the resurrection is examined carefully, in the temper of a careful historian anxious to arrive at the truth. One need not agree with all the results of Professor Lake to derive much profit from his investigations.

Confessio Medici. By the writer of "The Young People." New York: The Macmillan Co.

The anonymous author of *Confessio Medici,* who is reported to be Dr. Stephen Paget, begins his book with the artless confession that he has stolen his title—from Sir Thomas Browne and from Gower. The "confessio" of this physician is no confession of sins, but, rather, of faith. The volume is, apparently, a series of lectures to London medical students, upon the higher aspects of their chosen profession; it is agreeably free from technicalities, and it takes Stevenson's view of the calling:

"The physician is the flower (such as it is) of our civilization; and when that stage of man is done with, and only remembered to be marveled at in history, he will be thought to have shared as little as any in the defects of the period, and most notably exhibited the virtues of the race. . . . Let other young men write lurid little books, and tear the veil from the obvious, and be proud of that achievement; what are they to him who entertains daily, as a matter of course, both Hell and Heaven?"

We have all seen the transformation of young doctors who, very often, change with seeming suddenness from somewhat hard, coarse, skeptical medical students into the broader and gentler men in active practice. Some one asked a physician of this nobler sort: "How do you preserve your faith in human nature? You see the wrong side," and the answer was: "I only regret that every one is not privileged, as I am, to see the patience and courage, the love and untiring devotion of which human nature is capable in the presence of pain and of death." On the side of practical ethics our physician reasons wisely, but his tilts at metaphysics are not so happy. He serves the "God of Things as They Are," and he is not equal to the demolishment of the materalist which he attempts; like many another philosopher, his conclusions are often true, where his reasoned argument is fallacious, and it would be safer as well as more interesting to act the oracle and just tell us what life has taught him. We congratulate him upon having a faith to confess. after his long experience of life's sterner side and of death's mystery—but let him not trouble his head about Haeckel!

Bahama Bill. By T. Jenkins Hains. Boston: L. C. Page & Co. $1.50.

Mr. Hains has struck a rich vein in delving into the everyday life of the sponge fishers, wharf rats and longshoremen of the Florida Keys. The central figure around which the stories are woven is Bahama Bill, a gigantic negro, six feet three inches in hight, and with a chest measurement of forty-eight inches. He can stay under water three minutes, and work in a depth of four fathoms with amazing force. A sponge fisher by trade, he takes up the more profitable and exciting pursuit of wrecking, and when wind and water fail to bring sufficient business, he swims long distances under water to loosen a vessel's

seams. When the craft starts to sink the wrecker is conveniently near for a large share in the salvage. The minor characters are well drawn, and the author shows versatility in preventing the stories from running to a monotone.

Literary Notes

....The *Church Standard,* of Philadelphia, established in 1830, and one of the oldest religious weeklies in America, has united with *The Churchman,* of New York. Its last issue appeared June 27th.

....That the interest in creeds and confessions has not altogether perished is indicated by a careful *History and Exposition of the Twenty-five Articles of Religion of the Methodist Episcopal Church,* by Rev. Henry Wheeler. (Eaton & Mains, $2.00.) The author expounds, but does not criticise, and any good Methodist who is content to believe what his Church believes will find his doctrine plainly defined in this volume.

....In course of the collection, verification and transcription of the documents comprised in the series, "The Philippine Islands: 1493-1898," Dr. J. A. Robertson has acquired an unequaled knowledge of the contents of the libraries of the world on the subject. This information he has now made public in a *Bibliography of the Philippine Islands, Printed and Manuscript,* printed by A. H. Clark Co., Cleveland, in a limited edition of 150 copies at $10.

....Especially timely in these days of "optimistic clubs" is Dr. Thomas R. Slicer's *Way to Happiness* (Macmillan, $1.25). Wise and healthful common sense characterizes the author's treatment of "The Way of the Stoic," "The Way of the Epicurean," "Happiness by Inspiration,' "Happiness at Home," and "Happiness by Liberty." Dr. Slicer treats happiness as a duty, "necessary to the complete integrity and grasp of the human mind," not an accident of circumstance or an element of temperament, but far above all accidents one of the absolute necessities of our earthly life.

....The amateur actor, whether outside or inside of school or college, is always at a loss for suitable plays. The catalogs issued by publishers are not systematically arranged, and most bibliographies on the drama are designed for the student. But in *The Select List of Plays,* compiled and published by Elizabeth A. McFadden and Lilian E. Davis, Cincinnati, the design is solely for the amateur's benefit. Not only are plays for all occasions recommended, suitable for children as well as grown people, but the publishers and, in many cases, the prices are indicated in addition. The volume will prove surviceable, and its practical possibilities have been guaranteed by the professor of elocution in Smith College, Miss Ludella L. Peck.

Pebbles

IN the parlor there were three:
Girl, the parlor lamp and he.
Two is company, no doubt;
That is why the lamp went out.
—*Princeton Tiger.*

SMART young man—You seem to be staring at me pretty hard. Do I remind you of any one?

Rustic old party—Yes; you remind me of an aunt of mine, only she's got a leetle more mustache than you have.—*Pearson's Weekly.*

A WOMAN on the train entering Grand Rapids asked the conductor how long the cars stopped at Union Station.

He replied: "Madam, we stop just four minutes, from two to two to two two."

The woman turned to her companion and said: "I wonder if he thinks he's the whistle on the engine."—*Outdoor Life.*

THE following conversation is said to have taken place in a Boston elevator:

Old Lady—Don't you ever feel sick going up and down in the elevator all day?

Elevator Boy—Yes'm.

Old Lady—Is it the motion of going down?

Elevator Boy—No'm.

Old Lady—The motion going up?

Elevator Boy—No'm.

Old Lady—The stopping?

Elevator Boy—No'm.

Old Lady—What is it, then?

Elevator Boy—The questions.—*The Watchword.*

"YES, I shall probably go to some summer resort when I get my two weeks off," said the young man in the music store, "but there will be no flirtations for me this time. You know I can't look upon them as most young men do. I am in too much earnest."

"Well, what about last summer?" was asked.

"I met a charming girl, sir, and we at once began a flirtation. That is, she did. On my part I was head over heels in love at once. I held her hand. I whispered words of love into her pink ear. We sat in the grotto and we rowed upon the lake. We sat in the same hammock and waded in the same brooks. At the end of a week I coaxed her to say that my love was returned. Happy? Why, I walked on air! I wouldn't have traded places with a king."

"And then what?"

"Then we were engaged; but it was agreed that we would keep it secret until my salary was raised to $15 per. Well do I remember that last evening. It was as near Paradise as I ever expected to get. We vowed that nothing but death should separate us.

"At the end of a week I called at her father's house in town. I flew there on wings of love. I dashed up the steps and rang the bell. My darling opened the door herself and —and——"

"And she rushed into your arms?"

"Alas, no. She looked at me for a moment, and then coldly and calmly said:

"'We never buy our electric mantles of agents. Good day!'"—*Brooklyn Citizen.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

THE Semi-Annual Index of THE INDEPENDENT is now ready and will be sent free to any one who notifies us that he wants a copy. Those who return to us the twenty-six issues of the magazine will have the index bound in the volume.

Grover Cleveland

GROVER CLEVELAND had the good fortune to be three times nominated for the Presidency and twice to be elected. We do not mean to claim that he was one of the greatest men the country has produced, for we do not think he was; but he was one of those many citizens of superior ability who have measured fully up to their opportunities, having taken them as they came. When General Kossuth was in this country, in 1852, pleading the cause of Hungary, begging our nation to seize this opportunity to help a people struggling for freedom, in one of those wonderfully eloquent addresses the orator, who had acquired his extraordinary command of English by studying Shakespeare in prison, stumbled into an expression more vigorous than literary when he begged his hearers to "seize the occasion by the—the—*front-hair.*" Cleveland always remembered that, as an old Latin poet tells us, "Opportunity wears a forelock, but the back of her head is bald."

Mr. Everett P. Wheeler tells our readers what were the great achievements of Mr. Cleveland as a public man; and they were great. We venture the untimely merit of praising him for his victory over himself, altho we remember how Secretary Taft has been blamed for calling attention to the virtue of self-conquest achieved by General Grant.

Mr. Cleveland's earlier life in Buffalo, and his association with merry companions, made it necessary to excuse and defend him. But if he had been something of a Prince Hal, when he became the servant of the people he lived worthily in the public eye. The companions of his youth complained that he slighted and forgot them. It was probably as well. President Roosevelt pays particular attention to the friends of his undistinguished days; but no stain ever attached in rumor to those companions or those days. He was no Prince Hal.

It must have been a great resolve which Grover Cleveland took when he was chosen Sheriff, and then Mayor, and again Governor, and so soon President. It was the resolve to do his full duty honestly for the people, and not for low partisan or personal success. Henceforth no stain was to attach to him, no aim lower than patriotism to control him. He had had experience enough of low ways in politics to despise and reject them. It was a day when the reform of the civil service, as against the spoils system of Andrew Jackson, was much urged, and as Governor and President he was the greatest champion the good cause has ever gained. Perhaps this will be his chief claim for fame, even greater than his opposition to the silver craze and his defense of honest money.

The rise of Grover Cleveland was almost meteoric. Nobody out of his own city had heard of him when, in 1881, he was elected Mayor of Buffalo, and nobody would ever have heard of him again if he had not used the opportunity which others had abused, and vetoed corrupt appropriations. That made him Governor of New York the next year, and his similar honest course as Governor elected him within two years as President of

the United States. This is nothing less than astounding, from a commonplace lawyer in three years to be President of the nation. It was extraordinary opportunity, extraordinarily well improved. It does not mean that he was a very great man, certainly not brilliant, but he had the moral courage and sanity to take the honest, straightforward course, after full, deliberate consideration, without regard to immediate political effects. The people said, "There is an honest man," and they chose the honest man rather than the man of vastly greater brilliancy and ability and political experience. His career is evidence that the people at heart put character before shrewd intellect. It is no evidence that such success may come to any one else of equal ability and honesty, for a thousand times has that failed; but it does show what are the opportunities which may come to a man, and which, courageously improved, may lead to the highest distinction.

Altho not a literary man, in his somewhat ponderous way he hit on some phrases that have caught the public ear and become part of the common stock of the language. They mostly had occasion in the discussion of the civil service reform. It was he who told us that "Public office is a public trust"; who resented the "pernicious activity" of officials in the public service, and denounced them as "offensive partisans." It was as a practical statesman that he declared that "it is a condition that confronts us, not a theory." The expressions "ghoulish glee" and "innocuous desuetude" were his; but nothing better indicated his political doctrine than his utterance that "party honesty is party expediency." It was that principle which gave him his prominence and honor. They say that he lacked tact, that he broke up his party; if he did, his party returned to him and again made him President after wandering far away. He had bitter enemies in his party, but that fact gave occasion for the *bon mot* at the Democratic convention: "We love him for the enemies he has made."

So we do not eulogize Cleveland as one of the greatest of American statesmen, nor are we oblivious of his personal weaknesses; but as a public man he would allow no taint to attach to his service of the State. His standard was the highest, and he lived long enough to attain the credit of an honest man and a sage.

Republican Politics

Republicans must admit that a part of Mr. Bryan's criticism of their platform is just. It was a retreat not only to say nothing about publicity for campaign funds in the committee's report, but even to reject afterward, by a vote of 880 to 94, a reasonable resolution on this subject. In the House the Republican majority had voted for such publicity, and Mr. Taft was on record in favor of it. It was a retreat to say not a word for a physical valuation of railroad property. Retreat from the position taken by both Mr. Roosevelt and Mr. Taft is to be seen in the declaration about injunctions. We said last week that this declaration really amounts to nothing. Mr. Bryan points out that it merely calls for an enforcement of the present statute, whose words are repeated in it. To say nothing about injunctions would have been better. Such an utterance deceives nobody. The situation is not improved by Mr. Wade Ellis's testimony that the declaration, as finally adopted, had been approved by Mr. Roosevelt and Mr. Taft.

There were parts of the rejected La Follette platform which should have been accepted or should have suggested declarations on the subjects to which they related. The demands for campaign fund publicity and a physical valuation of railroad property were two of them.. Another provided for a suspension of the collection of protective tariff duties whenever the products protected by them are controlled by a combination that suppresses competition in the home market and keeps prices at a high level. Mr. La Follette is in favor of a tariff equal to the difference between the cost of production at home and the cost abroad, provided that competition at home be preserved. But he is unwilling that protected manufacturers who suppress competition should be enabled by high duties to exact from the people prices much higher than they would be if they were determined by competition. There are many in the Republican party who agree with him about this, and the platform makers might well have added something

about the inexpediency of protecting Trust prices to the expression of their desire for duties that would cover a "profit" as well as the difference in the costs of production.

The platform is not a strong one. If a majority of the people are weary of the Roosevelt policies and spirit, the party may lose nothing by such a declaration; if they desire that these policies shall be vigorously carried forward, the makers of this platform have blundered.

We must say that the convention's nomination for the second place on the ticket cannot be satisfactory to the progressive element of the party or to independent voters. It is true that Mr. Sherman has been a member of the House for twenty years and has become influential there, but his influence has been seen in management and control of procedure rather than in legislation. In all these years of service his name has not been associated with measures of importance; nor has he been classed with the advocates of reform. Outside of the House and outside of his State he has recently been known only as the party collector who unsuccessfully solicited a contribution from Mr. Harriman and whose report to the President of Mr. Harriman's angry response opened to the public a disagreeable chapter of party history.

Everybody remembers that the Republican majority in the House, during the recent session, was with great difficulty driven to take action upon a small part of the President's program of reform legislation. In regulating and controlling the course of procedure, Mr. Sherman, as a member of the dominant Committee on Rules, was one of Speaker Cannon's most efficient assistants. Rightly or wrongly, he has been regarded as a part of the House machine and as a representative of reactionary and obstructive tendencies in the House. There, as the associate and assistant of Mr. Cannon, he became obnoxious to the representatives of organized labor, who now say he is their enemy. For these reasons his nomination was not an exhibition of political wisdom.

The truth is that neither at the recent session of Congress nor in the convention were the politicians of the party moved by fear of defeat in November. Foreseeing the nomination of Mr. Bryan, they did not feel that they must take thought of the judgment of voters. If the nomination of Mr. Bryan had not been practically a certainty, they would not have made appropriations for expenditures exceeding $1,000,000,000, in the face of a deficit of $60,000,000 for the current fiscal year and with an additional shortage of at least $125,000,000 promised for the fiscal year now at hand. But for the Democratic party's loyalty to Mr. Bryan they would have made a better legislative record outside of the appropriation bills, made a better platform at Chicago and nominated a stronger candidate for the Vice-Presidency. If Mr. Bryan sees this, he will say nothing about it in his criticism of their acts. But it may be shown in November that they have relied too much upon his two defeats. Undoubtedly they are helping him to get more electoral votes than were given to him in 1896 or 1900.

The Simulation of Laxity

We discussed last week "The Mob Ceremonial," showing how the mob loses the danger of passion when it has reached the imitative, ceremonial stage, as in the case of the carefully planned cheering at the foreordained time at a Presidential convention. Just now the country is waiting to see whether the cheers for Bryan will be kept up at Denver for two minutes longer than those for Roosevelt at Chicago, which now hold the record.

We have a word, now that the college commencements are over, for another mob ceremonial, not that of the college contests, which are ceremonial as far as the bleachers go, but by no means as far as the contestants go. It is all real with them. We have in mind the class reunions.

They come together, after great effort to bring every member within reach, the graduates of the third, fifth, tenth and preceding quinquennial years, with those who dropt out by the way. They come to renew acquaintance, retell their old exploits and have the happiest sort of a time. It is all, or should be, reasonable, delightful, reminiscent and purely natural. The men are more mature than they were as boys, have taken hold of the serious problems of life and have given hostages to fortune.

But there is likely to be in every large class a certain number who hanker for some sort of a show, and provide for the mob ceremonial. We have seen their headquarters, even in a prohibition town, provided with a free bar and negro minstrels to add to the jollity of their own college songs and yells. They are men who have been serious and busy enough these years, but now they are bent on forcing themselves into the imitation of a reckless, noisy boyishness. The real mob-madness requires that the several units lose self-control. They must let the passion get command and run away with their wits. But with these personally conducted, carefully contrived and prolonged alumni demonstrations there is nothing capricious, impulsive; the recklessness is all studied with foresight and kept up to its pre-arranged measure, with no chance to burst its bonds.

College classes arranging for reunions should not put the plans in charge of the lighter heads of their number, who think it necessary to provide unusual uniforms and noisy demonstrations, and the imitative bibacity of simulated bacchanals. It gives to town's people and the visiting fathers and mothers of sub-freshmen a bad and false idea of what college men are, and it displeases the bulk of the alumni themselves. Why a company of sedate gentlemen, on visiting their alma mater, should think it fine to put on the mask and motley of the rake is a question whose investigation may be left to alienists. Sallust describes one who "could feign a virtue and dissemble a vice"—"*cujuslibet rei simulator ac dissimulator.*" Loyalty to college or class requires no alumnus to reverse this by dissembling his virtue and feigning vice.

Inoculation Against Phobias

AGAINST hydrophobia there is now, thanks to Pasteur, a remedy, but the phobia of hydrophobia still rages unchecked thruout the country, causing much distress and injury, if not fatalities. The next step in preventive medicine is to devise some method of getting rid of this fear as well as all the other morbid and exaggerated dreads that do almost as much to make us unhappy as the real calamities they anticipate. The discovery of an antitoxin to fear would benefit the race more than a cure for any specific disease. A few minims of it injected into the arm of the soldier before he goes into battle, the valedictorian as he steps upon the platform and the lover as he is about to propose, might prevent many a disaster. Heroism would become so common that Carnegie could die poor.

But if fear produces a chemical alteration in the blood too little is known about it to make use of it. No one, so far as we know, has proved experimentally that the bravery of a rabbit can be increased by a transfusion from the arteries of a lion. We do not mean to encourage research in this direction, but on the contrary to suggest a method which would not offend the sensitive conscience of an anti-vivisectionist, that is, that each man may develop in himself the antitoxin to the specific phobias which afflict him and so become immune to them.

We have in mind particularly a young man who was abnormally sensitive to tickling, an affliction from which he suffered much, for his playmates discovered that they had him at their mercy and they had none. He would go into a tremor if a teasing finger were pointed at him from across the room or if velvet were stroked in his sight. But he was completely and forever cured of his weakness thru the kindness—unintentional on his part—of his chum at college, who bound him to the bed and tickled the soles of his feet with a feather for an hour. He was so pleased at getting rid of this source of suffering that he afterward used the method voluntarily and by accustoming himself to doing anything that he was unreasonably afraid to do he converted himself from an excessively timid youth into a man who could meet the ordinary vicissitudes of life with a fair amount of equanimity.

We commend the plan to the psychopathic wards now being established in our churches. Perhaps it could also be added, like everything else, to the curriculum of our educational institutions. A hundred years ago it was the fashion for women to be excessively timid, to shriek and faint at all sorts of things that the modern girl treats with contempt. But some women are born a century late and find the weaknesses which would once

have insured their popularity are rated as defects. For these cases of belated timidity some sort of a finishing school could be provided where they would be subjected to series of shocks of gradually increasing severity. Mice, plush-covered and mounted on noiseless wheels, would run across the floor at frequent intervals, and spiders with hair-spring legs drop on them from the ceilings. They would be liable to be awakened in the night by cannonball thunder and the flash of lightning produced by dragging an electric wire along a file. Telegrams would be delivered at all hours. The elevator would be arranged to get stuck between floors often enough so it would not seem to them like an accident but merely a Howell's farce. Burglars, of course, would appear once or twice a week. No young girl can be expected to hit a burglar the first time she throws her shoe at one, and being necessarily limited to two shots, she should have training in this accomplishment. Very good ghosts, much more lifelike—or deathlike—than the old kind, can nowadays be produced by the kinetoscope. Frequent and unexpected examinations would destroy the dread of these. Any young lady who went thru this whole course, including the big fire at commencement, would be entitled to a diploma certifying to the fact that her nerves were no longer in the plural. Graduate courses might also be offered, for example, a professional course for suffragettes in which athletic contests with policemen would be included and the fair candidate given practice in oratory, in the presence not only of a mirror, but also of a phonograph which she had primed with such insulting epithets as she could ascribe to masculine malignity.

Similar training is necessary for the other sex if it is to keep its reputation for superior courage in the face of feminine competition of the present day. Lord Nelson was as afraid of a mouse as any woman or elephant. Napoleon was a victim of chronic ailurophobia. If he had been given doses of catnip tea in his infancy and brought up with a kitten, he might have been freed from his dread of the harmless necessary cat.

As civilized life becomes more safe, even and comfortable, people find more things to be afraid of. Psychiatrists are kept busy thumbing the Greek lexicons to find names for the latest freaks of their trained neurasthenics. If the patient dislikes to be alone he has monophobia. If he shuns society it is anthropophobia. Those who prefer to skirt a city square rather than venture to cross the open space have agoraphobia. Those who feel oppress in a narrow room and will not sit with the face to the wall have claustrophobia. The notable housewife is afflicted with mysophobia; the athletic girl with œcophobia. Then there are photophobia, the fear of light; pathophobia, the fear of disease; decatriphobia, the fear of thirteen; sitiophobia, the fear of food; acrophobia, the fear of falling from a hight; and anything not otherwise specified is included in pantiphobia. The classification has been carried so far of late that each of us can find his pet aversion or weakness in the list and derive a feeling of gratification, even of justification, from this nominal recognition of it.

But an antipathy is an expensive thing to keep up all thru life. It grows and becomes stronger as it is indulged. It is far better to kill them off one by one as they appear by a resolute system of hardening the constitution by getting used to them. The art of getting used to things is, after all, the art of living. The only justifiable form of cowardice is the fear of fear.

State Supervision of Private Lands

The Maine Legislature has recently harnessed the Supreme Court of that State to the Legislative Department. It requires legal decisions not after legislation, but anticipatory. This in itself is a startling innovation, and if carried out by all of our States and the National Government as well, it would save a deal of time now wasted on legislation that is to be afterward brushed aside by the Court.

But a decision just rendered to the Maine lawmakers is still more startling in its nature and its far-reaching effects. The question submitted was whether the Legislature had power, under the Constitution, to enact a general law "to

regulate or restrict the cutting or the destruction of small trees, growing on wild or uncultivated land, by the owner of the land, and without compensating him for the restriction." It was required also that a decision be rendered as to the right of the Legislature to restrict the cutting of such trees when the cutting was "not required for improving the land, or for its use in agriculture, mining, quarrying, manufacturing or for pleasure purposes, or for a building site." In other words, can the Legislature of a State step in and say to the owner of a tract of woodland, "Your right to cut or to destroy or to burn over is limited."

The Supreme Court replies: "The United States Constitution has no clause that prevents a police power on the part of a State to prescribe regulations to promote the health, peace, morals, education and good order of its people, and to legislate so as to increase the industries of the State, develop its resources and add to its wealth and prosperity." As to the State Constitution, the Court decides that it contains no clause that could be invoked against the suggested laws and regulations, except the guaranteed right to acquire, possess and defend property, and that private property shall not be taken for public uses without just compensation. The Court holds that every property-holder has possession of his holdings under the implied liability that the use he makes of them shall not be injurious to the "equal enjoyment of others" or the rights of the community. All property in the commonwealth "is derived from the Government," and must be held subject to regulations necessary for the common good and the general welfare. Rights of property, like all other social rights, are subject to reasonable limitations, such as shall prevent them from being injurious to the public. This is not asserting the right of eminent domain, but something very distinct from that, namely, the right to interfere with individual control of forest or waste land; not the occupancy of it for public and general purposes, but the supervision and direction of its use, while still remaining and recognized as private property. We cannot see but that this opens the way to State supervision over a very large amount of landed property, which in the opinion of the owner may not be waste.

The Court urges two reasons for applying this construction to the ownership of property in land, and it is to be noted that these reasons do not apply strictly and solely to forests and waste lands. In the first place, it is argued that such property "is not the result of productive labor, but is derived solely from the State itself, the original owner." In the second place, the amount of land, being incapable of increase, if the owners of large tracts can waste them at will without restriction, "the State and its people may be helplessly impoverished," and one great purpose of government be defeated. This argument must apply to small tracts as well as to large, in order to be logical; and we cannot see but it permits the State to enter in upon any man's holding and direct such use of his acres as shall contribute to the public welfare. We should also like to know what the Court would say concerning land, and the use of land, that never belonged to the State. There is more than one holding in New York State, and we judge in Maine itself, taken directly from the Indians. However, the decision as handed to the Legislature, is signed by six out of the seven supreme judges of the State, while the seventh simply declines to express his opinion.

Farther explaining their position, the judges say that such governmental interference as they propose would not restrict the owner of uncultivated acres from making them productive, altho it might delay his anticipated profits, and even thereby might cause him some loss of profit. It would

> "Leave him his lands, their product and increase, untouched; and without diminution of title, estate, or quantity. He would still have large measure of control, and large opportunity to realize values."

He might suffer delay and he might be deprived of some profits; yet the Court soothes him with the fact that he would not lose all. While the use of his land might be restricted, the land itself would not be appropriated "or taken." We suggest at this point that if the use of a man's property be restricted for a term of a year or for five years it might involve his use of it altogether. The sale

of land depends not upon the possible use that may be made of it, but upon the certain use of it, and the absolutely unrestricted use.

That "the owner will participate in the general good" which is anticipated in restricting his private occupancy is another sop from the Court, and it may have something to do with the justice of the decision; yet this principle of "general good" would require delicate application. We have in mind a noted and honorable professor of Greek, whose comfort rests in twenty acres of distrest lawns and unproductive glens, where his fancies work out unrimed hexameters. To the unanimous public his acres are "waste." What would our Maine judges do in such a case? Would they leave Emerson's muse to reap a harvest from a valley view, or would they sternly decide for that crop alone "which homeward bring the oxen strong"? That any undisputed line of demarcation can be drawn between uncultivated and cultivated, waste and non-waste land we do not conceive.

This decision of six Maine judges somewhat approaches the demand of the avowed Socialist. Our lands are pronounced to be still in some sense a commonalty; having been obtained of the government, they forever in some sense have the flavor of public property. In some degree at least the State may interfere with the management of any man's landed estate. Referring to H. G. Wells's latest interpretation of Socialism, which may be assumed to be authoritative, he tells us:

"The idea of the private ownership of things is enormously exaggerated. The conception of private property has been extended to land. As a result there is an enormous waste of human energy. The socialist holds that the community as a whole should be inalienably the owner and administrator of the land."

And we cannot see but that these Maine judges are of about the same opinion.

Justice Holmes, in formulating a recent decision of the United States Supreme Court, laid down the principle that property rights tend to their extreme limit, but that they are constantly being restricted and limited by the interests of the people and the police power of the State, and that the point where the latter checks the liberty of the former is fixt by the decision of courts. This is in line with the dictum of the Maine Supreme Court, and it gives us our relief as against the extreme power given to private wealth by our Constitution, as lately stated to our readers by President Hadley.

Two Presidents on Honor

WHEN a constituent found fault with some action of Henry Clay and declared he would never vote for him again, the Senator asked if his critic's rifle had never missed fire. "Certainly," was the reply. "And what did you do?" "Picked the flint and tried it again." The application was easy. President Roosevelt made a hasty blunder when he signed a letter with Robert Bacon asking if it would not be possible to substitute some other punishment for two students who "merely took away a book which they were permitted to use in the library":

"It seems to us, and, we feel sure, to the great body of graduates, that it is unfair and unnecessary to make others suffer for an offense of this kind for which some other punishment might surely be found."

The reason for this appeal to the President of Harvard University by the President of the United States and the Assistant Secretary of State was that the two students disciplined were on two of the crews that were to race with Yale last Thursday, and it was feared that their suspension and consequent withdrawal from the races would ruin Harvard's chances. We must presume that President Roosevelt wrote without full information, and yet he, or at least so famous an old oarsman as Mr. Bacon, should have known what was the offense of these two men, and that there is an agreement with Yale that neither university shall put in the crew any man who is under discipline. President Eliot's reply is crisp and conclusive. It allowed no answer. This is the whole of it:

"To President Roosevelt, White House, Washington:

"Each man did a dishonorable thing. One violated in his private interest and in a crooked way a rule made in the common interest, while the other gave a false name and did not take subsequent opportunity to give his own. The least possible punishment was putting them on probation, but that drops them from the crews. A keen and sure sense of honor being the finest result of college life, I think

the college graduates should condemn effectively dishonorable conduct. The college should also teach that one must never do scurvy things in the supposed interest or for the pleasure of others.

"CHARLES W. ELIOT."

Such a statement of moral principle is worth the occasion. Even the President of the United States may not regret that his hasty blunder bore such good fruit. It is just such a bit of a sermon as President Roosevelt has often preached.

But one sentence in Mr. Roosevelt's letter calls for further remark. He said:

"It is unfair and unnecessary to make others suffer for an offense of this kind for which some other punishment might surely be found."

No man can do a wrong that is not likely to affect others. No man is punished for his offense without some others suffering as well as he. We have had a big lesson on that matter in the case of the Brownsville soldiers. Some of them were supposed to be guilty of a serious offense, and President Roosevelt dismissed the whole squadron without honor. Most of them must have been innocent, and "some other punishment" might presumably have been found; at any rate Secretary Taft held up the order for three days until he had a peremptory order from the President to issue it.

Mr. Cleveland as a Sportsman

The portrait of President Cleveland, which we give on page 16, in which he and his dog appear, was a favorite of his, and was taken, with several others, to go with articles written by him for THE INDEPENDENT, and later gathered in a book by The Outing Publishing Company. We have his autograph letter before us dated June 2d, 1906, in which he says:

The photographer has sent me proofs of the pictures taken a few days ago. I think the one taken of me sitting and the dog will do very well. The proof of one where I have a reel in my hand is not bad.

My object in writing is to ask you if you can submit all the proofs of these pictures to the Outing Company, and allow them to use such as are available in illustrating the book of sporting sketches which they have in course of publication.

Mr. Cleveland's five articles in THE INDEPENDENT appeared in successive vacation numbers from 1903 to 1907. Their subjects were, "A Word to Fishermen," "Summer Shooting," "Quail Hunting," "Rabbit Hunting" and "Shooting in Season." They represent the recreation side of his life, for his Messages, speeches and lectures belong to politics rather than to literature, except in so far as they gave occasion to memorable expressions, such as we quote elsewhere, and which have made a permanent addition to public speech. We may recall here that the late President's sister, Rose Cleveland, had a decided literary ability, and in the years before he was President was a somewhat frequent writer for THE INDEPENDENT.

A Quarter of a Million Soldiers

Our nation is given to common sense. Our people do not much love soldiering. Our laws allow a standing army of 75,000 men, and we have only about 60,000 regular soldiers, because men will not enlist, or will desert. A late law increases soldiers' pay and may help enlistments. It would be impossible to persuade Congress to give us a large standing army, as it would be impossible to enact a law for forced service. But we have a State militia, composed of young men who like to play soldier, to meet and parade, and to have a week's summer outing in camp. It is good physical exercise, and gives us a sort of imitation soldiery. Now Congress has enacted two laws which grant $4,000,000 to be paid to support such State militia organizations as will agree to be governed by certain military requirements as to practice and encampments, and to be at the command of the Government in time of war. In some States the militia have accepted the subvention, and in some, for example, New York, they have declined. But the militia organizations do not in all embrace more than 111,000 men, which, even if they all accepted the terms, would put but 161,000 men at the immediate command of the nation in case of war, while the War Department thinks there should be 250,000 men available. We are not at all concerned to increase the State militia; and yet if the inducements now offered in paying the bills should lead to the enlargement of the militia to a total of 175,000, so as to bring the total with the allowed 75,000 of the regular army up to 250,000, it would not be a serious thing. Only the

people should guard against this being made an opening step toward a large standing army.

Publicity

A good cause, particularly a new reform, needs publicity. It does no good to coop it up, develop its theory, satisfy its friends with esoteric encomiums or defenses; but the one thing to do is to crowd the reform on the public, which, perhaps, is ignorant or careless about it. The straightening of our crooked spelling is an illustration. If this reform, sure to win in the end, makes slower progress than we wish, it will not be from any lack of scholarship on the part of those who conduct the campaign, but because they do not sufficiently push the reform upon the public. Doubtless the scholarly work of the reform, the working out of classifications of needed amendments, is far ahead of the publicity work needed. We do what little we can by putting before the public a portion of the reforms. We do not use all we shall use, very likely, ten years hence; for the Simplified Spelling Board in this city can tell a great deal more that ought to be done. We would have the Board give its chief labor to the public, by securing the adherence of institutions, societies, and particularly of schools and journals. That Board has told us pretty well what we need first, and then what the next improvements should be; now let it give its labors to getting them—at least the nearer ones—adopted; a step at a time. The theoretical part can rest a bit.

Twelve Air-Ships

The succession of inventions for public comfort has been so swift that one is almost dazed by the progress. They are still young men and women who first rode the bicycle, and then came the telephone, and then the automobile and now the flying machine is assured, and only needs perfection. That will be a revolution in social conditions as great as any other since steam carriage. Dr. Alexander Graham Bell says there are now twelve successful flying machines in existence, of which two are American. He predicts that these air-ships will soon be used for pleasure, and very likely for carrying the mails. We can at present reach a speed of forty miles an hour, and there is no reason why we should not reach sixty. The time of the bulky, blundering balloon is past. We are learning that what the mosquito, the june-bug, the robin and the condor can do man can also do—spurn the earth and ride the skies. This does not mean that railways will cease to be used for heavy traffic, but that light and swift traffic will probably in five years need neither rail nor macadam. Such inventions as these, with more to follow which we cannot now guess, are making ours a new world.

Are Your Eyes Alike?

Do you know any one whose eyes are either different in color or pink? Such peculiarities afford opportunity for testing theories of inheritance, and Mrs. Gertrude C. Davenport, of the Carnegie Station for Experimental Evolution, Cold Spring Harbor, Long Island, is desirous of receiving accounts of any such cases, especially where it extends to more than one generation. Usually the two sides or halves of the body resemble one another in shape, size and in other respects so closely as to appear identically the same only oppositely placed; in other words, they are bilaterally symmetrical. Such symmetry, however, is probably never absolutely perfect and is often markedly imperfect. A very conspicuous example of bilateral asymmetry is the large claw on one side and the small on the other of the lobster or the crab. Even in human beings bilateral asymmetry not infrequently occurs, such as a dimple in one cheek only, or eyes of different color. The behavior in heredity of unsymmetrically colored eyes has recently been studied by Dr. Hans Przibram in white angora cats, which are very apt to possess one blue and one yellow eye. The reason for the loss of symmetry in eye color we do not know. In cats Dr. Przibram found that the asymmetry may be transmitted to the offspring just as it occurs in the parent, that is to say from the right eye of the parent to the right eye of the offspring and from the left eye of the parent to left of offspring; or it may be transmitted turn-about from the right eye of the parent to the left of the offspring; or the color of either eye of the parent may be transmitted to both

eyes of the offspring. The latter kind of transmission he has observed in man as well. The father possesses one light gray and one brown eye. His wife's eyes are gray. Two of the children possess symmetrically-colored brown eyes. The eyes of the other four children are gray or gray-blue. As with human infant eye-color, Dr. Przibram finds that the color of cats eyes sometimes changes, so that a kitten with both eyes blue at first may, when adult, possess one blue and one yellow eye. A condition that is probably less common than asymmetry is the pink eye—the eye without pigment. It is usually associated with absence of pigment in the skin and hair also and is commonly called albinism. The heredity of albinism has been studied in flowers and certain animals, but the family history of very few cases of human albinos is known. When one of the parents only is an albino, it is probable that all the children will be normal, but more facts are needed on this point also to enable us to get a better understanding of heredity in man.

The Hats of the Season

This summer many ladies find difficulty in keeping the expression of their faces in tune with their hats. The careful dresser will avoid discords of this kind by having a different headgear for every mood, taking several hatboxes along with her in case she thinks her mood is likely to change in the course of the walk. It is distressing to see a "Merry Widow," "A Soul Kiss" or a "Waltz Dream" above an "Old Hundred" or "Last Rose of Summer" face. The prevailing style is also modifying the customs of etiquet. Ladies, as well as gentlemen, now tip their hats an entering an elevator or street car. The churches are finding it necessary to abandon the rule of St. Paul in regard to head coverings. Public pageants in Europe have had to be abandoned because of the impossibility of providing for the big hats on the grandstands. It used to be thought that a young woman was suitably matched with her escort when she was just a little taller than his shoulder. Now a young man walking out with such a companion is liable to lose his head as tho by a circular saw. He cannot see her face, but he can admire the flora and fauna of her roof garden. These are indeed worth study. In a crowd one can profitably spend the time he otherwise would devote to the stage, speaker or view in trying to identify the flowers, fruits, birds, insects and mammals he sees around him. If the Latin names were given on labels as in a museum or botanical garden it would be still more improving and not add much to the weight.

A Samaritan Discovery

One would have thought that visitors enough had rummaged the books of the Samaritans at Nablous to get long ago whatever they have preserved of their sacred or other writings; and yet Dr. Moses Gaster describes in the London *Times* his discovery of an unsuspected version of the Book of Joshua, found by him at a visit to them. It has hitherto always been said that they possessed only the Pentateuch, which was all they retained, or perhaps had, when they separated from the Jews. But scholars have long declared that Joshua is a mere continuation of the Pentateuch and that originally they were one work. For many years there has been known a Samaritan Chronicle, or compend of history, which includes the story of Joshua, but with some variation from the Hebrew; but this is in Arabic. The Samaritan Joshua found by Dr. Gaster agrees with the Hebrew Joshua as far as the thirteenth chapter, but varies considerably afterward, where the allotments are made to Judah and the two tribes of Joseph. The Samaritan Pentateuch contains some important variations from the current Hebrew recension, partly better readings, corroborated by the Septuagint, which have been preserved from the copy brought to Nablous when about 330 B. C. the Samaritan priest, Manasseh, was allowed to build a temple on Mount Gerizim; and in part purposed corruptions of their own. Doubtless this newly discovered text of Joshua will be the occasion of much study. Hitherto the Septuagint and the Samaritan Pentateuch have been the only source for textual criticism of the Hebrew Bible. The addition

of the Samaritan Joshua is of the first importance.

Those Millions

We do not understand the whole drift of the letter of thanks for its aid addrest by Mgr. Agius, Apostolic Delegate at the Philippines, to the Propagation of the Faith Society. He says the prospect looked very gloomy at first, but is now brighter for the Catholic Church:

"We have got back our church edifices from the Aglipay Schismatics, but oh, in what a state of dilapidation. The war and insurrection caused the destruction of a vast amount of church property. True, the United States Government has appropriated $403,000 to cover our claim for two and half millions, yet, as this sum must be distributed all over the Islands, it will be but as a drop in the ocean. We are going to have up-hill work here for some years to come. Our friends in America must not forget us."

That $403,000 is for losses suffered in the use of churches, etc., and is in addition to the millions paid to the friars for their lands. Mgr. Agius does not seem to have got any help from those millions. Archbishop Ireland was very anxious that this money should go to help the Church there and not be taken to Spain; and such was the substantial promise given to Mr. Taft when he went to Rome. We observe that some American Catholics press the question, whether the wealth gained by the Church in the Philippines should not be spent for the Church in the Philippines before taking penny collections here for the dilapidated churches. Our Government has protected the rights of the Church there. Left to the people themselves, all the ecclesiastical property would have been sequestrated, and not a cent paid for it all.

In certain sections of our country it is not only considered discourteous, but is actually dangerous to pass the lie. Editors and other citizens have been shot for that indiscretion. And yet the Charleston *News and Courier* says this recklessly about its Senator Tillman:

"The Senator's denials of interviews are not taken seriously by newspaper men familiar with his reckless and voluble habit of utterance. Within the last three or four years he has denied flatly interviews that he has given to the late Mr. Robert M. Larner, formerly Washington correspondent of the *News and Courier;* Mr. Charles M. Galloway, of the Columbia *State;* Mr. Rutledge McGhee, of the Greenwood *Index,* and numerous incidents of similar character have marked his career. When the Senator is talking he is not conscious of more than one-third that pours off his tongue as the waters come down from the cataract of Lodore."

That last sentence may save Editor Hemphill from being shot; for the Senator simply does not know what he is saying.

The Louisiana Legislature has followed New York's example and past an act forbidding gambling at racecourses. The Senate had about as much difficulty in getting it enacted as they had at Albany. When the time for the vote came one Senator had been detained by a railroad accident and another was taken suddenly sick, with suspicion that he had been poisoned. But they were able to put off the vote and the next day the sick Senator, as at Albany, was supported as he tottered into the chamber and cast the one last vote of the twenty-one needed to enact the law which shuts off the public gambling from every State this side of California. The defeat of the bill would have been worth a million dollars to the race gamblers.

In an interview the Emperor William intimates that a tax on bachelors is imminent in Germany. But the corresponding proposition of a bounty on families of children has often been proposed, particularly in France, and is not a bad plan. A French commission, presided over by Senator Piot, recommends a special tax on citizens without children as a relief from taxation in proportion to the number of children. The statistics for last year show that in France the deaths outnumbered the births by 19,920, a very startling figure.

Prohibition now claims eight States, with a total population of 13,000,000, in which the public sale of intoxicating liquors is forbidden; also 250 prohibition cities in 35 States, with from 5,000 to 160,000 each, and a total population of 3,500,000. Practically 40,000,000 people, of whom 10,000,000 have been added within four years, are living in prohibition territory. It is the big cities that resist prohibition.

Insurance

The New President of the New England Mutual

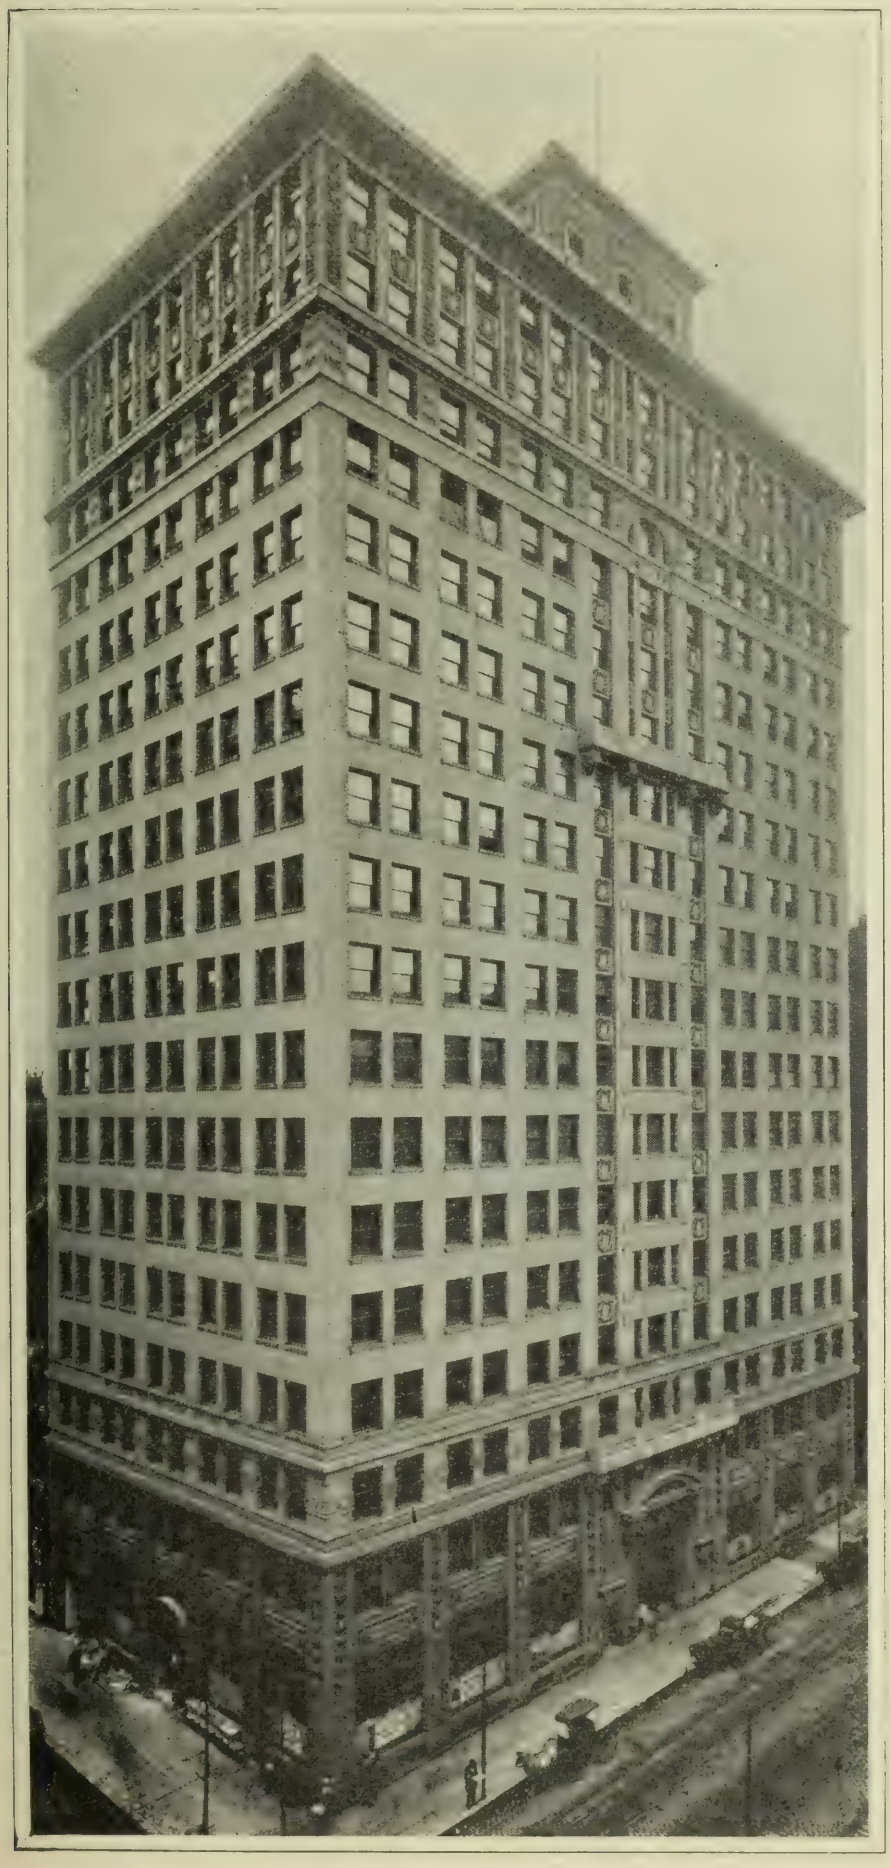
ATTENTION is directed to the recent changes which have taken place in the New England Mutual Life Insurance Company, whose head office is in Boston. Albert Dwight Foster, formerly vice-president, has been elected president. Mr. Foster was born in Worcester, Mass., on April 27th, 1852. His father, Dwight Foster, served at one time as counsel of the company, and his mother was a descendant of Roger Sherman, signer of the Declaration of Independence. Young Foster attended the Boston Latin School, and was graduated at Harvard University in 1873 and from the Law School of Boston University in 1875. He practised law in Boston for eighteen years, and in 1893 became the vice-president of the New England Mutual Life Insurance Company, for which he had previously acted as counsel. He is a director of the Norwich & Worcester Railroad, the State National Bank, the State Street Trust Company, the Western Real Estate Trust, the Worcester Consolidated Railroad and the Fall River Gas Works Company. For some years past Mr. Foster has been the virtual head of the company of which he is now the recognized head, and his management of its affairs has repeatedly demonstrated his fitness for the office which it was generally considered a foregone conclusion that he was destined to fill. D. F. Appel, formerly secretary, has been elected vice-president of the company. Mr. Appel was born in Weston, Pa., in 1857, and in 1885 became the Indiana general agent of the company. In 1895 he was made superintendent of agents, and three years ago became secretary. The new secretary is Jacob A. Barbey, formerly assistant secretary, who for twenty years has been in the service of the company. According to the last published statement of the New England Mutual Life the company has total assets of $44,182,875, a surplus of $3,023,742, and insurance in force on a paid for basis of $178,872,320.

A Successor to Cleveland—or Mutualization?

THE recent death of Grover Cleveland has given rise to considerable speculation as to his successor as chairman of the trustees of the majority stock of the Equitable Life Assurance Society and as chairman of the executive committee of the Association of Life Insurance Presidents, of both of which offices Mr. Cleveland died seized. The suggestion gained some currency last week that both offices were to be offered to Theodore Roosevelt. No verification was obtainable for this rumor. While Mr. Roosevelt would doubtless make an admirable executive in both offices there are certain objections to his enjoyment of the offices, that it might be difficult to overcome. It seems to THE INDEPENDENT far preferable to follow the suggestion we made under date of February 6th last, and to accomplish the "mutualization" to which the present owner is already pledged. The policy-holders of the society would be better off under "mutualization," because the title to the entire property would then be vested in them and they could then change at will their trustees and officers. The lethargy of policy-holders in their voting privileges is known to be great. It was shown to be so in the last election; but the power of exercising such a privilege, altho latent, is still there waiting to be exercised in any emergency that may arise.

So widespread have serious, if not fatal, accidents become on July 4th that something in the way of first aid to the injured may well be made widespread also. In pursuance of this idea Surgeon General Wyman has issued a circular from Washington giving instructions as to the proper treatment of Fourth of July injuries. Among the suggestions are the following:

"Incise freely every wound.



"Carefully and thoroly remove from the wound every particle of foreign matter.

"Cauterize the wound thoroly with 25 per cent. carbolic acid.

"Apply loosely a wet pack of 2.5 per cent. carbolic acid.

"Give a full dose of anti-tetanic serum."

Financial

Third National Bank of St. Louis

THE growth of the banking business in the West is well illustrated by the Third National Bank of St. Louis, whose new building has just been completed. A photograph of it is reproduced on this page. The Third National Bank was organized December 25th, 1863, and was the successor of the Southern Bank, which began business in 1857. The original capital was $1,165,000, which in 1901 was made $2,000,000. Since 1906 the deposits have grown from $2,000,000 to $30,000,000. The last statement shows a capital of $2,000,000, surplus and profits of $2,240,838, and total resources of $35,934,722. The officers of the bank are C. H. Huttig, president; W. B. Wells, vice-president, and G. W. Galbreath, cashier.

....The Long Island Loan and Trust Company, of which Edward Merritt is president, and whose capital stock is $1,000,000, shows in its last report that it has a surplus, including all undivided profits, of $1,766,820, and total resources of $10,361,854. In view of the late financial depression this is an excellent showing.

Municipal Bonds

THE name "Municipal Bonds" is given, in its general sense, to the sealed obligations of a municipal corporation or a public quasi-corporation. A municipal corporation is one of the individuals in a place or district at their own motion but with the consent of the State government. To this municipal corporation are granted certain powers of self-government, including in most cases the right to borrow money and to sue and be sued. The public quasi-corporation is created by the state for the convenience of government, and not at the request of the inhabitants thereof, so that in effect the public quasi-corporation is a part of the state government created for the purpose of doing certain things in the most expeditious and easiest manner.

The chartered city, with its rights of self-government, etc., is a municipal corporation. The county, township, or school district, created by the State, is a public quasi-corporation. The constitutions of the various States define clearly the rights of the two classes of corporations, and general recognition is given to the right to issue interest-bearing obligations and to pledge the taxes and revenues to secure the same. These obligations constitute the municipal bond, as it is known popularly, without regard to which class issues it.

The obligations or bonds of the divisions of the commonwealth represent the joint obligations of the taxpayers of the community. With a few exceptions, the original debt can only be created by a vote of the people, and in many States it is necessary that two-thirds of the vote shall favor the issuing of bonds. At the same time that the bonds are issued, a tax levy is voted to pay the interest as it accrues and the principal at maturity. The debt, therefore, can only be created for such purposes as appeal to the majority of the voters as advantageous either to the health, wealth, or betterment of the community.

In order to realize how secure these obligations are, the reader needs only to ask himself whether the debts of his own community are paid. Such obligations precede in lien every real-estate mortgage in the community, since when real estate is sold in foreclosure the past due taxes are deducted from the purchase price. They precede every cent of earnings on bank stock, since no dividend can be declared until the annual taxes are paid. In fact, they are next to the tangible wealth, in whatever form it exists. In addition, the debt is a community one, depending on the wealth and morals of all, and is not subject to the vagaries, business reverses, or earning power of individuals or corporations.

Municipal bonds in ninety-nine cases out of a hundred are in the form of coupon bonds, the most convenient form of investment. They are usually issued in denominations of $500 and $1,000; but many desirable communities issue small bonds of less amounts. In France, which is the wealthiest nation per capita, municipal-bond buying is universal, and the usual denomination is 500 francs or $100. The only responsibility is that of properly caring for the bond itself, the only labor the pleasant one of cutting off and collecting the coupons twice each year. Income goes on continuously during the life of the bond, quite regardless of business conditions.

Municipal bonds represent the best and safest class of investments, and consequently the interest rates are not high, ranging from 3½ to 5½ per cent., according to the size, reputation, and location of the community. In many States the legislatures have past laws exempting such bonds from taxation, and this movement is one which is spreading rapidly, until it would appear that all municipal bonds will soon be exempt from taxation in the States of their origin.

Less care is necessary in buying municipal bonds than in the other securities, since bonds of this class are uniformly good. It is, however, wise to deal only with houses of the first order, which have been successful and which make actual purchase of the bonds themselves and do not act as brokers only.

In municipal-bond buying, experience and care are valuable aids, and the investor may best avail himself of this knowledge by buying thru experienced and conservative investment bankers.

The Independent

VOL. LXV NEW YORK, THURSDAY, JULY 9, 1908 No. 3110

Survey of the World

The Democrats at Denver

While it was admitted in Denver at the beginning of the present week that Mr. Bryan could rely upon the support of more than two-thirds of the delegates to the approaching Democratic convention, no candidate for the second place on the ticket had become prominent. It had been known for some days that Mr. Bryan desired the nomination of Judge George Gray, of Delaware, but on the 1st the latter sent the following message to an inquiring newspaper:

"I have your telegram saying that it is stated positively that I will accept the Vice-Presidential nomination and asking whether this is true. As I have repeatedly said I would not consent to being placed in nomination as a candidate for the Presidency, I now say with equal emphasis that I will under no circumstances consent to a nomination for the Vice-Presidency."

Judge Gray repeated this statement on the 3d and 4th, but his friends in Denver continued to urge his nomination for the first place, striving to convince Mr. Bryan's friends that the latter could not be elected. Many others were mentioned for the second place. It was understood that Mr. Bryan was unwilling that it should be given to Governor Johnson. On the 5th it was said that there was scarcely anything left of the movement in support of Johnson for the first place. Supreme Court Justice William J. Gaynor, of New York, had some prominence as a candidate at the end of last week, but on the 5th it was reported that he had been found to be unavailable. Many delegates and other politicians on their way to Denver called upon Mr. Bryan at Lincoln. One of these was Herman Ridder, of New York, who had said that he would ask Mr. Bryan to withdraw. He did say to Mr. Bryan that the latter couldn't carry New York, but the candidate remarked that he could win without that State. Mr. Ridder obtained Mr. Bryan's approval of a platform resolution calling for the removal of the duties on wood pulp and print paper. It was asserted in many newspapers that Mr. Bryan's attitude had become conservative, and that he was seeking to conciliate the Cleveland or Gold Standard element of the party. Therefore, it was said, he desired that the second place should be given to Judge Gray. It was pointed out that in his newspaper, last week, he had published an article which might prevent the opposition of Mr. Hearst and his independent party. Alton B. Parker, the Democratic nominee in 1904, and now a New York delegate, took with him to Denver a series of resolutions concerning the late ex-President Cleveland, intending to introduce them in the convention. Parts of these resolutions, relating to Mr. Cleveland's "defense of sound principles of finance" and his respect for "the integrity of the courts," were not acceptable to some of Mr. Bryan's friends. For this action Judge Parker was sharply attacked by Henry Watterson in a long editorial article beginning as follows:

"The attempt to drag the dead body of Grover Cleveland from its new-made grave into the tumult of a national convention will deceive no one. An invasion of the grief of the noble lady who weeps amid the silence and the solitude of the granite hills, a blow at party concord, it is the act of shameless hypocrites. Nor was ever a professional ghoul in-

spired by a more mercenary spirit, because the sole aim and end of the Murphy-Conners crowd, aided by Judge Parker, is the perpetuation of the ascendency of the Belmont-Ryan combination, to which Democracy owes its last ignominious and well-deserved defeat. It was Belmont-Ryan money that financed Judge Parker's campaign for the nomination in 1904. It was Belmont-Ryan money that nominated him, and it was the Belmont-Ryan tag that made an anti-trust Government under such a brand absurd and impossible."

The New York delegation declined to accept responsibility for the resolutions. It is understood that other resolutions in praise of Mr. Cleveland will be offered by the delegation from Mr. Bryan's State, and that they will supersede Judge Parker's. On the 4th, Mr. Bryan made addresses to several delegations at his home in Lincoln. Speaking to Pennsylvanians, he attacked Col. James M. Guffey, the State's member of the national committee, asserting that Guffey had "deliberately and wilfully conspired to defeat what he knew to be the expressed will of the Democrats of Pennsylvania," in the selection and instruction of delegates. He opposed the reelection of Guffey to the committee. "No bushwhacker," he remarked, "should be put into my councils to betray me." Tom L. Johnson said that men like Guffey had betrayed the party and would betray it again. A part of Mr. Bryan's address to a large party from the South was as follows:

"I am going to assume that I am going to be nominated at Denver. It is not a violent assumption, because we have, I think, at least 100 in excess of two-thirds of the convention. It has been a remarkable contest. Only in one State west of the Alleghany Mountains has there been a failure to pass a resolution of indorsement, and only in one State of that number did they stop with an indorsement. In all the others they proceeded to the extent of instructions, and when I assume that Democrats will not disobey their instructions, I am building on a solid foundation. I say I assume that I am going to be nominated, and the nomination comes as distinctly from the rank and file as any nomination ever given to any man, and that is why I am proud of it."

In reply to Mr. Bryan, Colonel Guffey has published a long statement. Declaring that Mr. Bryan's charges are false, he quotes the latter's assertion that he has "abstained scrupulously from taking part in local controversies," and points to the candidate's action in Kentucky, West Virginia, Indiana and Illinois, reproducing the letters calling for Roger Sullivan's removal from the committee as the representative of the last named State. Mr. Bryan, he says, is "the most impudent, domineering and devastating boss the Democratic party has ever known." He asserts that in the campaigns of 1896 and 1900 Mr. Bryan "beseechingly sought" the financial aid of the late Marcus Daly, William R. Hearst and himself, and accepted gratefully the "thousands and thousands of dollars" which they secretly gave:

"And what followed? After his defeat Mr. Hearst became his patron and paid him thousands of dollars, only to be turned upon without a qualm, tho now, when again a candidate, Mr. Bryan fawns upon him in hope of gaining his support. I reap my reward in a vicious, brutal attack from the man who professed to be my friend. Mr. Daly died soon enough not to see the ingratitude of one who accepts a man's assistance and, at the first refusal to serve a selfish purpose, spits in his face. I have replied to Mr. Bryan's vituperative assault upon me with calmness and restraint. This simple recital of plain facts shall be sufficient to enable any fair mind to determine with certainty at a time when harmony is the chief requisite of party success who is the self-convicted falsifier, who the hypocrite, who the real and most arrogant 'boss' every known in the Democratic party, and who, I regret to add, the ingrate."

Railroad and Trust Topics

One prominent railroad officer says that the proposed general increase of freight rates will be made on October 1st. There is a difference of opinion in railroad circles, however, as to the expediency of such action. Leading companies are said to have agreed that for at least three months to come wages shall not be reduced.——The Circuit Court, at St. Paul, has suspended the enforcement of an order of the Commission, reducing by one-half the rate on live stock from the Chicago terminals of several roads to the stockyards in that city. The court holds that the present rate is a reasonable one. ——A. Booth & Co., of Chicago, prominent dealers in fish, who own several hundred refrigerator cars, have pleaded guilty to receiving rebates from two railroad companies on shipments from the Atlantic coast.——The international combination of manufacturers of steel and iron tubes, formed in December, 1907, was dissolved on the 1st, owing, it is said, to the acceptance by Glasgow manufac-

turers of a South American order which, under the agreement, should have been given to manufacturers in this country. Prices have fallen 10 per cent.——After a hearing in the municipal court at Boston, the seven officers of as many prominent boiler, bridge and structural steel companies who were accused of conspiring criminally to defraud that city by collusive bids, and of whom President Roosevelt spoke in a recent message, have been held for the grand jury.——At Nashville, the indictments in the case of the Government against the Virginia-Carolina Chemical Company, which was alleged to be an unlawful combination of manufacturers of fertilizers, have been quashed because special counsel representing the Government wrongfully took part in the proceedings before the grand jury.

Mayor McClellan's Election Confirmed

At the end of the trial of the quo warranto suit to test the title of Mayor McClellan, of the city of New York, in the interest of William R. Hearst, it was decided last week that Mayor McClellan is rightfully in possession of the office. The election took place nearly three years ago, and for the three candidates nearly 600,000 votes were cast. Mr. McClellan and Mr. Hearst were almost abreast in the contest, each having more than 220,000 votes, but the former's plurality over the latter was about 3,500. As settled some time ago at a partial recount, it was 3,474. The recent complete recount, before Supreme Court Justice Lambert and a jury, consumed fifty-one days. The result showed a gross gain for Hearst of 1,094, a gross gain for McClellan of 231, and a net gain of 863 for Hearst. Thus the Mayor's plurality was reduced to 2,965, and the jury was directed to render a verdict that he was duly elected in November, 1905. The judge said that the evidence had shown that there was no fraud, so far as the conduct of the election officers was concerned. At the end of the recount, Mr. Hearst's counsel had asked that 112 boxes be thrown out, because of slight discrepancies between their contents and the poll books. The judge ruled against this, holding that there was no evidence to warrant it. Mr. Hearst's counsel said the trial had been an eminently fair one. Mr. Hearst himself said in a cablegram from London that the result was "more than satisfactory" to him. His aim, he continued, had been to secure an honest count. That had been secured, and hereafter it would not be possible "for election thieves to commit frauds in secrecy and security behind the barrier of the law." Mayor McClellan has expended more than $40,000 in defense of his title, and Mr. Hearst's expenditures in the various proceedings of the last two years and a half have largely exceeded that sum.

Politics in Panama

At the municipal elections in Panama, on the 28th ult., a majority of the candidates who are counted on the side of Jose Domingo Obaldia in the campaign for the Presidency were elected. The followers of Obaldia were successful in both Panama and Colon, and returns from the entire country indicated that at the Presidential election, on the 12th inst., Obaldia would receive about two-thirds of the electoral votes. There was good order at the polling places, and it is asserted that the elections were fairly conducted. On the 3d, Ricardo Arias, Obaldia's rival and the Government's candidate for the Presidency, proposed to Obaldia that both should withdraw in favor of some third person. Obaldia refused. Thereupon Arias withdrew, and his supporters will not vote at the coming election. According to dispatches from Panama, Arias says he recently received messages from Secretary Taft opposing his candidacy and favoring that of Obaldia. The Secretary says he has sent no messages relating to Panama politics since the letters which were published in May.——Honduras fears invasion from Guatemala by revolutionists, and it is said that she has appealed to Washington for help. Ex-President Bonilla is said to have organized an invading force on the Guatemalan frontier and to have been aided by President Cabrera. Friends of Bonilla, who were retained in office by President Davila (of Honduras), took part in the revolutionist plot. Several of them have been arrested.——Reports from Paraguay say that a revolution broke out on the 30th ult., in Asuncion, the capital,

where the soldiers turned against the Government. It became known on the 6th that the revolutionists had overcome all opposition and made Dr. Naviero president.

The Philippine Islands

W. Cameron Forbes, of Massachusetts, has been appointed Vice-Governor of the Philippines. He was graduated at Harvard in 1892 and for four years has been a member of the Commission, as Secretary of Commerce and Police. Gregorio Araneta, who has been Attorney-General, has now been made a member of the Commission and Secretary of Finance and Justice. The President has also added to the Commission Newton W. Gilbert, of Fort Wayne, Ind., and Rafael Palma, a native of the islands. Mr. Gilbert has been Lieutenant-Governor of his State and a member of Congress. He went to the islands as a captain of volunteers. Since 1906 he has been a judge there. Señor Palma is a lawyer and a member of the Assembly from Cavite.——Cholera has spread from the province of Pangasinan to the province of Nueva Ecija. On the 1st there were ninety-seven new cases and fifty-one deaths in Pangasinan. The infected districts are within 100 miles of Manila, but at last accounts the disease had not appeared in that city.——On the 3d, in Manila, there was a procession of 20,000 men, representing the leading industries of the islands, in support of the petition of the Merchants' Association to Congress for such free trade with the States as has been granted to Porto Rico. It is expected that 1,000,000 signatures will be attached to this petition. Sugar and tobacco planters say that their industries will be ruined if our tariff on these products is retained.——Manuel Quezon, representing the Assembly, has finished his study of the Russian Duma and has left St. Petersburg for Berlin. He is accompanied by the editor of a Filipino paper published in Manila, and his tour of inspection was suggested by the War Department. Dispatches from Russia say that he was impressed by the severity of the Russian police government and by Russia's policy in Poland and Finland; also that he spoke of the advantages of the American attitude toward the Philippines, and remarked that the Filipinos should proceed slowly and carefully in the development of legislative autonomy.

Paraguay

A small revolution has taken place in Paraguay, tho the details have not yet been received. It has succeeded in overthrowing the present Government, several of whose leaders have been forced to flee. The revolutionists have made Dr. M. Emilio Gonzales Nageiro President, who held the office of Vice-President in the Government which has just been overthrown. As the new Cabinet includes members of both parties, it is believed that peace will be insured for the immediate future. There has been much fighting in the streets of Asuncion, the capital, for many days, and quite a number of public buildings have been destroyed. The number of fatalities, it is believed, will not exceed 500.

The Brazilian Dreadnoughts

There has been not a little discussion the past week as to the ultimate disposal of the three monster battleships being built in Great Britain for the Brazilian Government. It has been suggested that Brazil having no use for such vessels, which will be the largest possessed by any power, having a displacement of 21,000 tons and an extraordinarily heavy armament, are being built really for some other power, presumably Japan or Germany. The question then arises whether Great Britain will consent to such a sale; but she will be powerless to prevent the sale after the vessels have been delivered over by the contractors and are on the high seas. Several weeks ago in Parliament the Government was requested to give assurance that the vessels would not be permitted to pass into the possession of any power whose interests might be hostile to those of Great Britain, meaning Germany; but no assurance was given. Brazil, of course, does not allow that they will be for sale. She regards herself as equal to any other American Power, and claims to need a corresponding navy for her own protection, altho it is not clear what enemy she can have. There are, however, disputed boundary questions between her and her neighbors, and a navy

would be of use if Brazil or her neighbors were not willing to refer the question to arbitration. But it would hardly seem possible, considering the attitude of Argentine and Chile, that arbitration would be refused. Hence the concern over these battleships.

Great Britain

Only two topics have interested the British public this past week, the monster display of the Suffragets and the saving of daylight. On Wednesday evening for several hours a vast multitude of men and women besieged the House of Commons, and five thousand policemen were needed to prevent their invading the Parliament House. It was the largest assembly ever seen in Parliament Square. It was not a violent demonstration, but the crowd was so large and so persistent that some rough work was necessary, and there were many arrests and some were injured by the charging of the police, on foot and mounted. The occasion was the assertion by Premier Asquith that the women had shown no great desire for the suffrage, and this was the reply. The leaders met and sent a delegation of twelve women, Mrs. Pankhurst at their head, to see the Prime Minister. He refused to see them, and sent word to them to put their demands in writing. Mrs. Pankhurst declared that the hour had come to show their strength. Mrs. Pethick Laurence said in an impassioned speech that women had broken all records. In 1897 women presented the greatest petition Parliament had ever known. On June 15th of this year they had held the largest public meeting in Albert Hall that had ever been held, and on June 21st they organized the most impressive demonstration that ever appealed to any people or any government. She added that they would produce another record tonight, and they kept their word. They went to Parliament Square, tho not in procession, for that would have been a breach of the old statute, and would have subjected all participating to a penalty of three months imprisonment. On the next day the women who broke windows in Mr. Asquith's official residence were sentenced to two months' imprisonment. One of them declared that next time they would throw bombs. Twenty-five of the women arrested for resisting the police chose to go to prison for three months rather than pay a fine and give bonds for their good behavior for a year.——The committee to whom the proposal to save daylight was referred has reported strongly in favor of it for ordinary purposes. The measure proposes that all clocks in the United Kingdom shall be advanced eighty minutes on the third Sunday of April, and turned back on the third Sunday in September. They believe the measure would be a benefit to health, lessen the use of saloons, reduce expenditure for artificial light, which would save workmen 18 cents a week. The supporters of the bill include many chambers of commerce, boro councils, railways, representatives of the manufacturing and shopkeeping classes, numerous associations for recreative purposes, and schoolmasters and others interested in the education and welfare of children. The majority of the newspapers are in favor of the proposed change and the post office authorities have declared that the business of the United Kingdom with the Colonies and the United States could be easily accommodated to the proposals of the bill. The London Stock Exchange opposes, as it would interfere with concurrent dealings with the New York Stock Exchange, but its advocates declare that the United States would follow very soon.——A naval fleet of 101 vessels has met in the North Sea for maneuvers, and a game of war in an attack on the British coast. This is the greatest fleet ever assembled in the world, and is compared with the recent North Sea German maneuvers, when 62 vessels of war were brought together.——A sum of $500,000 has been collected for the reendowment of Oxford, and W. W. Astor has given $100,000 of it.

The Fourth in Europe

As usual, the Americans gathered on the Fourth in the leading European capitals, under the lead of the American legations. In London Ambassador Reid in an address said:

"Our own latest war is happily ended. It raged for a year or more between the United States and Japan in the sensational press. The Foreign Offices of both countries were power-

less to check its ravages, but at last it burned itself out, with the result that the chief casualties were found among those on either side who from the seclusion of their quiet offices had conducted the campaign, and so we are at peace again with the whole world, including Venezuela, in spite of energetic temptations from its redoubtable President."

In Berlin Ambassador Hill called for international fellowship and friendship, and said:

"I am glad to think so many American men have loved and wedded German wives. I am also happy to see there are American wives who have been transplanted to the German Empire. I cannot doubt that in the course of time this intermingling of peoples will help to draw together and create a network across the sea which will bind the nations in closer fellowship."

The Russian Duma

The effort of the present Duma to find some way of getting along with the Government and gradually establishing a constitutional Government seems to be proving a success. The Duma will take a recess probably from July 11th till October 28th, the ukase for the adjournment having been signed by the Czar. M. Khomyakoff, the president of the Duma, has been received for the last time during this session by the Czar, and he seems to be quite pleased, on the whole, with its course. It is reported that he expresst complete satisfaction with the Parliament's work, and approved even its rejection of the battleship scheme, saying that it was easy to understand the Duma's refusal to vote piecemeal appropriations before a comprehensive program could be presented. He said that he was impresst with the earnestness of M. Guchkoff's attack on the grand dukes, and expresst a wish to give the Octobrist leader a hearing. He concurred in M. Khomyakoff's suggestion that the presence of the grand dukes in the army was opposed to the true monarchical principle. He sympathized with the Duma's championship of student universities, and approved M. Milyukov's motion to permit so-called listeners to complete their course of study. Since this interview the Duma has approved the budget of revenue, amounting to $1,250,000,000. Finance Minister Kokovtsoff said he thought the country's financial system had fully sustained the test to which it had been subjected. Notwithstanding the recent war and internal disorders, he said, the ordinary revenue had exceeded the ordinary expenditures by $4,650,000. The deficit for 1908, he thought, could not shake Russia's financial position. In conclusion he declared that the bankruptcy of Russia existed only in the pamphlets of Dr. Martin and other ill wishers. Dr. Martin is the German official who three years ago declared that Russia would soon be bankrupt. The Duma has authorized the expenditure of $46,000,000 for army material and defenses in the East, and a further expenditure of $100,000,000 in 1909-11 for the same purpose.——The annual average executions in Russia from 1842 to 1904 were 15; in the six months from August, 1906, to February, 1907, they numbered 950. The total number in 1906 was 1,642. In 1907 1,693 death sentences were past and 748 persons were executed. ——It is announced that the Emperor of Germany will meet the Czar in a few days, thus anticipating the visit of President Fallières.

Persia

The British Government refused the request of the Persian Government that the political refugees be turned over to the local authorities, declaring that none who had fled to the British compound would be given up without adequate assurance of their proper treatment. Terrible stories are told of the barbarous treatment of prisoners. A palace official was sent to the British Minister with a verbal apology for the picketing of the British compound, but he was not received. It is declared that four eminent divines reached the camp in the hands of yelling soldiery. Their heads and limbs were broken, their beards plucked and they were smeared with blood. Malik, the great Nationalist preacher, was strangled before the eyes of all the prisoners. When he was half dead the cord around his neck was loosened, his flesh was hacked with blunt knives, and his body was thrown to dogs. The Parliament building has been demolished, all papers have been destroyed, the Shah is said to have wired King Edward, over the head of the British Minister, complaining at the British Legation for sheltering refugees, but, according to

the story, he got no reply that pleased him. The reports are conflicting as to the result of the fighting at Tabriz. That which comes from Russian sources, which are favorable to the Shah, declare that the revolutionaries have submitted and surrendered their arms. There are said to have been 4,000 casualties in the fighting there, and that 1,700 refugees are in the premises of the Russian bank. We also hear that leading chiefs are conspiring to depose the Shah.

Various Events

Very slowly is the income tax bill making its way thru the French Chamber of Deputies. It was introduced nearly six months ago, and only twenty-four of its ninety-eight articles have as yet been discussed. The latest discussion has been over the provision that in case a taxpayer complains that his income is rated too high he must be compelled to show his accounts. As amended the treasury and the taxpayer are required to prove their case, but the taxpayer is not required to present his account books. As so amended the article past by a majority of 154.——The Duke of Orleans has issued a manifesto in the form of two interviews in the *Matin* on the occasion of the centenary of the founding of the military academy of Saint Cyr by Napoleon. He asks for a constitutional monarchy, promises to avoid clericalism, and to respect the authority of Parliament if made King of France. Very little attention has been paid to his words, which shows that his cause is dead in France.——An almost incredible story was told in the Portuguese House of Lords by Dr. Alpoim, chief of the Progressive Dissidents, when it was insinuated that he was implicated in the assassination of King Carlos and Crown Prince Luiz last February. He asserted that the assassinations had been decided upon at a meeting of the leaders of the Progressive and Regenerator party a few days before they were carried out. A number of Republicans also were present at this meeting. Dr. Alpoim charged further that the Republicans proposed to obliterate the entire royal family, with the exception of Maria Dia, the mother of King Carlos, but that the Monarchists insisted that such a general slaughter would be useless. Finally Manuel Silva Buissa and Alfredo Costa were given $20,000 and $10,000, respectively, to kill King Carlos and Premier Franco. Arrangements were made by other men to cover the flight of the assassins, but when Buissa and Costa fired their friends lost their heads and opened fire also. These shots resulted in the death of Prince Luiz.——The ill-health of Prime Minister Saionji is given as the reason for the resignation of the Japanese Cabinet. The new Premier will be the Marquis Katsura, who was at the head of the Cabinet before that headed by Saionji. The return of Prince Ito from Korea may be connected with this change of cabinet, altho it has been intimated that he would be succeeded in Korea by some one who would not hold so tight a rein on the Koreans, with a view to calming their anger against Japan. It will be a coalition Ministry, with the Elder Statesmen and the Constitutionalists, otherwise called Liberals, in power. The chief question in difference between the parties will be over the financial questions and the heavy taxations and military budget.——Three churches, Trevés, Turin, Argenteuil —that is, German, Italian and French churches—claim the ownership of the coat for which the Roman soldiers cast lots on the day of the Crucifixion. All these have duly authenticated documents. The canons of Treves are so sure that they have the genuine coat that they have brought the matter before the Congregation of Rites and ask for the rejection of the other two coats as counterfeits. No doubt the Delphic Oracle will be equal to the occasion.——We may suppose that in the not distant future the Catholics of the United States will be convinced that the law separating Church from State in France was a blessing. In a late address, Cardinal Gibbons, speaking to Cardinal Logue and a great company of Irish Catholics, said:

"I hope that the day shall never come when the clergy here shall be supported by the Government, because if it does, I fear that the Government may undertake to say what we shall preach and what oppose. I hope that the clergy can always receive the free will offerings of the devoted."

General Horace Porter at Woodstock

All the older readers of THE INDEPENDENT will remember the Fourth of July celebrations held in the village of Woodstock, Conn., where Mr. Henry C. Bowen, the proprietor of THE INDEPENDENT, from 1870 to the time of his death in 1896 assembled the foremost men and women of the land to discuss the themes appropriate to the day. Presidents Grant, Hayes, Harrison and McKinley attended these celebrations, whose influence naturally extended far beyond Mr. Bowen's birth town in the New England hills. At the first celebration in 1870 President Grant was present. The ceremonies at that time consisted of the reading of the Declaration of Independence, the planting of an elm tree by General Grant and several speeches. This year at Woodstock a similar Fourth of July celebration was held. The Declaration of Independence was read, as in 1870, and in the absence of Gen. Frederick D. Grant, who expected to be present, his wife planted another elm tree, 100 feet from the "Grant Elm," planted thirty-eight years ago by her father-in-law. Gen. Horace Porter, who, as executive-secretary to President Grant, accompanied him to Woodstock in 1870, was happily present and delivered an oration in eulogy of the great Commander-President, who, he held, ever showed his real greatness when great problems were to be solved. As General Porter served thru the war as aide de camp of General Grant and has written a book entitled "Campaigning with Grant," there is probably no one living better qualified from intimacy and personal knowledge to speak of the great Civil War General than his distinguished soldier in arms. General Porter's simple eloquence will long be remembered in Woodstock.

Law That Does Not Punish

BY JAMES GRAFTON ROGERS

THAT "the administration of the criminal law in all the States of the Union is a disgrace to our civilization," is a statement credited to William H. Taft. Sidney Brooks, in the London *Chronicle,* says, "the criminal law of America is a refuge and a comfort to the lawyer and the criminal, and a menace and vexation to the rest of the community."

What do these charges mean? Such affairs as the following:

In 1900 a man named Huntington was indicted in California for performing a criminal operation. He was tried for murder, and convicted of manslaughter, a lesser degree of crime. The court sentenced him to ten years' imprisonment, a substantial penalty. He appealed. Three years later the Appellate Court reversed the whole conviction, because the trial judge told the jury that he might be convicted of manslaughter—an instruction that could and did act only in his favor. In March, 1907, they started to try him again. The doctrine that no man can be twice tried for the same offense met the court at the threshold. The conviction of manslaughter had, the decisions declare, acted as an acquittal of murder, a greater degree of homicide. The judge, in an effort to find some road to justice, attempted to try him for murder, but to punish him, if convicted again, only for manslaughter. The Appellate Court blocked the whole proceeding, and ordered the convicted criminal discharged. He cannot, the court says, be tried for manslaughter because he could never be accused of it; nor for murder, because he has been acquitted. "He may not be convicted," the court argues, "of a crime which the evidence shows he did not commit, for the reason that the evidence shows he did commit another crime of which he has been acquitted." That they unquestionably thought he had committed something was quite immaterial. He went free.

In Georgia, about the same date in 1907, the second trial, for murder, of a man named Bagwell came up. On the first trial the jury had disagreed, and had hurriedly been discharged by the judge, without haling the prisoner out of his cell into the court room. The Supreme Court would not permit him to be tried again. Why? Because the constitution declares that no man shall be twice tried for the same offense except in case of mistrial, and, moreover, a man must be brought face to face with the witnesses against him. The dismissal of the jury in his absence amounted to an acquittal.

A few months before the same court in Georgia reversed a conviction for receiving stolen cotton. The prisoner had been caught with the 800 pounds of cotton of a peculiar sort, the sort stolen, locked in his storehouse and wet with the night rain. But in the trial the prosecutor had forgotten to ask somebody, anybody, whether cotton was a thing of value. The court or jury, it appears, could not be permitted to know that 800 pounds of seed cotton had value without being told.

In Montana a jury convicted a man named Penna of murdering another man's wife. He was sentenced to death. He had followed her across the ocean. Then, one day, he learned that she was a married woman. Penna knocked at the door and shot her dead. The defense was insanity. On appeal the conviction was reversed. The trial judge, among a string of other instructions to the jury, had happened to mention the fact that if they found from the evidence that the defendant had a good character, they might consider that as a circumstance tending to establish his innocence. As a matter of fact there was no evidence at all introduced regarding Penna's character. The instruction to the ears of the Appellate Court was clearly prejudicial to Penna. The conviction was unfair.

In Indiana, in 1903, one James Gillespie was to be tried along with three others for the murder of a woman of the same name. It was evening when the jury was finally impaneled and sworn. The court adjourned over night. In the

morning the public prosecutor, before the case was opened, asked that one juror be removed and another substituted in his place. The juror, the prosecutor had learned over night, had falsely sworn the day before that he was not related to any of the defendants. As a matter of fact, he was related. The court gave an opportunity to substitute another juror. The case went on; the jury disagreed. On a second trial Gillespie was convicted and given a life sentence. The Supreme Court turned him loose. The substitution of that first juror was manifestly an acquittal of the crime. It is quite plain.

In Illinois, in 1907, a defendant, Elgin by name, was found guilty of setting fire to a creamery to defraud an insurance company. But the judge, in describing the elements of the offense (and describing them correctly) had casually used the word "arson." Moreover the jury, in finding Elgin guilty, had found him "guilty of arson, as charged in the indictment." The indictment was invulnerable, the conviction was clear, the jury had had no opportunity to be misled, the instructions were all fair, but "arson" is the burning of a dwelling house and not a creamery. Reversed.

In Montana, somebody stole $7,000 from the Bank of Somers. A jury convicted Peterson. In instruction No. 11, the trial judge had told the jury that "to find the defendant guilty you must find that he appropriated the property without color of right and authority and with intent to steal the same." Peterson appealed, and the Supreme Court sent him back for a new trial. It was clear to them that the jury were not instructed that there must be a criminal intent in the act. That the court had told the jury so much in so many words in instruction No. 6 was quite beyond the question. Instruction No. 11 did not say so. It only said intent to steal. The jury had unquestionably been misled.

These examples are not abnormal, and absurd cases singled out from the long history of American jurisprudence. They are cited almost at random from the decisions of the year 1907. For the purpose here required, they should be so chosen, as fair samples of the sort of criminal procedure that American courts are administering. The cases, moreover, are not stated in the strict legal phraseology and detail that a lawyer would require. Behind every decision mentioned there is more or less of a chain of legal logic, which is here abbreviated or omitted. That chain of reasoning is of no interest to the lay citizen. At best it is only a means to an end. When that end, namely, the intelligent administration of criminal justice, fails, the logic is rubbish.

That these decisions are perverted law, that the legal conditions which permit such decisions are vicious and unsafe, that the preservation of order has been lost sight of in an effort to follow abstract reasoning to the vanishing point —in short, that the charges of Taft and Brooks are justified, seems to the writer very clear. In only one of these cases was there any other ground than that named above assigned as a reason for reversal. In none of them did the court find that the prisoner's guilt was doubtful. In none of them did the court express any regret that justice was being tripped. It was examining merely a problem in mathematics. The problem had not been solved according to a formula. The court's eyes were on the formula and not the answer. It was not the prisoner, but the judge, who had been on trial.

The cases fall chiefly under the operation of three or four dogmas. The doctrine of double jeopardy, mentioned above and expressed in over forty American constitutions, is at the root a provision against political persecution. "No man once acquitted shall be tried again for the same offense." This doctrine has been distorted out of all resemblance to its sense or origin. Intelligently used it is an inestimable safeguard against such occurrences as the recent persecution and conviction of Harden, editor of the Berlin *Zukunft*. As used in the United States, it produces monstrosities like the Gillespie and Huntington trials cited above. Something the same is true of our doctrine regarding the impartiality of instructions given by the court to a jury. It is a defense against untrustworthy judges. In the English courts, even in our own Federal courts, the judges without any miscarriage of jus-

tice habitually add the advantage of their own intelligence to that of the "twelve good men and true." Not so with the State courts. The judges are trimmed and measured to delicacies of expression that not one juror in a thousand could detect, much less feel the influence of. To the rules of evidence, to the construction of indictments, to a dozen other legal rubrics, the same criticism fairly fits. Some of these evils legislation can eradicate. But legislation cannot bind a court to any interpretation of a constitution, and legislation, when it tampers with legal procedure, is a risky instrument.

The fault lies, of course, in the attitude of the legal profession, and chiefly in that of the judges. Such an attitude does not exist in England. It exists in America mainly for one reason. The balance of ability and intellectual force is on the wrong side of the bar that separates court from counsel. The job is still looking for the man in America, and not the man for the job. As a result, the attraction of a fixed income, even of a very considerable income, is not equal in the eyes of the capable lawyer to the advantages of freedom and the possibilities of big fees and big speculations that exist outside the judiciary. This situation exists most strikingly in the Western and Northwestern States; and it is in those States that the most frequent failures of legal procedure occur. It may be that the short terms of American judges play some part in the matter. Be that as it may, the most forceful lawyers of America are not the judges, but the advocates. As lawyers are bound to do, as lawyers always will do, these advocates urge the defense of their clients to the minutest quibble that may avail. Instead of being capable of meeting and defeating this tendency to mere microscopic sophistry, the courts have given way before superior force.

Perhaps the solution lies with time and economic growth. Today the average lawyer is too close to the law, the average citizen too far from it, to detect, at any rate to comprehend, how far the criminal law has swung from its orbit. Newspaper writers, whose occupation it is to follow the course of criminal trials, make occasional hue and cry. A bombshell like the Schmitz fiasco in California ought to stir even the Man on the Street

DENVER, COL.

The Faint Refrain

BY KELLY MILLER

THOSE godly men in days of old,
Ere doubt was born, and faith was bold,
Grasped heavenly things with a firmer hold.
Not far away the blest abode,
The mountain top and desert road,
Where godly man might tryst with God.

This newer world like an anvil rings
With the dint and din of doing things
For the gain and glory that it brings.
Elated with the modern joys,
The whir and stir of the new made noise,
Our ears are stopped to the heavenly voice.

A scient and unreverent age—
The schoolboy laughs at the ancient sage,
Makes jest of his sacred heritage;
And science with revealing eye
Has banished God from earth and sky
To more remote vacuity.

Proud man would grasp infinity
And all its hidden mystery,
And leave, O God, no place for Thee
On the hither side of time and space,
Where we might meet Thee face to face,
Get hallowed glimpses of Thy grace!

Nor stately temple's gilded part,
Nor show and cheat of mimic art
Reveals Thee to the human heart.
Tho priest may chant in solemn style
Archaic words with cant and guile—
The soul's unsatisfied, the while.

Lord, we would walk and talk with Thee
With sure unfeignèd certainty.
If the elders did, why may not we?
Wilt Thou to us be only known
(Thy wiser sons and greater grown)
Thru faint refrain of the ages flown?

WASHINGTON, D. C.

Life in the Kentucky Mountains

BY A MOUNTAINEER

THE farthest back I can remember is when I was a wee chap in cotton dresses pulling after my mother and begging for a biscuit. Sometimes I would beg for hours and hours when I knew there wasn't one in the house. Biscuits were a rarity with us.

I was the seventh of a family of eight —four boys and four girls—Bill, Dick, Josie, Sarah, Becky, Martha, Sam and Joe. Joe was the baby; the largest biscuit and the prettiest piece of meat always went to him.

The house where I was born and lived till I was four years old was a little log cabin of one room, far up a deep, long hollow, four miles from any schoolhouse or church, surrounded by a dense forest of trees and entwining grape vines. In those days the country was very different from what it is now. A great deal of land that is now cleared and settled was in woods. We were sometimes so far from any postoffice that even tho a letter were directed to us, we would never get it.

When I was five years old and commenced wearing pants, I thought I was beginning to be a man, and Joe and I would shoulder our little wooden guns and go out to "fight the Indians." While the rest of the children were at school Joe and I would have great times together, hunting chestnuts and chinquapins and gathering wild flowers. We were not left to ourselves many weeks and months tho, for father would get behind in his work and the older boys

EXTERIOR OF A MOUNTAINEER HOME. CUMBERLAND MOUNTAINS.

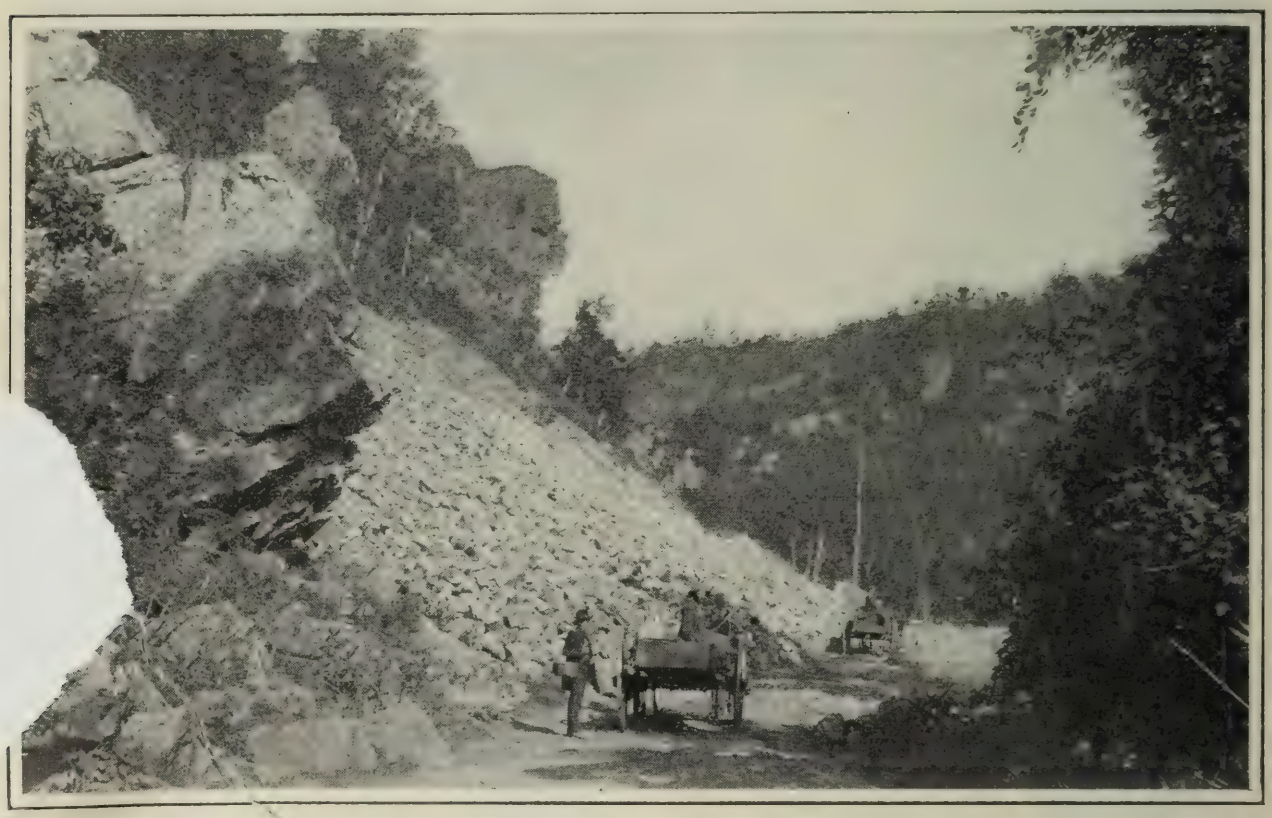
INTERIOR OF A MOUNTAINEER HOME. CUMBERLAND MOUNTAINS.

would have to quit play and assist him, while the girls would have to help mother with her pumpkin and apple butter and jams. As the school was in most all cases very far off, and the creeks so wild, they were afraid to send the smaller ones alone. I would be glad when they didn't go, so we could all be together!

Altho I managed to obtain a rough knowledge of some of the free school branches, yet "book-learning" in those days had no fascination for me. While the children of the "land owners" wore their nice, new suits and pretty caps and shoes, I had to wear my "jeans" pants, "hickory" shirt, bark hat and go barefooted, and this contrast would cause me a feeling of great shamefulness, and tended to corroborate the theory that "such fellows as me were never intended to learn anything." I was a swift runner, an excellent ball player and expert wrestler—but for "book lore"—I left that for the "other fellow."

My happiest days were those spent at home in winter, after supper, before the fire on the old puncheon floor. [illegible] and girls would gather around in [illegible] and play "Jack rocks" or "hull [illegible]" For hours and hours this merry s[illegible] would continue till a gruff voice would command us to bed. Sometimes some of the neighbors' children from over in the next hollow would come in and join us in our little games.

When I was about ten years old Dick traded for an old banjo, and every night after his day's work was done, he would take it down from where he kept it hung on the wall and thump on it for hours at a time, trying to make a note on some tune he had heard. This did not suit father, who always went to bed as soon as supper was over; and when the nights got warm Dick would take him a chair and go out and sit against a tree and pick till far into the night. While Dick was away to his work, and I was not in school, I would slip the banjo out into the woods and go over those notes Dick had learned. One day he caught me at this, but when he saw I could play equal-



ly as well as himself, he never afterward objected to me using it.

We never lived at one place long at a time, except when father would take a lease for several years on one tract. Joe and I were always glad when it came "moving time," so we could have new woods to explore, new trees to climb and new caves to rummage. At no time, tho, were we ever fortunate enough to be in close range of any schoolhouse or church.

As soon as my sisters would become grown they would hire out to the farmers of the valley, at from twenty-five cents to a dollar a week. Then some fellow would take a liking to them, and before I was grown they had all married off.

My father was a great hunter, and always kept a good hunting dog, which we all loved dearly. During the fall of the year father and Bill and Dick would work hard all day and hunt the greater part of the night. Joe and I thought if we could ever get big enough to go hunting our greatest ambition would be realized; and one of the most regrettable things of my life is that little Joe's ambition was never realized. Before he was seven years old he took with diphtheria, which he caught at school, and became its victim after an illness of only a few days. If he had had the proper medical treatment he could have been saved; but father had had bad luck that year and because he had not been able to settle up an old account he owed for previous treatment, the doctor feigned sickness and wouldn't come. It threw a gloom over the little household and saddened us for several years.

After quitting school, life was somewhat strange and lonesome to me, for little Joe was not there to keep me company. For a while after my day's work was finished I would get my arithmetic and slate and work examples till bed time; but I kept running on sums that I couldn't work, and as there was no one to help me, I gradually began to lose interest, until I finally gave up altogether. Instead, I would pick up my gun and call old "Tray" and stroll out thru the woods in quest of the possum and the coon. If the night was cool and game scarce, I would sometimes build up a fire and old "Tray" and I would gather around it and look out over the dark, mysterious

MOUNTAINEERS RETURNING FROM MARKET.
Nigger Head Rock in the center background.

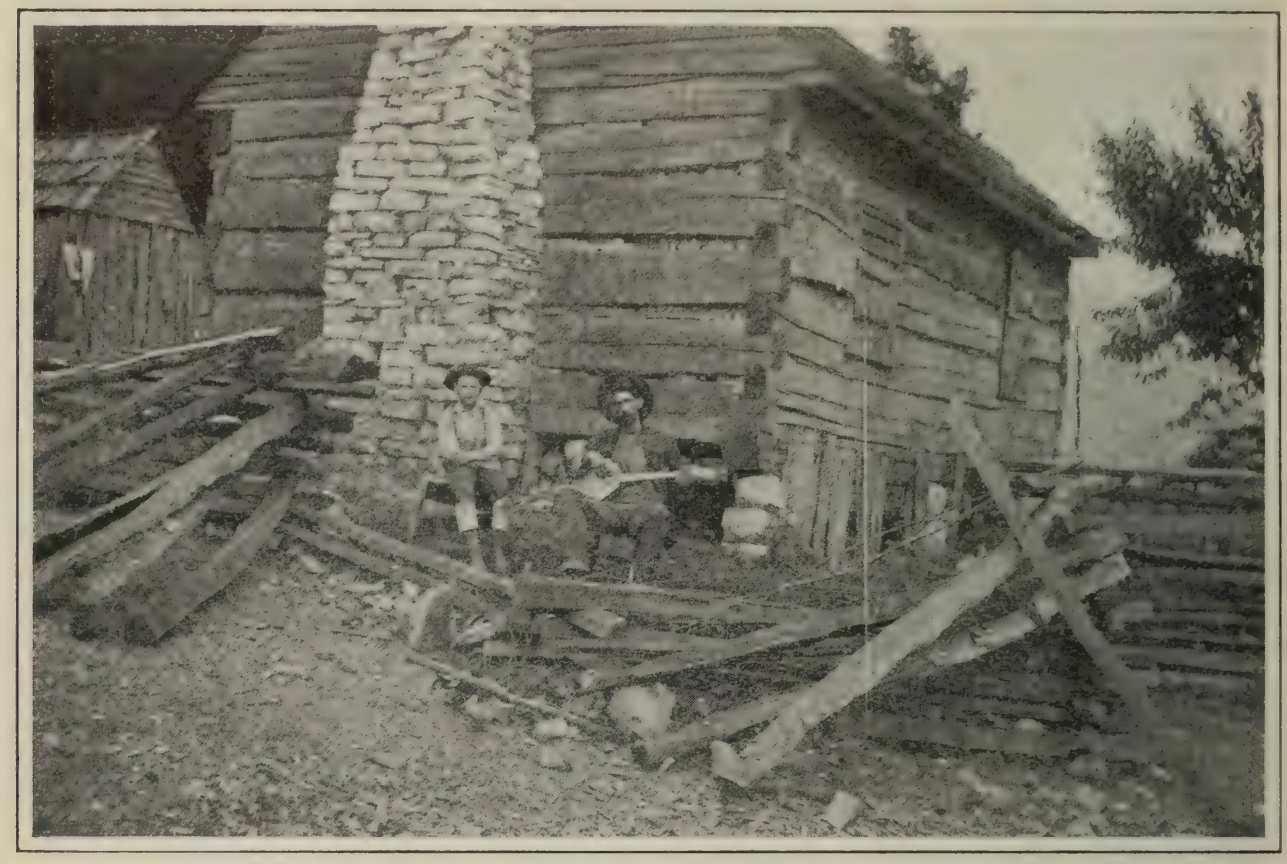
valley and the world beyond, till far into the night. I would talk to him and tell him what a peculiar, curious world it was we were living in, and I always thought old "Tray" could understand what I was talking about, for he would draw himself closer up to the fire, and with his tongue protruding out the side of his mouth, gaze down into the valley with a dreamy, far-away expression.

If the night was dark, warm and damp we would often get as many as three or four possums and one or two coons, which I would skin and stretch on boards and sell to the country store for shoes, clothing, powder, lead and many other necessaries of life. This was almost my only financial source.

To add to my many other misfortunes and loneliness. Dick had taken away his banjo, when he went down to Tennessee to get him a job. I was thrown so completely at sea in this last misfortune that I decided I must have one of my own, and one night, on one of my midnight rambles, I called on one of my old school chums and swapped him a "Bull Dog" pistol to his "home made" banjo. At the time I thought this was the greatest bargain anyone had ever made.

The noise never seemed to bother my mother very much, as she appeared to take an interest in the different tunes I was learning—sitting quietly in her corner knitting, she would watch me from over her spectacles. But father always did regard it as a nuisance and something that was altogether uncalled for.

So when the pleasant moonshiny nights of spring and summer came on, like my older brother, I would take my banjo and chair and go out and tilt back against the crib or a tree and pick till far into the night. Old "Tray" would lay out in front of me with his head resting on his paws, and whenever I would stop he would wag his tail, raise his head and blink his eyes to tell me how well he was appreciating the music, and to encourage me on.



Thanksgiving, Christmas and New Years, was the time of all times with me. All during the spring and summer I would study about the good times I would have when that period came round —of the girls I would hug and the boys I would "beat." But my one fad in these sports was my old banjo. However great the distance and dark the night, I would take my old banjo and start for any and every "party" or "dance" I could hear of. As long as there was no one present that could beat me, I would play for them, while they went thru their game of "Boston" or "Snap." (I always would rather pick than to do anything alse, and if I had any hugging or kissing to do, preferred to do it on the quiet.) It was not long till I got to be the best banjo picker there was in the country, and I managed to save me up some money from the sale of my fur, and this, with what I sold my old one for, ordered me a good "store" instrument. It was not long till my fame spread and I was sent for far and near to make music for school exhibitions and all sorts of entertainments thruout the country.

At these "parties" I made the acquaintance of a Miss Lizzie Blarney, the daughter of a widow washerwoman (of the sturdy old Irish stock). She knew more "calls" and could dance more new "steps" than any one else, and was always the life of the crowd and favorite at all of the dances and "plays." Falling in love with her seemed to be the most natural thing of my life. When it would come her turn on the floor I would always tune my banjo till it would ring as clear as a bell, and I had a natural incentive to do my best on all of my "favorite" tunes; and when she would smile at me it would make me feel mighty glad the "other fellow" wasn't the banjo picker!

The next spring after I met her they moved on old man Brown's place (i she and her mother and two you brothers) just across the valley, in p view from where we lived; and that mer, besides keeping even on t bors' washing, ironing and scr going far and near over the valley, ing from early till late, receiving a thirty or forty cents stipend, and being paid in "hog's heads," "back bones," a "turn of corn"; or, when the old lady would keep persistently reiterating the dire need of "Lizzie a new dress," "Bobby a pair of shoes," she could manage to procure an "order to the store"—they also tended several acres of corn, and to me their

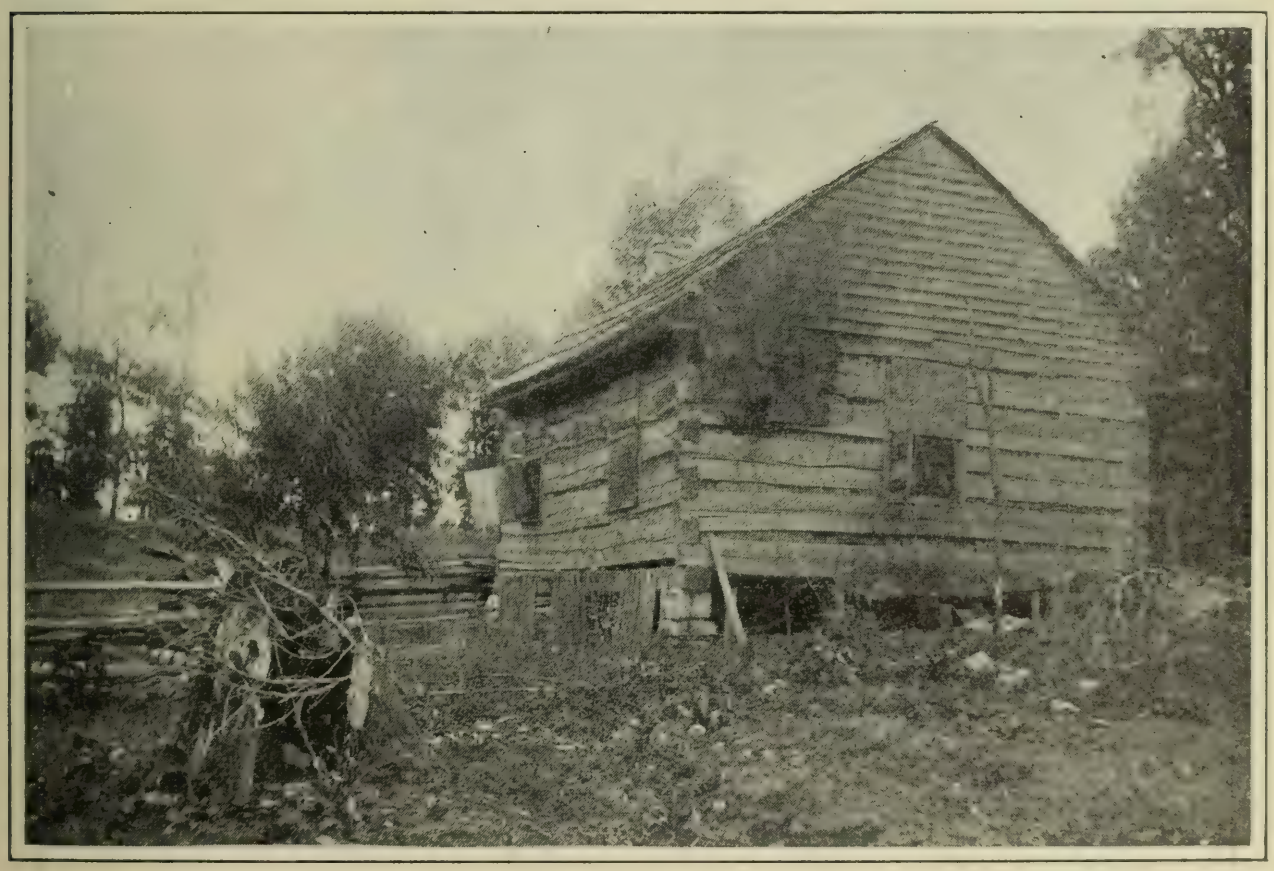
cabin, surrounded by this foliage of white tassels, presented a beautiful and bewitching spectacle, and I began to secretly cherish and admire the thrifty and persevering qualities of the Blarney family.

That fall and winter during the holidays I would make it convenient to be around where Lizzie's hat and shawl were, when the "play" had concluded, and ask her "if any one had made any arrangements to take her home," and tell her "if she didn't have any particular

AT THE CLOSE OF DAY THE MOUNTAINEER MAKES MUSIC.

ections I would just as soon go und that way."

fter the "plays" had all "died out" y" and I would go over in that hunting (tho we rarely ever y game). I remember very well irst night I went over in there (*i. e.*, after the holidays) I never could quite understand just how Lizzie and "the folks" regarded my suit, and I sat on a log, some hundred yards back of the house, with my gun across my lap, looking far out over the golden, moonshiny valley, and wondering why life had become so miserably to me. Old "Tray" came and laid his head on my lap, as if to tell me: "Old Pal, I'm one that won't go back on you." How I did love old "Tray!" For several hours I sat stroking his velvet ears, pouring out my troubles to him. At last he seemed to understand, for he pulled himself loose from me, and gazed out thru the timbers in the direction of the house, and whined piteously. Old "Tray" had solved my problem for me, for it was not long ere I became a familiar figure at the Blarney fireside; and when the old lady was busying with her household duties and the boys were not keeping too close guard, such an exchange of kisses!



One night I was somewhat later than common in getting started from home, and to make it still worse, my father got me to go by one of the neighbors and return some meal we had previously borrowed; and, as it so happened, Mrs. Blarney and Lizzie had been off doing some washing that day, and being tired and sleepy, had retired somewhat earlier than usual. When I got there, all was darkness and solitude. Thinking some accident might have happened to them, I rapped on the door. Old Mrs. Blarney's voice broke out clear and audible on the

still night air: "Mister Johnson, if you want to court my gal, you have to come earlier." That was warning enough!

In the early spring Lizzie and I were married—she being eighteen and I nineteen—and I took a five years' lease on a piece of land on the ridge some two miles down the valley from the scene of our old homes. This tract at the time was nothing but a jungled mass of forest. I went to work with all the zeal of a pioneer woodsman, cutting down trees to build me a house; riving my own boards, splitting logs into halves and dressing them down with my ax into puncheons for the floor, and then, after "chinking" it securely, I had as comfortable a cabin as any mountaineer could wish for. Then Lizzie and I bundled up our belongings into a two-horse wagon load, and betook ourselves to our new home.

The first year was a rather tough one for us, for building my house threw me so late with my clearing that I only got about five acres cleared off, and was nearly till June getting the corn planted. However, I managed to pull thru somehow, with not any more than $25 to the debit side of my account! At the end of the next year I was even with my creditors, and with a horse, cow, a crib of corn and some vegetables stored up for winter besides. At the end of the five years I had the entire thirty-five acres cleared off, and besides a team of horses, cow, hogs, chickens and winter's supply of feed; I also had $250 stored away in our old chest. (About half of this I made swapping horses, fattening hogs and selling off calves.) This amount we put into the farm where we are now living.

Those first five years of married life, tho hard, yet were not without their joys. Often after my day's work in the woods was done, I would take my boy on one knee and my banjo on the other, and while Lizzie was "cleaning up" the supper dishes, sit and rehearse the old tunes of the Christmas holidays, looking out thru the open door into the bleakness of the night building pyramids for the future. I sometimes think they were about the happiest days of my life.

A TYPICAL MOUNTAINEER DWELLING.

This little farm we are now living on (and where we have lived since our lease was out) contains about a hundred acres. That part which lays in the valley (about

twenty-five acres) is considered fairly good for all farming purposes. At the time we bought it, there was about twenty-five acres in pasture and the rest was in timber. Now we have it all cleared off and in grass and under cultivation, except about twenty-five acres.

It cost us $10 per acre, $250 down and $125 per year for six years, with interest. About six years ago we sold off timber to the amount of $500, which we used in repairing the house, fencing and fixing up generally.

While I have made what I consider a pretty fair success in life—brought up a family honestly and successfully, and given them many modern advantages, and have a comfortable home in which to spend my old days, I cannot overestimate the important part my wife has played in the matter. In fact, as I sometimes tell myself: "It was Lizzie that did it, not me."

Like her mother—an untiring worker and economical housewife. Many a morning she would hurriedly wash up her dishes and hoe her row of corn by my side, thruout the long Spring and summer days, stopping only to cook our noon and evening meals. She it was that saw that the extra dollar was laid away for a rainy day. And besides all this—laying aside the mater of a comfortable home and farm as of insignificant importance—I yet owe her a larger debt of gratitude than I shall ever be able to repay.

Lizzie had had some educational advantages; tho meager, yet it was enough to enable her to grasp an idea of what it was and what it meant to be educated. Most of this knowledge she obtained while they were living with one of her uncles, at the village, before they moved to the Brown farm. And even here at this latter place she attended two terms of the country school—(what time her mother could do without her).

So after we were married she kept expostulating with me about subscribing for some papers and buying some books and "trying to keep up with the times." But manhood had brought on a fuller conviction of the old doctrine of my forefathers, and I was firmly settling it in my mind that "the woods was the only place for me." And when she would say: "Sam, have you ever ordered those papers and books yet?" she would cut me to the core and wound me unmercifully.

After may misgivings, much contemplation, arguments and reasoning, I finally gave in; and, thanks to my wife, I now have a fairly good understanding of what is going on, and what has went on, and slowly but surely the old prejudice for "book knowledge" has vanished away.

And in purchasing the land for a home I let the matter of school and church house be of first importance. Here we would be within a mile of both, and I thereupon decided that no pains would be spared to give my children as good an education as my means would allow. No, I did not expect to make an Abraham Lincoln out of them, but I thought I could at least get them to the point where they could earn a living without having to work as hard as I did for it.

Dear reader, if I were to draw these notes to a close at this point I could possibly be able to portray for you as beautiful a picture of home life and contentment as it has probably been your lot to read of. But in this autobiography it is not my intention to offer you a balm for your imagination or a soothing ointment to all your prejudice. As near as I am able to do so, I intend to give you absolute facts—my own genuine autobiography—of an undistinguished Kentucky mountaineer.

Not long after I married, my father got killed in an election row, down near the village where he lived. They had had trouble at that place at the previous election, and my father, with several others, had been notified to "be on guard and stand for their rights." That day they, sure enough, tried to work their same old game of voting men who were not entitled to vote, and marching some of the "weak-kneed" mountaineers up and voting them their way. My father was well known thruout the country as one who would not give an inch to any man. He would do almost anything to avoid a difficulty, but when he was imposed upon, or saw others imposed upon, his anger knew no bounds.

When the mountaineers made their "stand" that day, a cry went up: "Watch

Dan Johnson," and my father was shot dead in his track, while reaching for his revolver. But when the smoke cleared up three men were found dead on the porch of the little house used for a poll booth, and the rest were routed from the town. The mountaineers then appointed their judges, and the process of voting proceeded according to law. Of course it created some little disturbance in the neighborhood; but then it was not long in blowing over.

I shall never forget old Tray's actions after my father's death.

That evening I went up to take the news to mother and to stay with her for the night, and as I walked up to the house he did not come bouncing to meet me, as was his usual custom, but just regarded me in a very serious and indifferent manner. As I went about doing up

eye-witness of the village tragedy, and because it was nothing unusual for my father to go off and stay for two or three days at a time.

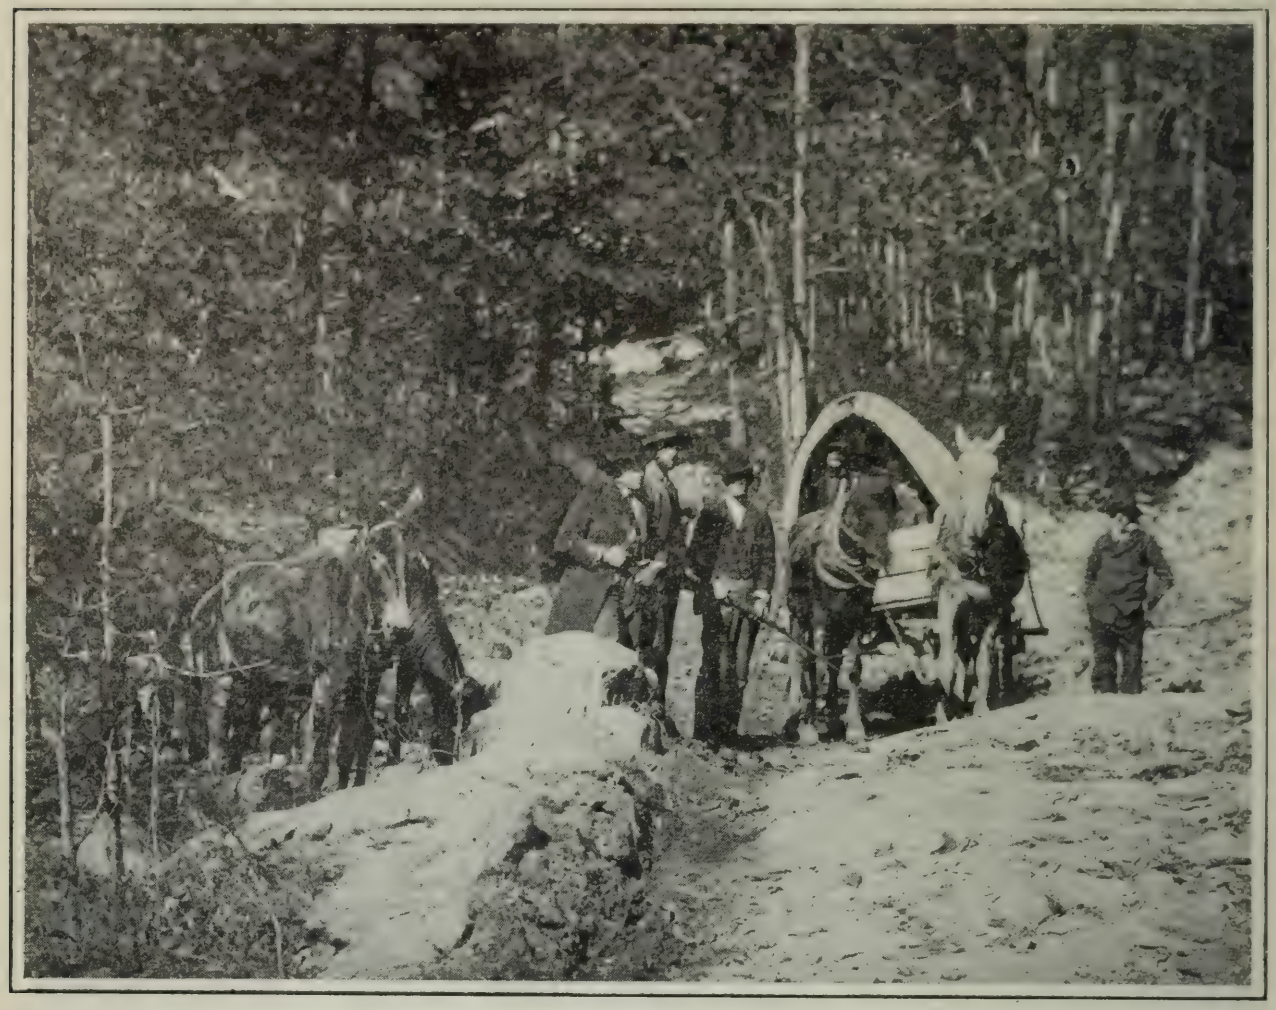
That night after I went to bed, feeling, of course, very sad and dejected, my mother sitting in the corner sobbing plaintively, old "Tray" was out behind the crib uttering the most mournful howls that ever I heard come out of the mouth of a dog. And he kept this up till far into the night.

Poor "Tray"! He disappeared shortly after my father was killed. Not long after that a traveler, passing thru from Tennessee, described such a dog as that, that was wandering among the mountains there. And that is all I could ever learn of him.

After my father died my mother came to live with me; but this was not for

OLD-FASHIONED SQUIRREL HUNTING IN THE CUMBERLAND MOUNTAINS.

the little chores, feeding the hogs and chopping wood, I noticed that he was very restless, going from place to place and very ill at ease; this the more strange because old "Tray" was not an



long, for a year had hardly past till we laid her beside her husband and little son at the Jarvis graveyard. Poor mother! She never ceased to speak of little Joe and father. Often she would

take out little Joe's clothes and smooth them across her lap with a tender affection, and when her eyes would fall on father's old hat or coat she would break out and cry. Death seemed to come to her as her only relief.

Next election I wrote Bill and Dick, and buckling on our six-shooters we took an early start for the little town that had marked such a sad epoch in our lives.

I was not going for the express purpose of killing some one, for I knew the penalty of the law too well for that, and if there is one thing I have tried to avoid more than anything else it is the thoughts of having wilfully and maliciously transgressed the laws of our land. I have no particular objections to the law if it is a just one and properly applied, but I do object to discriminating laws and the unjust application of the just ones; to a law that will allow one man the right of suffrage and deprive another on purely political principles.

Our presence on the grounds that morning seemed to throw an awe over our adversaries—the ballot-box stuffers and political tricksters—and I was greatly in hopes that everything would go off quietly and smoothly without the usual row.

DEFYING THE ENEMY. A MOUNTAINEER OUTLAW RENDEZVOUS.

About ten o'clock I began to notice the presence of whisky on the grounds—several red faces and an occasional outburst of laughter or a loud oath. (I had cautioned my brothers very carefully on this point and had their promise to refrain from taking but one dram on this occasion.)

Soon some of them began huddling together in groups of three and four. Some of them would look at me with a haggard, wolfish expression, while others would talk in low monotones near their ears. Of course I was curious to knew what new motive they were brewing, so I posted one of my friends to go over and lounge near them, in a very uncon-

scious manner, and find out what they were talking about. Pretty soon he returned and reported what he had heard: "Fire! fire—fire at the first signal! Let's clean them up at one volley!"

I then saw I had no time to lose, and I said to him: "Go back there and tell those fellows when they see me advancing to fall in line." I beckoned to my brothers, who came up with quick steps and dropped in on each side of me.

The red faces and stiff collars were not long in catching my meaning, for they came together in one band by the time I commenced advancing.

It was my purpose to strike while the iron was hot and before any one was hurt, for I knew that one shot fired meant a dozen or more killed; to explain to them what it meant to raise a row at such a time as that, and to effect a compromise if it was possible to do so. No sooner had I came with some fifteen steps of them than they broke out in a tumult of loud oaths, and I soon saw that I would have no opportunity to reason with them about the matter. I could see their hand working nervously toward their guns. A cry went up: "Kill Big Sam Johnson (so called on account of my immense weight and hight, being at that time six feet and two inches high and weighing one hundred and eighty-five pounds. I also had a cousin "Sam Johnson," who was not near so large as me so they called me "Big Sam.") Instantaneously our twelve forty-fives were leveled at their head. I was too quick for "my man," for I had my gun on him ere he had his more than half-way up.

"Down," I says, "down with it, or you are a dead man."

As soon as I saw we had the "wire" edge off of them, I said: "Boys, I think this matter has gone far enough, for it seems that there can't be an election held here without some one getting killed. We don't want to have trouble with you, but we are going to have justice or death; understand me—justice or death! You people have been in the habit of running things at this place as you please—of sending us old agriculture report books in lieu of official ballots, and when we do get good tickets, of voting your men and knocking ours out, and we are not going to stand it any longer. My father sacrificed his life for this cause, and I stand here ready to put mine into the bargain if you want it."

At that an exclamation of oaths broke out behind and around me.

"Gentlemen," I says, "I just give you thirty minutes in which to vote and get away from here." And they did, without another word. That was the last row that ever occurred at that place.

The great press will speak in horrible terms of the "lawlessness of the mountaineers," but us poor mountaineers, as far as the press is concerned, have no retaliation. Unschooled and unlearned, we must sit quietly back and bear it all in silence. Our only retaliation to speak of is the muzzle of our guns; when all else fails us we at least have that left us. We cannot invite the wise judge and commonwealth's attorney to a dinner of wines and champagnes, write him out a fat fee and say: "When this you see, remember me."

We have no aristocratic family to boast of, and in what other way can we protect and uphold what honor we do have than thru these "automatic friends" of ours?

Tho the election laws are bad enough as they stand, and the old Goebel law has served its purpose well, there is not now the political chicanery in this county there once was.

But I have never yet drawn blood nor had blood drawn from me, nor do I ever intend to have if there is any other alternative. Very early I seemed to have been possessed with a sense of extreme cautiousness, combined with my frank fearlessness, that has probably been the means of my salvation in this way.

I am now fifty years old, in tolerably fair health, tho my locks are getting somewhat gray. I have been elected to two offices—constable and deputy sheriff. They are talking of running me for sheriff next time, and I think I will run. After that I want to be elected to the Legislature, and see how they make laws at Frankfort before I die.

Of my brothers and sisters only three are living—Bill, Sarah and Martha. Dick was killed from ambush several years ago in the lower end of the county. Some said he had taken a part in that Baker and White feud, but I always

thought it was done thru an old grudge against my father. Josie and Becky died of typhoid fever somewhere down in Breathitt County.

Bill comes up every year or so (he owns a scrap of land in Letcher County) and we discuss the events of the day and political matters together. The last I heard of Sarah and Martha they had moved over in West Virginia, near the coal-mining region, and their husbands and boys were working in the mines.

All of my seven children are married and gone, except Lillie and little Dan. Two are teaching school, two own a store together, at the village, and one took a business course and is now working in a bank at Jackson.

My old banjo is still hanging on the wall, tho somewhat battered and worn and with its fourth "hide." And often when the nights are warm and moonshiny, while Lizzie is sitting in her corner knitting (a bit changed than when she used to trip the "light fantastic" at the country dances!), and Lillie and Dan are working their sums in arithmetic and algebra, I take my old banjo and go out and tilt back against the woodshed and play to old "Tray" Junior, who lays curled up at my feet.

And however well read I get to be, and whatever honor is accorded me in this world—and tho Goebel laws may come and Goebel laws may go—I will still be just "Big Sam" Johnson ("what hain't afeered uv nuthin'," as the little mountaineer chaps are wont to say), and I guess that's about all the Lord intended me to be.

The Return

BY FRANCIS G. MARQUETTE

She left the nursing hills of Meenaghally,
A maiden, and the morning in her face—
Oh, the dim, fond eyes that watched her down the valley,
The hearts that glowed and trembled for her grace.

Why is it hearts of age alone are fearful,
When life no longer needs its pearl to guard?
Why is it only old faint eyes are tearful,
While youth with laughing glances soon is scarred?

She came to tears: once, in the long times after,
Again she walked the well-known fields of home,
Weeping she met the ghosts of her old laughter
That died with innocence beyond the foam.

A white cross now proclaimed the peaceful sleeping
Of souls that sooner would have known the flame
Than that the cross should there be proudly keeping—
And not their child—the father's spotless name.

Still, it was half of peace, amid the clover,
To lay her face upon her mother's grave,
And know no cloud of time could e'er come over
The heart that hers its lilied fragrance gave.

Washington, D. C.

The Moral Greatness of the People of Japan

BY J. H. DE FOREST, D.D.

The almost universal nineteenth century thought of Eastern peoples was that they are heathen, pagans, idolaters, immoral, brutal, superstitious, licentious, and that the term "semi-civilized" was really too good for them. This traditional style of thinking still persists. An editor of a large Christian paper recently returned from Japan and tried to be just in his report by saying several good things about the Japanese, but was conscientiously compelled to add, "They are still a pagan nation." A member of the English nobility and a clergyman, a few months ago, after seeing Japan and Korea, wrote to that world journal, *The London Times,* "I am not for a moment blaming the Japanese soldiery, but they have only the ideals of a heathen race."

Not only does the religious bias make some Christians cruelly unjust to a great moral-loving people, but such censors unwittingly give aid and comfort to the sensational press in America which despises the peoples of the East and tries by slanders and even lies to poison and inflame the minds of the people here against "the yellows." One need only to ask, "Is a nation pagan after it has adopted and adapted the very best fruits of modern civilization—civil and religious liberty, universal education, equality before the law, and representative government? Can an army of over half a million carry on a campaign in a foreign land on a higher moral level than was ever attained by other armies, and still have 'only the ideals of a heathen race'?"

The time for revising our nineteenth century ideas of the East has come. The real facts are beginning to loom up before us. And new and glad voices are bearing witness to the wonderful moral and spiritual life in the nations of the East. Bishop Roots, of the Episcopal Church, is one of these witnesses. In an address given in Boston he recently said:

> "It is difficult to take in the moral greatness of the people of China! They are the only people who have never deified vice, who have never placed unsavory stories of vice in their classics, who have never publicly sanctioned immorality. Their ideals have been scholarship, peace with the world, and righteousness; and it may be their mission to impress these upon the world."

I cannot frame a sentence just like that for Japan, but I can truly shape one that shall have fully as high a moral ring to it and shall begin with the same words:

It is difficult to take in the moral greatness of the people of Japan. They are the only people who have an Imperial Line unbroken from prehistoric ages, so revered and loved that against it the people have never risen in revolt. What moral power is embodied in that historic fact! In the face of the barbarous beheadings of kings and queens in the West, and of the horrible assassination only the other day of the King and Crown Prince of Portugal, how exceptionally moral appears this Imperial Line, for which during millenniums supreme reverence and devotion have been so strong that it has never been attacked.

They are the only people that have furnished a moral hero whose death is so close to that of Christ that you cannot read it without putting the two together. When Sakura Sogoro was crucified, his noble wife refused to be divorced, preferring crucifixion with her husband and death with her children rather than life divorced from him. And his parting words to his people as he hung on the cross were: "Had I five hundred lives. I'd gladly give them all for you!" The history of Japan is rich in this spirit of self-sacrifice for others, and this is one of the elements that make Japan a nation of moral greatness.

Again, they are the only people, I think it safe to say, whose passion for righteousness has exceeded her greed for

gold, and whose love of honor was greater than her fear of death.

Here is a nation whose virtues were so embodied in life that when the Red Cross Society and its humane work were presented to them, it just fitted into the nation's moral character so that it came natural to be kind to wounded Russians, and to treat their 72,000 prisoners with a degree of kindness and consideration that no Christian nation under similar circumstances has yet equaled. After the battle of Mukden I saw whole trainloads of prisoners coming down to Dalney. Every time our trains met I saw Japanese officers and soldiers give, not as conquerors but as comrades, their cigarettes and hard tack to the Russians until their private stores were exhausted. Read "Human Bullets!" That tells of a wounded officer who beckoned for aid for help to a Red Cross man on his enemy's side. Immediately he received the needed help, had his wounds bound up and a canteen of water left by his side. After which he drew his revolver and deliberately shot his deliverer dead. The officer who did that dastardly deed was not of the yellow race; he was a white man, a subject of a Christian nation. I was in the Japanese army for six weeks, privileged by letters from the Premier, Count Katsura, to see everything that did not interfere with the fixt regulations of war time, and I have no hesitation in saying that so far as I saw and heard thru careful inquiry, there never was an army so absolutely free from camp women, so free from drunkenness, so free from looting, so free from boasting over a conquered foe, and so kind to prisoners of war as were the half million soldiers of His Majesty the Emperor of Japan.

It may not be out of place to say here that those victories on land and sea were really won "by the virtues of the Emperor." "What nonsense to ascribe those victories to the Emperor who never was on a battle field and presumably has no military knowledge!" some Americans have exclaimed. Yet those reports of victories sent by generals and admirals, ascribing their successes to "the virtues of His Majesty" were absolutely correct. But for the traditional virtues of that Imperial Line there could be no such devotion and loyalty as held together the generals of that huge army and the admirals of that victorious navy so that no jealousies or rivalries or personal hatreds or love of women even once imperiled the success of the strategy. Every dying soldier, too, bore the same witness to the virtues of the Emperor if strength sufficed to utter the words: *"Heika, Banzai!"* Long live the Emperor! It was not the flattery of underlings but a true expression of faith in the virtues of the Imperial Line which have made possible the history of Old and New Japan.

But right here objectors may say: "You are making them out altogether too good. Are they not commercially untrustworthy and about as dishonest as they can be? Are they not notoriously licentious, so that their immorality is well known the world over? Are not their soldiers in Korea barbarous in their treatment of Koreans? And, anyway, have not the Japanese a spying, treacherous nature, so that the more foreigners know them the less they like them?"

Commercial immorality; sexual immorality; savage brutality; unsocial, spying natures; these are the four charges freely made, and always, I venture to say, by those who do not know the facts, and sometimes by those who do not wish to know the truth. I freely admit that there is some measure of truth in every one of these charges. Take commercial and industrial dishonesty. Yet before examining theirs, let me ask whether investigations into some of our great life insurance companies; the constant discoveries of graft in our city governments; the illegal rebates that have helped make some swollen fortunes; the sweating system of making cheap clothes at the expense of precious life and yet more precious purity of life—are these and other great outstanding financial immoralities in our own Republic so insignificant that we can afford to throw stones from our own glass houses?

Now in this irresponsible assertion of Japan's commercial dishonesty, it has gone all thru the nations of the West until even a well-informed and well-disposed people believe it to be true that the Japanese are so dishonest among themselves that they have to have Chinese compradores in their banks to keep watch of the bank accounts! Cultured men and

women who have traveled around the world keep coming home with this ludicrous slander, and back it up by saying: "I saw it myself. Chinamen in the banks took my checks and handed me the cash!" Well, that seems conclusive, for you cannot think that scores of business men and bright women could all be mistaken on so simple a matter. "The Chinaman was there and gave me the money," they say. And, indeed, that is perfectly true, but it has no more to do with Japanese untrustworthiness than the presence of Chinese laundrymen in our cities means the untrustworthiness of the merchants in the same cities. These returned globe trotters who are so cock-sure that Japanese banks employ Chinese accountants probably never saw the inside of a Japanese bank. They had their letters of credit cashed in the great Hongkong and Shanghai Bank, a British bank, whose branches are in Yokohama, Kobe, Nagasaki, and all the main ports of the East. If these travelers had gone to the Yokohama Specie Bank, or to any of the six great banks of Tokyo, the largest of which has a capital of $15,000,000 (gold), or to any of the 2,200 native banks, they couldn't have found with the best of microscopes a shadow of a Chinese. They did not know that some of the ablest financiers in the world are Japanese. Probably not one of these persons ever so much as heard that Count Matsukata, a dozen years ago, swung the finances of his Empire from a silver on to a gold basis, without deranging any industries, and with the applause of all men who have the difficult problems of the world's finances always before them. One might as well say that because Chinese coolies were employed in the rear of the Japanese army in Manchuria, therefore the Japanese couldn't trust each other to handle their commissariat and had to have Chinese to do it for them!

Now I freely acknowledge that many of the merchants in Japan will bite any foreigner if they get a chance. Too many Japanese merchants actually have a bad reputation. But no one knows this better than do their own statesmen and moralists and upright merchants. They are doing everything they can to correct this national defect by persistent earnest ethical teaching in all their schools, especially in the higher commercial schools. And I believe it will come out all right, just as I believe that our shameful graft, and the evils of our trusts, will come out all right. Just as there is here a strong moral life that will conquer our financial immoralities, so do I believe in the strength of the moral qualities of Japan to correct her mercantile defects and put her on a level with the best commercial morality of the world. Not long ago I spent three hours with Prof. K. Nakamura, of the Imperial University in Tokyo. He said: "One of the reasons why Japan at first hated and resisted any treaty of commerce was the fear that mercantile relations with the West would foster the spirit of gain, and would thus harm the finer moral sentiments of the people." Indeed, it has been widely and profoundly feared in Japan that a great world commerce, on lines of competition, as in the West, would bring untold peril to the high moral sensibilities of the Samurai spirit.

No, I do not withdraw or modify the statement—it is diffiuclt to take in the moral greatness of the Japanese, whose passion for righteousness exceeds her greed for gold.

"Well, can you keep that up when it comes to sexual morality?" I am asked. I dislike very much to speak about this subject. It is one of the great world problems that never lets up in any land. If we didn't have 50,000 abandoned women in New York; if every city in our Christian republic did not have its Tenderloin districts; if our divorce rate were not rising with such frightful rapidity (while Japan is probably the only nation on earth whose proportion of divorces to marriages is diminishing) that now we have "more divorces in this country in one year than all the other Christian lands combined" (Pres. G. Stanley Hall); if every university in our land where gather the choicest of our youths were not infected with this alarming problem; if latest scientific reports on the so-called "black plague that infects nearly sixty per centum of youths" did not threaten the moral existence of our homes; then we might venture to talk.

All I have to say on this sad question is: The people of the East prize among

their highest and noblest virtues those that conserve the family lines. Everybody knows that when men and women become morally rotten, such societies gradually are irreparably ruined, and families die out in crime and impotence until their nations cease from off the earth, or are swallowed up in outside conquests. Applying this great moral law that runs through all society East and West, we see at once that when family lines exist for centuries and even millenniums, it must be because they are supported by real moral life. The same is true of nations. So that when we see these oldest of the nations of the earth, with their histories, their moral and religious leaders, their self-sacrificing heroes—women as well as men—and when we find them so morally vigorous that they are capable of adapting the best fruits of Christian civilization within one generation, then I submit that talk about their licentiousness and concubinage and *yoshi waras* cannot have any deep meaning comparatively. I need not lower the flag yet. It still is difficult to take in the moral greatness of the Japanese.

Next, take their brutality as manifested by soldiers in Korea. Sad stories of this have been published far and wide, and I fancy much of it is true. But I remember it is less than a decade since one of our generals in the Philippines ordered the slaughter of men, women and children, and the brutal water cure was not untried on the natives by some of our officers. The fact is, whenever a superior nation becomes the victor over an inferior one, no history of such conquests and occupations as yet has had a white page. No one deplores the irregularities and injustices consequent on the temporary military occupation of Korea more than does Japan's greatest statesman, Prince Ito, the Resident General of Korea.

Just as I believe there is a high humanitarian spirit in our republic, and a moral life that will push our work in the Philippines to a successful issue, so I believe that Korea, which by her weakness and ignorance has been a standing peril to the peace of the East, will under Prince Ito's just guidance, and under the splendid work of our American missionaries, become a vastly better and happier land than it ever has been or ever would have become under the old régime. Just as I believe in the moral greatness of our own republic, in the ultimate solution of our problems of expansion, so I believe that the moral power of Japan, increased by the wider interpretations of moral terms, will justly solve the problems of expansion in Korea, Formosa and Manchuria.

The last of the four charges is that the Japanese are a spying and treacherous people. I hasten to suggest that this charge is never made by any one who can converse in their language and read their literature. The greatest barrier that exists between the millions of the East and the millions of the West is the language, and the Japanese language is confessedly the most difficult on earth to master. "Nothing is worse than a barrier against the communication of thought," said the unfortunate Premier, Ii-Kamon, who was assassinated for daring to sign the treaty with Commodore Perry. It is perfectly safe to say that were the North separated from the South in our republic by the same linguistic ignorance that separates our people from Japan, the misunderstandings and bitter slanders that would ensue would be incalculable. It is natural to be suspicious where one cannot understand, where the barrier against communication of thought cannot be crossed. It is because of this difficult barrier that 99 out of every 100 of the foreigners who have come in contact with the Japanese have such a large margin for suspicion and such an easy digestion for misrepresentations and such an unsuspecting willingness to pass on current slanders as truth.

The Japanese are vastly superior to us in their unwavering purpose to break down this wretched barrier to intercourse. They have splendidly overcome enough of Western languages to understand fairly well our governmental, educational, religious, social, and family structures. Their scholars read in the originals our histories, and are familiar with the great men and women who have left imperishable names in Western literature, laws and science. And there is no language they study so much and prize so highly as the English, which

now has become the world language. There is not a higher government school in Japan where English is not ceaselessly taught, with the possible exception in very few schools where German or French is the specialty.

But how is it with us of the West? We never learn the Japanese language unless we have to. I know of none of our hundreds of universities and colleges where students take courses in the Japanese language. Even our great government, that has been of invaluable aid to Japan for over half a century, never has had more than one or two American interpreters in diplomatic service, until recently they have sent out six students to learn the language and be ready to take responsible positions. The government may possibly have one official in Washington who can read the Japanese language, but I very much doubt it. Is it not therefore natural that Westerners who can't think or speak in Japanese should take easy refuge in all sorts of suspicions, especially when not even our ablest newspapers have on their staffs a single one who can read the Japanese language? Is there not danger that our highest officials may be misled by some angry war correspondent, or by some disappointed military attaché, or by the newly formed body of secret agents of the government, or by hateful European diplomats who long to break the real friendship that for more than half a century has bound us together? If all these men, whose business it is to know facts exactly as they are, were able to use the Japanese language freely, does any one imagine that the jingo journals of America could have had such a prosperous crusade of over a year against Japan? Or that a member of Congress could go around the country, ignorantly or maliciously slandering great and friendly Japan, without arousing the indignation of the body of which he is a member and the disgust of the people who condescend to listen to him?

I believe that thirty-three years of life in Japan enables me to say without fear of contradiction by any one who knows their language that the moral greatness of Japan makes it impossible that she should do an act of international treachery, such as attacking the Philippines or Hawaii. They are a people as sacredly bound to the principles of international law as we are. Their alliance with Great Britain, instead of being, as some maliciously assert, a peril to America, is one of the surest bonds of abiding peace. It may be worth while to quote from a very high authority on this subject:

"That treaty has not abridged in any way the right of Great Britain or Japan to go to war of its own choosing; but in that case the other party is under no obligation whatever to come to the assistance of its ally. . . . *In order to involve the other party to the alliance* in a war waged by its ally it is essential that the war should have arisen from unprovoked attack or aggressive action on the part of some other power. If the territorial rights of Japan or Great Britain in Eastern Asia or India, or the general peace in those regions, or the "open door" in China is threatened by an aggressive and hostile action of a third power, then only are Japan and England to fight shoulder to shoulder in *defense* of the just rights of one or the other of the two parties or of both."

This means that if Japan should make any aggressive action against America, the alliance does not bind England at all.

It seems to me that those who accuse Japan of possible treachery are themselves treacherous to the ideals of our republic on fair play and to our Anglo-Saxon standards of honor. They seem to me to be ignorant of the people they slander, ignorant of the methods of diplomacy, and of international law. It is not more difficult to take in the moral greatness of the Japanese than it is to take in the moral littleness of those who slander her. In the face of the charge that the Japanese are "a race morally reprehensible," I have no hesitation in saying again:

It is difficult to take in the moral greatness of the Japanese, whose Imperial Line has never been broken; whose family life persists thru centuries; whose heroes, men and women, show a spirit of sacrifice that is the very key to the highest moral life; and whose virtues are so virile that they can appropriate within the narrow limits of one generation all the great liberties of our modern civilization, and all the humanity that is embodied in the world-wide Red Cross Society.

In these days of ceaseless insinuations of the likelihood of war with Japan sooner or later, it is not out of place to say that Japan regards our traditional friendship of very great value, and she

has an unique feeling of gratitude to us. But it is equally true to say we owe Japan quite as much as she owes us, and in the solution of the greatest world problem—the peaceable coming together of the East and the West—Japan can be of more use to us than all the rest of the world. It would be a calamity for us to lose the true and sincere friendship of Japan.

SENDAI, JAPAN.

The Salary of the College Woman

BY THE BACHELOR MAID

DURING the past two or three years a noticeable amount of mention has been made of the inadequacy of the college professor's salary and its disproportion to the demands made upon him by the social position and the standard of living coincident with his calling. While the agitation has perhaps been neither general enough nor sufficiently organized to bring about as yet any appreciable benefit to this class of wage-earners, it has undoubtedly met a sympathetic reception, and the purpose of the Carnegie Pension Fund has found general approval. But in the discussion of the professional salary in general, small note has been taken, so far as I have observed, of the particular portion of college instructors who have in reality the greatest ground for complaint—*i. e.*, the feminine portion. The woman who holds a college position has generally not held it very long before she discovers herself face to face with a dead wall, often made sightly by a veil of academic ivy, it is true, but no less hard to scale for all that; and rarely worth the scaling. indeed, because there is nothing for her on the other side. Only the satisfaction of having made the climb, along with some scratches and bruises, rewards her for leaving her little grass plot of comfortable mediocrity. Or, in language stripped of floral decoration, the very best college positions open to women, with a few conspicuous exceptions, offer salaries which no man of corresponding scholarship and pedagogic experience would consent to accept. Even the woman who has adorned her name with all the possible academic degrees, and enriched her mind with foreign study and research, finds practically but two alternatives open to her: a professorship in one of the few high-grade colleges for women, where the honor is indeed great but the remuneration small, or a salary similarly small and a subordinate position under some masculine head of a department in a coeducational university. Thus are all the laurels on the other side of the wall already gathered by her professional brother for the adornment of his own brow. And in conduct, if not in words, he seems to counsel her to emulate her gentle domestic sister, and be content with only a rose in her hair. Such, save in the case of the very few whose conspicuous executive ability has placed them in the chair of president or dean, is the reward of the women who have actually scaled the wall, who are counted as the "successful" and the "able" in the educational world. What of the large number of women instructors and professors in the colleges a degree less great, women by nature equally able, probably, but denied thru narrow means even in their schooldays the prestige of European study—that winning card which so far outranks all else in the game for favor with the college trustee?

Numbers of ambitious, clever, earnest young women are graduated from our colleges and universities, young women whose abilities call forth sincere recommendation from their instructors, often profound admiration. The aforesaid recommendations frequently place them at once in positions which seem, and are, remarkably flattering to a new-fledged B. A., and hardly a girl of them, finding herself so early, and so easily, established in a college instructorship, but mentally sees herself a student in a European university within at least three years'

time. Where is she actually to be found at the end of ten years? Where she began, altho earning, possibly, an additional two or three hundred dollars annually in recognition of exceptional merit or thru promotion upon the resignation or death of a superior in the same department. And there she will be (minus a second "raise" of salary) at the end of ten years more, unless some fairy godmother secure her passage to Europe or some lover persuade her to transfer her field of research to love and domestic science in an apartment house. For the universally low salary results in a correspondingly low proportion of vacancies in desirable positions. With nothing to be gained by change, women who have once secured what are admittedly the best places to be hoped for by the sex naturally hold on to them, and thus there is *not* "room at the top." That portion of the top reserved for women on the educational eminence has a very limited circumference. But supposing the existence of a desirable vacancy, the teacher who was so "promising" ten years before has small hope of reaching it, for she has gained little, save experience, in that time to make her more desired by, or better known to, another institution than in her first years of teaching. Of course, so long as no other college seeks her, her own college need not pay a great sum to keep her, and the savings out of that sum do not rapidly reach proportions suggesting study abroad. So she stands helpless at the foot of the wall.

I have asked various college presidents and administrators why they did not pay their women teachers as high salaries as were given to men doing the same grade of work. The first and most conclusive of all their answers is invariably: Because no other college does. Now, of course, that reply is not highly logical, but it must be admitted that there is a finality about it which gives them a distinct advanage. However, having first by this telling stroke made you fully understand that there is absolutely no money for you in the discussion, they are generally willing, purely as an academic exercise in argument, to go on to explain why this female-teacher's-salary condition prevails. The reasons commonly given are these: Men are not necessarily more successful in the class room than women, but they are of more value to an institution, because they, either by writing or successful research, call attention to it, or they travel about, giving lectures or attending educational meetings whereby their college is favorably advertised, or they are prominent in the civic life of their own community, or they are superior to women in managing the machinery of the college itself; and men have families to support.

I am moved to answer the latter reason first—to get it off my mind. I marvel that any reasonable man will venture to offer it to a woman even *half-way* reasonable, and men generally do back down from it tolerably early in the discussion. For the absurdity of it is even greater than the injustice of it, since it is a distinction never drawn between one man and another, and you do not fix the salary even of your professor of sociology by your knowledge whether he is a bachelor or supports his theory of eugenics by being the parent of ten vigorous and hungry children. But supposing that men's salaries anywhere were proportioned to their real or apparent need of money, what right has any one to assume that the financial responsibilities of the professional woman are less heavy, her needs less urgent? Few women are teaching in colleges or elsewhere who have not broken-down parents to support, younger relatives to educate, family debts to pay for the sake of the family honor. Of these women many are giving up a part of their savings, some are giving all. I know one woman, the recipient of "a good salary for a woman" and counted "successful" by her friends, who each September returns to her position with less than the price of a month's board in her purse, and this by no means because she has wasted her substance in riotous living. And there are doubtless many like her, if we but knew it, but therein lies the difference between the woman and the man. He parades his infant "responsibilities," for they mark him the "good citizen" and "unselfish" contributor to the nation's strength, but the woman's responsibilities are born of the failure and defeat of those she loves, and she cannot lay bare

their sores and hers even to a *pitying* public eye.

Yet I emphatically do not claim that these, her misfortunes, furnish any just ground why she should expect a larger salary. I do wish, however, to call attention to the fact that it is very largely due to these conditions that women are not as "valuable to an institution" as are men. Practically every one of the "valuable" assets of the man professor above enumerated is contingent upon the possession of a reasonably large income, save only perhaps the writing of books and magazine articles. Even these, if of a technical nature (and unless the teacher possess a purely literary gift independent of his specialty, they must be that to be in any way valuable), presuppose the expenditure of a considerable sum of money in the schools where the foundation at least of this technical knowledge must be gained, for the day is past when the self-educated, however earnest and capable, can compete with those who have had access to university libraries and laboratories. But in proportion to the number of men on college faculties the production of books from that source, save for an inundation of textbooks—notably editions of Cæsar's Commentaries—most of which the educational world could get on comfortably without, is not large. And a very respectable number of women teachers have produced books of acknowledged excellence. Several of these authors were among my own teachers. They are today, as they were then, on the faculty of an institution which is invariably cited as an example of the small salaries paid even by the very foremost colleges for women. Evidently, being a woman is the one condition under which it does not "pay to advertise."

As to "research," material upon which to work is an absolute essential. Only the exceptionally fortunate of either sex ever begin teaching with so extensive a preliminary training and equipment that they can accomplish much that is really worth while in that respect without additional opportunities for study later in life. And they must go outside of their own institutions to secure it. This takes money, and no small sum. And the provision for placing such opportunities within the reach of poorer teachers is, in actual fact, most inadequate. The various fellowships offered for study abroad are almost invariably limited to women whose bachelor degree is less than five years behind them, and of those eligible under that condition many cannot avail themselves of the money thus offered for their support, because during their period of study their families would be deprived of their accustomed assistance from their salaries. Again, the colleges which offer a regular leave of absence for study to every teacher are very few, so that the only means by which the impecunious one may increase her store of knowledge is vacation study. And, so far as I am aware, the only place in the United States where serious advanced work may be done in summer time by college instructors is the University of Chicago. The fortunately central location of this great institution makes it a boon to low-salaried teachers, whose appreciation of it is strongly attested by the throngs of them who may be found there thru the summer months, but, altho it is indeed the traditional "half a loaf," it is not a satisfactory substitute for a year or two of uninterrupted study. The teacher goes there tired with the year's effort to make others learn, she leaves still tired from the effort to learn in a limited time the greatest possible amount herself, and has learned so much the less for that precise reason. And to the aspirant for advanced degrees this patchwork style of study holds out small encouragement. How then may the ill-paid instructor hope to glorify her college by "research"?

The attendance upon educational and like meetings, the maintaining of an influence in social, and, thru that, in civic life are so obviously dependent upon the financial status of the college professor that they hardly call for argument.

The "advertising" done by lectures, and the direction of the larger matters of college life are not, of course, matters governed by the pocket-book. They are, however, controlled by the same spirit which makes the sex distinction in salary. Even in colleges for women wherever both sexes are represented upon the faculty—and there are exceedingly few colleges of first rank where they are not—the higher powers infallibly see to it that every duty involving

appearance in public is assigned to a male members. They never take the trouble to find out whether their women professors possess latent germs of platform oratory or executive ability.

Now the reason of all this is, I suppose, that they honestly think us inferior, altho they print "Professor" after our names in their catalogues in quite as large type as is granted to their masculie instructors. The thing quite beyond the grasp of my feminine intellect is: Why do colleges which profess to desire the best, and can pay for it, put up with inferior substitutes year after year? Or do they consider some chairs really less important than others? When they employ a man professor of Latin and a woman professor of Greek, a man for chemistry and a woman for physics, do they rank the relative importance of these subjects in accordance with the respective salaries which they pay? It might appear so, if I had not absolute knowledge of several cases where a reversal of sex in the occupants of a chair was accompanied by an immediate "about face" in the relation of the salaries paid.

In this, as in other departments of woman's work, the presumably temporary tenure of position is often given as a reason for inferiority in pay. However just this may be in a general way, the college instructor is, of all salaried women, probably least deserving of such discrimination. Her work is in itself attractive enough to her so that she is not to be easily tempted to give it up for another sort whose attractions remain to be proved, and besides she is becoming ever more imbued with the idea that if she does marry that is no occasion for renouncing her profession. Therefore, the chances upon her permanency have come to be practically equal to those taken upon her male colleague, and the danger of losing her "just when she has learned the business" may now be considered a negligible quantity. True, there are said to be some worthy gentlemen who advocate as a matter of principle the maintenance of her low wage with a view to discouraging her professional aspirations and diverting her into "her proper sphere." This idea seems to me —if I may be allowed the undignified phrase—to be getting worked considerably overtime. At any rate, the working of it is time wasted. Women are not scared into matrimony nowadays by dread of starvation, and if they could be the college woman, thus forcibly diverted from what she has spent her life learning how to do to a thing which she has never learned at all, would make anything but a satisfied and satisfactory wife.

I would not be understood as asking for absolute equality of salary among all college professors irrespective of any other consideration than the fact of being labeled "professor." One man in an institution may be unquestionably the superior of his fellows, tho his title be the same, and there are many possible reasons why his superiority should be given public recognition by a distinction in salary. The same conditions may and do occur in a group of women teachers, and no reasonable woman can possibly find in them cause for offense. But when the same position is sought by a man and a woman essentially alike in education, length of service, and recognized success as teachers, and the man is offered two-thirds more than the woman, when the leading women's colleges pay niggardly salaries, when the Ph.D. forsakes her chair in one of these, only to find herself degraded in rank and not bettered in income in a coeducational university, then, *then*, we begin to know from experience what is meant by "closing the door of hope." For, after all, the mere dollars do not mean so much to us as the implication made thru their denial that, at best, we can never rise in the college world above the position of a temporary economical makeshift for the man who happens not to be at the moment available. Added to this, in the case of some, is the bitter consciousness that thru this same lack of dollars they are indeed, tho ambitious and conscientious in their work, not as valuable as the men and women who, in their undergraduate days and after, have been able to afford the exceptional opportunities for study which they themselves could only long for. It is often said that women have themselves to thank for their low wages, in that they accept with grateful meekness what a man would decline with jaunty scorn. This may be true of some trades, but how may you be jaunty when your life and others depend upon

your salary, and the men who employ you know as well as you do that there is not a place in the land where you may hope to receive more than they see fit to pay you?

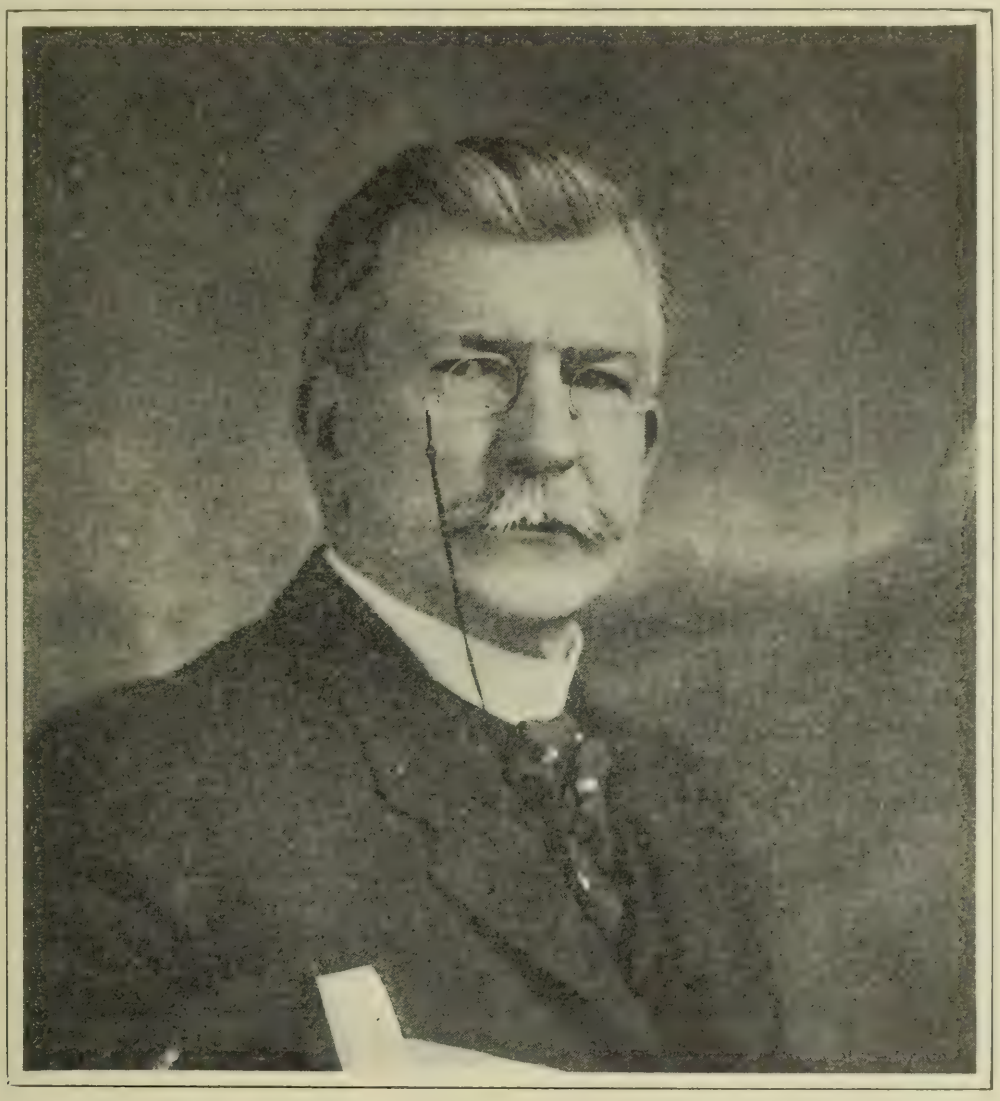
I have not included the public school teacher, overworked and underpaid as she is, in this protest, because certain features of her case differ essentially from ours, and also because she possesses, with all her wrongs, one weapon denied to us; there is something higher for which she may "strike." The peculiar embarrassment of our present situation appears to be that we have already gone as high in our line as men consider it expedient for women to go. Is there no way of advancing our limit save by the manual laborer's weapon of organized revolt?

General Luke E. Wright, Secretary of War

BY F. HEISKELL

WHEN President Roosevelt again honored Luke E. Wright, of Tennessee, this time appointing him Secretary of War, the average American, reviewing the several honors that have fallen to this Southern Democrat and former Confederate soldier, sought the "why" in the case. What does this Southerner possess which wins for him posts coveted by any American? What does he bring to the Cabinet as compensation for the loss of two such unusual War Secretaries as Root and Taft?

He brings to the Cabinet absolute fearlessness, a remarkable mind, a keen perception which enables him to strike at the exact psychological moment, a grasp of the details of conditions in the Philippine Islands, and of the needs, the good qualities and the shortcomings of the natives; a thoro and intimate knowledge of the actual warfare and a good idea of the needs of a modern army, the esteem of every army officer who knows him and many who only know of him, a sense of justice almost quixotic, a heart as tender as that of a woman, and a backbone of steel.



It fell to the lot of General Wright at fifteen to be a soldier, and he was in every engagement of the Army of Tennessee except Shiloh. A delayed train kept him out of this great fight. He thus saw four years of bruising warfare. His record sparkles with gallantry, but it was after the war that his courage had the most severe test. During the yellow fever scourge in Memphis General Wright led in the fight against the scourge, against famine, and against the brutal marauders who dared God's anger for loot. He was stricken with the fever, but he cut short the long period of convalescence the physicians would have required and took up his work again as soon as he was able to leave his bed.

In 1870, when a demoralized Memphis was overrun with thugs and with lawlessness, Mr. Wright was asked to run for Attorney-General for the criminal court of Shelby County (Memphis). It was a position requiring fearlessness and good judgment, and both of these the candidate had. He was elected and since has been called General, as is the custom in Tennessee.

During his term of service as Attorney-General two daring and desperate criminals established themselves in Memphis as "lumber brokers." They opened an office in a prominent street and a few weeks later clubbed into insensibility a Southern Express money messenger, who had come into their office to deliver what was afterward discovered to be an ordinary builder's brick, which had been forwarded by a confederate. The thieves robbed the messenger, tied a sack over his head, and fled. After a long chase they were captured and General Wright prosecuted them. One of them, known as Johnson, feigned insanity, and while in jail, during all his waking hours, he

screamed almost continuously, "Dollar for dollar!" "Dollar for dollar!" He uttered his strange cry constantly in the court room while on trial, and during the Attorney-General's speech to the jury he yelled with redoubled energy. Suddenly, just as Johnson gave the cry, the prosecutor turned on the prisoner and the expression which comes to his face, even at this good day when it is aroused, flared forth. Advancing toward Johnson and shaking his finger to emphasize his words, he exclaimed: "We shall have dollar for dollar from you. I'm here to see that you pay it." Johnson, taken off his guard, let drop the mask. The jury saw it and the judge saw it. Johnson, in stripes, gave nearly a quarter century of labor to the State of Tennessee. Before he was taken to the penitentiary at Nashville he said to a jailer: "That prosecuting attorney will never know how near death he was that day in the court room when he turned on me. I knew my game had failed. On the table before me was the club with which we had struck the messenger, and for a moment I intended to kill him with it even if they swung me up afterward."

Another evidence of General Wright's foresight and perception was given early in his service as a member of the second Philippine Commission. Before entering upon its duties as a legislative body the second Commission gave three months to investigation of conditions in the Islands. Rich men and poor men, priests and sinners, Englishmen, Germans, Italians, Spaniards, Americans—all classes and conditions were summoned and each told what he knew, each offered advice, each worked for his in-

GEN. LUKE E. WRIGHT, OF TENNESSEE.
Appointed to succeed Mr. Taft as Secretary of War.

dividual interest. Into this mass of testimony the Commission thrust its hand, grasped the kernel, shook away the waste matter and having found the problem set about solving it. Arguing that the American people would not countenance the retention of the Islands if an army of 65,000 men was necessary to hold them, Commissioner Wright proposed to organize the Philippine Constabulary, to be composed of loyal Filipinos and officered by American ex-regulars and ex-volunteers. At first the other members of the commission did not take kindly to the idea, but they were soon won over. Not so, however, with the army, or that part of it which hovered about the south wing of the Ayuntamiento, where the commanding general's office was. These soldiers held up their hands in holy horror. The army had been buying loyalty from the Filipinos by paying 30 pesos to each insurrecto who came out of the bush and surrendered his rifle, and now these civilians who knew nothing of war would put good American arms into the hands of the Filipinos. There would be an uprising. The commanding general pointed to the Sepoy rebellion. And then and there the commanding general and other officers nearby heard a neat, concise and accurate history of the Sepoy rebellion, the lesson of which was that the rebellion proved the necessity for proper organization and proper disciplining of native troops. Commissioner Wright was the lecturer. In the softest voice and with most genial manner he gave them details of the Sepoy rebellion, for, anticipating just what happened, he had read a bit in order to add to his general knowledge of the great revolt. He chose for this reading a critical analysis of the causes leading up to the rebellion. It was written by a British officer, and there were just thirty-two volumes of it. Shortly thereafter the constabulary, thoroly organized, was holding the Islands.

Here is another incident which shows the fearlessness of the man, and his power to see when and how he may win with one blow instead of a long, tiresome campaign. It happened when he was Acting Governor of the Philippine Islands. Certain Filipinos, biting the hand which fed them, preached sedition, and certain officers of the army predicted an uprising. They made the predictions so often and so publicly that the Filipinos heard and were encouraged. It was about this time that the Federal party was organized at the suggestion and under the direction of the Philippine Commission. The party's membership increased with wonderful rapidity and within a few months more rifles and arms of all kinds were brought in by alleged insurrectos than the army had been able to gather in three times as many months, and the army paid 30 pesos for each rifle, while the Federal party paid nothing. But the success of the new party brought forth a new element of danger. The Filipino is a shrewd politician, and seeing the popularity and rapid spread of the Federal party, those politicians who had loudly refused to join began to cast about for some channel thru which they might reach the open stage and be seen and heard. One of these politicians was the editor of a paper which carried much matter just bordering on sedition. He conceived the idea of organizing the "Katipunan party," and at once set about putting the idea into execution. He printed much about the new party, its aims and its possibilities, and the tone of his editorials was more seditious with each issue, but the Gobernador Civil said nothing. He knew, however, the history of the Katipunan. He knew that it had been organized by real patriots and with a view to striking hard and often for their native land, and he knew the organizers had left it long before "ladrones" and murderers operated under its flag and as members of it. So he waited.

Shortly after the day's work had begun one sunshiny morning Governor Wright sat in his office in Manila talking with Senator Beveridge, of Indiana, when Señor Editor and a delegation from the Katipunan party was announced. The same expression he wore when he turned on "Dollar-for-Dollar" Johnson came to the face of the Governor as he ordered the delegation ushered in. Señor Editor was followed by a number of *hombres*, whose shirts at their lower extremities flapped outside of their trousers and whose ideas of statesmanship consisted of a knowledge of the habits of the water-buffalo and of the fighting-cock. They did not know just why they were there and just what

was to happen; and what did happen happened so rapidly that they, being Tagalogs of the lower class, and having little knowledge of Spanish, probably do not know until this day what it all meant. Nor is it probable that Senator Beveridge understood it, not knowing Spanish.

After a courteous greeting from the Governor, Señor Editor launched forth into a speech. "We do not represent," said he, "the aristocracy of the Philippine Islands, but we, members of the newly organized Katipunan party, represent the brawn and sinew, the——" But his speech ended there. The Gobernador Civil, who had waited these several days, was talking. The forefinger of his right hand was near the nose of Señor Editor, and the Señor was backing toward the swinging doors, thru which he had entered the chamber. "The Americans," said the Governor, "desire in every way to help the Filipinos. But the Filipinos must also help. Katipunan spells murder in the Philippine Islands now, and you know it. The time is not arrived for a Katipunan party. And another thing. We have been watching your antics and reading your paper. Bilibid prison's doors swing wide for those who spread sedition and you have for some time been dangerously near the line."

Just then Señor Editor backed thru the swinging doors and into the hallway. The representatives of the brawn and sinew of the Islands had been in the hallway some time, and neither El Señor nor the brawn and sinew tarried longer. When the swinging doors closed behind El Señor, the Katipunan party, a project big with trouble, was dead beyond resurrection.

This incident shows the army's feeling for him. The writer was one of three civilian guests at a large dinner in Manila one night. The diners other than the three civilians were officers of the army and navy. Toasts were drunk sedately to generals and admirals. Then a captain of regulars—not a "coffee-cooler," but a fighting-man—proposed a toast "to the best and most popular man in the Philippine Islands—Luke E. Wright." With a shout the diners were on their feet and they drank "bottoms up."

These stray bits show what the Southern War Secretary brings to the nation's councils. He has been poorly advertised, for his modesty protested when newspaper writers, in discussing him and his work, would bestow praise where praise was due. But those who know him understand why he has been the recipient of unusual honors, and his honors have been unusual. His appointment as a member of the Philippine Commission came unsolicited. His work in the Philippines was notable and especially so in the beginning, when five men threw their energy and their strength into the staggering job of making a government for ten millions of people, "half devil and half child," and many of them whole devil. When Governor Taft was stricken with an illness which Washington feared would mean his permanent retirement, General Wright was jumped over a Republican who ranked him on the Commission, and into the newly created office of Vice-Governor. So clearly did his work stand out and so universally was he esteemed that the man over whose head he went into the Vice-Governorship, a brusque man and one often misunderstood, but a man valuable to his government, said: "He deserved it, and I am glad it was given to him. He is the man for the place."

Later, when Judge Taft was made Secretary of War, General Wright was made Governor-General of the Philippine Islands, the first Governor-General ever appointed by the United States. When he returned to Memphis for a brief rest, after more than two years of service in the Islands, the President of the United States came there to welcome home this Democrat and ex-Confederate soldier who had "made good." When Japan asked for an Ambassador instead of a Minister from America, she also asked, and stressed the request, that the first Ambassador be one of America's great men, and the appointment was given to General Wright. Japan knew him thru his work in the Philippines, as did all the Orient, and the appointment pleased Japan. The latest honor is the Portfolio of War. Ere long the North will thank the South for giving the nation such a man.

WASHINGTON, D. C.

Literature

The Struggle for American Independence

We have great respect for the bubble-pricker whether we agree with him or not, for this is a complacent world, with a complacency nowhere exhibited more cheerfully than in connection with the traditions of the American Revolution. Hence we always listen to Mr. Sydney George Fisher when he utters himself upon this topic which he is trying to make his own. He is in a way the *enfant terrible* in American history, assuming a place made vacant by the late Moncure D. Conway. He has already rendered more than one service with his thorogoing irreverence and his incisive criticism.

A few years ago Mr. Fisher offended the "professional" historical world with his "*True* History of the American Revolution," in which he sought at once to show that there was a conspiracy among history writers, and that the American Revolution was really less dignified and pretentious than the patriotic societies had believed. He has now expanded this work, corrected what was in it a badly balanced treatment, and delivered himself of two volumes upon *The Struggle for American Independence.** The story here told is interesting and convincing. Mr. Fisher has good literary ability and the faculty of knowing a point when he sees it. He has consulted the original sources of information at great length, as his elaborate notes and citations bear witness, while he is at the same time familiar with the secondary works in which the "historians," who are still somewhat under the ban, have analyzed and digested the revolutionary archives. We believe that the volumes are an excellent corrective, worthy of careful study by all who would know of the Revolution as it was. Thru most of their pages they tell the familiar narrative, but Mr. Fisher's insistence upon the rejection of tradition is always obvious. He is safe in his statement that too little critical skill has been spent upon the books available for the public.

Mr. Fisher's chief thesis has changed but little since his "True History" appeared. He still delights in proving, and then again proving, that the patriot army was not a gay military aggregation in traditional buff and blue, but was a disorderly, badly drilled crowd of farmers who could be relied upon only to shoot straight. They deserted at pleasure, obeyed or disobeyed at will, until the victorious American general deserved as much glory for conquering his own army as for humbling the enemy. Apart from this, Mr. Fisher has shown again, and in greater detail, how much the Revolution owed to English indifference. Until the very end England held to her idea of conciliation, sending out eminent Whigs, who opposed the war, as her commanders, and rarely resorting to that kind of war which General Sherman has so laconically described.

It is not our desire to maintain that the professor is the ideal history writer. Rhodes and Parkman and Lea would silence that. But Mr. Fisher reveals continually the weakness to which the lawyer or business man writing history is peculiarly susceptible. History is not "shop" to him. He pursues it in his leisure moments, but does not live with it and talk it for hours a day with his equals or colleagues. It is but a little thing to speak of "Mr." Stubbs; yet not to think of the greatest English historian of our times as the Bishop of Oxford has considerable significance. Many perfectly true things seem new to Mr. Fisher merely because he does not know that they are in the mouth of every first-rate teacher of American history in the country. He speaks with proper contempt of his professorial friend who doubted the existence of original revolutionary evidence "worth investigating," but reveals thereby not the weakness of teachers, but his own lack of acquaintance with them.

Mr. Fisher is refreshing and in many ways original. He has a good knowledge of the Revolution and one that has steadily improved. Every one of his volumes has given valuable points of view. And

*The Struggle for American Independence. *By Sydney George Fisher.* 2 vols. Philadelphia: J. B. Lippincott Company. $4.

every time he plucks away a tradition that conceals a sham or bolsters up an unearned glory we give applause. On the whole, we are quite willing to have the historical profession lampooned for the sake of Mr. Fisher's books.

Folkways

On reading the preface of Professor Sumner's *Folkways** one cannot fail to feel the note of authority which appears in the dispassionate way in which the author turns aside from writing a text-book of sociology to prepare a treatise on the folkways, in order to fill a gap in the literature of social science due to the lack of an exhaustive treatment of the social importance of tradition and its relation to the principle of welfare. With its six hundred and ninety-two pages and more than seven hundred titles in the bibliography, not to mention the frequent evidence of a working knowledge of the principal languages of Europe which has largely been acquired by the author since the days of his economic publications, it is not to be gainsaid that the generous volume resulting from this excursus has fulfilled its mission, and Professor Sumner can now finish the Sociology with the assurance that henceforth he can refer to his own treatment of the *mores* in print (p. iii).

Altho the title of this treatise is "Folkways," the distinctive word is "Mores," which we find to be an elusive but exceedingly suggestive term. The mores are folkways "raised to another plane," "when the elements of truth and right are developed into doctrines of welfare" —that is, "the mores are the folkways, including the philosophical and ethical generalizations as to societal welfare which are suggested by them, and inherent in them, as they grow" (p. 30). In the preface, Professor Sumner says, speaking of the word *mores:* "I mean by it the popular usages and traditions, when they include a judgment that they are conducive to societal welfare, and when they exert a coercion on the individual to conform to them, altho they are not coördinated by any authority." These "are the results of the efforts of men to find out how to live under the conditions of human life so as to satisfy interests and secure welfare" (p. 606). In the skillful hands of the author this word *mores*, denoting the undefined and unconscious power of custom and tradition in the life of society, when guided by the universal interest of welfare, becomes a thing of itself and serves to explain, as tho it were an external force, the very phenomena upon which it rests. It is a fair question whether or not the inclusion of the welfare element in the folkways, which are traditional (p. 35), is responsible for the ease with which Professor Sumner relegates philosophy, ethics and religion to the secondary place of products of the mores, instead of coördinating them with other portions of the mores as the common product of the principle of welfare in the reaction of man upon his environment (p. 38). It is obvious that philosophy and ethics "are never original and creative," and that they are "secondary and derived" when compared with the efforts of man to live, but it is to be questioned whether they do not assist in determining what constitutes welfare in the constant selection of the folkways, which are to be promoted to the rank of mores.

On all the stages of development, from the simplest processes of procuring food to the intricate relations of modern industrial life, folkways have developed with notions of right and wrong ways about all the activities and relations of society. In this long process various factors of selection, such as suggestion, distinction, ideals, delusions, law, religion, persecution, etc., have been at work molding society. The mores, by their coercion of the individual (p. 174), have been the great power behind this process of selection. The argument of Professor Sumner that suggestion is one of the chief factors in the production of mass phenomena is ably supported by illustrations from political and religious movements, and promises a more rational explanation of the mind of the mob than the method of Völkerpsychologie (p. 174, p. 210).

In the great groundwork of the mores are found embedded all the elements of social structure, of which a few are se-

*Folkways: A Study of the Sociologica. Importance of Usages, Manners, Customs, Mores, and Morals. *By William Graham Sumner.* Boston: Ginn & Co. $3.

lected for discussion, such as slavery; the population policies of abortion, infanticide and killing the old; cannibalism; relations of the sexes; social codes concerning the natural functions of the body, clothing and nakedness, obscenity, proprieties, good taste, and the like; incest; and blood revenge. No illustration of the power of the mores could be more illuminating and impressive than the treatment of the marriage institution, showing as it does how marriage today is popularly considered a free contract, but, apart from the entrance into it, which is voluntary, is in reality a status with all its conditions determined by the group (p. 67, cc. ix, x).

By customs "which seem to us contrary to simple and self-evident rules of right; that is, they are contrary to the views now inculcated in us by our own mores as axiomatic and beyond the need of proof" (p. 522), Professor Sumner in several chapters illustrates and defends the thesis that the "mores can make anything right and prevent condemnation of anything." Prisons in England in the eighteenth century, wars of factions and their penalties of defeat, bundling, public lupanars, sacral harlotry, child sacrifice and ancient public sports, exhibitions and drama are topics exciting sufficient repugnance in the modern mind to indicate the relative character of what is "good" and "right," since these all belonged in that category when they were current practices.

As one closes the book the feeling is strong that he has seen many strange things, which, nevertheless, have been explained or described by a master; that sometimes the details of the analysis have obscured the relations of the whole; that in the discussion some factors have been magnified out of proportion to their societal importance, but with the distinct purpose of making a clearer analysis; that the character of society is determined by some relentless power which is a product of man's attempt to live well, but over which man has very little control; that progress and improvement are fully as slow in their operations as the mills of the gods; that the future, with its hopes and ideals, has been but reluctantly retained and acknowledged as a controlling factor in the life of society, tho frequently it has been accorded all the effectiveness of a silent partner, and that the author has treated his subject with fairness, firmness, and an interest in the real welfare of society that is not entirely determined by our mores, or completely unaffected by our ideals. It is to be hoped that the science of society will not be deprived by any aleatory circumstance of either the text-book of sociology or the unpublished chapters of the mores, of which the ripe scholarship of the *Folkways* is an attractive earnest.

Defense of the Mecklenburg Declaration of Independence. An Exhaustive Review of and Answer to All Attacks on the Declaration. By James H. Moore. Raleigh.

The old controversy concerning the declaration of independence supposed to have been emitted at Mecklenburg on May 20th, 1775, will not die, and we have before us the latest contribution to it from the pen of Mr. James H. Moore. The new account is a frank attempt to prove the authenticity of the document and to answer all of its recent critics, more specially Mr. William Henry Hoyt. Mr. Moore has done his work in manifest good faith. His own sincerity in the matter is beyond question, while his treatment of his adversaries is courteous and fair. The story which he defends asserts that the people of Mecklenburg County, North Carolina, met in May, 1775, and adopted with loud applause resolutions couched in much the same language used by Jefferson and Lee in the formal declaration adopted by Congress, and insists that to these Mecklenburgers is due the credit for first enunciating the principle of independence. Its details are gathered chiefly from the recollections, written after 1800 and not widely known before 1819, by John McKnitt Alexander, who claimed to have been the secretary of the convention. The difficulty in accounting for this generation of silence and for the lack of positive contemporary proof is exceedingly great. Mr. Moore has little special knowledge of Revolutionary history. He cites Elson as his chief authority here, and speaks of the "Thwait Library" at Madison. Much as we respect the great services of Mr. Thwaites we must protest against ascribing to him the whole

library of the Wisconsin Historical Society. Mr. Moore adds almost no new facts to the controversy, and his literary skill is not large. In many ways his argument is plausible, but we do not feel that he has proved his case and ended the controversy.

A Man of Sark. By John Oxenham. New York: The Baker & Taylor Co. $1.50.

This is a story of the Channel Islands in 1800, when England was at war with France and Spain. The elements of which it is composed are as old as the flowers that bloom every spring, the same form and color and with the same sweet perfume; and the author has preserved some such charm of repetition in it, despite the fact that it is a tale of adventure and not of lady's bowers. Frank R. Stockton never conceived in the course of one narrative of more hairbreadth escapes from pirates. And the most romantic writer of the day has not created a fairer heroine or a braver hero. And not one of the recent Channel Island stories is better told or of more absorbing interest.

A History of the United States Navy. By John R. Spears. Pp. 334, with illustrations. New York: Charles Scribner's Sons. $1.50.

And still the history of the navy is not written. Fenimore Cooper saw deeper into the real history of the Navy than any writer since his time and his story ends at 1839. The pretentious volumes of Maclay, disfigured by personal spleen, are mere annals of this or that expedition or this or that action, and not as good as the hastily compiled work which Mr. Spears evolved at the beginning of the Spanish War and of which he makes no mention in his present production. There are some special books of a popular character like Hill's "Twenty-six Historic Ships" or Rawson's "Twenty Famous Naval Battles," which describe the engagements even better than the histories do, and Parker's "Recollections of a Naval Officer," Evans's "Sailors' Log," Schley's "Forty-five Years Under the Flag," and Soley's "Admiral Porter," now and then afford a glimpse of the inside of the navy. But the history of the navy which shall show its true relation to the country in the past, how such an organization could develop such men as it has, how it has managed to exist under its extraordinary vicissitudes, what it has done, not merely in the brief moments of war, but in the long years of peace; all that and much more is still to be written. Mr. Spears's book, despite great compression of incidents, is readable, as is everything he writes. It never rises to the dignity of its subject, nor could it do so perhaps in the narrow limits of a single small volume. The current stories regarding naval heroes are accepted more or less blindly, as witness the myths and exaggerations about Paul Jones, all duly repeated except in the case of Lawrence of "Don't give up the ship" fame, to whom the usual eulogies seem to be denied. The Schley-Sampson controversy, which might better have been ignored, or, at most, dismissed in a paragraph, is needlessly strung out, regardless of the fact that the Elliott troubles after Perry's action, the fierce struggle between the captains and the lieutenants in the 'twenties, Mackenzie's hanging of Spencer in 1842, the Dupont disturbance in the Civil War—and the list might easily be lengthened—all excited much public interest at the time, and are just as well worthy, if at all, of detailed chronicle. On the whole, it is not quite clear why this book should have been written. With serious studies of naval engagements, such as those of Captain Mahan concerning the 1812 duels or the actions during the Revolution, it bears no comparison. Nor does any convincing reason appear from its pages why to the numerous "popular" books about the navy still another of the same kind should now be added.

The Development of Modern Europe. By James Harvey Robinson and Charles A. Beard. 2 vols. New York: Ginn & Co. $1.60.

Professor Robinson is already well known to teachers of European history thru his excellent "History of Western Europe." It has worked well with high school and college classes, and has paved the way for the new *Development of Modern Europe*, in which he has been aided by his colleague, Prof. Charles A. Beard. Any attempt to treat the history of Europe since the time of Louis XIV

in less than eight hundred small pages must result in problems of selection and arrangement rather than those of scholarship alone. In the latter qualities the volumes stand the test of criticism, while in order and proportion they seem also worthy of commendation. The first volume, and the smaller, covers the long eighteenth century, which began in the reign of Louis XIV and ended only with the fall of Bonaparte. In the latter volume, with an increasing intensity and detail, we find the nineteenth century. The various national threads of this development, Russia and France, Germany and Italy, and England, to say nothing of the Industrial Revolution and the Far East, are spun with accuracy and order. Modern Europe is at once an idea and a composite of local problems. The balance between these two aspects has been preserved with considerable success. But the volumes make it very clear that no single thought unites the period since the Congress of Vienna, similar to that of the revolutionary and Napoleonic periods, or that of the seventeenth century. Perhaps when we see more clearly we shall there, as in the nineteenth century, have our attention diverted to economic advance and social reform. There is no better text-book for the nineteenth century than this.

The Religious Teachers of Greece. By James Adam. Pp. 460-467. New York: Charles Scribner's Sons. $4.00.

We have before us a work of unusual merit, the *opus magnum* of a man who literally put his life into it. The book has lived, and will live on; but the author died worn out at the age of forty-seven. Five years before his death he was appointed Gifford lecturer at the University of Aberdeen, his alma mater. His task was to deliver ten lectures in each of two years "on some subject connected with natural religion." Two years of preparation were allotted him, and he went promptly to work on *The Religious Teachers of Greece.* The strain of eight previous years of work on Plato's "Republic" found him in need of rest, but he attacked his new work with all the energy that he could summon. In 1903 he writes: "I am making no progress at all, and am in a state approaching despair. I can't even think of words, much less of ideas, tho I am sitting at the table about ten hours a day. I seriously think I shall have to chuck it." But he kept manfully to his Herculean task. An incurable malady at last came on, and he died under the surgeon's knife before the last chapters of his book were completed. The work was revised with scrupulous care by his wife, assisted by several scholars. A frontispiece presenting the sad-faced scholar seems, in this one case, appropriate. But we pass to the rich matter of the book, presenting a few driblets. Here comes the mystical Pythagoras, "who in his sojourn in hell saw the soul of Hesiod bound to a brazen pillar, and crying out, together with the soul of Homer, suspended from a tree, and surrounded by snakes, in return for what they said about the gods." We here trace the everlasting feud between poetry and philosophy. With the arrival of Socrates we have the "prophet of a new evangel, and every word he utters is full of indomitable courage and steadfast hope." "In his creed there is no room for despair, nor in his life and doctrine did he ever show the smallest trace of pessimism." The man who carried in his mind all that he revolved in four years of strenuous work on top of all that he had done before is a hero. *Finis coronat opus.* The English poetical translations thru the book, taken from numerous and various authors, are a feature helpful to many.

On the Training of Parents. By Ernest Hamlin Abbott. Boston: Houghton, Mifflin & Co. Price, $1.00. net.

There is an hour of genial reading, not without its minutes of instruction and more sober reflection, in Mr. Abbott's little book *On the Training of Parents.* Whimsical it is in many places, and filled with tales of childhood, but its message emphasizes the individuality of the child. We are today child study mad. Our psychologists and theoretical pedagogs have for many years been reducing childhood to a system, training teachers, at the same time, to manage their children according to the precepts of their new law. Mr. Abbott points out, as it is well to have it pointed out, that tho the

individual passes thru childhood, where he is entitled to receive the common heritage of the race, he passes also thru Johnhood or Maryhood, where nothing but his own individual law will suffice him.

The Prima Donna. By F. Marion Crawford. New York: The Macmillan Co. $1.50.

The Prima Donna is the second volume of Mr. Crawford's new trilogy, which began with "Fair Margaret" and is to end with "The Diva's Ruby." Yet it is complete in itself, and is a curious study of the dual personality of a great singer. It provokes comparison with Mr. Moore's "Evelyn Inness," in which the central figure is another great lyric soprano—also of a dual personality. The inference of both authors appears to be that there is a distinct deterioration of character in the case of every successful singer. Mr. Crawford distinguishes very cleverly between Margaret Donne and Madame Cordova, and there is an interesting chapter in which she, the less worthy she, is jealous, not of another soprano, but of the tenor. It is refreshing to find a jealousy on a comparatively high plane—a sexless emotion born of art and egotism. Mr. Crawford is drawing some very real characters in this triptych of portraits. In each the continued heroine is attracted by a different lover; the chivalrous Lushington of the first volume gives way to the unspeakable Greek, Logotheli, who wins at the end of the second, only to be exposed and overthrown by the American millionaire, Van Torp, to whom she is safely, and we may hope permanently, in spite of her profession, married. The first suitor loved only the girl Margaret, the second professed to like the Cordova equally well. But this was not sufficient to satisfy the mounting ambition of the diva, and she was finally won by the man who was shrewd enough to engage first her professional services and build her an opera house.

Deep Moat Grange. By S. R. Crockett. New York: D. Appleton & Co. $1.50.

Yorkshire has been the scene of several grewsome novels, notably "Wuthering Heights," but we do not recall one more horrible than *Deep Moat Grange*. The author of "The Lilac Sunbonnet" is capable of writing more attractive stories than this, which opens with a murder, and piles up the horror about the mysterious Grange with its heart-shaped beds of lilies. Singularly enough, just as the book appears, the papers are full of a similar story enacted in Indiana, a series of murders quite as revolting, and a like house of mystery. Which mind acted telepathically upon the other? Was Mr. Crockett, a respectable, God-fearing Scott, subconsciously aware of what the Norwegian murderess was about? Or did his unpublished romance influence Mrs. Gunness? Plagiarism is out of the question, as neither knew the other's invention, which was made public simultaneously. Deep Moat Grange is a hair-raising, goose-flesh producing tale of horror related in schoolboy dialect, which is grewsomely incongruous, a *souffié* of slang and shudders.

A Guide to the West Indies and Bermudas. By Frederick A. Ober. New York: Dodd, Mead & Co. $2.25.

When a book is published that surpasses its antecedents in general worth, due credit should be given, but when an excellent book is issued on an untouched subject then unstinted praise should be bestowed. Not long ago we needed up-to-date information about Santo Domingo, and hardly a paragraph could be obtained in any of the libraries. The present guide contains 42 pages on the subject. A footnote states that the author's material for the chapter was obtained mainly in the island itself. This is a typical instance. Of Cuba, Porto Rico and Bermuda we already know much, but the descriptions and information about the unknown communities of the Leeward and Windward Islands are as valuable as they are interesting. The history of the individual islands is briefly summarized. We are inclined to forget the important part the West Indies played in the early history of the American continent. The little island of St. Kitts, in the days of piracy, was as much of a center as Venice in her prime. The varied fortune of these isolated lands under French, English, Dutch, Spanish and American rule is a unique chapter in the world's history. The guide is illustrated profusely, and contains five good maps.

Literary Notes

....It was a happy thought of the Rev. James Mudge to compile a selection of religious verse bearing on character, and tending to encourage good living and a spirit of courage and self-sacrifice. Clergymen will find here many a verse fitted to adorn and strengthen a sermon. The title is *Poems with Power to Strengthen the Soul.* (Eaton & Mains, $1.50.)

....A recent number of the series of church histories known as "The Church Universal" is *The Age of Revolution: Being an Outline of the History of the Church from 1648 to 1815,* by Rev. William Holden Hutton (Macmillan, $1.50). Discussion is confined to churches of the episcopal order, and the point of view is tolerantly Anglican.

....One conceives an impression of devout piety coupled with clear understanding of human nature as characteristic of the Bishops of the Episcopal Church from such volumes as *The Forgiveness of Sins,* by Bishop Hall, of Vermont, and *The Mind of Christ Jesus in the Church of the Living God,* by Bishop Brent, of the Philippine Islands. (Longmans, Green & Co., 50 cents.)

....The Rev. G. Campbell Morgan plans an exposition of the entire Bible, to be isued in about thirty volumes, and to be known as *The Analyzed Bible.* Three introductory volumes are already published (Fleming H. Revell Co., $1.00 each), which include brief introductions to all the books of the Bible, from the practical and devotional point of view. Points of difficulty and questions of criticism are kept in the background.

....*A Journey in the Back Country in the Winter of 1853-4.* By Frederick Law Olmsted (originally issued in 1860). In two volumes. New York: G. P. Putnam's Sons, 1907. $5.00. The reprint of which this is the latest instalment was a very happy thought of the publishers and republishers. Nobody who knew Fred Law Olmsted (for it was thus and not "Frederick" that he wrote it and liked it to be written) but would have picked him out for just this work. He was himself so free from passion and prejudice, so anxious to be right and fair, so very scrupulous to avoid doing injustice and his remarkable powers of observation which of themselves went so far to constitute remarkable powers of description, and you have the equipment for an expert witness on the slavery question in the sixth decade of the nineteenth century, when it was so burning a question. You have, in fact, the equipment for the production of a classic in its kind, as is proved by the reprint and ought to be proved by the public acceptance of the same. When Olmsted says as the conclusion of his investigations, "The present agitation of the country results less from the labors of Abolitionists than from the conceit, avarice and folly of wealthy owners of slaves," the reader who has gone along with him feels that he has reached a judicial conclusion.

....Mr. Frederick Trevor Hill must unquestionably have followed his successful book on "Lincoln the Lawyer" with such a series of articles as this now published under the title of *Decisive Battles of the Law.* (Harper, $2.25.) Viewed from a popular standpoint, he has chosen and treated the "battles" wisely. These cases include the trial of John Brown, the Dred Scott case, the impeachment of President Johnson, the *Alabama* Arbitration, the Hayes-Tilden contest and the case of the Chicago anarchists. Without exception they all have a practical and general interest to the reader of today who seeks information as well as sensation and gossip, and all of them are of great importance and of wide influence, and in that sense "decisive." Mr. Hill reviews them as one would expect, that is, as a novelist educated in the law. The law is scientific, and a straight scientific statement in even striking cases would find little popular sale. On the other hand, there is a greater degree of romance, adventure and human interest connected with the law than we find with most sciences. It is this romantic quality that Mr. Hill has seized, and he tells the stories vigorously, holding, as a rule, very carefully to historic facts, altho in this regard the coloring that a novelist may easily and rightfully give is occasionally somewhat misleading.

Pebbles

A LITTLE girl we know of said to her mother, "Why does not the Lord go to our church the way he does to Aunt Nettie's?"

"But he does, my dear," said the mother.

"No, mother, for I went to church with Aunt Nettie, and the Lord was there in a long, black gown; and he kept talking to the people and they kept answering, 'We'll be switched if we hear thee, good Lord.'"

BEFORE a man is married, he is considered a fit companion for any woman, but as soon as he is married, he is thought to be dangerous except when his wife is along to wither him. A man may travel the world over, and come back all right, but at home he is considered a savage unless his wife is along to control him. Young women are allowed to spend a great deal of their time with unmarried men, but if a married man walks along the sidewalk, the older members of the family rush out and bring the girls in. The married men must have been guilty of some great wickedness in the past; otherwise they would not be looked upon with so much suspicion. Innocent amusements are planned for all sorts of people except married men; it is generally believed that married men are so wicked that they only enjoy swearing, drinking whisky and chewing plug tobacco. A great deal is done by young women to entertain unmarried men, but a married man, particularly if he has children, is a wretch if he wants to be entertained beyond allowing the children to climb over him. Married women have their afternoon parties, and enjoy themselves, but a married man is not trusted in the sacred precincts of his own home when there is company; it is feared that even his wife may fail to keep him from acting up, and possibly shooting some of the guests.—*Atchison Globe.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Independence Day—For Whom?

We celebrated last week the independence of the United States. But on the Fourth of July, 1776, it was not these forty-six United States that daringly declared their freedom from alien rule, for they were only thirteen colonies, and all the territory they knew of hardly reached the Ohio River. After the happy issue of the Revolutionary War more than half the present contiguous territory of this nation was still subject to France and Spain.

So only the Atlantic seaboard celebrated last Saturday the one hundred and thirty-second anniversary of its independence. The great French Purchase of 1803 under President Jefferson gave the Fourth of July to the Mississippi Valley and all its subsequent States. Florida did not have any Independence Day before 1812, and was not quite certain of the possession for some years later. Texas had no Fourth of July before 1845, and California none before 1848. In Seward's day the Fourth sailed north to Alaska, and in these last years it has been voyaging southward to Porto Rico and Panama, and westward till it has reached the ancient East. It was not theirs; but they are allowed to take it as a precious gift.

Independence Day is worth honoring if it represents independence possessed and exercised. When we bought territory of France, or took vast regions from Spain at the close of the Mexican War, we not merely transferred the allegiance of the inhabitants to the flag of the United States, but we promised to make them equal sharers with us of its protection and rights. We gave them Territorial government, and then full State rights, just as soon as they were ready for them. There was nothing mean or suspicious about the action of those old States to the newcomers. We made them absolutely our equals. Because their territory was so great the old Thirteen now look small, and the dominion has moved from the Atlantic, and the West rules the land and is sure to remain predominant. But the old Thirteen, who only have the right of primogeniture, feel not the least jealousy. They give the flag freely, with all it involves of equal rule, to these later comers, and so they feel equal pride and exultation in our Independence Day.

But how about these latest comers? Will they, can they feel this same pride and joy?

To make the people of our new possessions honor Independence Day it is not enough that we own Porto Rico and Guam and Samoa and the Philippines. We must do more than rule them. We must let them rule themselves. This we are doing in Hawaii, after the Territorial pattern, which implies the State pattern to follow. But we have not done this yet for Porto Rico and the Philippines. Why, we have not yet made those people even citizens of the United States. There are nearly a million people in Porto Rico, who have lost their citizenship of Spain, who welcomed us rapturously when we drove out their Spanish rulers, but whom we have left these years men without a country. They have asked the boon of citizenship, but we have refused. Can we expect to create in them a love for the Fourth of July by teaching boys and girls in school to salute in unison a flag that is not theirs? We are giving them partial self-government, it is true, but no inde-

pendence such as our forty-six States possess. We ought immediately to give them full citizenship and then set a date near at hand when we will ask them to set up a Territorial government, with no more restraint than we put upon Arizona and New Mexico, and then follow it in ten years with full Statehood. We have no right to rule people in any other way.

For the same is true of the Philippines. They are not ready to be divided into States nor even to be created Territories; but that is what we ought to have in mind, and it is what their people have the right to expect. If we are not ready to tell them that we are preparing to give them within our nation the same rights of independence that we possess, they can properly ask for independence apart from us. We cannot ask them to stir their enthusiasm over Independence Day if independence does not mean independence for them. It is we that need conversion on these matters. We have the idea that independence is safe for us, but too good for other people. They have feelings and passions and hopes and ambitions and the love of freedom as well as we. Let our people learn that annexation means ultimate Statehood, just as much for Porto Ricans, Filipinos and Visayans, yes, and Moros, as it did for the settlers in Ohio or the older residents of Florida and California and New Mexico.

The Dignified Life

THERE are fashions in character as in the cut of the beard; in the conduct of life, as in the giving of dinners. It was once good form among well-bred people in the United States to cultivate in manner, and if possible in character, decorum and dignity. The example had been set by the great men of the Revolutionary age, Washington and Franklin, Jefferson and the Adamses. Of late, dignity and decorum, if not lost sight of, have at least not been much insisted on. This is the age of efficiency, and, of course, of that make-believe efficiency which consists in "hustle" and vociferation. The "strenuous life" has been the up-to-date thing.

Fashions are in nothing more true to their nature than in the suddenness with which they change, in obedience to a cause which to the unthinking seems curiously trivial in proportion to its effect. Some little trick of mode or manner operates as a potent suggestion upon the minds of thousands, and before one can realize what is happening the outward aspect of a nation is transformed.

The marvelous unanimity and sincerity with which the whole civilized world has paid its tribute of admiration and respect to the life and character of Grover Cleveland afford substantial ground for hope that we may once more witness a popular preference for the dignified life. It would seem that such spontaneous and such genuine praise of the modesty, the simplicity and the rugged integrity of a great man who in his lifetime was thought cold and unmagnetic, could hardly have been rendered if the American people had not arrived at certain new valuations of personal qualities. There is indeed much evidence that, partly because of business misfortunes freely attributed to the policies and the individual influence of the President now in office, the nation has become somewhat weary of the "strenuous life" and ready to give heed to a very different model.

The life of keen activity, of ceaseless striving to achieve, is one always to be respected so long as it attains its ends by just and honorable means. It is not, however, the highest type, and has never been so regarded in the greatest ages of high civilization. To accomplish much, but to do so with a certain grace and decorum, to combine the proprieties and an unfailing respect for self and others with the dynamic power to do, is a finer thing than to achieve noisily and crudely. This was the supreme lesson of Greek civilization; it should be the supreme endeavor of our later civilizations, none of which has as yet quite measured up to the standard of the Periclean Age.

When a college president lately complained that a college teacher could in these days hardly open his mouth without being lampooned for his utterances by the press, the reply was made by one of our leading journals that the press never lampoons President Eliot or Presi-

dent Hadley or President Woodrow Wilson. Every one sees in their discussions of events, whether educational or sociological, a dignity, a quiet but weighty and self-respecting reserve, which maintains the noblest traditions of more stately days.

We cannot prophesy that these events will turn the tides of men's thoughts and feelings, and mark the beginning of a new insistence upon the dignified life, in contrast with that which is "strenuous" only. Yet we dare to hope that they may.

The Republican Tariff Policy

Some expected that the Republican party in its tariff platform would call for a revision involving a reduction of the present rates, because Mr. Taft had said that some of these rates were too high. There may be persons who think now that the new platform calls for such a revision. It is interesting to consider the opinions of the American Protective Tariff League about this. The League had stoutly opposed revision or any platform promise that a revision should be made. It has been asserted that those who opposed revision insisted upon the insertion of the words about "a reasonable profit" in the following platform declaration:

"In all tariff legislation the true principle of protection is best maintained by the imposition of such duties as will equal the difference between the cost of production at home and abroad, together with a reasonable profit to American industries."

It is said that they thought this addition would prevent any reduction, because they could convince the Congress committees that they had been making only a "reasonable profit" under the old rates. It is noticeable that the League, which had opposed revision, regards the new platform with great satisfaction. It says:

"The Republican party has rejected the demand of the tariff agitators for a revision downward. . . . Nothing more strongly protective than this has ever appeared in a Republican platform. . . . Herein is an absolute guarantee that in no event shall protection be sacrificed in the interest of more foreign trade. . . . The advocates of revision downward will not find a word or syllable in this tariff plank that tends to furnish them the slightest crumb of comfort. There is no promise of revision downward; on the contrary, the scope and purpose of the tariff plank is to continue the fullest measure of protection to all industries, and that the proposed revision of the schedules shall maintain the standard of protection in every feature of the new law. To those who believed that the nomination of William Howard Taft would be a pledge of the party to a downward revision the platform is a complete and unqualified answer. . . . If he has at any time gone too far in his advocacy of tariff tinkering, he has not been able to carry the Republican party with him."

It is also pointed out by the League that the party "flatly rejected the policy of some loose thinkers" that the maximum rate should be at the protective line, and declared that "the minimum rate shall be the adequately protective rate." The League, of course, would have the new minimum rates coincide substantially with those of the present tariff, and it believes that the platform calls for this, which, it joyfully asserts, will make "reciprocity in competing products absolutely impossible."

Such is this powerful protectionist organization's interpretation of the platform. We turn to the opinions of Mr. H. E. Miles, chairman of the Tariff Committee of the National Association of Manufacturers. That association holds that tariff duties should be equal to the difference in costs of production, but Mr. Miles objects to the apparent guarantee of a "reasonable profit" in addition, saying that it "means Trust-making by Government enactment."

There will be, he asserts, three classes of manufacturers, the first including those who are on a sharp competitive basis "and receive nothing from the tariff," the second composed of those more or less closely joined in what are called "gentlemen's agreements," and the third including the "full-fledged Trusts, which control most of the great necessities and conveniences of life." Under the proposed revised tariff, he continues, these Trusts are to be informed that the Government will protect them against foreign competition up to the point of such a profit as they can "reasonably" claim:

"If the new tariff is to be enacted sixty days after the inauguration, say May 4, 1909, Trusts can, it must be assumed, print not only on their bonds but also on their preferred and common stocks this extraordinary and un-American clause: 'The principal, together with a "reasonable profit" thereon, is guaranteed by

the Government of the United States by enactment of May 4, 1909.' These Trusts, having full control of the domestic market, as at present, and deeming, say, 20 per cent. a reasonable profit, can charge $1.30 for an article costing 90 cents to produce in Europe and $1.00 here, and the European would have to pay 45 per cent. duty with only a real difference of 10 cents in cost of production. And when he has paid this 45 per cent. he is still selling his product in the United States at his own bare cost, with no profit. He will not ship on this basis, it is hardly necessary to say, but will insist upon at least 10 per cent. This he will not get, and so the home Trusts can add all or a part of this additional 10 per cent. to their selling price before any relief comes from foreign competition.

"It is evident that class one, wholly under competition, and class two, midway toward consolidation, will be hastened into class three. What will be the result? It surely is not wildly improbable that the manufacturers will become the only class wholly guaranteed and promoted by the Government at the expense of the consumer. This 'reasonable profit' clause must not be permitted to become effective. It must be throttled on the edge of the platform, or else we shall never have an honest and equably adjusted tariff."

These remarks give us another protectionist view of the matter, for the numerous manufacturers represented by Mr. Miles are by no means free-traders. Both the League and the Association had committees at work in Chicago, and for a long time they have had an intimate practical knowledge of our tariffs. Their opinions are instructive.

Neither the League nor Mr. Miles (in these recent utterances, at least), speaks of the protected combinations' practice of selling their goods abroad at a large discount. This practice the Republican platform-makers and the convention refused to criticise. We observe that the manufacturers of tin plate, protected by a high duty, have recently been giving Canadians a considerable advantage over consumers here at home. A few days ago the New York *Journal of Commerce* published the following in a dispatch from its agent at Pittsburgh:

"The market price of tin plate [at Pittsburgh] since the reduction of January 6th, has been $3.70 [per box]. The average, however, is pulled down by the lower prices at which export tin plate is sold. . . . Competition between the American and the Welsh manufacturers in the Canadian market was very keen, and Canada was said to be the cheapest tin plate market in the world, sales being made at $3 to $3.10. There has been no question but that the American exports to Canada were of the nature of 'dumping' as defined by the Canadian law, and the regulation putting tin plates into the list of products against which the anti-dumping clause would be made effective has removed the American mills from the Canadian market. Competition there hereafter will be narrowed to the one Canadian mill and the Welsh manufacturers. According to all accounts, the American Sheet and Tin Plate Company has been selling plates to Canada at prices netting it about $1 a box less than the price to domestic consumers."

Combination kept up the price to Americans at home (with the help of the high duty), while the Canadian buyer was getting the protected American product at a reduction of about 20 per cent. Such discrimination in favor of buyers abroad is extremely distasteful to many American citizens, who would like to see it prevented by law. The convention which made a platform so satisfactory to the Protective Tariff League and, as Mr. Miles asserts, so favorable to the Trusts, rejected Senator La Follette's resolution, which called for legislation to withdraw tariff protection from any combination guilty of such injustice in its treatment of its own countrymen, from whom this protection has been sought and obtained.

Morally Decadent? No!

A WRITER in the *International Journal of Ethics* asks whether the American nation is morally decadent, and for answer he reassuringly tells us that it isn't.

For warning or for consolation, such questions and answers doubtless have their uses. Their scientific value is small. Those who propound them do not always define their terms, and the problem itself, being quantitative, is essentially statistical, and adequate statistical data on the subject are lacking. We do not even know how many serious crimes are committed in any one of the forty-six American commonwealths in any given year. Much less do we know how many were committed in any one of the thirteen original commonwealths in 1800, or in 1850, or in 1875. How, then, can we measure even approximately the sum total of right and wrong acts making up the conduct of a past or of the present generation?

All that can be accomplished by such an inquiry, assuming it to be made by an intelligent person and as carefully as

possible, is to compare in a very general way the miscellaneous evidences indicative of the prevalence of specific kinds of conduct at different times. For example, it is legitimate to point out that before the period, let us say, of the Mexican War, duelling and lotteries were common indulgences, and that they no longer are. It is likewise legitimate to show that for every one of the varieties of swindling and of political graft of which we now complain, a variety quite as reprehensible flourished in former days. With the growth of population and of wealth, and with the increasing magnitude of industrial operations, wrongdoing can be conducted on a larger scale. But it does not follow that stock watering and mine salting are worse deeds in quality than putting small potatoes at the bottom of the bushel or doctoring horses before "swapping."

A much better way of estimating the moral virility of a nation is to examine its moral working hypotheses, and the extent of its activities in behalf of the common welfare. Moral ideas swell and shrink, like the crops from season to season. Sometimes they become small and silly, and again they expand with force and meaning. Perhaps there is all in all no better indication of a nation's moral energy than the ratio which a village type of solicitude over the private affairs of one's neighbors bears to the generous giving of time and energy by groups of citizens to the solution of essentially public problems and the vigilant watching of public officials.

Let us illustrate by an interesting historical example, which is recalled by the passing of Grover Cleveland. The Blaine-Cleveland presidential campaign was fought at a time when party ties had been loosened. Independent voting was preached and practiced as a peculiarly important political virtue. Tens of thousands of Mugwumps, whose consciences were their especial pride, were rather eager than otherwise to vote the Democratic ticket as a moral rebuke to Republican malfeasance. But they had no sooner hailed Mr. Cleveland as the standard bearer of a Spartan political righteousness than they were confronted by the assertion and the admission that their champion had not all his life adhered to accepted standards of private conduct. At the same time, against Mr. Blaine lay the charge that he had improved his opportunities as a public man to better his private estate. It was not shown that Mr. Blaine had broken any law of the land or even any one of the Ten Commandments. Only a probability was established that his ideas about what a public man could with propriety do in furthering his own interests were of a sort which the Mugwump conscience had begun to question. To the independent voter, therefore, the clean-cut issue was presented between a combination on the one hand of private misconduct with a high standard of rectitude in public service, and, on the other hand, private conduct, at least conventionally correct, united to notions of public duty which no longer pass unchallenged. Confronted by this alternative, a sufficient number of independent voters cast their ballots for Mr. Cleveland to effect his election.

To many thoughtful minds this outcome of what was unquestionably a real moral contest in the American nation seemed deplorable. Looking back upon it now, in the light of subsequent events, we think it must be acknowledged that the nation gave no proof of moral decadence in the decision that it made. No student of our moral life would care now to assert that the condoning of Mr. Cleveland's early life created any new laxity on the part of the American people in general. On the contrary, there is reason to think that quite the opposite effect was produced, by the certainty that his popular support would have been far larger had his earlier career been beyond criticism. On the other hand, the unmistakable declaration of the people that they regarded faithfulness to public duty as a virtue of supreme importance in public men, was an impulse of political righteousness, the stimulating effects of which are still felt thruout the land.

There has never been any time in our national life when the evidences of moral virility were more numerous and encouraging than they are today. The people are alive to their rights. They are vigilant in watching legislation and executive power. Their standards of public duty are high. Above all, they have begun to

see how to preserve a keen sense of responsibility in the men whom they elect to positions of trust. Full publicity of all acts that are public in character, or that directly affect the public welfare, is the one certain assurance of right doing. We may rest confident that a people which has begun to demand, among other things, complete publicity of political accounting, including the items of campaign contributions and expenditures, is in no immediate danger of moral decay.

A Spelling Contest

A SPECIAL lesson of the National Education Association meeting in Cleveland attaches itself to the spelling contest between school children of Cleveland, Pittsburgh, Erie and New Orleans. One hundred words were given to be written from dictation, and then a certain number to be orally spelled, by fifteen children chosen from the schools in each city. The biggest auditorium in the city was crowded with six thousand present to hear the children spell. The chief lesson of it all is well put by the Cleveland *Leader:*

"Isn't every spelling contest a protest aimed at the needless and burdensome eccentricities of the English language? Does it not teach the wisdom of spelling reform? Ought the most important business language of the civilized world to be so complicated by irregularities that it cannot be used without constant danger of mistakes in the very rudiments of its form?

"Correct spelling is a matter of course in Germany or Spain. It is taken for granted that any one who can read or write can spell all ordinary words. There is nothing like the mazes of English orthography in Italy, for instance, or in Holland. This country and Great Britain, with the British colonies, carry a heavy burden of difficult and confusing spelling, through their schools into business and all other activities of life.

"It isn't common sense. It isn't in harmony with the shrewdness and get-there characteristics of the English-speaking nations. It is a matter in respect to which there will yet be radical changes."

Then why will not the *Leader* help by accepting the simplified spellings proposed?

Another impression comes to us as we read the names of the Cleveland children who took the first prize with a total of forty errors. We observe that twelve of the fifteen were girls, and that most of them bear names that are not English. Here are Maude Lesmer, Hilda Moskowitz, Sylvia Sicha, Irene Langlois, Etta Epstein, Rosa Meier, Leo Goldreich, Ida Fantana, Colette Litet, Leah Bratburd and Freda Markowitz. The next generation from foreign parents, and particularly Jews, is promising.

And one other note. Two girls, Marie C. Bolden, aged thirteen, of the Cleveland team, and Mae Thursby, of Pittsburgh, made perfect record, and received a gold medal; and Marie C. Bolden is a colored girl. And here, again, is one of the pretty incidents of the contest. When the New Orleans children learned that a colored child was one of the competitors some of them raised the question whether they should withdraw, but they concluded not to do so. That was more noble than we might appreciate hereabouts; and we doubt not they opened their eyes wide in wonder when the colored girl came forward to receive the gold medal.

In the good day coming spelling contests will be recalled as records of a barbarous age. That will be when we have a scientific alphabet and children no longer waste two years of school life learning to read words as they are not written and to spell them as they are not pronounced.

Labor Unions in Politics

THE court decisions in the Hatters case and in the case of the Buck Stove and Range Company, both of which make the boycot illegal, have left the trade unions at the mercy of the employers. If the decisions are enforced, and the general use of injunctions is continued, the unions will be powerless to conduct strikes or boycots. One of two things is likely to happen. A law may be past similar to the British Trades Disputes Act of 1906, which places the unions and the employers' associations on an equal footing. Otherwise workingmen will try to have enacted into law what they cannot get by means of agreements with employers. This is the purpose of the compulsory arbitration and minimum wage boards of New Zealand and Australia.

The British act places labor organizations and employers' associations in a class by themselves, and treats them alike.

In this country, unfortunately, we have confused trusts, organizations which deal in commodities and prices, with employers' associations and trade unions, both organizations which deal in labor and wages. The difference is one of classification. Combinations are made for two reasons: first, to raise or to monopolize prices, and, secondly, to adjust labor conditions. Capital organizes trusts to do the first, and employers associations to do the second. Labor unions do not come under the first class at all. They are concerned only with the second. Obviously a trade union like that of the Machinists and an employers' association like the National Metal Trades Association, are similar combinations of labor and capital, and according to our law should be treated alike. But neither of them has anything in common with an organization like the United States Steel Corporation.

To give equal treatment to capital and labor it is necessary to separate these two classes of combinations. The Sherman anti-trust act was directed against trusts only. New legislation is needed to deal with associations of capital and labor which are organized for the same purpose, namely, to deal in labor. This the British Trades Disputes Act does. Since the employers can always make a blacklist appear legal, the act legalizes the natural counter-weapon, the boycot. Strikes and lockouts are made equally lawful, and no actions which arise from either are entertained by the courts.

As the situation is in this country at present a union may be mulcted for three times the damage done to an employer because of a strike or a boycot. Not only are the union funds in jeopardy, but the property of any individual member may be attached for payment of damages. Unions may not publish an "Unfair List" by which they ask friends to withhold their patronage from firms that do not employ union labor, or whose workmen are on strike. A boycot is considered a conspiracy in restraint of trade, and as such is punishable under the Sherman Anti-Trust law. On the other hand the recent case of Adair v. United States legalizes the blacklist. A law prohibiting an employer from discharging a man because of membership in a union is unconstitutional, because it interferes with the freedom of contract.

It is essential to the life of a union that it have its funds secure, and that it protect its members in their employment and in their property. Further, in order to win a strike, it must be able to injure the non-union employer by taking away his trade. The recent decisions would prevent the unions from doing this, and indeed would make membership in a union impossible for those who have savings or homesteads. Obviously organized labor is in a tight fix.

At this stage it cannot be expected of workmen to consent that industry shall go on unregulated by the government or unchecked by labor organizations. The confusion which exists in the minds of the general public, however, between trusts and labor organizations is likely to defeat anything like the British legislation. The last Congress heeded neither the threats nor the pleadings of organized labor. At the Republican convention the labor leaders did not fare much better. It is doubtful whether Congress, for a number of years to come, will be prepared to take the step which was taken by the British Parliament in 1906.

The very refusal of Congress to give organized labor adequate relief will increase the class feeling for independent political action on the part of labor, which is already growing for a number of reasons. The great trusts have long ago crushed the unions by importing foreigners and quietly weeding out the union men. In the smaller industries the avarice and the competition of employers gave the unions an advantage. But strong employers' associations have now taken this away. Long-drawn-out strikes, aided in many cases by injunctions, are weakening the unions in the competitive industries. Now come the court decisions which seem like a deathblow. Instinctively organized labor turns to the ballot, just as it did in England and in New Zealand under similar conditions.

The general hopelessness of this situation, coupled with the refusal of Congress to act and the equivocal labor plank in the platform of the dominant

political party, has led many thoughtful workingmen to look for relief only in independent political action. Unless one of the two big political parties takes a very advanced stand on the labor question, there may be a combination of organized labor with the Socialists, similar to the combination made in England. In such a case workmen are likely to seek relief in government regulation of wages, hours and conditions of labor, rather than in building up strong unions. That the Socialist party is making a strong bid for the vote of organized labor is evident from the length to which it went in adopting an opportunist platform.

Mr. Taft's Retirement

To be a private citizen again is a new experience to William H. Taft, but it is no vacation. His service for four years and five months as Secretary of War has been the most notable in the history of the Department, always excepting the period of the Civil War, when Mr. Stanton was Secretary of War. Perhaps we ought to have a Secretary of the Colonies, but a Secretary of War has had little to do, and it was proper that the colonies should be put upon him. He has had to do much for the Philippines since he was Civil Governor there. He has prest Congress for a favorable tariff, and has partly succeeded. He provided a railroad system, adjusted the friars' lands, has organized the constabulary, provided for elections and visited Manila to open the first legislature ever allowed a colony in an Asiatic country. When troubles arose in Cuba and President Palma asked our intervention he became Governor, pacified the island, again visited it, and in a few days the election will be held under his direction. When trouble arose in San Domingo it was his duty to provide the plan which is working with success. He has had to build the Panama Canal, and at the same time to keep the peace and secure a fair presidential election. This has required him to go twice to the Isthmus. Meanwhile in all matters he has been a principal adviser to President Roosevelt. And after all these labors he is to have no vacation, but to enter on the Presidential campaign. Fortunately he works easily, keeps his health, and work does not make him grow thin.

"Uncle Remus"

Joel Chandler Harris, known the world over as the author—or, as he would say, the reporter—of the "Uncle Remus" stories, died last week in Atlanta, Ga. Their popularity surprised him, for his pride was more in what he had thought out for himself than in what he had simply told as a reporter. But the public were right. It was an utterly new field to literature, altho the stories are told orally wherever in Africa or in either America the negroes live. They are the folk-lore of the African race, just as the fairy stories of Norseland are the same, with other names, as those repeated in India. But Mr. Harris told the stories with delightful simplicity, and their humor charmed every one. But what made Mr. Harris famous was not his serious work, but this nonsense thrown off as a sort of play. Yet what is Harris but the reporter of folk lore? And is it not a fact that the greatest names in literature are of those like Homer, Æschylus, Sophocles, Euripides, Racine, Chaucer, Shakespeare, who tell old stories for the amusement of the people rather than for their instruction.

Trade Schools

Gen. Andrew S. Draper, who is Commissioner of Education for the State of New York, made a notable address at the National Education Association in Cleveland last week on the subject of "Adaptation of Schools to Industrial Ends," in which he denounced our present school system as "deformed, lop-sided, and not broad enough at the base." The ailment, he said, is not with the university and secondary schools, but with the elementary schools. The result is that "but one-third of the children remain to the end of the elementary course," a statement which cannot be true in States that have a compulsory school law. He says that children go out from these elementary schools without the preparation necessary to begin work in office or shop. We should be surprised if with any possible training

they would be fitted to begin work in office or shop at the age of twelve or thirteen. He would have our elementary schools train to industrial employments:

"It is the time to inaugurate factory and trade schools as a part of the general school system. These must be wholly apart from the manual training schools. They must have a distinct individuality and a definite object of their own. The culturists must not be permitted to appropriate them.

"These schools must contain nothing which naturally leads away from the shop. They are to train workmen to do better work that they may earn more bread and butter. They are to follow and supplement the common school."

As we understand General Draper, he would provide schools which would have boys and girls, say after the seventh grade, when eleven or twelve years old, encouraged to go to a school where they shall be taught no culture work, only shop and factory and trade work—to be cash girls in department stores, to run a machine in a cotton mill, to be breaker boys about Pittsburgh and district messenger boys in the big cities. In the country districts, if there is room for such schools, they will be taught to milk cows and dig potatoes, if their fathers have not already taught them. The character of the teaching will depend on the nature of the principal business. In Lynn, Mass., they will be taught to run the machine that stitches shoes, and in Milwaukee they will learn the brewery business. We venture to think that such schools will be an utter failure. The children for whom they are established will go to work without waiting for them, while those that have ambition will choose the secondary schools.

Misspelling Among the Immortals

The forty Immortals of the French Academy have ever been and now are leading literary lights. And yet their fulness is not perennial. Gaston Boissier, who died the other day, the perpetual secretary of the French Academy and author of thoroly scholarly books on the end of Paganism, the religion of the Romans, and their rule in Africa, as well as the skit on Napoleon III, known as *"Ciceron et ses Amis,"* says *Le Matin*, called on his fellow academician, Renan, an equally renowned writer: "I am come," remarked Boissier, "to take you down a peg or two." "How's that?" asked Renan. "Why, my autograph sells for more than yours." "Indeed," coolly retorted Renan; "when did you learn that?" "Oh, yesterday," was the answer. "At the public auctions, Rue Drouot, two letters were put up, one of yours and the other of mine. Yours sold for three francs and mine for five." "I was aware of all that," answered Renan. "Do you know why?" "No." "Well, in your letter are three words spelt wrongly. It lies there on my desk. It was a friend of mine bought it and gave it to me, explaining: 'Send this letter to M. Boissier. If it were permitted to be past around with its *grammatical beauties* it would hurt the reputation of the Academy.'" However, the illustrious secretary was not the only Academician who misspelt. In 1868 a number of them, at Compeigne, in the presence of Napoleon III and Eugenie, agreed to take down a dictation. This trial was suggested by Victor Duruy, then Minister of Public Instruction. His object was to expose the abuses of giving difficult dictations at the examinations for teachers. Prosper Mérimée, himself an Immortal, gave out the matter. Not a single one of the Immortals had all his words spelt correctly. Not one of them had done well enough to merit the ordinary teaching license (*brevet élémentaire*). Both Eugenie and Napoleon joined in and came out the dunces; she with ninety words wrong and he with sixty. Surely, our college examiners may take courage. They stumble across pretty bad spellers, but there are others.

Spontaneous Generation

A correspondent quotes Haeckel to us in favor of spontaneous generation and in criticism of our editorial two weeks ago. We do not accept Haeckel as the final mouthpiece of biologic philosophy; but at the same time we do not mean to assert that autobiogenesis is unthinkable or certainly disproved. All that science has yet reached is that all attempts at spontaneous generation under the most favorable conditions yet devised have failed, and that, whether in hygiene or any other science, we have to go on the theory that no life, even the lowest, is ever produced after the style of the

crude method which Virgil recommended in the Fourth Georgic for getting a hive of bees out of the putrid body of an ox. Not even the plasm which might work itself into a smallest monera has yet been produced. But there is no more theologic reason why one should deny the possibility of it than there is why one should deny the general truth of evolution. Only the attempt to explain the introduction of life on our planet by imagining it might have been brought from Mars or from an aerolite is wild, and only puts the question back a step further.

It is announced that Mr. Parker, defeated candidate for President four years ago, will propose to the Democratic convention this week to eulogize Mr. Cleveland by resolution for his attitude while President in opposing the positions supported by Mr. Bryan. If it be his idea to smash the Democratic party and defeat the election of Mr. Bryan, should he be nominated, he could hardly do it more effectively. He may think it sublime patriotism to pull down the pillars of the temple of Democracy, and perish, with all his enemies, in the ruins, but it is not loyal to his party, to say the least. He has had the greatest honors the party could bestow, and was defeated. It would be more becoming if some one else should throw in the firebrand.

A man was murdered in Philadelphia the other day whose business it was to murder unborn children at the request of their prospective mothers. He was poisoned by a man whose wife had gone to him for his aid, without the husband's knowledge, and who, as is liable to be the case, died as the result of the operation. The murders by the physician were dastardly. He lived by murder, murdered for money. The crime of the man who killed him was not so much dastardly as it was illegal and therefore wrong. He deserved killing, but by the law and not by the angry husband. But what shall we say of the women who hired the man to murder their children? They are unnatural monsters and deserve to die each with her child.

Altho the proposition to save daylight was referred by the British Parliament to a committee with roars of laughter, the committee reports in favor of having all clocks after a certain date put forward an hour and twenty minutes. That, it is argued, will "save daylight," will make an economy in gas and candles, and be a blow at the saloons. It is supposed that men will get up and eat breakfast and go to bed eighty minutes earlier, and so use the morning daylight and persuade themselves that they are keeping their old hours. People have chosen their hours according to what seemed convenient, and we doubt if the attempt consciously to cheat themselves will succeed.

By a majority of over 80,000 the Swiss referendum has voted to prohibit the manufacture and sale of absinthe in Switzerland. It will involve a big loss of revenue, as much of the absinthe drunk in France is made in Switzerland. We commend this example to Georgia, which proposes to lease the convicts for five years more, knowing it is wrong, because it cannot afford to lose the revenue needed to support the new industrial schools.

It must not be imagined that the so-called Socialist-Labor party, whose convention has just unanimously nominated with shouts of endorsement a man for President who is serving a twenty-five year term in prison for murder, is *the* Socialist party in this country. It is an irreconcilable, a mere rump of the party, which can command only a few thousand votes, and which has now advertised its crazy absurdity.

The Chicago *Tribune* reports 71 dead and 2,624 injured, directly or indirectly, as the result of the Fourth of July celebration all over the country. Quite a battle, say the old men; too much to pay for the noise. Worth all it costs, say the young folks, and they keep up the fun and the racket year after year, and will continue to do so. One lesson we may all agree on, Be careful how you handle powder.

INSURANCE

The Tallest Skyscraper.

THE Equitable Life Assurance Society is about to build a new home for itself, on the site of its present building, bounded by Broadway, Nassau, Cedar and Pine streets. Accustomed to large transactions, it will erect a building that will dwarf the famous Singer Building, of which it will be a near neighbor. The plans prepared and filed last week by D. H. Burnham & Co., Chicago architects, call for a building sixty-two stories high. The extreme hight is to be 909 feet above the curb, exclusive of 150 feet of flagstaff. When completed the Equitable building will have but one rival, the Eiffel Tower in Paris, which rears a skeleton framework of iron and steel to a hight of 984 feet. Merely the drawing of the plans just filed was of itself a work of considerable magnitude, and draftsmen of experience were quoted as saying that not less than 150 men were thus engaged for more than six months, at a cost of something like a quarter of a million dollars. The plans were filed now to forestall any future legislation that might be enacted whereby the hight of buildings in Manhattan might be restricted. One feature of the plans is the elaborate system of wind braces called for by them. The complete building will cost about $10,000,000.

THE PROPOSED NEW EQUITABLE BUILDING.

Financial

The Treasury's Fiscal Year

DURING the fiscal year which ended on June 30th, the expenditures of the Government exceeded its receipts by $59,656,362. This deficit marks a decided change from the conditions prevailing in the preceding year, when there was a surplus of $86,945,543. The change was due largely, of course, to the effect of the panic upon the revenue from customs and internal taxes, but it should be noted that the expenditures of 1908 exceeded those of 1907 by $81,000,000 and were the heaviest in forty years. Figures for the two years are given below:

REVENUE.

	1908.	1907.
Customs	$285,680,653	$333,230,126
Internal revenue	250,714,908	270,309,388
Miscellaneous	63,501,102	61,766,621
Total	$599,895,763	$665,306,135

EXPENDITURES.

	1908.	1907.
Civil and misc.	$146,898,930	$124,117,119
War	110,284,864	101,671,881
Navy	118,726,347	97,606,595
Indians	14,550,759	15,140,292
Pensions	153,887,995	139,290,910
Public work	93,778,239	76,051,271
Interest	21,424,990	24,482,524
Total	$659,552,125	$578,360,592
Excess of revenue		86,945,543
Excess of exp.	$59,656,362	

It will be observed that the revenue of 1907 exceeded by only about $5,500,000 the expenditures of 1908. Now, in the face of this deficit of nearly $60,000,000, Congress made appropriations for the expenditure of $1,008,804,000 during the present year, which began on July 1st, knowing that this would involve an additional shortage of from $100,000,000 to $150,000,000. When Congress revises the tariff, next year, it will find it necessary, or at least expedient, to provide for an increase of revenue, possibly by new taxes. If revision is made by the Republican party, there will be no legislation designed to increase (by a reduction of tariff duties) the imports of foreign goods and to enlarge the revenue derived from such imports.

....The longest interurban electric railway in the Southwest, 67 miles, from Sherman to Dallas, Tex., was completed a few days ago.

....Thomas Cooper, land commissioner of the Northern Pacific, testified last week that the company's coal mines and coal lands are worth $50,000,000.

....In the six months that ended with June 30th there were disbursed, in dividends and interest, according to the *Wall Street Journal*, $628,794,768, or about $25,000,000 more than in the corresponding six months of last year. The gain is due to the increase of bonded debt, as there has been a slight decrease of dividends.

....The Chemical National Bank, of New York, a temporary Government depository, has surrendered its deposit of public funds, $1,028,000. Under the new law it would be required to pay 1 per cent. interest upon this money. As it does not pay interest to depositors, its officers decided not to make an exception in the case of the Government. For similar reasons the American Exchange National Bank, a regular depository, has surrendered $230,000, being the excess over the amount which it is required by the Government to keep on hand to meet disbursing officers' checks and which is not subject to the interest charge. One Western bank has taken similar action.

....We commend to investors, and especially to those who desire to know what inquiries should be made concerning the various kinds of securities, *How to Invest Money* (Funk & Wagnalls Company), an excellent little book written by George Garr Henry, vice-president of the Guaranty Trust Company, of New York. Following an introductory essay on the principles of investment, which is a model of its kind, there are chapters on railroad mortgage, railroad equipment, industrial, public utility and municipal bonds, real estate mortgages and stocks. Mr. Henry brings to this work an exceptionally broad and instructive experience as an investment banker. While his chief aim has been to set forth fundamental principles, he has also pointed out the practical application of them. This he has done clearly and in a style well fitted for a thoughtful study of his topic.

The Independent

VOL. LXV NEW YORK, THURSDAY, JULY 16, 1908 No. 3111

Survey of the World

The Democratic Nominations

At the Democratic National Convention, in Denver, last week, William Jennings Bryan, of Nebraska, was nominated for President, and John Worth Kern, of Indiana, for Vice-President. There was very little exprest opposition to Mr. Bryan, who was nominated on the first ballot, receiving 892½ votes. For Judge George Gray 59½ votes were cast, and for Governor Johnson of Minnesota, 46. His own State gave the latter 22, and to these were added 9 from Maryland and scattering contributions from Maine, New Hampshire, Connecticut, Rhode Island, Pennsylvania and Georgia. Judge Gray's list was made up as follows: Delaware, 6; New Jersey, 24; Georgia, 20; Pennsylvania, 9½. The balloting was completed at 3:40 a. m. on the 10th, but the clock in the convention hall had been stopped just before midnight on Thursday by those who desired to say that the candidate had not been nominated on Friday. In the afternoon of the same day the ticket was completed by the nomination of Mr. Kern, whose name was presented by Thomas R. Marshall, Indiana's Democratic candidate for Governor, and several others. Charles A. Towne, of New York; Archibald McNeill, of Connecticut, and Clark Howell, of Georgia, were also placed in nomination for the second place, but after a little delay their names were withdrawn. Mr. Towne was named by ex-Governor Thomas, of Colorado, and the nomination was seconded by the Maryland delegation. The New York delegation had no candidate, and before final action was taken it seconded the nomination of Kern. This was also done by the Illinois delegation, which informed the convention that John Mitchell, whom it had desired to support, had declined to permit his name to be used. Mr. Kern was then nominated by acclamation. He is a lawyer, is fifty-eight years old, and has been defeated twice as a candidate for Governor of Indiana, first in 1900, when the majority against him was about 35,000, and the second time in 1904, when it was 83,000. He has been reporter of the Indiana Supreme Court, State Senator and City Attorney of Indianapolis. He is a Presbyterian, has three children, and is a good campaigner. His most energetic supporter was Thomas Taggart, chairman of the Democratic National Committee. It was well known that Mr. Bryan desired the nomination of Judge Gray for the second place, and the latter was subjected to much pressure by Mr. Bryan's friends, but he emphatically refused to accept. New York could have had the second place, but it appears that the State's delegation declined to present a name. It is understood that the selection of a nominee for the Vice-Presidency was left to Mr. Bryan. Failing to prevail upon Judge Gray or to obtain a candidate from New York, he selected Mr. Kern, being moved in part by a conviction that the main battleground would be in the Middle West.——It was known, of course, before the convention assembled, that Mr. Bryan would have the votes of more than two-thirds of the delegates. There were conferences, however, of those who opposed him, and in these conferences the New York delegation was urged to stand against him openly. It was asserted that if it should do so, his nomination would be opposed by more than one-third of the entire number. It is understood that New York demanded proof of this and that the proof was not furnished.

Under the unit rule, New York cast its 78 votes for Mr. Bryan. The opening session of the convention, on the 7th, was a brief one. Resolutions concerning the late ex-President Cleveland were submitted by friends of Mr. Bryan in the Nebraska delegation. There was a call for Judge Parker. He read the resolutions which he had prepared (these being not wholly satisfactory to the supporters of Mr. Bryan), and then seconded the Nebraska resolutions. As a mark of respect for Mr. Cleveland, after the adoption of these resolutions the convention adjourned. Thereafter there was much delay, owing to the prolonged deliberations of the Credentials and Platform Committees. The most interesting of the contests were those affecting certain Pennsylvania delegates, a majority of them from Philadelphia, as to whom the charge was made that they had been elected by the votes of Republicans. This dispute involved Colonel Guffey, the Pennsylvania Democratic leader, whom Mr. Bryan had recently denounced at Lincoln, and who had replied with a bitter attack upon Mr. Bryan. The contests finally came before the convention in majority and minority reports, and there they were decided against Colonel Guffey and in favor of the Bryan delegates by a vote of 615 to 387. One result was the deposition of Colonel Guffey from the National Committee. Mr. Bryan had said, in his speech at Lincoln, that Guffey's continued presence in the committee would be embarrassing and offensive to him. Mr. Bryan was in communication with the Platform Committee by telegraph and telephone, and all the resolutions were submitted to him. This is said to have caused delay. The platform was not reported to the convention until about 1 a. m. on the 10th, a short time before the first and only ballot for the Presidential nomination. At one of the waiting sessions, among the speakers was Mr. Gore, the blind Senator from Oklahoma, who, in an eloquent passage, led up to the name of Mr. Bryan. Whereupon the convention proceeded to break all records for continuous applause and other expressions of approval, the uproar lasting for one hour and twenty-seven minutes. At a later session, when Mr. Bryan was placed in nomination, there was a similar exhibition, which continued for one hour and ten minutes and was brought to an end only by turning out the lights. Twenty-two minutes was the duration of the applause for Governor Johnson. Among those in the galleries were Mrs. Longworth, the daughter of President Roosevelt, and Mrs. Leavitt, the daughter of Mr. Bryan. At times they were in the same box, exchanging comments upon the scene before them. Richmond Pearson Hobson addressed the convention in advocacy of a great navy, and repeated his familiar predictions of war in the Pacific. Both the convention and the galleries found him tiresome, and made disrespectful remarks. Mr. Roosevelt had said in his presence, he asserted, that there "existed the greatest probability of a war with Japan." Mr. Roosevelt has promptly denied that he ever said anything of the kind.——When Mr. Bryan received the news that he had been nominated, on the 10th, he issued the following statement:

"The Presidency is the highest official position in the world, and no one occupying it can afford to have his views upon public questions biased by personal ambition. Recognizing his responsibility to God and his obligation to his countrymen, he should enter upon the discharge of his duties with singleness of purpose. Believing that one can best do this when he is not planning for a second term, I announce now, as I have on former occasions, that if elected I shall not be a candidate for re-election."

Thomas W. Lawson, who, in a long telegram, urged Mr. Bryan to withdraw in favor of Governor Johnson, promising to raise a campaign fund of $1,000,000 if he would do so, has telegraphed again, saying that he erred. He now believes Mr. Bryan can be elected, and he tells him that his election will guarantee to the people "four years more of Rooseveltism, and, after those four years, the return of Roosevelt to a broader and more thoroly plowed field of endeavor."

The New Democratic Platform

Prominence is given in the new Democratic platform to labor questions, and especially to court procedure concerning the use of injunctions in labor controversies. Following a brief introduction, the platform says:

"The courts of justice are the bulwark of our liberties, and we yield to none in our purpose to maintain their dignity. Our party has

given to the bench a long line of distinguished judges, who have added to the respect and confidence in which this department must be jealously maintained. We resent the attempt of the Republican party to raise false issues respecting the judiciary. It is an unjust reflection upon a great body of our citizens to assume that they lack respect for the courts. It is the function of the courts to interpret the laws which the people create, and if the laws appear to work economic, social or political injustice, it is our duty to change them. The only basis upon which the integrity of our courts can stand is that of unswerving justice and protection of life, personal liberty and property. If judicial processes may be abused, we should guard them against abuse.

"Experience has proven the necessity of a modification of the present law relating to injunctions, and we reiterate the pledge of our national platforms of 1896 and 1904 in favor of the measure which passed the United States Senate in 1896, but which a Republican Congress has ever since refused to enact, relating to contempts in Federal courts and providing for trial by jury in cases of indirect contempt. Questions of judicial practice have arisen especially in connection with industrial disputes. We deem that the parties to all judicial proceedings should be treated with rigid impartiality and that injunctions should not be issued in any cases in which injunctions would not issue if no industrial dispute were involved."

The party favors the eight-hour day on all Government work; a general employers' liability law, "as far as the Federal jurisdiction extends," and the creation of a Department of Labor, to be represented separately in the Cabinet. There should be no abridgement of the right of wage-earners to organize for the protection of wages and the improvement of labor conditions, "to the end that labor organizations and their members should not be regarded as illegal combinations in restraint of trade." The Republicans have postponed tariff revision, the platform says, until after the election, in which they must have support from the beneficiaries of the present high duties:

"We favor immediate revision of the tariff by the reduction of import duties. Articles entering into competition with Trust-controlled products should be placed upon the free list; and material reductions should be made in the tariff upon the necessities of life, and especially upon articles competing with such American manufactures as are sold abroad more cheaply than at home; and graduate reductions should be made in such other schedules as may be necessary to restore the tariff to a revenue basis. Existing duties have given to the manufacturers of paper a shelter behind which they have organized combinations to raise the price of pulp and of paper, thus imposing a tax upon the spread of knowledge. We demand the immediate repeal of the tariff on pulp, print paper, lumber, timber and logs, and that these articles be placed upon the free list."

The paragraph relating to Trusts is like that of the Nebraska platform. It calls for the vigorous enforcement of the criminal law against guilty Trust magnates and officials, and specifies the following three remedies for Trust evils:

"First, a law preventing a duplication of directors among competing corporations; second, a license system which will, without abridging the right of each State to create corporations, or its right to regulate as it will foreign corporations doing business within its limits, make it necessary for a manufacturing or trading corporation engaged in interstate commerce to take out a Federal license before it shall be permitted to control as much as 25 per cent. of the product in which it deals, the license to protect the public from watered stock, and to prohibit the control by such corporation of more than 50 per cent. of the total amount of any product consumed in the United States; and, third, a law compelling such licensed corporations to sell to all purchasers in all parts of the country on the same terms, after making due allowance for cost of transportation."

Railway traffic agreements are favored, if approved by the Commission. There should be a physical valuation of railroad property, the Commission's powers should be enlarged, it should be authorized on its own initiative to pronounce excessive rates illegal, railroads should be forbidden to engage in business which brings them into competition with their shippers, and there should be legislation "which will assure such reduction in transportation rates as conditions will permit, care being taken to avoid reductions that would compel a reduction of wages, prevent adequate service, or do injustice to legitimate investments." The Republican financial policy and the new currency bill are attacked. Emergency currency should be issued by the Federal Government and loaned to banks upon adequate security. The national banks should be required to establish a guarantee fund for the prompt payment of the depositors of any such bank that becomes insolvent. Publicity for campaign funds is demanded, with imprisonment for officers of a corporation that contribute in its behalf or consent to such a contribution. The Philippine "experiment in imperialism" is condemned, and the platform asks for an immediate declaration

of the nation's purpose to recognize the independence of the islands "as soon as a stable Government can be established." There should be an adequate navy, "sufficient to defend the coasts." Concerning immigration the platform says:

"We are opposed to the admission of Asiatic immigrants who cannot be amalgamated with our population, or whose presence among us would raise a race issue and involve us in diplomatic controversies with Oriental powers."

It favors an income tax, and urges the submission of a Constitutional amendment authorizing Congress to levy one; favors the election of Senators by direct vote of the people, and calls for the regulation of telegraph and telephone rates. The Republicans are denounced for extravagance and for increasing the number of offices in the civil service. President Roosevelt is condemned for "using the patronage of his high office to secure the nomination of one of his Cabinet officers." The improvement of all navigable water courses is demanded, with the preservation of forests, the irrigation of arid lands, the reclamation of swamp lands, the development of water power, and the conservation of all national resources.

Republican Campaign Funds

Frank H. Hitchcock has been elected chairman, and George R. Sheldon treasurer, of the Republican National Committee. Mr. Hitchcock was the leading representative of Secretary Taft during the canvass which preceded the convention. Mr. Sheldon is a well-known banker of New York, and president of the Union League Club. The election of these officers (at Hot Springs, Va.) was accompanied by a statement to the public, from them and Mr. Taft, that the headquarters of the committee and of its treasurer would be in New York City, and that publicity would be given to the treasurer's receipts and expenditures in compliance with the new publicity law of the State of New York. Mr. Sheldon was treasurer of the Republican State Committee during the campaign which ended with the election of Governor Hughes. He received between $300,000 and $400,000. In obedience to this same law, he published the names of the contributors and an itemized account of all expenditures. "I shall see to it," he says to the press, "that publicity is given to the sources from which the funds going thru my hands are received and as to the manner in which the money is expended." Commenting upon published estimates of national campaign funds of the past, he remarked that the size of these funds had been exaggerated. Campaign expenses, however, were heavy, for the cost of campaign literature and the circulation of it was something like $750,000, and about $700,000 was required for campaign speakers.

Mr. Roosevelt on Socialism

A monument to Captain John Underhill, a soldier and statesman of colonial times, was unveiled on the 11th at Matinnecock, which is about six miles from President Roosevelt's summer home on Long Island. In response to the Underhill Society's invitation, the President made an address. Having spoken of the duties of citizenship, he said that in this country we had measurably succeeded in securing equality of opportunity. This was different from equality of reward. He would strive to secure equality of opportunity, but when it came to reward he would let each man get what, by his energy, foresight, intelligence, thrift and courage, he could get with the opportunity open. He then turned to socialism:

"Very properly we in this country set our faces against privilege. There can be no grosser example of privilege than that set before us as an ideal by certain socialistic writers—the ideal that every man shall put into the common fund what he can, which would mean what he chose, and should take out whatever he wanted; in other words, this theory is that the man who is vicious, foolish, a drag on the whole community, who contributes less than his share to the common good, should take out what is not his, what he has not earned; that he shall rob his neighbor of what that neighbor has earned. This particular socialistic ideal would be to enthrone privilege in one of its grossest, crudest, most dishonest, most harmful and most unjust forms.

"Equality of opportunity to render service? Yes, I will do everything I can to bring it about. Equality of reward? No, unless there is also equality of service. If the service is equal, let the reward be equal, but let the reward depend on the service, and mankind, being composed as it is, there will be inequality of service for a long time to come, no matter how great the equality of opportunity may be, and just so long as there is inequality of service it is eminently desirable that there

should be inequality of reward. But in securing a measurable equality of opportunity let us no more be led astray by the doctrinaire advocates of a lawless and destructive individualism than by the doctrinaire advocates of a deadening socialism.

"As society progresses and grows more complex, it becomes desirable to do many things for the common good by common effort. No empirical line can be laid down as to where and when such common effort by the whole community should supplant or supplement private and individual effort. Each case must be judged on its own merits. Similarly, when a private or corporate fortune of vast size is turned to a business use which jeopardizes the welfare of all the small men, then in the interest of everybody, in the interest of true individualism, the collective or common power of the community must be exercised to control and regulate for the common good this business use of vast wealth; and while doing this we must make it evident that we frown upon envy and malice exactly as we frown upon arrogance and oppression."

Doings in Parliament

The Laborite members of Parliament and their followers are quite excited over the failure of the King to invite Keir Hardie, M. P., to the garden party lately given by the King at Windsor Castle. They have communicated with the Lord Chamberlain and concluded that the reason for this neglect was that he had spoken vigorously in Parliament against the visit of King Edward to the Czar at Reval. The party leaders therefore decided that the court had attempted to influence members of Parliament in the discharge of their duties and in expressing opinions honestly on political questions. The party accordingly adopted a resolution associating itself with Hardie, and requesting that until his name be restored to the official list of those invited to such functions, the names of all the members of the party be removed. Since the incident Hardie has reiterated in public speeches and otherwise that he would not have accepted an invitation to the garden party if one had been extended to him. Addressing a meeting of East End laborers, Hardie said: "I shall allow no interference with my political conduct in or out of Parliament by the King or the court." William Thorne, M. P., secretary of the Gas Workers' and General Laborers' Union, spoke in a similar vein. He repudiated the right of the King or anybody else to curb his tongue inside or outside of Parliament, adding: "I hope the time will most speedily arrive when there will be no room for the kings and queens. We shall then govern ourselves better than now."——The attack on Admiral Lord Charles Beresford, at the head of the navy, grows in bitterness. *The Times* publishes a statement to the effect that, during the recent maneuvers of the Channel fleet, Admiral Lord Charles Beresford gave the signal for an evolution which, if obeyed, would have brought the cruisers "Argyll" and "Good Hope" into collision. Sir Percy Scott, however, on board the "Good Hope," the statement says, doubted the accuracy of the signal and refrained from obeying it. When questioned in Parliament on this matter, the Secretary of the Admiralty said he knew nothing of it beyond seeing it in *The Times*. Lord Charles Beresford refused to answer any questions except to the Admiralty. Questions were also asked in Parliament whether it is true that Lord Charles is not on speaking terms with two of his subordinate admirals, but no reply was made. Premier Asquith, in Parliament, said that, apart from certain unverified rumors, the Government had no knowledge of the existence of any trouble. "If," he added, "the Government found reasons to believe that a state of things existed in any way detrimental to the discipline and smooth working of the fleet it would not hesitate to take prompt and efficient action."——Statistics of twelve late by-elections in Scotland and North England shows a remarkable growth of the Socialist and Labor vote. They add up 45,771 votes for the Unionist candidates, 52,397 for the Liberals, and 33,596 for the combined Socialists and Laborites. In four other by-elections there was no Liberal candidate, and the Unionist combined vote was 20,983, and the Socialist 21,564.

A Fleet of Airships

The Emperor William tells his people that the success of Count Zeppelin's airship means that it will have to be made a part of the military establishment. Hitherto France has made the larger number of military experiments with balloons, and the loss of one was much advertised. Now there is

considerable regret that France seems to be beaten by Germany in this branch peculiarly her own, as she has just been beaten by Germany in the race of the automobiles. The airship averaged a speed of 30 miles per hour, and made 55 with the wind, carrying thirteen persons; and so stable was it that they could sit or lie down or walk about. The airship forced its way slowly, at times against a wind of 30 miles an hour. The trip took the passengers over the falls of the Rhine at Schauffhausen, to the valley of the Reuss, then across Lake Lucerne, over the Kussnacht, across mountain ridges to Lake Zug, thence to the Lake of Lucerne, and then to Lake Constance and back, landing with no difficulty, after an extraordinary trip of twelve hours, during which time the machinery was always at full command. One of Count Zeppelin's assistants says it could go to the Pole and back; but that depends on the supply of petrol.

THE ZEPPELIN AIRSHIP.

French Troubles in Venezuela

The French are, like other nations, having their troubles with President Castro, of Venezuela. A correspondent of the *Matin* interviewed Castro on these matters and was told that the question of resuming diplomatic relations with France was one that should be addressed to M. Fallières rather than to himself. Venezuela had, he said, no interests to defend in France, while France had 4,000 citizens residing in Venezuela and $2,400,000 invested there. He cherished no grudge against France, but modern diplomacy pursued a business policy, and he did not want any foreign monopolists in his country. Venezuela was on bad terms with nearly all the Powers. That was his own work, of which he was proud. Comparing himself to the South American liberator Bolivar, who had expelled the Spaniards, General Castro said that he himself had attacked an enemy far more numerous and better armed. Cosmopolitan companies had taken possession of their lands, mines and commerce. In Venezuela, Colombia, Bolivia and Ecuador almost the whole economic life of the country was in the hands of foreigners. It was impossible to separate the political life of a State from its economic life, the latter regulating the former. Consequently,

their national independence was at stake. The President went on to say:

"Why should I conceal the fact? My aspiration is to regenerate the northern Republics of South America by uniting them for their joint defense against the barbarians of Europe and the other America. . . . The differences with France originated in the affair of the cable company. I closed the offices of that company and expelled the French agent, who acted as Minister Plenipotentiary in virtue of the right vested in all governments to defend themselves against political agitators (*perturbateurs politiques*). The cable company was in the service of Mattos during the revolution, and M. Taigny, disregarding all diplomatic usage, also intervened in favor of the insurgents during the civil war. . . . I have documents which account for the reserve of your Government, who have not ventured to support either their Minister or the company."

General Castro is represented to have said, in conclusion, that he did not fear Europe. Even if all the Powers were to combine, Venezuela would remain impregnable as long as he lived.

In Japan

The Japanese Diet has appropriated $12,000,000 for a new Capitol building in Tokio, and Mr. Hayashida, who is the Mikado's personal representative in the Japanese Parliament, its chief secretary, and the author of various parliamentary reforms, is in this country with a staff of architects inspecting public buildings. He declares that Japan would shudder at the idea of war with the United States, to which country she owes so much. The business men and manufacturers of Japan will invite a party of one hundred representative American business men to visit Japan in October, the beautiful chrysanthemum season.——The Japanese authorities in Korea have taken action to transfer to the state the lands held by the Emperor of Korea and the princes thruout the empire, which will become public property. An army of hangers-on will be dismissed, and a large public income thus added, not to speak of reducing the number of malcontents likely to raise trouble. Another good reform is that 1,300 local officials will henceforth be appointed by provincial inspectors and not by the court, with a corresponding diminution of intrigues and bribery. These provincial inspectors are a sort of governors of provinces. Before leaving for their posts they were given an interview with the Emperor, who seems to have experienced a change of heart. He said that, on ascending the throne last year he had sworn to the spirits of his ancestors that progress should be the keynote of the national policy. By the neighborly assistance of Japan this program had been duly inaugurated. But owing to the want of due mutual understanding between rulers and ruled there had occurred disturbances which were not only sacrilegious toward the ancestral spirits, but were also most ungrateful toward Japan, which had rendered valuable aid to Korea. His Majesty therefore conjured the provincial inspectors to be guided by principles of strict justice in the discharge of their duties.——The number of Japanese in Korea is 107,000, and they are settling to business, and the floating population of adventurers is being replaced by orderly settlers who establish schools and educate their children.

Fighting in Persia

So far as the cable despatches show the Shah of Persia has quite the upper hand about Tabriz, as well as in Teheran. At Teheran a body of Cossacks are reported to have demolished the most prominent café in the city, acting under imperial orders, on the ground that a bomb was thrown from this café at the time of the bombardment of the Parliament buildings. The people are said to have looked on with indifference. When the disturbances broke out in Tabriz, which is within the zone of the Russian influence in Persia, the Russian Consul-general took a prominent part in favor of the Shah and against the revolutionaries. When the fighting became acute, and 12,000 are said to have been killed, he fled to his villa in the country, and fighting between the Persian Cossacks under Russian officers and the revolutionists is reported, a few being killed. The Cossacks are protecting his house. The surrounding country has been given up to pillage and the people of the near-by villages have fled to the compound of the consul for protection. Only a handful of troops protect foreigners and the consulates. Reports received at Washington from our consul say that Tabriz is again quiet.

Massachusetts's Substitute for Old Age Pensions

BY LOUIS D. BRANDEIS, A.M.

[Ever since the recent insurance scandals Mr. Brandeis, who is a leading Boston lawyer, has been urging that the savings banks be given power to go into certain forms of the insurance business. His efforts have resulted in the State of Massachusetts undertaking the experiment, as the following article shows.—EDITOR.]

THE urgent need of an adequate system of old age annuities for wage-earners is becoming generally recognized. A quarter of a century ago Germany resorted to compulsory old age insurance, dividing the burden of premiums between employer, employee and the state. This year England is turning reluctantly to old age pensions, borne wholly by general taxation. In America the subject is engaging the attention of Congress, of State and municipal governments, and of public service and private corporations. The problem is pressing for solution.

Massachusetts now offers a partial solution of the problem by authorizing, under a recent act, savings banks to issue old age annuities and life insurance. Unlike Germany, Massachusetts seeks to secure for her wage earners voluntary instead of compulsory old age insurance. Unlike England, Massachusetts plans to make her superannuated workingmen independent instead of dependent, to relieve instead of further burdening general taxation. Her aim is to make the opportunities for saving money as numerous as the opportunities for wasting it; to make saving popular by giving to the saver all his money can earn.

The Massachusetts State Actuary, in a recent publication, shows that, under its system, the old age annuity *plus* life insurance will cost less than the workingman now pays for his industrial life insurance alone.

Suppose you are twenty-five years old and pay to the savings bank $1.30 each month and your neighbor who is the same age pays $1.35 each month to the insurance company.

When *you* reach age sixty-five, you will have no more deposits to make. Instead of making deposits you will begin to receive an annuity of $100.

While you are enjoying the fruits of your saving, your neighbor will still be paying $1.35 every month to the insurance company and he will have to continue paying this amount until he is seventy-five years old.

Which would you rather be—your neighbor or yourself?

The maximum premiums to be charged and the minimum benefits to be received on such a policy are shown in the table on the next page.

As stated, these tables show the maximum of premiums and the minimum of benefits. All the profits of the annuity and life insurance business will go to the policyholders, just as now all the net earnings of the savings department go to the depositors. It is expected that these profits will be large.

The Massachusetts savings banks have a long record of large earnings on deposits and of small expenses of management. Tho the character of permissible investments is narrowly limited by law to ensure safety, these banks earned last year 4.73 per cent. on the deposits, while the expense of management was only ¼ of 1 per cent. All earnings of the annuity and insurance department, except so far as required for expenses or taxes or as applied to build up guaranty funds, will be paid to the policyholders. For the Massachusetts savings banks have been operated solely for the benefit of the depositors. They have no stockholders. Their trustees, usually men of high character and of large experience, serve substantially without pay, recognizing that the business of collecting and investing the savings of persons of small means is a quasi-public trust. The savings bank is therefore conducted by its officials as a beneficent and not as a selfish money-making institution. Its trustees, officers and employees have been trained to the practice of strictest economy in the administration of these savings. These opportunities for safe and

profitable investment have made saving popular in Massachusetts, and account in a large degree for the prosperity of the Commonwealth. With a population of little more than 3,000,000 people, Massachusetts has by these means developed in her 189 savings banks 1,971,644 separate deposit accounts, aggregating $706,940,596, the average amount of each account being $358.55.

Under the act passed last year, the organization and facilities of these savings banks, and the good will and efficiency developed in nearly a century of honorable service, are to be applied in furnishing opportunities for the other forms of saving more recently organized, namely, old age annuities and life insurance. The statute authorizes any savings bank to issue, under adequate safeguards, to residents of Massachusetts, annuities up to the amount of $200 and life insurance up to the amount of $500. The same individual can take out policies in any desired number of banks. Each savings bank, thru its trustees and incorporators, decides for itself whether it will extend its functions so as to include the issuance of annuities and life insurance. Likewise each bank decides for itself whether it will engage in the annuity and insurance business on its own account or

consent to act as agent for some other bank. The statute prohibits savings banks from employing solicitors and collectors, for the system of personal solicitation and house to house collection of premiums practised by the industrial insurance companies is recognized as the main cause of the waste and of the heavy percentage of lapsed policies attendant upon their operations. But the statute provides in the amplest manner for establishing agencies thru which annuities or life insurance may be applied for, and premiums and benefits be paid. Not only may each savings bank become an agent for others, but such agencies may be established, under proper safeguards, in factories, stores, trade and other organizations, and generally wherever the convenience of the community and the desire to disseminate the blessings of thrift may dictate.

The savings banks, at their own offices or at some agency, are to receive applications for insurance as they now receive deposits—that is, without personal solicitation. Premiums are to be payable monthly. It is expected, however, that eventually more simple, convenient and economical methods of premium payment will be quite generally introduced. For instance, upon issuing the policy an effort can be made to induce the insured, if he is not already a savings bank depositor, to become such, and to give the bank a standing order to draw on the savings deposit in favor of the annuity or insurance fund, to meet the premiums as they accrue. Again, where large numbers of employees of a single concern are insured, an effort will be made to induce the insured employees to have their employer reserve from the wages the amount of the premiums and pay them to the bank monthly. The payment of individual premiums can thus be made practically automatic so far as the insured is concerned.

The savings bank in the town of Whitman, in Southeastern Massachusetts, was the first to avail itself of the provisions of the Insurance and Annuity Act. Its first policy was issued June 22d, 1908. The People's Savings Bank of Brockton will soon follow. Its president, ex-Governor Douglas, one of Massachusetts's most successful manufacturers, has been one of the leaders in the movement to extend the functions of the savings banks.

The machinery provided by the new law is such as to promote a general extension of the system thruout the Commonwealth. The insurance actuarial services and the facilities incident to that department of the business will be furnished by the Commonwealth to the banks without charge. The State Actuary is to perform all the expert insurance work for all the banks. He determines premiums and reserves, frames the forms of applications and of policies, and prescribes the methods of accounting. The State Medical Director prescribes in like manner the rules relating to health and acceptability of the applicant for insurance, and acts as supervising and advising physician to the local physician of the bank. The blanks and books used, as well as the services of these experts, are furnished by the Commonwealth to the banks without charge.

Success of the Massachusetts system can, of course, come only with a full appreciation by the employee, the employer and the community that provision for old age and life insurance is an integral part of the daily cost of living; that no wage is a "living wage" which does not permit the workingman to set apart each day or week or month the necessary cost of such provision for the future; that no workingmen can be truly self-supporting and independent who does not make such provision; and that the savings bank will enable him to make the provision at the lowest possible cost.

In the necessary work of education long strides have already been taken. The enlightenment campaign which preceded the passage of the act resulted in a wide discussion of the subject in every part of the State. Nearly three hundred labor unions joined in the effort to secure the requisite legislation. The presidents of the State Branch of the American Federation of Labor, of the Boston Central Labor Union, of the International Boot and Shoe Workers Union, and the International Textile Workers Union—thus representing Massachusetts's leading industries—were among its most enthusiastic supporters. The movement is thus assured of a broad sympathy from

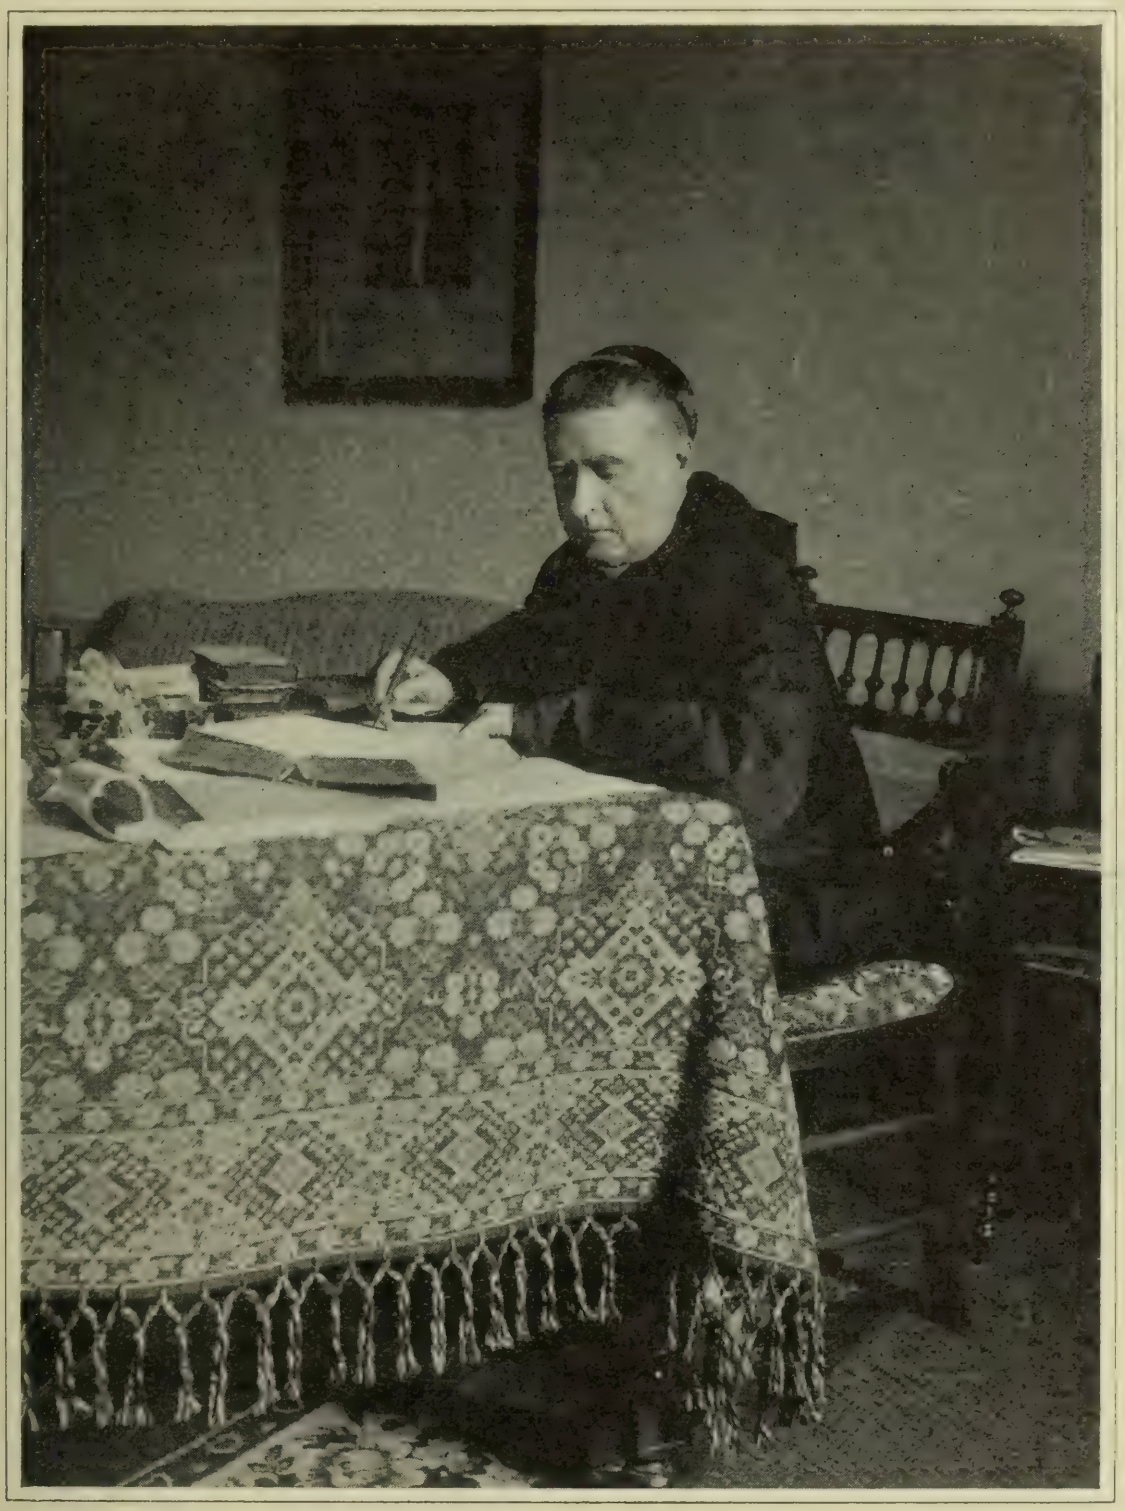
the wage earners. It has secured the same cordial support from employers, from social workers, and other public-spirited citizens.

The efficient administration of the new law is assured. It is under the direct supervision of the Bank Commissioner and the Insurance Commissioner; and the savings insurance and annuity banks are under the general supervision of the trustees of the General Insurance Guaranty Fund. The members of this Board are appointed by the Governor from among the trustees of the savings banks. They are men of influence and ability, and are filled with zeal for this important work.

BOSTON, MASS.

The Aventine and the Vulgate

BY SALVATORE CORTESI



THERE are spots in the world whose history is absorbingly interesting, and seem destined to perennial celebrity. Such is the Aventine, one of the seven hills on which Rome stands. It appeared for the first time in legend over thirty centuries ago, when Hercules came to Italy with the oxen which he had taken from Geryon, in Spain, and killed in a cave of the Aventine, Cacus, son of Vulcan, who had stolen part of the cattle while the hero was asleep. Hercules gave the name of Aventinus to the son he had by the priestess Rhea, and in honor of the victory over Cacus erected and dedicated on the top of that mount the Ara Maxima, which was in existence in Rome for ages afterward.

Originally, according to Virgil, Mons Aventinus took its name, *ab avibus,* from the birds of ill omen which populated it, and its reputation for bad luck continued, and grew especially after it was chosen as the burial place of Remus, who was killed by his brother Romulus. It was also a place of refuge for those persecuted, for conspirators and for all in opposition to the powers of the moment, especially the ecclesiastical powers. From being the hill of the plebeian, it came to be the scene of what constituted a religious epoch in Roman history, when the orgies of the wild Bacchic worship took place, in which seven thousand men and women joined. At the Christian period the character of the Aventine changed. St. Paul lived there as the guest of a host of Jews, who were later driven to the Ghetto, but succeeded, with the tenacity which is so conspicuous in their race, in reconquering a portion of the historical mount and establishing their cemetery on the eastern slope. For the pagan temples of Juno, Diana, Hercules, Victory and Liberty the Christians substituted churches, which are now the oldest in Rome, and there St. Augustine and St. Gregory the Great and the terrible Hildebrand left marks of their passage.

In the Middle Ages the Aventine did not escape the constant wars, when the Savelli, Colonna and Orsini were fighting for the possession of Rome. At that time Sixtus IV destroyed the Sublician bridge at the foot of the mount which, besides being the lineal descendant of the bridge kept by Horatius, had a considerable importance because the Popes owe their designation of Pontiff to it. As they were entrusted with its care and reparations, they came to be called "Pontifex," or Bridgemaker. Rienzi summoned his followers to the Aventine the night which was the turning point of his life, and there Crescenzio, Consul, Tribune and despot of Rome is buried.

Nowadays the sacred hill has been enhanced by the erection of the Monastery of the Benedictines, the headquarters of this religious order, which, since its foundation by St. Benedict in the beginning of the sixth century, has played such a prominent rôle in religion, science, art and politics. The new building, considered one of the best of modern Rome,

recalls the ancient abbeys of the Middle Ages, and looks more like a castle than a monastery. Of these Montecassino is the best example, and I may say in passing has as Arch-Abbot an American, Father Boniface Krug, of St. Vincent's Arch-Abbey, near Beatty, Pa.

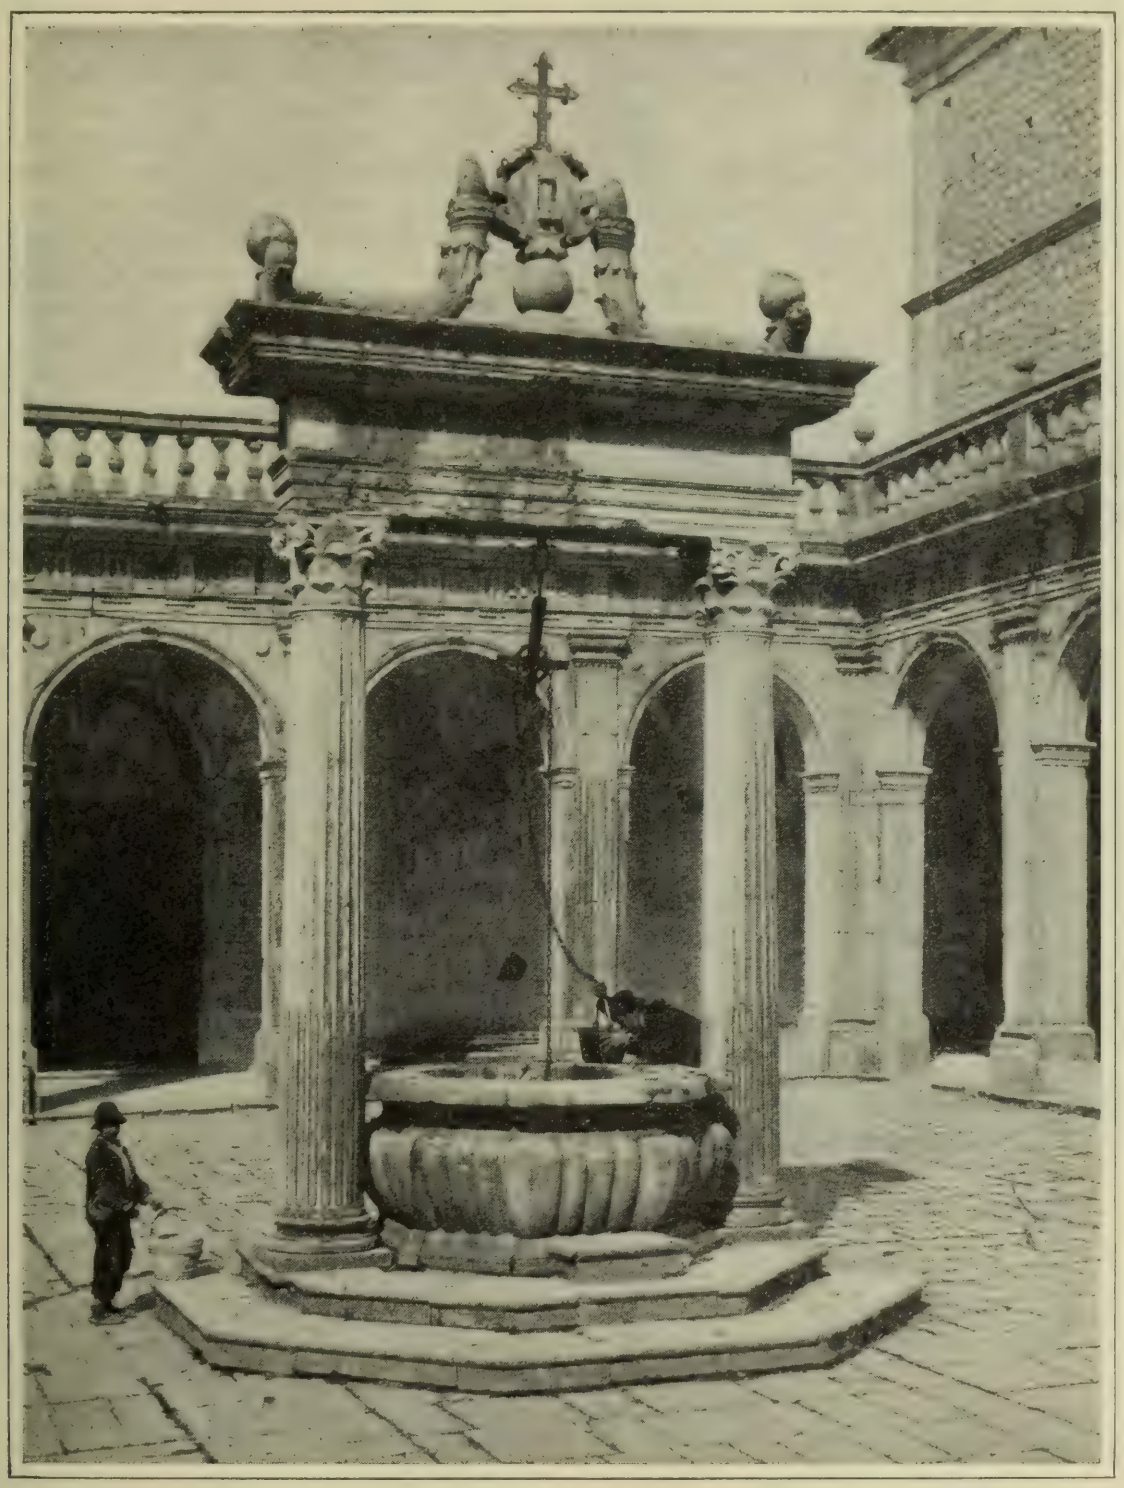
ABBOT GASQUET.
Working at the revision of the Vulgate in his cell at the Monastery of St. Anselmo in Rome.

The "Black Monks," as the Benedictines are called from the dark gown they wear, have as their supreme chief Father Hildebrand de Hemptinne, appointed Abbot Primate by Leo XIII, who took the order under his direct protection and built the great monastery of Sant' Anselmo, in which he instituted an international Benedictine College composed

of students and professors from all the nations of the world. Father de Hemptinne designed the monastery, which was begun in 1887, with $300,000 given by the Pope, and $600,000 by the Benedictines in Italy and abroad. It was inaugurated three years before the death of Leo XIII, who was represented by Cardinal Rampolla, as special Legate *a latere*, surrounded by twelve cardinals, fifty-six Benedictine bishops and abbots from all parts of the world, the generals of all the religious orders, the Papal Court, the diplomatic body accredited to the Holy See, the Roman aristocracy, and prelates, priests, monks, nuns and seminarists in gowns of all shapes and colors.

MONASTERY OF ST. ANSELMO.
On the Aventine in Rome.

After the ceremony in the church, which glittered with thousands of lights, a sumptuous banquet of 480 covers was given in the refectory.



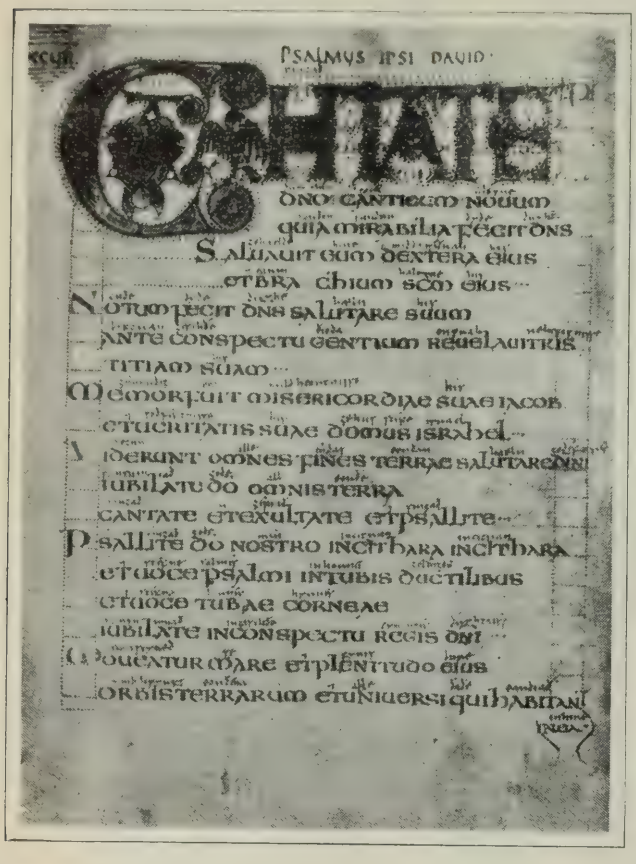
It is there, on the top of the Aventine, inside the imposing College of Sant' Anselmo, that Father Francis Aidan Gasquet, Abbot President of the English Benedictine Congregation, occupies a modest cell, and works indefatigably at the revision of the Vulgate, one of the most important tasks ever undertaken.

His room is about 24 square feet in size, with a part curtained off, behind which is the bed and a prie-dieu standing before a crucifix. The bare space left contains nothing but a square wooden table, covered by an ordinary cover, where the Abbot works, a sofa and four straw-bottomed, wooden chairs. On the walls is a picture of Pius X standing dressed in white with his red cape. From his table Abbot Gasquet directs his colossal undertaking, which, tho attempted in past centuries, has always failed, and which it seems very daring to attempt again.

As is known, under the name of "Vulgate" is comprised the translation into Latin of all the books found in the Hebrew Bible, made by St. Jerome at the end of the fourth and the beginning of the fifth centuries. It is interesting to recall that St. Jerome, when forty-five, began to learn Hebrew from a converted Jew, as a remedy against temptation. In his preface to the Book of Job, which is the second part of the Bible which he

translated, the first being the four books of Kings, he speaks of a Jew of Lydda whom he hired at great cost, and of a certain Baraninas, who came to him by night for fear of his brother Jews. The analogy in our day in the struggle for and against modernism. St. Jerome had then as his chief adversary and bitterest opponent his once closest friend, Rufinus.

St. Jerome finished his work in 405.



THE ANCIENT WELL DESIGNED BY BRAMANTE IN THE ABBEY OF MONTECASSINO.

alleged apology of the doctrines of Origen, made by St. Jerome in one of the prefaces of his translations, was the cause of a great theological struggle, which, in a small proportion, has its

His version, however, which was ultimately adopted as the only one authorized by the Catholic Church, circulated thru manuscript copies, which, as time past, became less and less correct, until

the scribes entrusted with copying bibles composed the new editions according to their preferences, and the true translation of St. Jerome could scarcely be recognized, especially as the original was no longer in existence. Hence the necessity of revisions. Indeed, the attempts at revising the many mistaken and independent translations which in every century were augmented by thousands, assumed the aspect of an avalanche let loose on the hill of the ages. It is impossible to chronicle all the tentative efforts in this direction, but the first worth mentioning

Photograph by Dottarelli, Rome.

A PAGE OF THE SEVENTH CENTURY PSALTER.

This is a manuscript of the Ninety-eighth Psalm in the British Museum. "Glosses" and translations in several languages are inscribed over many of the words.

was that of Alcuin, the eminent Yorkshire ecclesiastic teacher of Charlemagne, who published in 802, four centuries after St. Jerome, a revised text of the Vulgate, without, however, consulting the Greek.

Theodulf, of Orleans, fifteen years before, had also begun an important work of revision which did not appear until 821. Lanfranc, of Pavia, Italy, the strong Benedictine, who was appointed first Archbishop of Canterbury after the Conquest, spoke of the "barbarism of the nations he was thus compelled to visit," and found time in his adventurous existence to dedicate some of his energy and erudition to a revision of the many incorrect bibles then circulating. Nicolau, the learned German cardinal of the twelfth century, whom Lucius II appointed librarian of the Church because of his perfect knowledge of Greek and Hebrew, left a most erudite volume on the corrections to be made in the Bible, but soon it became evident that the work of collating and correcting would be enormous, that the energy and life of one single individual was not adequate to the task. It was, therefore, undertaken by corporations which began to issue "Correctoria," such as the "Correctorium Parisiense," the "Correctorium" of the Dominicans and that of the Franciscans, but contemporaneously the work of isolated scholars went on, especially notable being that of the illustrious Dutchman, Erasmus, who used to say that "his heart was Catholic, but his stomach was Lutheran," because he could not eat fish. Cardinal Ximenes, at the beginning of the sixteenth century; R. Stephens, in 1528, but, above all, Henten, of Malines, in the middle of that century, contributed to the restoration of a critical text, the work of Malines practically answering the requirement of the Council of Trent.

Sixtus V had a special commission to issue the "authentic and unquestioned" Bible known as the "Sistine," which Clement VIII had seized and destroyed a few years later, while the most learned theologians of his time took forty years to publish a new edition known as the "Clementine." Nearer our own time the Barnabite Vercellone surpassed perhaps all others; but since his death there has been a long period of discouragement, to which Pius X has just put an end by entrusting the really colossal enterprise to Father Gasquet, with the understanding that after his death the Benedictine Order will continue the work until the desired object is reached. The history of the Aventine and the traditions of the Benedictines ought to be good auguries for the happy conclusion of an attempt which interests all scholars.

ROME, ITALY.

The New Government in Westminster

BY JUSTIN McCARTHY

PARLIAMENT is at work again in Westminster after the short interval, this time a very short interval, of the Whitsuntide holidays. These holidays had this time a somewhat peculiar season to make the best or the worst of. The opening days of June this year made themselves remarkable by the extraordinary exhibition of a fantastic rivalry between summer and winter. One day we were all going about exulting in the tropical glow of the sun, and the next day breaking into complaint and denunciation of the winter winds, the winter rains, and the rapid descents of the thermometer. The Englishman took his pleasure very sadly, to use the once familiar phrase, during some of those holidays. The worst of it was for him that the sudden changes from tropic heat to arctic chill were to be experienced in many continental countries as well as in England, and the Briton who spent his holiday abroad found only too often that he might as well have spent it at home, so far as the delights of equal temperature were concerned.

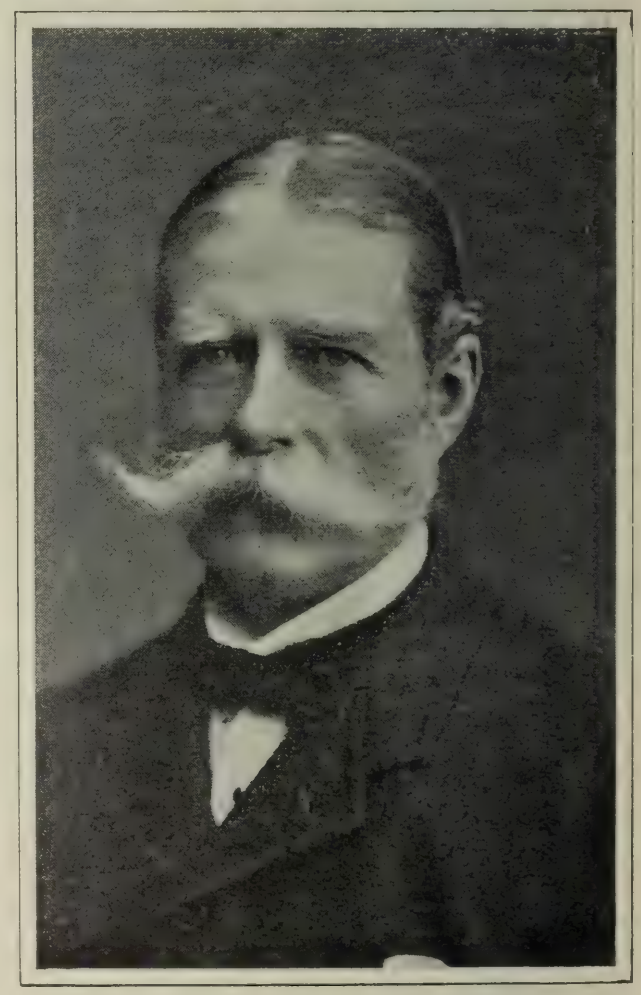
Now the holidays are all over and the Briton who is a member of Parliament finds himself once more hurrying to the call of the division bell at St. Stephen's instead of listening to the voice of the nightingale in some delightful holiday resort. There is heavy and exhausting work before the new English ministry, and it is work which has to be got thru with the least possible delay, and with a dismal uncertainty on the part of each member, no matter to what political section he belongs, as to whether the work before this perplexed session can possibly be brought so soon to anything like a satisfactory and an enduring settlement.

Parliament has before it the licensing measure, the Old Age Pensions measure, the Small Holdings Bill, the Irish Universities Bill, the Miners' Eight Hours Bill, and several other projects of legislation which concern the direct interests and especially the class interests of powerful orders, and do not seem to hold out any promise of prompt and satisfactory arrangements even during a session which is certain to be extended far beyond its usual limits, and with the cheerful prospect of a long winter session to follow it.

The new Government has, in fact, undertaken a great task, and none but the most uncompromising anti-Liberal partisans can deny that some such reforms as those which Mr. Asquith and his colleagues have introduced are absolutely essential to the welfare of multitudes of King Edward's subjects in these islands. Most of these new projects of legislation admit and even invite persistent and complex methods of opposition, and it would be hard indeed for the most keen-eyed, firm and judicious ruling authority in the House to define the limits beyond which partisan opposition may not exercise its obstructive power.

The most conspicuous figure thus far in the new administration is that of the Chancellor of the Exchequer, Mr. Lloyd-George. He seems now at last to have come to his own, and the suddenness with which he has obtained this possession might give the idea to an outside and distant observer of our public affairs that Lloyd-George's recent elevation to one of the highest offices of state has been a surprise to the world of politics. But the fact is that Lloyd-George's elevation brought with it no surprise whatever to the public here, and had, in fact, been taken for granted, looked upon as a coming certainty for many years past. The members of the present administration might, it seems to me, be very well divided, if such classification were necessary, into Liberals and Radicals—the Liberals as the Whigs of a later date and the Radicals as England's nearest approach to the embodiment of the principles of liberty, equality and fraternity.

I do not suppose that Mr. Asquith and Mr. Lloyd-George, if they were convers-



THE RIGHT HON. DAVID LLOYD-GEORGE.

ing freely and confidentially together on political and constitutional prospects, would find themselves in close companionship of ideas with regard to many great political questions, and I can fancy also that an intelligent political stranger, happening by some sudden chance to overhear such a conversation, would learn afterward with much surprise that these two men were the leading members of one and the same political administration.

The immediate work of the Cabinet was for the moment, so far as the attention of the outer public was concerned, thrown into the shade by the accomplishment of the public procession of ten thousand ladies, who thus made their organized demonstration in support of the demand for the admission of women to the political suffrage. The procession started from the City and made its way thru miles of London streets to the Albert Hall, where the meeting was held and where resolutions demanding the suffrage for women were carried with enthusiasm. The procession was composed of women belonging to all ranks and classes. Ladies of title and of aristocratic birth were there in great numbers, and there were women artists in painting, in sculpture and in music, and representatives of all classes of women occupying business pursuits, down to the humblest grade of women and girls, whose daily toil is to make a living by their personal labor.

The procession was, on the whole, a very successful demonstration, and invoked many expressions of sympathy from the crowds thru which it made its way. The assembled crowds gave many a cordial cheer to the advocates for the vote for women, and altho there were undoubtedly many exclamations here and there of ridicule and contempt for the new ideas, it may yet be said, in full seriousness, that the demonstration was as successful as any political demonstration could expect to be in its passing thru so many different kinds of population in the great metropolis. No political

SIR ALGERNON WEST.

organization making a display of its purposes thru so large a part of London could possibly escape or hope to escape from some manifestations of hostile feeling in such an open challenge to public criticism, and it is certainly not too much to say that the procession must be regarded as having accomplished its immediate object.

There were many banners with appropriate pictures and picturesque emblems

THE LEADERS OF THE WOMEN'S SOCIAL AND POLITICAL UNION.

They organized the monster demonstration in Hyde Park at which there were 500,000 people present. At extreme right is Mrs. Pankhurst, the founder, next Miss Christobel Pankhurst, her daughter, whom W. T. Stead has called the English Joan of Arc. Fifth is Miss Flora Drummond, the commander in chief of the entire demonstration.

borne by women who moved in the procession—by peeresses, by authors, by artists, by women of wealth and family, by the wives and daughters of shopkeepers, of artisans and of laboring men. I think that on the whole the women have every reason to feel satisfied with the effect produced by their open air movement.

About the ultimate success of the demand for woman's suffrage I do not feel the slightest doubt, and I think the cause has made steady progress from the days when it first became recognized and acknowledged as a serious movement with which legislation must soon have to deal. It has long passed away from that stage of its growth when it was commonly regarded merely as the whimsical movement of a few dreamy and eccentric women, and some yet more dreamy and eccentric men, and was treated in newspaper literature as one of the characteristic follies of the fair sex, like the once famous Bloomer movement. I know, of course, that a large section even of those who go so far as to admit the right of women to have a vote in the making of laws which affect women just as much as men are still strongly opposed to any attempt of women to obtain seats in Parliament, and who feel that, when once the right is obtained to vote in parliamentary elections, it will be impossible to prevent women from becoming candidates for ad-

mission as representatives to Parliament itself. I quite admit the reasonableness of this assumption, but I am unable to see any reasonableness in the doctrine that women can be prevented or ought to be prevented from obtaining seats when there are constituencies willing and ready to accept them as representatives. I can well remember the days when it was still maintained by the majority of public instructors, among the editors of leading newspapers, that mere social revolution must be the immediate result of allowing workingmen to have votes and even to enter Parliament, and I do not observe that anarchy has settled upon us as the result of any such legislative innovations.

I await, therefore, with composure the results not only of allowing women to vote for the election of members of Parliament, but even of allowing women themselves to obtain seats in the representative chamber or to succeed to a seat in the House of Lords, as they already may succeed to a title. It would be hard indeed to convince me that England, Ireland, Scotland and Wales got on better under the reign of George IV than under that of Queen Victoria.

I may say with some confidence also that I at least do not look forward to any magical and at the same time disenchanting effect over the character and the grace of womanhood, such as a great many men and probably even a great many more women appear at present to regard as the inevitable result of woman suffrage. Some of the most graceful, modest, refined, and thoroly womanly women have been leading and influential advocates of the principle which would allow to woman the right to express her political convictions by means of a vote at an election. In the meantime, however, we have enough to occupy our attention in the mighty demonstration by the supporters of women on the following Sunday, in which no less than 50,000 feminine champions of woman's rights to the political suffrage were arrayed, and that many subsequent demonstrations of at least equal numerical efficiency are to claim the attention of all who are supposed to have attention worth giving. I may therefore venture to assure all those in the United States who have any sympathy with the British suffragist that there is only one possible means of getting rid of the agitation in these islands, and that is by preparing at once for the full and open recognition of a political demand which must be granted sooner or later. Any of the ladies who led the last or are about to lead the next London demonstration might adopt without much alteration of meaning the words of the famous Scottish ballad and proclaim, "You have not seen the last of my bonnets and me."

"One City and Many Men" is the name of a work just published by Messrs. Smith, Elder & Co., London, and the author is Sir Algernon West. Sir Algernon West has held many high public offices and has been private secretary to many eminent statesmen, among whom Mr. Gladstone was one. His most recent work, that with which I am now dealing, is concerned, like most of his books, with public events and characters of his own time and coming within his own observation. "One City and Many Men" is especially interesting to me because it has to do with time, places and men that came under my own observation, and some of them at least within the scope of my own personal knowledge. This work, which has just appeared, has one chapter about the life and the character of the late Lord Randolph Churchill, and it was my good fortune to have known that brilliant leader of men both publicly and privately during many years of his life. I first made his acquaintance during the earliest years of my own parliamentary life, and altho he was the founder of an entirely original school of Toryism, absolutely his own and not bowing down in any homage to elder Tories, and I was a convinced and uncompromising Home Ruler, we formed between us during the remainder of his years something which could not be called by any other name than that of a personal friendship.

Messrs. Chatto & Windus have published quite recently a very beautiful book—one of their series of color books, called "The Greater Abbeys of England." The book itself is written by the well-known writer, the Rt. Reverend Abbot Gasquet, and the illustrations, in color, are after Warwick Goble. This volume is one of the most interesting of

all the series. There is no one who could write of the abbeys of England better than the writer of this book, as he has so much knowledge of the history of the abbeys and writes a most attractive style. I cannot imagine a more fascinating tour than to visit them all in turn, and I am sorry to say that there are many of them that I have not yet seen. Of course, there are many I have seen—the famous Tintern Abbey among them—and, most famous of all, Westminster Abbey, which naturally I know well. Very beautiful are the illustrations, both those of the buildings near and from a distance, and also those of the interiors of some of the abbeys. The lovely English landscapes seem the ideal scenery to surround these beautiful buildings, which have, besides their beauty, the wonderful glamor of association, both religious and historical.

The Future of the Sherman Anti-Trust Act

BY GILBERT HOLLAND MONTAGUE

[Mr. Montague graduated from Harvard in 1901, and instructed in Harvard in Economics from 1901 to 1904. While a law student he was an editor of the *Harvard Law Review* from 1903 to 1904. He is the author of "The Rise and Progress of the Standard Oil Company" and "Trusts of To-day," and is now engaged in the practice of law in New York City.—EDITOR.]

IN 1890 Congress enacted the Sherman Anti-Trust act. This act declared that "every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States, or with foreign nations, is hereby declared to be illegal." Every person engaged in such a transaction, or "who shall monopolize, or attempt to monopolize, or combine with any other person or persons, to monopolize," was punishable with a fine not exceeding $5,000, or with imprisonment not exceeding one year, and was required to pay to the aggrieved person threefold damages.

"It would be impossible," said the United States Supreme Court, seven years later, "to say what were the views of a majority of the members of each House in relation to the meaning of the act." In response to the popular clamor against large corporations, the Sherman Anti-Trust bill was proposed. The sweeping language of the bill rallied to its support every one opposed to large corporations, and its vagueness quieted the suspicions of the neutral. Before the final vote in the House, Mr. Culberson, now Senator from Texas, who had the bill in charge, declared: "I wish to be understood, Mr. Speaker, as having stated in the outset that I do not know, nor can any one know, just what contracts will be embraced by this section of the bill, until the courts determine." Mr. Cannon, now Speaker of the House, ventured the pious remark: "Gentlemen say they do not know how the courts will construe the act. It is for us to enact the law and for the courts to construe and enforce it. If we do our duty, it is reasonable to believe that the co-ordinate branch of the Government will do its duty!" Accordingly, the bill past the House, and subsequently became a law.

In his speech at Bath, Me., in September, 1906, Hon. William H. Taft, who, as a Federal judge, had had occasion to construe the statute described the Sherman Anti-Trust act as follows:

> "It would seem as if Congress itself knew that the evil existed, but had a most indefinite idea of how it was to be described. . . . Construed literally, this statute could be used to punish combinations of the most useful character, like partnerships and other business arrangements conceded by all to be legitimate and proper, and the difficulty in its construction has been to draw a law effective to suppress the real evil aimed at by the Legislature and to furnish a proper and clear rule for the guidance of business men while not interfering with legitimate combinations which Congress had no purpose to prevent."

The sweeping prohibitions of the Sher-

man Anti-Trust act did not win immediate favor in the courts. The proceedings undertaken under the act by the Government against the Sugar Trust were reviewed by the United States Supreme Court in 1895, and were dismissed. In 1897 and 1898 the real mischief of the act first appeared. A number of interstate railways combined in the Trans-Missouri Freight Association and the Joint Traffic Association "for the purpose of mutual protection by establishing and maintaining reasonable rates." In its opinion declaring these agreements a violation of the Sherman Anti-Trust act, the United States Supreme Court held that the act forbade all agreements restraining interstate commerce, *whether the restraint was reasonable or unreasonable.* In enforcing the literal language of the act, the court did not blink at the disturbance which it would cause. The court said:

"It may be that the policy which was evidenced by the passage of the act itself will, if carried out, result in disaster to the roads and in a failure to secure the advantages sought from such legislation. Whether that will be the result or not we do not know and cannot predict. These considerations are, however, not for us."

And so the law has stood, for the past ten years, in stubborn contradiction to the common sense of the courts and of the business community.

Every tendency which the Sherman Anti-Trust act was enacted to correct was quickened by the act. Between 1897 and 1900, 183 "holding corporations," designed to concentrate in single control power which previously had been diffused among groups of concerns, were organized—79 in the year 1899 alone—with a total capitalization of over four billions of dollars. These enormous combinations comprised one-seventh of the manufacturing industry of the United States; one-twentieth of the total wealth of the nation; nearly twice the amount of money in circulation in the country; and more than four times the capitalization of all the manufacturing consolidations organized between 1860 and 1893. Today, upward of 150 corporations, in every branch of industrial enterprise, have each secured, thru stock ownership or thru purchase of properties, complete and single control of concerns ranging in number from 5 to 125.

This rush to combination was largely impelled by the belief that "holding corporations" were less subject to legal attack than were the looser forms of combination. During the first ten years of the Sherman Anti-Trust act this view was apparently shared by the Government. In 1901, however, the Government proceeded against the Northern Securities Company and its principal stockholders, who had organized it as a "holding corporation" to control the Northern Pacific and the Great Northern railways; and in that suit the United States Supreme Court held that a "holding corporation" was no more immune from the Sherman Anti-Trust act than any other combination in restraint of trade. The last avenue which the business community had considered open to legitimate combination was thus effectually closed. Practically every great industrial concern was threatened with the penalties of the Sherman Anti-Trust act unless it could establish the proposition—demonstrably false in the instance of most large corporations—that it did not restrain, reasonably or unreasonably, or in any manner whatsoever, trade or commerce between the States.

This impossible prohibition of the Sherman Anti-Trust act, which literally forbade the soundest and most important development of modern industry, was condemned even by the Administration which had been most zealous in enforcing it. In his annual message to Congress in 1905, President Roosevelt said:

"It is generally useless to try to prohibit all restraint on competition, whether this restraint be reasonable or unreasonable; and where it is not useless it is generally hurtful."

In his annual message to Congress in 1906, President Roosevelt discussed the working of the Sherman Anti-Trust act as follows:

"It is unfortunate that our present laws should forbid all combinations instead of sharply discriminating between those combinations which do good and those combinations which do evil. . . .

"It is a public evil to have on the statute books a law incapable of full enforcement, because both judges and juries realize that its full enforcement would destroy the business of the country; for the result is to make

decent men violators of the law against their will and to put a premium on the behavior of the wilful wrongdoers. Such a result in turn tends to throw the decent man and the wilful wrongdoer into close association, and in the end to drag down the former to the latter's level; for the man who becomes a lawbreaker in one way unhappily tends to lose all respect for law and to be willing to break it in many ways. No more scathing condemnation could be visited upon a law than is contained in the words of the Interstate Commerce Commission when, in commenting upon the fact that the numerous joint traffic associations do technically violate the law, they say: 'The decision of the United States Supreme Court in the Trans-Missouri case and the Joint Traffic Association case has produced no practical effect upon the railway operations of the country. Such associations, in fact, exist now as they did before these decisions, and with the same general effect. In justice to all parties we ought probably to add that it is difficult to see how our interstate railways could be operated with due regard to the interest of the shipper and the railway without concerted action of the kind afforded thru these associations.' This means that the law as construed by the Supreme Court is such that the business of the country cannot be conducted without breaking it."

Again, in his annual message to Congress in 1907, and in his special message to Congress, submitted January 31st, 1908, President Roosevelt repeated with renewed emphasis the same views.

Cogency was added to these comments by the decision of the United States Supreme Court on February 2d, 1908, in the "Danbury Hat Case," in which the court held that a boycott, organized by the hatters' union and carried out in such a manner that it any way restrained interstate commerce, was a violation of the Sherman Anti-Trust act. Organized labor, which is naturally a more vociferous sufferer than organized capital, immediately raised its voice in protest. President Gompers, of the American Federation of Labor, declared:

"The anti-trust law as interpreted by the Supreme Court would cause a retrogression of fifty years. There stand before us two things—the law and the country's industry. If one must go, industry cannot. The law must be amended or ended."

The mischief of the Sherman Anti-Trust act, as appears from the debates at the time of its passage and from the decisions of the United States Supreme Court and the criticisms of the present Administration, consists in the failure of the act to define the crime which it prohibits. The present misfortune of organized capital and organized labor lies in the fact that the definition of "those combinations which do good," and "those combinations which do evil" exists not in the statute, but in the mind of the prosecutor; and that the prosecutor may determine, without the formality of a trial, that the object of his disfavor is a "bad" trust, and under law "such that the business of the country cannot be conducted without breaking it," the prosecutor may boldly attack any combination, in the public press or in the courts, in the confident assurance that whether it be a "bad" combination or a "good" combination, it is guilty before the law.

The obvious cure for this mischief, it would seem, would be to amend the Sherman Anti-Trust act so as to define the crime with such exactness that it would exclude "those combinations which do good" and would include "those combinations which do evil." The United States Supreme Court has repeatedly intimated that every combination affecting interstate commerce, that really opposed public policy, would have been prohibited, had the Sherman Anti-Trust act merely prohibited every combination "in *unreasonable* restraint of trade." Upon the authority of the highest court in the land, therefore, as well as the tacit admission of the Administration, it would seem that the mere insertion of the word "unreasonable" would transform an act which is now a menace to the entire community into an act which would be an effective defense to every good combination and an effectual prohibition of every bad combination.

In his special message, submitted March 25th, 1908, President Roosevelt suggested the following changes in the Sherman Anti-Trust act:

"The substantive part of the anti-trust law should remain as at present; that is, every contract in restraint of trade or commerce among the several States or with foreign nations should continue to be declared illegal; provided, however, that some popular governmental authority (such as the Commissioner of Corporations acting under the Secretary of Commerce and Labor) be allowed to pass on any such contracts.

"Probably the best method of providing for this would be to enact that any contract, subject to the prohibition contained in the anti-trust law, into which it was desired to enter might be filed with the Bureau of Corporations or other appropriate executive body. This would provide publicity. Within, say, sixty days of the filing, which period could be

extended by order of the department whenever, for any reason, it did not give the department sufficient time for a thoro examination, the executive department having power might forbid the contract, which would then become subject to the provisions of the anti-trust law, if at all in restraint of trade.

"If no such prohibition was issued, the contract would then only be liable to attack on the ground that it constituted an unreasonable restraint of trade. Whenever the period of filing had passed without any such prohibition, the contracts or combinations could be disapproved or forbidden only after notice and hearing with a reasonable provision for summary review on appeal by the courts."

Substantially the same recommendation was repeated in President Roosevelt's message to Congress, submitted April 27th, 1908; and in the bill prepared by the National Civic Federation, and introduced into Congress by Representative Hepburn, this recommendation was substantially embodied.

The haste to amend the Sherman Anti-Trust act, during the session of Congress just ended, was equal to the haste which characterized its passage in 1890. Like their predecessors eighteen years ago, President Roosevelt and Congress "knew that the evil existed, but had a most indefinite idea of how it was to be described." The only difference was that the sponsors of the act in 1890 left it to the courts to define what combinations were guilty of crime, while the sponsors for the amendment proposed in 1908 left it to the "Bureau of Corporations or other appropriate executive body" to define what combinations were guilty of crime. The original mischief of the act, in outlawing organized capital and organized labor, was sought to be tempered by a system of special immunity. The dispensation of this immunity, it was suggested, should not be trusted to the courts, nor even to that branch of the Government concerned in the administration of justice, but rather to a bureau in the Department of Commerce and Labor. Under such a statute every business man making contracts relating to interstate commerce—and such contracts are made by scores and hundreds in every large business—and desiring to make sure of escaping the penalties of law, must file each contract with a Government bureau, and thereafter wait patiently for sixty days before completing or executing the contract!

A kindly Providence, however, overcame this proposed amendment to the Sherman Anti-Trust act. Because of the opposition of President Gompers, it is reported, the proposed amendment was abandoned for the session. President Gompers, who doubtless wants full immunity for organized labor, objected pointedly that the proposed amendment did not clearly exempt trade unions from its operation. This objection to the ambiguity of the measure, in a larger view, must eventually prevail against the proposed amendment and against the Sherman Anti-Trust act. The office of criminal statutes is to define crimes with exactness and to prohibit them. Criminal statutes are not intended to be letters of marque in the hands of prosecutors and government officials, available at their option against the entire business community, and subject at their favor to special exceptions. When the Sherman Anti-Trust act is finally amended, and brought into consonance with the public morality of the community, it may confidently be expected that it will recognize the principle that ours is a government of laws, not of men, and will forbid merely combinations in unreasonable restraint of trade.

THE DAM.
From a point below. Shows large pool of water which has trickled thru the dam and again gathers into a brisk trout stream.

Animal Engineers

BY DIETRICH LANGE

With Photographs by the Author.

OF all animals, beavers show the greatest constructive ability. Where they are not molested, they build a dam across the valley of some small stream, and thus make an artificial pond, in which they build one or more houses of sticks and mud.

In this article the writer wishes to give an exact account of the structure of a beaver dam which he studied very recently, and he would like to have his readers decide for themselves whether animals can do work of this kind by mere instinct, or whether they work with a higher kind of intelligence.

The dam in question is located in the mixt forest of Northern Wisconsin. It is about 200 feet long and runs completely across the valley of a swift trout stream. As the stream averages about 4 feet in width and 10 inches in depth, the amount of water which must be controlled is very considerable. I should say it is large enough to run a farmer's grist mill day and night for three hundred and sixty-five days in the year.

The dam curves in and out from one convenient foundation to the other. For a length of 50 feet across the stream and at the lowest part of the ground it is about 5 feet high, and the water rises within a few inches of the top. In this part it is built of dead brush and sticks which slant down stream. They are all placed butt down, and make the stream side of the dam look like a palisade of slanting sticks.

On the pond side these sticks are filled

BEAVER LOGGING.

in with mud in such a way that the dam slopes very gently into the pond and that the sticks are not visible in the pond itself. The base of the dam is water-tight, but the thin top allows numerous small streams of water to flow thru; but the large amount of wood in the dam prevents the water from cutting and forming dangerous breaks in the dam.

Near the outer edges, where the water exerts little pressure and has no current, the dam is only a few inches high and wide, and is built entirely of mud, which was scooped up in front of the dam.

TWO SMALL POPLARS HAVE BEEN CUT AND REMOVED.
The larger tree lies as it fell.

While the central part of the dam looks as if a man might have built it with considerable expense of hard work, the edges look like the tiny mud dams which barefooted country children are so fond of making after a hard shower.

After the beavers had built the main part of the dam, they discovered that two separate depressions on the south side would partially drain their pond. In order to prevent this they built a small dam of mud across each of these depressions.

BEAVER HOUSE.
Built of dead sticks and mud, 12 feet long, 10 feet wide and 5 feet high.

The site of the dam is apparently well chosen. The pond now covers about four acres, with an abundant growth of small poplars in and near the pond. The beavers live on the bark and twigs of these trees and have cut down a goodly number. The greatest depth of the water is about 6 feet, and does not cause a pressure which is hard to control.

The little four-footed engineers seem to have first constructed a kind of trial dam a hundred feet farther down stream. They abandoned this site, as far as I could judge, because it was right in an alder thicket, where it was difficult to work, where but little ready-made building material was at hand, and where their pond would not have enclosed or approached their favorite food trees, the poplars.

The permanent dam was located on the edge of a natural clearing, where the conditions for work, ready building material and food supply were most favorable.

Had they gone about half a mile farther down stream they would have had to build a much longer dam. Had they gone a mile below the present site, where the little valley is much narrower, the dam would have produced a rapidly rising and therefore dangerous head of water. Had the builders gone farther up stream, their pond would have enclosed a tamarack swamp, but would not have brought them near any poplars or other food trees.

In the pond is one large lodge, housing probably six or more beavers. I did not see the animals. The pond is within three miles of a railroad station, and the animals are very shy and work only at night.

The largest poplars which the beavers have cut measure 5 inches in diameter. It has been claimed that beavers cause the trees to fall in a certain direction, but I saw no indication of this. They seemed to have chiseled around the trunk until the tree fell.

The animals must have expended a very large amount of energy in building the dam. I estimated that it would take a strong man at least six days to duplicate their structure, if he were not allowed to use an ax for cutting brush, but were allowed to use a spade to scoop up the needed mud.

Now, the question is: Did these beavers work with anything akin to human intelligence, or did they work under the guidance of nothing but a blind instinct?

Our Mediterranean Mountains

BY HERVEY WHITE

Author of "Differences," "Quicksand," "When Eve Was Not Created," etc.

THERE are many of us who are devoted to the mountains, and unweariedly tramp them over every summer, and yet, if we must confess it, find them monotonous with their uniform woods and streams and steel blue distance. We have tried the Adirondacks, the White and Green, and found their color to be varied in name only; we are familiar with the Catskills, with the Ramapo, even the more distant Alleghany, Blue and Smoky. But everywhere the same steeps stand before us; everywhere the same character of peaks and ridges. We realize as we never did from our geographies that, after all, they are the Appalachian Mountains. Their flora and their fauna are but one. Their very inhabitants differ but in degree of their dry shrewdness. The food is uniformly bad; the hotels are painfully similar in their heartless indifference to comfort. "Where will it end?" we cry weariedly. "How can we ever escape the democracy of the district school education?" Our cities are intolerable in summer. Our need is one of air and exhilaration. But we also have a mental need of rest. Where, where is it to be sought, and found in seeking?

At first thought the answer would seem to come: "Why not try the Rocky Mountains? They are different!" And a summer may be given to their grandeurs, with much profit in mental stimulus as well as oxygen. But, in the end, the Rockies also are unsatisfactory. The trip back and forth is expensive, hot and dusty. Places to board or stop at in tramping are far apart, and even less attractive than their cousins, the Appalachian institutions. Then the mountains are too big and too gloomy for everyday wear. It takes too long to walk around one or over it, and for loneliness they would drive one to insanity if he undertook a walking trip across the ranges. No, decidedly, the Rockies will not do, tho we acknowledge it was a year's worth to have seen them.

It is at this juncture that the suggestion might arise, Why not go down to the sea to find the mountains? And here it is I wish to add my vote and suggest further the mountains of Southern Europe, of the islands of the Mediterranean, of Spain and Italy. It were possible even to walk thru the Levant, but there I have neither experience nor information. It was, however, my good fortune while still young to spend an autumn, winter and spring in the mountains of Italy. I have since learned something of the islands of Corsica, Sardinia, Malta and Sicily. The Balearic Islands seem unknown to travelers, and indeed in all those countries mentioned are regions entirely unexplored by any

one from city civilization. There they lie as primitive and innocent of anything modern as they were in the golden age of fauns and shepherds. Their flocks browse on the rounded grass-grown uplands. The children look out wonderingly from unkempt foretops; the goats and sheep and swine cease from their gambols, for a strange creature from America is passing; he might be from the millennium for all their knowledge, so lost are they to time and passing centuries.

I have thought sometimes they were not far from satyrs, and I remember being in no way surprised when once coming upon a mountain drove of swine I found many had wattles like the goats and fauns, and all of them seemed sportive and athletic, as far from ham and bacon as one could fancy. Everywhere there is fellowship and simple speaking. The traveler is not a guest or "boarder," as in America. "Thou, brother," is the look all give him frankly. And what they have is shared without a question.

"But the language!" I hear in protest. "One cannot speak their language!" To which I reply simply: "You must learn it." It is not difficult to acquire a speaking knowledge of a language in a country where by necessity it must be spoken. While yet a boy I learned from an experienced traveler how one could put a grammar in his pocket, a dictionary under his arm, and without the simplest rudimentary knowledge of the language, go out and spend the day with simple people, gossiping and inquiring of all the strange things and strange customs, looking up the words in the dictionary, hunting out the forms from the grammar; the wondering people have always time to wait, and in reality they are learning as much as the stranger, for they have never before seen these "speaking papers" that interpret for the stranger from his language.

It is a disgrace and a laziness peculiar only to English and Americans that they speak but one language out of many. Perhaps the French who stay at home might also be found guilty, but they stay at home and that is partial exoneration. Why not learn a language? What more pleasant recreation for a summer? Not learn it from books and harsh-voiced teachers, but from the children, and simple people of sun-grown hights; from shy-eyed damsels, with pursed lips and quivering eyelids. It is remarkable the progress a man will make under such conditions, especially if he be young and fauns are piping.

Another objection that will be offered to my plan is that it is so much more expensive than the Appalachian summer. It is this question that I am especially willing to discuss. Knowing its importance to all who are limited by vacations. Let us take for a basis one of the very modest estimates where, say, a teacher who has a three months' vacation goes to a quiet mountain boarding house resort. We will say he pays $10 a week board, that will be $120 for the season. Carfare and laundry bills will easily bring it up to $150; and what will that do toward taking one to the Mediterranean? It is true it will do very little if one travels first class on one of the large boats, but there are always ways around those high priced passages.

I, myself, went on a freight boat to Naples for $40; had a stateroom to myself, ate at the captain's table, and had for my friends the ship's officers, instead of the usual touring public. That experience in itself was worth a summer, as it put one in touch with the life at sea that a dozen ordinary passages would not do. I think a round trip can still be secured for $80 if one is ingenious in looking up unadvertised lines. This pays also for the board of one month and leaves $70 remaining for the other two. They will hardly require more than $20, at the maximum, and we come home with the unused $50 in our pockets. I am counting board at the rate of 33 cents a day, where it can be had readily in the best inns of the remote and untoured places. Often I have paid no more than 11 cents a day, and I have even got it down as low as 7.

"How much for the account?" The host says smiling. "Let us see. There is 10 cents for the bed. You had a room to yourself, sir, and fresh linen; had you been in the common room it would have been only 5 cents. Then, for supper, you had soup, meat and vegetables, with a salad; that is 12 cents, sir; you know that meat is dear; you did

not drink wine; then, for breakfast, you had coffee, rolls and an omelette, that is 8 cents, altogether 20. Thirty cents, sir, does it seem too much? We could make it cheaper by the week; the room, sir, is as much trouble as a week would be. Service? Oh, no, sir, do not think of it. We are glad to have you with us. You must come again. But it is a long, long, way to far America. Give our greetings to Andrea Rossi if you meet him. And you a real American, and not red! So our geographies at school must be mistaken. The bread and nuts for your little meager luncheon. Oh, it is nothing, sir—then 3 cents if you will. So. I should think you would grow weary always traveling. For us, we are better off where the good God put us. Good-by, sir; it has been an honor and a pleasure to have seen you; had I been a rich man you would not have paid me a cent. Good-by! A happy day! A pleasant journey!" and you depart from the place where you have fared like a man of culture and paid 33 cents for board and lodging, a perfect room, white and quaint in sweet old comforts. You have eaten in the room kept apart for guests. It is true you have not drunk wine, for that is extra. But no more do you in your Appalachians, so keep your $50. Or else, if you will be extravagant and spend them, you will find that wine will be 15 or 20 cents extra; that is, if you have a bottle and are quite regardless.

It may be that you will not care to play the gentleman, but prefer to eat in the kitchen with the family. In that case the expense is much lighter. You may purchase in the market your own viands, and cook them yourself at the common fire, or have them prepared by one of the women. By taking a bed in the dormitory or common room, where the linen is always clean—I met with but one exception—you can reduce your expenses fully half and fare heartily for from 15 to 18 cents. It is also cheaper in the kitchen to have wine, as you have it drawn from the cask instead of bottles. A great astonishment is expressed if you do not take wine. It is concluded that, of course, you must refuse it out of poverty. How many times I have experienced the following:

"How much, sir?" from the waiter as he stood beside me, meaning a liter or a half liter.

"I don't drink wine," is my brief answer.

"Ah, sir, you are a German. You drink beer. We can procure it for you in the cellar."

"I don't drink beer."

By this time the bystanders are all attention, as the waiter inquires with some emotion: "But, sir, do you always drink brandy?"

When I tell them that I drink only water, they all gather about me in wonderment, examining me as if I were some prodigy and exclaiming: "Why, he looks as healthy as we do!"

At one time the landlord gave a leap and exclaimed: "We have a man in our village who does not drink wine!" and straightway a messenger was dispatched for him. "He says he doesn't like wine! Isn't that funny!" and when the man was produced the crowd stood around as if expecting to see us throw ourselves into each other's arms or display some similar emotion. In fact, it was not a little embarrassing for us both, and never in my life did I feel more like asking a man to come in and take a drink in order to melt the stiffness of first acquaintance.

But in order to prove the rule of hospitality I had to encounter my one exception of greed and cunning. It had been a weary day of storms and wilderness. I had quite lost the path among the summits, and the blinding snows of March were very disheartening. At nightfall I had found a path, and then the highway, and a hut soon appeared in the damp distance, still up in the passes of the mountains, but with the welcome bush nailed up above the door, a way that announced a wineshop, possibly a lodging, for such travelers as might have need and be belated.

"Can I stay all night?" I asked of the old man and old woman, and while they were quarrelling in their unintelligible jargon, I took off my knapsack, boots and coat, and did not wait for their reply or invitation.

"I will stay all night," I said calmly. "What can you give me for supper?" While chatting with the old man, almost against his will, for he was taciturn, and

the old woman was not only silent, but sullen, a charcoal burner came in and sat by the fire, making a black fourth to our small company. I think I have never seen human creature so black; the whites of his eyes, his teeth, his tongue were affected grimly. I got into a quarrel finally with the old man, who was enraged because I could not understand all his dialect, and who accused me of pretending not to understand my mother tongue, because I had been in the army and grown conceited. I told him I could understand it if he took the trouble to speak it plainly, and I angrily turned my back on him and his spouse, and took out my fountain pen and set to writing. It may be seen that we were not a pleasant family, and I may not have been entirely blameless for the treatment I received the next morning.

"How much?" I asked the usual question, remembering the hard mattress of corn husks and the charcoal burner sleeping blackly in an adjacent bed, for there was but one room in their poor attic.

Then I saw the look of cunning come into the old woman's eyes and the sly, dogged evasion of her husband. I made up my mind I would not be victimized, and mentally placed the maximum at twenty cents; it was double the sum they ought to ask me.

The old woman glanced at my knapsack. She had seen my fountain pen, and thought me rich; I could see she was trembling with excitement.

"How much?" I repeated the question brusquely.

"You had eggs, sir, for supper, and meat, a stew, and for breakfast you have had honey, a great delicacy."

I nodded, remembering how vile the stew had been. I would not pay more than twenty cents, tho I had to walk away and leave them threatening.

I saw the old woman was nerving herself for the exorbitancy; the old man was slyly encouraging her.

"Seven cents," she said thru barely parted lips.

I paid the price, and departed with a smile. All the day I was happy in her self-torture. "Would he have paid eight?" she was asking, and never will she know. No, never, never.

Well, there are countless reminiscences, countless memories for those long days in our Mediterranean mountains. There are the ruins that repose upon the hilltops, the following of old paths and vanished roadbeds. There are occasional dips down into the larger valleys to watch the fourteenth century spectacle of a market day, or the issuing of a procession from a church, marching out perhaps to invoke blessings on the grain fields. There are the songs with mandolin accompaniment, the bagpipes playing, perhaps, before some wayside virgin, a madonna sculptured out in sheltered niche.

One acquires something fresh from Pan and Arcady in thse wanderings, quite unknown in our American science mountains. Even we will take the swine for company, and laugh and sport with them among the daisies.

WOODSTOCK, N. Y.

Threnody

BY JOSEPH LEWIS FRENCH

SAY if any sorrow blows
In the bosom of the rose
When she lists the mellow tale
Of the plaining nightingale,
Or when laughing in the pool
She beholds her petals full,
Or when violets on the green
Croon a homage to their queen,
Or when life and love are one
In her lusty lord the sun!

Mellow song and laughing hour
Shall not crown her spirit's dower.
All the ecstasy of spring,
All the summer's burgeoning,
All the bliss her passion yields,
All the chorals of the fields,
Kindle sighs that steal her breath—
Harbingers of heavy death!

NEW YORK CITY.

Literature

Standard Usage in English

ADVANCING knowledge is ever breaking down ancient superstitions. Only two centuries and a half ago the French Academy was established to act as a guardian for the French language and to preserve its integrity. Less than two centuries ago Addison wisht for some authority to protect the English language against French terms. And about half a century ago Lord Houghton evinced his hope that the British and the Americans would unite in keeping English pure and undefiled. Nowadays no one who knows anything about the growth of language and the processes by which it adjusts itself to new demands ever thinks of making any plea for the preservation of its "purity." No language is pure; no language ever failed to borrow what it wanted from any other dialect; and any attempt to impose a standard of "purity" must cramp and hinder the proper development of the language as an instrument of human activity.

Yet ancient superstitions die hard, and they linger alive among the half-educated. There was a demand, therefore, for an authoritative statement of the position now held by linguistic scholars. There was a call for a book written by one speaking with authority which should declare that English, at any rate, does not need a guardian, and that it is perfectly capable of minding its own business and of attending to its own necessities. This is the book which has now been written by Professor Lounsbury,* the president of the Simplified Spelling Board. We are already indebted to him for a model "History of the English Language," of which the only fault is its brevity. In the present volume he reiterates and amplifies points which could receive only casual consideration in the earlier volume.

He declares that the standard of English usage, the only possible standard, is that which is set up by its leading writers. When we find a word, a phrase, a grammatical form, employed frequently by the more distinguished authors of our language, we have no right to denounce this word or phrase or grammatical form, however abhorrent it may be to any of us individually, however illogical it may seem, or however firmly we may resolve not to employ it ourselves. Any usage which we can find repeatedly in the English Bible, in Shakespeare, in Milton, in Tennyson and Thackeray, in Emerson and Hawthorne, is for that reason acceptable. It may have gone out of fashion since they employed it, but it is good English by the fact that they did use it. In other words, the final standard of English is to be sought only in the practice of the masters of English, who wield the language nobly, bending it to their bidding and setting an example to the rest of us.

This is Professor Lounsbury's thesis, and he elucidates it with the fruits of his ripe scholarship and of his intimate acquaintance with every stage of the development of the language. His discussion of the theme is lightened by all his characteristic humor, by all his felicity of phrase and by all his unexpectedness of witty allusion. His book is a solid contribution to linguistic science, yet it is also eminently readable as a piece of literature. And it is a book which is certain to be widely read and to be widely discusst. The discussion will be wholesome, and it will do much to prevent that "schoolmastering" of the language, which has been as dangerous and as pernicious in English as it has been in French. Readers who have not kept up with the more advanced views of modern scholars and who still rely on what they learnt as schoolboys in obsolete grammars, and in later manuals pretending arbitrarily to lay down unwarranted laws—these readers will be surprised at many of Professor Lounsbury's dictums. Some of them will be horrified and some of them will be delighted. To one reader, at least, nothing in the whole book is more delightful than the crushing of the

*THE STANDARD OF USAGE IN ENGLISH. *By Thomas R. Lounsbury.* New York: Harper & Bros. Pp. 309. $1.50.

theorists who have preached the use of the stilted and artificial "I would rather" as a substitute for the nervous and idiomatic "I had rather." But there is delight in every chapter, some for readers of one kind and some for readers of another.

New Tales of Olden Times

THE human is a curious creature, and the historical novelists have somehow come by a very profitable knowledge of some of his peculiarities. All of him save his mind is still medieval. He develops morally from age to age, conquers each wickedness incidental to the process so soon as he is tired of it—and invariably starts a new one in the very midst of his moral shouting. His life and energies change, become modern, but nothing can change his heart. It is the young kinsman in his breast to all the past, the Adam and the Nazarene and the knight and the scamp in him that preachers and teachers touch, but do not conquer to the death of his imagination. This is why Warwick Deeping's story[1] of old Brittany, when Courage wore armor and Love fought in the lists for his lady's favor, will entertain most readers. It is impossible to know whether the spirit of the book represents the spirit of the times in which the characters lived, but it is true to our idea of medieval men and manners, and this is the author's success that he has created an illusion of the life in ancient Brittany that is faithful to the modern imagination of that period. The hero is the ugly, despised son of a noble house, and the chronicle of his deeds makes up the tale, deeds so monstrous that the most abandoned criminal of our day would shrink from them, yet we are filled with admiration for Bertrand, especially upon that long journey thru the forest, where he slaughters three men single-handed, one at a time, and concludes the performance by cutting off the head of the third in the presence of his admiring lady-love—admiration, because the heart in us is yet kin to the savage Bertrands of the past, and because the historical atmosphere affects the imagination and changes our convictions of right and wrong—for Bertrand—and for ourselves, if we could but stand for one golden day in Bertrand's shoes, meaning more particularly his armor, and feel as the gallant Breton felt when he and his free companions fought for the honor of the fair Tiphaïne.

So far, that bonny rake, Prince Charlie, has figured in English historical fiction to the exclusion of all other Charlies. But now come the Castles, Agnes and Egerton, with their story[2] of the times of Charles II, and while it appears that the moral weaknesses of all royal Charlies are similar, the change of personality at least is a grateful one. "My Merry Rockhurst" is the hero of the book, and is so called by the King because of the gravity of his countenance and the *diablerie* of his wit. He lived in an age when a man could be both as bad and as good as he pleased, and the authors have made the best of this circumstance. In one chapter he is "Rakehell" Rockhurst, the revolting libertine; in the next, he is the faithful, fearless counselor of the King, or the Puritan father of his only son, and at a pinch he is a veritable Bayard to a lady in distress. It is difficult to say whether they have written most dramatically of the plague which sweeps thru London in the course of the story, or of the burning vices that consume the souls of the fair throng about the King's throne, but the story is vividly told, and charms for the same old reason that the human heart of today still thrills at this costuming of itself in the deeds of dead kings and revelers.

However, we cannot escape Prince Charlie, for if the Castles found it chronologically impossible to get him into company with "My Merry Rockhurst," they have written a volume[3] of short stories in which there is a kind of fraudulent use of his person. In "The Young Conspiracy" and "The Great White Deeps," respectively, another man is mistaken for Prince Charlie, and the interest of each tale depends upon the mistake. A curious fact is that neither of the heroes resembles each other or any of the numerous descriptions we have of the young prince. This volume, indeed, may be called the very last strippings of the Cas-

[1] BERTRAND OF BRITTANY. *By Warwick Deeping.* New York: Harper Bros. $1.50.

[2] MY MERRY ROCKHURST. *By Agnes and Egerton Castle.* New York: Macmillan Publishing Co. $1.50.

[3] FLOWER O' ORANGE. *By Agnes and Egerton Castle.* New York: Macmillan Publishing Co. $1.50.

tles' imaginations. The stories are thin, absurd, and uninteresting, composed upon half-made plots. And their only charm is in the words with which they are told. These authors appear to have all the fine and fancy old words at their command, as they have chests of suitable costumes for their historical characters. And the reader is refreshed by the use of quaint, almost forgotten names of things, as he would be amused by rummaging thru the very old love letters and swords and breeches of his forefathers.

The Life of Goethe

With the present volume* we have concluded one of the most notable translations into English of recent years. As a whole it cannot be denied that Bielschowsky's work, accepted in Germany as the chief biography of Goethe, has something of the heaviness and want of grace commonly attributed to German writing; it lacks the vividness of Lewes's comparatively superficial volumes, to which the reader who desires an easy introduction to the poet will still profitably turn. On the other hand, Bielschowsky has all the *gründlichkeit* which we expect from his nation; we feel always that he has overlooked and sifted the whole literature of the subject.

Like Lewes, he divides his work into biographical and critical chapters. And in the former it is a relief to find that he bravely waives aside the ocean of anecdotes that has poured over Goethe's name. His purpose is to set forth the fundamental character of the man and to show the connection between his personality and his art. Such an abstinence is as unusual today as it is thoroly commendable, altho occasionally we may feel that the austerity of the author's design has led him to sacrifice those minuter points that not only lend vividness to a narration, but reveal the real man. He fails too—as most Germans who treat their heroes fail—in humor or decorum; the two are one in this sense. Thus he deals with solemn gravity of Goethe's aged sentimentality; he seems not to feel the humor or the lack of decorum in the spectacle of the world-famous old man of over seventy, who had for so many years preached the doctrine of self-control and resignation, philandering with, and even proposing marriage to, any pretty girl that crossed his path. These faults of taste we must accept along with the indisputable excellences of Bielschowsky's narrative.

And so in the critical chapters we must not look for that keen discrimination which the French school has taught us to expect in such writing. Bielschowsky is learned, and at times profound, in analyzing the philosophic data that underlie Goethe's rhythmical *katharsis* and representations of life. The chapter in the present volume on the lyrical poems is a model in this respect. But his sense of form is characteristically uncertain. He has no harsh comment for the waste of Goethe's genius in endless trifling; he can accept with too much equanimity the egotism—one may almost call it the literary dishonesty—which allowed Goethe to pitchfork all sorts of heterogeneous material together and call it a book—"Wilhelm Meister's Wanderjahre." After all, he writes as a professor and not as a critic.

We have spoken as if the work was entirely Bielschowsky's. As a matter of fact, it was left unfinished by the author, and a considerable part of the third volume is from other hands. The chapter entitled "The Naturalist," an illuminating study, is by Prof. S. Kalischer, of Berlin; the conclusion of the chapter on "Faust" is added by Prof. Theobold Ziegler, of Strasburg, as is the final chapter of the book; while other eminent scholars have revised the original manuscript and added notes. We cannot see, as some have pretended to see, that the work has suffered from this divided authorship.

In conclusion, we would repeat our general praise for so solid a piece of biography, and our commendation of the translator's care and skill. The three volumes are handsomely printed and adequately illustrated. It might be wished that the publishers had seen their way to issuing the work in somewhat smaller form and less expensive style.

*The Life of Goethe. *By Albert Bielschowsky.* Authorized translation from the German. *By William A. Cooper.* In three volumes. Vol. iii, 1815-1832. New York: G. P. Putnam's Sons. $3.50.

The Sword Decides. By Marjorie Bowen. New York: McClure Co. $1.50.

Of all the queer things about women, the queerest is the contrast, the eternal contradiction between them and their minds, between their natures and their perfectly primitive imaginations. And no matter where they appear, in whatever sphere, this is the basis of the confusion they create, of the mystery they are. Some years ago we were amazed at the ferocity and what may be called the dramatic fleetness of that historical novel, "The Helmet of Navarre," written by Bertha Runkle, a girl of nineteen. Without showing a blade of grass or giving the hero time to sleep or even wipe the blood off between duels, she accomplished thru him more red adventures in the space of seven days, the period of time covered by the story, than the average novelist could have written into the lifetime of a pirate. How and why did she do it, every reader asked, the young and timid girl who had lived on crackers all her life and had never seen France? No one appears to have thought of the very simple explanation, that women of a certain type still belong, and will always belong, to the middle centuries, mentally and spiritually, especially in their youth. If they have the wit to write what is in them rather than about what is around them in modern life, a tiger-faced romance is the psychological result. Two years ago Marjorie Bowen, an English girl of seventeen, wrote a most ferocious novel, "The Viper of Milan," and now she has been at it again. The scenes are laid in Naples during the fifteenth century, and the jungle character in it this time is a woman instead of a man, the Queen of Naples instead of the Duke of Milan. But the nature of the woman is simply the female version of the same horrid characteristics of treachery and cruelty. The Queen's husband, who is distasteful to her, is murdered under circumstances that lead us to suspect the author has studied some marital episodes in the life of Mary Queen of Scots, with a singularly open mind. The brother of the husband comes to avenge his death, and this lengthens the story by many pages of intrigue. Murder hangs like a mist in the air. But exactly in what sense the sword decides the reader never understands. The avenging King, with his army, flies from the plague in Italy without deciding anything. The Queen remains the cruel, remorse-mad woman in possession of her stricken city. But when all is said there is nothing remarkable about the story except the author's youth, her evident reversion to type, and her extraordinary use of words expressing color. Upon nearly every page may be found not merely all the colors of the rainbow in adjectives, but all the sensuous shades and tints we have invented between. The effect is gorgeous, and a trifle crude, like the color costumes of seminary young ladies dressed for an Oriental play.

Lucretius, Epicurean and Poet. By John Mason, M. A. LL. D. New York: E. P. Dutton & Co. $3.50.

Macaulay says somewhere, tho the index to his writings does not reveal where, that Lucretius and Catullus had more poetical imagination than the Roman poets of even greater fame. The remark tends to vindicate the remarker's critical acumen, which, since Arnold, it has been so much the fashion to disparage. Surely few poets have had more, in his own phrase, of the *"vivida vis animi,"* and no Roman poet, than the writer of the "De Natura Rerum." The "rich proœmion," as Tennyson calls it, the *Aeneadum genitrix, hominum divumque voluptas* is a strain of a higher poetical mood than *Arma virumque cano Trojae qui primus ab oris* and the exquisiteness of Virgil never reached the fiery vigor of

> Ergo vivida vis animi pervicit, et extra
> Processit longe flammantia moenia mundi,

of which last phrase Gray's "He pass'd the flaming bounds of Place and Time" is so clear an echo. And the greater part of Tennyson's "Lucretius," as Professor Mustard has shown in detail, is a close poetical paraphrase of the diction and imagery of the elder poet. Lucretius has been the particular terror of the clergy. It is amusing to read over the apology of the learned Jesuit, Michael Du Fay, who dedicated the Delphin edition to the most expensively educated of all princes. It is true, the learned Jesuit explains to the *"Serenissimus,"* that Lucretius atacked religion *"impu-*

dentissime," but then he wrote Latin *"gravissime"* and *"elegantissime,"* and he assures His Royal Highness that the book is prepared not to undermine his morals but only to cultivate his mentals. Dr. Masson has made an excellent book of his most inviting subject. He knows it very thoroly, founding his work, necessarily, upon Munro's monumental edition of forty yars ago—"the only English edition of a Latin author spoken of with respect by Continental scholars" it was then described as being—but also supplementing it with the fruit of the latest German researches. For literary readers who are purely such he gives too much space, perhaps, to a discussion of the atomic theory of Epicurus which Lucretius poetized. As to the life, and especially the death, of Lucretius, it is curious to note that the only authority for the story of the philter is a suspicious sentence of St. Jerome. Tennyson adopted the story, naturally and even necessarily. That was his business as a poet. But it is a very open question whether the story is true. At any rate, Dr. Masson's later chapters, which deal with the poetry, are admirably sane and clear criticism, and worth reading for all readers of Lucretius, and for other readers who may be by them attracted to become readers of Lucretius. A good piece of work.

Mary Stuart. By Florence MacCunn. New York: E. P. Dutton & Co. $2.00.

Often as the story of the ill-fated Queen of Scots has been told, there is such an abiding interest in her tempestuous life and such heated partisanship over final judgments of her character that every fresh recital is sure to find eager readers. The latest of her biographers is Florence MacCunn, who sees in Mary Stuart a romantic charm which is not diminished by a belief in her possible complicity in the murder of Darnley and in the plots for a Catholic restoration in England. In general, however, the author agrees with other modern writers that the evidence on which Mary was convicted was not clearly authentic and that she was executed for State reasons. In this popular account of Mary's life from infancy Miss MacCunn has drawn on ambassadorial reports and other contemporary documents for entertaining materials, but no startling or new revelations have thus been made. The plot has, perhaps, been too often anticipated by "omens," and we do not feel that the whole story or any part of it justifies the introductory claim that "any one wishing to know what the direct influence of women would be in the governing of nations has only to make a study of Western Europe in the latter half of the sixteenth century." Nevertheless the author certainly succeeds in winning for the unhappy Queen a fairer consideration than has usually fallen to her lot.

Rambling Recollections. By the Rt. Hon Sir Henry Drummond Wolff, G. C. B., G. C. M. G. Two Volumes. Pp. xv, 398; xi, 462. New York: The Macmillan Co. $7.50.

American librarians sometimes complain of the inordinate length of English memoirs, especially when these are of men who are only of second or third rate importance in English public life. Sir Henry Drummond Wolff's *Rambling Recollections* is typical of the books against which this complaint is with some justice made. He was of the Foreign Office staff; later he was in the diplomatic service abroad; and for eleven years he was also of the House of Commons. There he is best remembered as the originator of the Fourth Party—the little group which came into existence in the tedious months of 1880-82, when Bradlaugh was strenuously fighting for his right to take his seat as the representative of Northampton, and of which junto Churchill, Balfour, Gorst and Wolff were the members. What reputation Sir Henry Wolff made in the House of Commons rests almost solely on his part in that not altogether creditable episode of the Parliament of 1880-85. His career has been full and varied, rather than distinguished or great. The size of his book is out of all proportion to his achievements or the importance or wide interest of what he has to tell. The two volumes record many interesting experiences and episodes, and contain more than the average number of good stories. But they are overweighted with some stories that are threadbare, as, for instance, Labouchere's famous walk to Constantino-

ple, and the long-exploded story of Mrs. Norton's communication to the *Times* that the Conservative Government of 1841-46 had determined to repeal the Corn Laws. The author has met hundreds of prominent people in England or when traveling on the Continent for pleasure or when abroad on diplomatic missions. Scores of these men and women are, however, mentioned in such a touch and go style that the reader is carried no further; and from some of the pages the bewildered impression is left on the reader's mind that he has been working his way thru a guest book at a hotel or the list of visitors at a fashionable resort.

In Mary's Reign. By Baroness Orczy. New York: The Cupples & Leon Co. 75 cents.

The Baroness Orczy has written a novel very much in the vein of "When Knighthood Was in Flower," and other historical romances in which the romance predominates over the history. The author has succeeded in humanizing Queen Mary of bloody memory to a greater degree than one would think possible of the harsh featured and harder natured Tudor Queen. Her love for the Duke of Wessex, a gallant and courtly gentleman, wins the reader's sympathy, and will remain in his mind as a softer note in the cruel chronicle of the reign of Queen Mary.

The Training of a Priest. By Rev. John Talbot Smith. New York: Longmans, Green & Co., $1.50.

The Soul of a Priest. By the Duke Litta. New York: Doubleday, Page & Co. $1.50.

These two books deal with the studies and mental culture of Catholic priests, but in a widely different manner and spirit. Dr. Smith is himself a priest, and writes with a view to improving the intellectual status of American seminaries. There is need for such a work if we may believe experts in the matter. But we have our doubts whether Dr. Smith's recommendations will strike to the root of the trouble. Had he written more vigorously in denunciation of incompetent professors—for what sign of intellectual vitality is there in the corps of Catholic seminary teachers?—and had he insisted upon intellectual honesty in the training of young priests, he would have been more to the point. Duke Litta's book is a piece of fiction detailing the gradual loss of faith of a young Italian nobleman who had become a priest. The noble author is very bitter against the Catholic Church, and his pages are envenomed. All his ecclesiastical personages — cardinals, bishops, priests—are scoundrels, and the religion they represent is corrupt, pagan and dangerous, from center to circumference. This is overdoing the thing, and results in making the story less a work of literary art than a pamphlet to promote deplorable and un-Christian prejudice.

The Golden Rose. By Amélie Rives. New York: Harper Brothers. $1.50.

After a long silence, Amélie Rives, now Princess Troubetzkoy, has written another novel. She calls it "The Romance of a Strange Soul," but to readers with a sense of humor it wanes and flames like a funny little punkstick of passion that has fallen into the hands of an ardent love-heathen who does not know how to manage it. Years ago, when the Princess, then a young girl, wrote "The Quick or the Dead," she became one of the maiden godmothers of neurotic fiction in this country. And it appears that time has not calmed her emotions or made her a more truthful interpreter of love. She belongs to that class of feminine *poseurs* whose interpretations of love are artificial and sentimental, rather than natural and elemental, as love always is. Merand, the heroine of this story, celebrates his escape from a disagreeable marriage with this phrase—"Freed from passion, fear and anger . . . that is to be free indeed." She has a woman friend who loves her morbidly, and the conversations between the two are always trying, as talk between morbidly devoted women is likely to be. Naturally, it is only a question of time and opportunity when a pretty "fire and snow" lady like Merand affixes another man. This is young Trafford, a historian, who calls to see her in the old Virginia home on historical business, and remains to transact Cupid's instead. The conversation between the two consists in

page after page of quotations, Merand's from the Hindu sages, for she assumed this ancient cult just as she would wear her grandmother's breastpin, and he scrambles for his answers among the Occidental poets. One can see that he is on a dead level strain all the time, being a normal man and in love with a pretty woman who wants to pose in mid air, where she can look the sweetest and remain exasperatingly out of his reach. At last, by the aid of many quotations, he manages to get a timid hold upon her astral shape, and so makes his declaration, humoring her pretensions, doubtless, with the reasonable hope of overcoming them as a form of sublimated hysterics. She accepts as much of his love as is compatible with her soul, and no more. She persists, to his infinite confusion, in receiving all of his kisses like spiritual blessings, and even suffers him to embrace her as if she were an adorable little ghost. The sequel is that he goes to India on another historical mission, and is cured by the absence of his infatuation. So Merand loses her Golden Rose, but there is a very handsome doctor treating her for heart disease in the last chapter who is evidently prepared to offer her another posy. The writer of this review believes if he began his suit by spanking her thoroly he would increase his chances of success and improve both Merand's morals and health. The wickedness of such books as *The Golden Rose* is that they appeal to an element of insincerity in women readers, especially young women readers, without making them the more scrupulous about exciting honest natural love in as many men as they can. The affectation of coldness excuses them from responsibility for arousing warmer, more admirable and more decent feelings in men. Also, such novels inveigh against the dignity and righteousness of marriage. In the course of her musings, Merand, whom the author represents as being "buried fathoms deep in lonely sexless thoughts," turns up her spiritual nose and calls married love "only a harlot wearing a bridal veil." In short, the Princess Troubetzkoy suffers the same limitation that made Amélie Rives ridiculous to some readers and dangerous to others years ago. She has sense, a good deal of the feminine embroidery of learning, a milk and honey power with words, but her point of view is sickly, and leads to decadent conclusions. The one really vigorous and fine thing in this story is her description of a summer storm in Virginia. The rest of it should never have been written.

Santa Lucia. By Mary Austin. New York. Harper Brothers. $1.50.

The scene of Mary Austin's new novel is laid in a Western college town, and depicts the intimate home life of a college community with the students left out. The faculty and the philanthropists and a few outsiders for contrast are the principal characters. The women appear to predominate the tale. The old doctor's charming daughter stands upon the rim of every scene like a hardy hollyhock. She is introduced to the reader with her front hair in curl papers, bedroom slippers tied on her pretty feet, wearing a flowered Mother Hubbard wrapper, and in process of being late to breakfast. But a more irrelevant, adorable heroine is scarcely to be found in the year's fiction. The author is partial to her and exhausts her wit and tenderness in the creation of this sweet sloven. Serena Linsley is the Puritan young wife who does right and thinks right so easily that she is disposed to take too many cross stitches in her husband's morals. Julia Maybury is the beauty in the story, the poison chalice of love, whose life furnishes the tragic interest; one of those women who belongs to the commonplace fast set in a city and whom a mood of love and ambition makes the wife of a college professor. The men in the story are hard-headed, intelligent, and appear to be divided among the women with that mastery college faculty women always show for managing their mankind. The Western novelists come closer to life as it is in their fiction than any other writers in this country, and Miss Austin is no exception to this rule. The interest of her story lies not in the plot, which is conventional, but in her literalism, particularly in her understanding of human nature constrained by a college campus environment. We all know that there is something barren in the social life of a college community. It is difficult to account for

the phenomenon; certainly, it is not a lack of intellectuality, of ideals nor of standard, nor any of those things which the richer, less circumspect world at large does lack. But cut and dried personalities are the principal ones that flourish without accident or pain in this atmosphere. Possibly the trouble is the slavish obligation each member of it feels to set a proper example to the young people in their charge, but the fact exists, especially where the college is in a small town, which it dominates. And it is this primness, this blight, which Miss Austin interprets along with the strength and virtues in the situation. The book contains no new features. There is a happy love story in it and a tragic, unlovely story, and much fine delineation of character, all of which is better than the story itself.

Federal Usurpation. By Franklin Pierce. New York: D. Appleton & Co. $1.50.

This is a vigorous and well written, tho somewhat polemic, constitutional study, called out, we are told, by President Roosevelt's suggestion for an increase of Federal power "thru executive action . . . and thru judicial interpretation and construction of law." The author arraigns Mr. Roosevelt for attempting to destroy the State governments, imperialize the national Government, and convert the presidency into a dictatorship. Among the specific counts in the indictment, each of which is fully elaborated in its historical and constitutional bearings, are the President's intemperate criticism of Federal judges who render decisions not in harmony with his views, his pension order of March 15th, 1904, virtually establishing a service pension system; the practical creation under his direction of a protectorate over San Domingo, his "arbitrary and unwarranted" dismissal of the negro troops at Brownsville, and various other acts of a similar character. The author protests strongly against the growing popular subserviency to the President, the increasing disposition to deify him, and to attribute to him omniscience as well as omnipotence in political matters. He expresses equal disgust at the liberty which the President takes with the American people in lecturing to them thru a perennial flow of messages and addresses concerning a great variety of non-political matters, from football to race suicide and from simplified spelling to constitutional construction, as tho he were commissioned to govern the State and lead the people in religion, morals and the ordinary affairs of life. Congress likewise is charged with passing far beyond the constitutional bounds set by the fathers of the Republic. Recently it has made a powerful inroad upon the domain reserved to the States, thru such legislation as the pure-food law, the meat inspection acts, the interstate commerce and railway regulation laws, the anti-trust laws, the national quarantine law, the employers' liability act and others. In making this charge, however, the author overlooks the fact that practically all of this legislation was the result of a wide popular demand without regard to party lines, and has been sustained by the Supreme Court whenever its validity has been brought into question. Finally, the Supreme Court is criticised for its decisions in a number of recent cases, in which the acts of Congress, the President and the administrative authorities were sustained at the expense of the privileges of the States and the fundamental rights of individuals. Mr. Pierce suggests as means for "restoring the democratic republic" the extension of the Presidential term to seven years and the establishment of the rule of ineligibility, the appointment of inferior officers for indefinite terms, popular election of Federal Senators, the immediate convening of newly elected Congresses, and the strengthening of the State governments by the "inauguration of a vigorous State policy," and thru a constitutional amendment taking away from Congress the vast power which it is exercising over the States under the interstate commerce provision.

With Walt Whitman in Camden (July 16, 1888—October 31, 1888). By Horace Traubel. New York: D. Appleton & Co. $3.00.

These notes of Walt Whitman by his friend cover a period of three months and a half and fill 563 pages. The poet is on the sick bed, with nurse and friend in daily attendance, and the talk is abundant—criticism, reminiscence, prediction. The poet is himself always the

central figure, and is most interested in observing the attitude of the rest of the world to that figure. He is not unkindly in his criticism of those who fail to agree with him. Indeed, he is so sure that they will in time come to his side that he is willing to wait, but he wants his democratic dress on when they do come. The future is his and democracy's; he is sure of that. He loves mankind, and casts the love-bread on the waters, but always with the shy hope that some of it will come back to him before many days. Many letters are handed over to his friend and now for the first time published. The talk often turns on these letters. Do their writers love me, or only half love me, or not at all? Well, I forgive them, in any case. He is by no means a descendant of the ancient sybil, to indite an oracular line and carelessly leave it in some obscure corner of a cave to be picked up by the wind and tossed hither and yon. No, he wants to watch its course and see where it lands, who picks it up, and what they think of it. And the world doesn't like him any the less for that. It is only too anxious to get good poetic leaves; it will do Whitman more than justice, but the world has the hard up-hill work of pushing civilization a bit higher every century, and it isn't quite sure yet that the Whitman way will do it.

Essentials of Economic Theory. By John Bates Clark. New York: The Macmillan Co. $2.00.

Professor John Bates Clark's *Essentials of Economic Theory* is designed as a sort of a complement to his work on the "Distribution of Wealth," published almost ten years ago. The earlier work was a statement of the laws of a hypothetical static society, that is, the society which seemed "natural" to middle-class economists like Ricardo. Professor Clark is fully aware of the limitations of the classical school, for he recognizes the fact that the nature of things is itself a stream of tendency. He urges that population is increasing, capital accumulating, technical methods improving, the organization of production becoming more perfect, and the wants of consumers evolving. Accordingly he seeks to discover whither these forceful realities are driving political societies, and to examine their relations to older notions of economics, like wealth, production, distribution, value, capital and rent. Professor Clark frankly admits that knowledge of the causes of economic change is at best incomplete, and, rightly, according to our way of thinking, lays great stress on the need for statistical methods of investigation. Nevertheless he is optimistic about the future, for he believes that analytical study distinctly points to a coming time of increased comfort for working humanity. The only dynamic feature which he regards as suspicious and inimical to progress is the tendency to monopoly, which he characterizes as the gravest menace which hangs over the future of economic society, a definite perversion of economic laws. Here is where a firm and steady policy of government intervention, according to Professor Clark, can save competition, the mainspring of progress and the dynamic element in economic life.

The Golden Ladder. By Margaret Potter. New York: Harper & Brothers. $1.50.

The sub-title of *The Golden Ladder,* by Margaret Potter, is "An American Comedy of Gold," but it is really a tragedy of that restless and resistless passion for money, worked out with painful exactness to its worst results, in the story of a poor and ambitious young man and woman in a Chicago boarding house. They love each other, but do not marry, because of the fear of thwarting the ambition to be rich, which becomes the baleful and dominant influence in the two lives, and, incidentally, blights a good many other people's happiness in the hardening process, which burns all of the fineness and most of the goodness out of man and girl alike. Only the man becomes hard and strong, and the woman hard and weak, a result not so contradictory as it sounds in the case of character-annealing. There is a study of boarding-house life, careful, pitiless, and recalling a similar group in Miss May Sinclair's "The Divine Fire," only the Chicago "homeless" are more restlessly ambitious than their London prototypes, and the hero of the American "Epic of the Boarding House" is a financier and not a poet, altho both burn with the fire of

genius. The characters of Mrs. Clephane and her daughter Kitty are drawn remarkably well. Revolting as they are, one cannot help admitting their verisimilitude nor recalling types in recent newspaper reports of notorious women whom they resemble. The book has no heroine.

Literary Notes

....The publishing house of P. Blakiston's Sons & Co., of Philadelphia, will shortly publish a *Text Book on Physics,* edited by William Hallock, professor at Columbia University.

....The Broadway Publishing Co. has just issued *Universal Peace,* by Victor Hugo Duras, which is an argument for the reign of law thru the federation of the world. Tho marred by too many dogmatic generalities and irrelevant historical allusions, the argument of the book is unanswerable and in line with what THE INDEPENDENT has been advocating for the last decade. It is another sign that the philosophy of the Peace Movement is permeating our leaders of thought and action.

....Prof. Fabian Franklin has returned to Johns Hopkins University after an interlude of thirteen years in journalism as editor of the *Baltimore News.* Some of the fruits of his activity during this period have been gathered in a volume entitled *People and Problems* (Holt, $1). These comments on current events are not merely of historical interest, but are valuable as examples of the best style of American editorial writing, sensible and well informed as well as pertinent and readable.

Pebbles

THE more worthless a man, the more fish he can catch.—*Atchison Globe.*

SULLIVAN bought a goat, for which he paid $5. Shortly after he received a tax bill on the goat of $8. He called on Rafferty, the assessor, and said: "Why do you tax me $8 on my goat when I paid but $5 for him?" "Well," said Rafferty, "I have carefully read what the statutes say, and it reads: 'Whoever owns property abutting on the street shall be taxed $4 a front foot.' "—*Shoe and Leather Reporter.*

I DRIED my hair and washt the dirt
An' huckleberry off my shirt;
I let my feet get dusty brown
Before I came back home to town;
I waited till my hands had lost
That wivvered up like look; I tost
My hat in air and tried to be
As innercent ez I could be—
But, don't you know, my muvver knew
I'd been in swimmin'? certain true!
—*Chicago Tribune.*

"MR. WHITTLESY," said the city editor to the new reporter, "there's to be a meeting of the trustees at the public library building this evening at 8 o'clock. You may go and cover it. Make a story of about four hundred words out of it."

The new reporter went away on his assignment, and the chief of the local department turned again to his desk, made an entry in the assignment book that lay before him, and dismissed the matter from his mind. About 11 o'clock, however, he suddenly called out:

"Where's Whittlesy?"

"Here, sir," answered that young man, coming forward.

"I sent you to a board meeting at the public library. Where's your story?"

"It isn't quite finished yet. You told me to make four hundred words of it, and I've got only a little over three hundred so far."

"What did they do?"

"They met, called the roll and adjourned until next Tuesday evening.—*The Library Journal.*

FIRST COMPLETE DRAFT OF CHICAGO PLATFORM.

ONCE more the Republican party, by Theodore Roosevelt assembled, submits his cause to the people. Theodore Roosevelt has given us mighty progress in justice, equality and the Square Deal. To him we are indebted for the Big Stick, the Ananias Club and the Ten Commandments.

Under Theodore Roosevelt the American people have been led to hate liars, burglars, robbers and bachelors.

Theodore Roosevelt has fined Standard Oil $29,000,000, dug the Panama Canal, chased the Spaniards out of Cuba and the confidence out of bankers.

These are the achievements that will make Theodore Roosevelt his nineteen or twenty places in history.

The United States now owns one-fourth of the world's wealth, Standard Oil and the Steel Trust owning the other three-fourths. In all the great necessities of life, such as coal, lobsters, iron, wealthy ambassadors, cotton, divorce, corn, the stork and Pittsburg millionaires, American supremacy is undisputed, thanks to Theodore Roosevelt.

Theodore Roosevelt in convention assembled declares unequivocally for a revision of the tariff upon such articles as are not imported into his country.

Between the United States and the Philippines Theodore Roosevelt believes in a free interchange of products, except those objected to by the Sugar and Tobacco trusts.

Theodore Roosevelt in convention assembled declares for such amendments of the statutes of procedure in the Federal courts as will prevent the issue of writs of injunction on the one hand, and will, on the other hand, facilitate the issue of such writs.

The principal difference between Democracy and Republicanism is that one stands for vacillation in government, the other for steam boilerism in Theodore Roosevelt.—*New York American.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Bryan and Kern

It would seem incredible that a party, after having twice been defeated under its leader, should have chosen him the third time in preference to other more experienced and successful statesmen. Yet to Bryan they have returned, and with a riotous, tumultuous intensity of purpose which shows their loyalty to the fervid spokesman of their most radical policies. And they are right, for he is by far the strongest candidate the party could have selected, stronger than he was in 1896 or 1900.

It would look as if the party were weak in men. Judge Gray and Governor Johnson were better names, but weaker with the people. The people have not seen them, do not know them. Bryan has been everywhere, east and west, north and south. Everybody has heard him speak, has been charmed by his personally attractive presence and utterance, until to vote for him is almost like voting for a member of one's family. Never has a man so assiduously solicited the acquaintance and votes of the people. He has captivated the delegates and the people who chose them. Out of 978 votes Mr. Taft had 276 against him on the first ballot; out of 1,006 votes Mr. Bryan had only 113 against him on the first ballot. So much does visiting the people and chasing the lyceums surpass traveling on one's business to Panama and the Philippines, with the steam roller to boot.

But this more must be said, that Mr. Bryan pleases the people not only by his melodious voice, his eloquence, his magnetism, but also by his blameless character, his appeal to high moral sentiments, in which he is not surpassed by President Roosevelt, and also by his appeal to the class feeling of the poor against the rich. Here he tries, with some success, to more than equal in volume and force the utterances of the President. He makes himself the voice of the poor common people, the people who cast the votes. A demagog, say his enemies; our best friend, say his followers. In his address to the convention Mr. Dunn ran over the long list of the reforms first, he said, suggested and urged by this great proposer. To be sure, he did not mention the sixteen to one cure-all, for that proved a worthless nostrum, but not one of President Roosevelt's recommendations did he fail to claim as first proposed in some one of Mr. Bryan's unofficial messages to Congress and the people. And with a good show of justice, for it has been during all the years of his perpetual candidacy his perpetual task to discuss public wrongs and propose a multitude of remedies. Beyond question, this is a noble purpose, if only followed out with an intelligence equal to the aim. It may be more than demagogy; and as the purest patriotism his followers accept it and also as profound political wisdom.

Of course, the people now have to compare Mr. Bryan with Mr. Taft. The two men and the two platforms are presented for choice. Of the two, Mr. Bryan is the more eloquent and persuasive orator. He has patented far more medicines for the ills of the body politic than has Mr. Taft; many of them excellent, altho the doses may be large. If some of these same medicines, actually applied by President Roosevelt, have been thought to have left the patient in a feeble condition, those proposed by Mr. Bryan will do a more violent purging.

But Mr. Taft has been doing things while Mr. Bryan has been talking. We know what he is from what he has done, and done always wisely. Behind him are no silver blunders, only golden deeds. His record, not his words, speak for him.

But we must not fail to mention Mr. Bryan's supreme and careful neglect in his search for wrongs inflicted on the people. The most stupendous, colossal wrong of all, which affects the largest number of citizens and in the most personal and humiliating way, is the persistent, determined discrimination against the poor people of the South and their exclusion from the ballot, because they are poor and black. But not one word of sympathy or suggestion of help has Mr. Bryan ever had for them. The wrong is in States whose votes he can get if he is silent, but would lose were he to speak. That is the reason. He knows better, for he has a flood of words of liberty and equality flowing from his tongue, and he has sense enough to understand their application. President Roosevelt is of a different breed. Because he believed it right he made a negro Collector in Charleston, and closed a postoffice in Mississippi where the people had boycotted the colored postmistress; and because he believed it right he discharged without honor the negro soldiers. He did not care which side he offended. Mr. Bryan is of another sort.

Of the nominations for Vice-President not much can be said on either side. Neither is a constructive statesman. John W. Kern has been twice rejected as Governor of Indiana, as Mr. Bryan has twice been rejected as President. But neither Mr. Sherman nor Mr. Kern was chosen because he was thought to have peculiar fitness for the duties of President if fate should call him to them. We would seem to be in evil times when we think that any man who can carry a doubtful State is good enough for Vice-President. This is proof that we need some amendment to our Constitution that will give the Vice-President responsible duties. The leading men, who would be thought of for President, refuse to allow their names to be mentioned for the office, and it has to go to weaker men, except as one is thrust forward because he is too strong where he is, just to get him out of the way.

Like Mr. Bryan, Mr. Kern is inexperienced in national affairs. He has been State Senator, and has held local office in Indianapolis. He has been an active manager in State politics for his party, and so has been their candidate twice for Governor and once for United States Senator, but he was not the people's choice. He has no convictions that are not readily revised by a majority vote. He opposed free silver and then was its ardent defender. His political law is to be always regular. It is unfortunate that some really strong and proved man of principle could not have been chosen, who might have been an adviser to Mr. Bryan if he should be elected. Yet whose advice would he take, and what President would seek advice from such a nonentity as a Vice-President?

The Denver Platform

MR. BRYAN'S desire that Judge Gray should be associated with him on the Democratic ticket may have caused a modification of the Denver platform, which is unexpectedly mild in some of its utterances, when comparison with the platforms of 1896 and 1900 is made. We have in mind the use of qualifying phrases, here and there, as in the paragraph calling for "legislation which will assure such reduction of [railroad] transportation rates as conditions will permit, care being taken to avoid reductions that would compel a reduction of wages, prevent adequate service, or do injustice to legitimate investments." On the whole, however, the concessions to the conservative element are in form rather than in substance.

In the plank concerning injunctions, nearly all that was sought by representatives of the Federation of Labor has been granted. It is the proposition that there shall be jury trials in cases of indirect contempt which will especially excite discussion. The question is whether this change would seriously impair the power of the court. It seems to us that it would. In the campaign this subject will be thoroly examined, and before the election the effect of the pro-

posed changes will be understood by a great many, outside of the legal profession, who now know little or nothing about it. With respect to other questions relating to labor, the Denver platform does not outbid the one made at Chicago. While the Democrats say that unions should not be regarded as illegal combinations in restraint of trade, they do not ask that unions by new legislation shall be protected against the operation of the Sherman act.

Those who think, as we do, that the tariff should be revised by a reduction of duties which are too high, and that the largest reductions should be made with respect to rates which protect domestic combinations of manufacturers, will find the Denver tariff platform much more satisfactory than the doctrine proclaimed at Chicago, altho the removal of all duties upon goods competing with those of combinations would do more harm than good. The Republican platform points to very little change in the present rates. It virtually proposes that these shall be retained, and that there shall be a maximum list of much higher ones.

One of the strongest passages in the Denver platform is that which demands real and prompt publicity for campaign funds and the prohibition of contributions from corporations. But the political force of it in this campaign has been broken by the action of Mr. Taft and his representatives in the Republican National Committee. In all probability we shall see this year for the first time a publication of the receipts and expenditures of both parties. The Republicans, however, must defend themselves against the just charge that by sharp practice at the recent session of Congress they avoided legislation on this subject.

Both parties stand for an increase of the Interstate Commerce Commission's power, but the Democrats go much further than the Republicans, altho it will be observed that they are in harmony with their opponents in recommending that the railroads be authorized (by an amendment of the Sherman act, of course), to make traffic agreements subject to the Commission's approval. This, in the Democratic platform, we must regard as one of those concessions to the conservative element about which we have already spoken. The Denver platform's desire for legislation which will prohibit the railroads from engaging in business that brings them into competition with their shippers is somewhat belated, for a law to that effect has been enacted by a Republican Congress and is now being tested in the courts by the Government's suits against the anthracite coal roads. The Republican platform asks for legislation to prevent overissue of railroad stocks and bonds, but does not ask for that physical valuation of railroad property without which no just action in this direction could be taken. Such physical valuation is plainly demanded in the platform adopted at Denver.

The objection to Mr. Bryan's plan, in the Denver platform, for the control of industrial combinations is that it would give too much power to the President or some of his subordinates. Against Mr. Roosevelt's similar license plan the same objection may be raised. It has been asserted by ex-Secretary Shaw, and it is believed by many others, that persons representing the Steel Corporation obtained from the President, a few weeks after the beginning of the panic, what amounted to a license for the acquisition and absorption by the Steel Corporation of the large competing property owned by the Tennessee Coal, Iron and Railroad Company. We are not saying that this merger ought not to have been made, or that permission to make it was really granted by executive authority. But the incident suggests the possibilities of such a license system as has been advocated by the leader of each party.

What the Denver platform says about the currency differs greatly from the opinions proclaimed by Mr. Bryan a few years ago and is not so much at variance with sound finance as some hasty criticism would make it. "Emergency currency should be issued by the Federal Government and loaned on adequate security to national and State banks." While we do not commend this method, the difference between it and the method now provided by law is more in form than in substance. The guaranteeing of all bank deposits is another matter. It is opposed by eminent bankers and other authorities in arguments which deserve careful consideration.

Mr. Bryan and his party, still favoring

an income tax, would now procure authority for it by Constitutional amendment and not by relying (as formerly) upon a change in the personnel and attitude of the Supreme Court. We think there should be a tax on incomes, but the levying of it will be deferred a long time if the Constitution must first be amended. It is by no means certain that an income tax law would be disapproved by a majority of the present members of the court.

Among the subjects as to which the two platforms are substantially in agreement are the establishment of postal savings banks, the improvement of navigable inland waterways, the conservation of national resources, and the maintenance of a large navy. Concerning the treatment of the Philippine Islands hereafter they are not far apart. It is curious that a party which so recently denounced militarism should now place in its platform words designed to satisfy those who demand a navy large enough to supply a battleship fleet for each of "the coasts." The great appropriations ordered at the recent session by a Republican Congress, in the face of a deficit, invited the criticism made by the Democrats at Denver, but the Democratic program for improving every navigable inland water course, making a network of canals, developing water power, reclaiming swamp lands, etc., would call for a very great increase of national expenditures. The election of Senators by direct vote of the people, favored by the Democrats at Denver, is a reform that should be promoted by both parties.

A Public Nuisance

We refer—we more than refer, we point to, we inculpate, cite and arraign Richmond Pearson Hobson as a public nuisance, who fails to be a menace to public peace solely because the sensible American people, startled at first by his positive assurances of what he "knows," will not take him seriously. He has been going over the country preaching an unholy war, slandering a peaceable nation, swinging Bellona's torch, and mouthing the abuses of Shimei or Thersites. He is a public nuisance and a national disgrace.

We have had him first prancing and dancing over the country, ridiculous as the most bekist of martial heroes, but of late as the panoplied apostle of militant peace, making a new campaign around the Chautauquas and the Y. M. and Y. W. C. A.'s of the land, no longer as *le baiseur*, ringed with lovelocks, but changed to a frenzied godkin of battle, flying over our peaceful heavens, swinging the red thunderbolts of battle, and his head horrent with spired serpents, spitting flame and shaking pestilence and war. "War! war!" has been his strident cry, till we could think that the three Fates, and the three Furies, and the three Gorgons, and nine devils, and the dreaded name of Demogorgon, were in his train. We had hoped that the stout shaft of our correspondent, Dr. J. H. De Forest's logic might have quenched his madness, as it has given confidence to all intelligent people, but he has steered his flight westward and found resting for unblest feet at Denver, and there, to the makers of the Democratic platform, for a full hour and a quarter he prophesied and threatened war, declared it was coming from Japan within four short years, declared that already Japan has a huge army of trained soldiers in Hawaii, that on the Pacific Coast there were as many who are practicing the military art in shooting galleries, that the Philippines will be as easily snatched from us as will Hawaii, and that then terrible Japan will rule ocean and continent as far as the Rocky Mountains, while we, poor fools unprepared, our ships blown up, our harbors captured, our coasts ravaged, will be driven back to the Mississippi or the Atlantic to bemoan our deafness in not listening to this modern Tiresias of Greensboro, Alabama.

The committee on platform listened to him with open-mouthed wonder. Some believed and some doubted. He begged them to put in an ironclad plank for a big navy. The next day he was called to the platform to address the convention and the galleries. He began to repeat his well-worn tale of terror, but this time they were not impressed. When he looked to curdle their blood, telling them that "not so very long ago the President of the United States said in my presence, 'There exists the greatest possibility of a war with Japan,'" the disrespectful audience called out, "Come off!" "Rot!"

"You're crazy!" and he had to subside. Then the chairman, Mr. Bell, said, "The Chair hails from the Pacific Coast, and up to the present moment he has seen no occasion to enlist," and the people roared with laughter. The next day President Roosevelt elected him an active member of the Ananias Club.

Congressman Hobson is ridiculous, but his campaign of slander and war is no laughing matter. He has been supported by lyceums and associations that have the curiosity to see and hear the man who scuttled a coal-ship and was supposed to cultivate kissing bees. He has the gift of speech and he has one mischievous obsession. There are people enough in Alabama who believe his insanity is not obvious enough to require confinement in an asylum, but they thought he would yield to the constraint required of a new member in the Capitol. He has escaped, he is rabid, foaming and frothing, his tumult and wrath in; he is a nuisance.

When Wali Dad—

> "His sire was leaky of tongue and pen,
> His dam was a clucking, Khuttuck hen——"

carried his curse of an unstanched speech to the Red Chief, Gholam Hyder, at Cabul, and told him the army of the Russ was coming, then the King smiled a smile as dark as death, and bade the babbling mischief-maker climb a peach tree and shout when the Russians came, and stay there till they came:

> "'The Russ is upon us,' the clamor ran;
> 'Surely an hour shall bring their van.
> Wait and watch.'"

and twenty bayonets ringed the tree to catch him if he fell. But that was in Cabul, and the King's jest befitted the olden days. We cannot so utilize one of our peach trees.

Vacation Dangers

So much has been said of the benefit of outdoor air and of sunlight in recent years that there is the likelihood at the present time of many going to that excess in such matters that is so characteristic of humanity when it is on a reaction from one contrasting course of life to another. From being a nation twenty-five years ago that bothered its head very little about vacations, and in which only a few of the wealthier classes looked forward to having a formal vacation at all, we have come to be very fortunately a people in which practically everybody expects to take some vacation, and every one above the day laborer looks forward to at least a week or more of continuous outing. Such a custom should, according to hygienic principles, assure much better health for the community and should secure the laying up of a store of vital energy and resistive vitality that could carry people well over the work of the succeeding year.

It is not so sure, however, that this consummation, so eminently to be desired, is being secured. Not a few people return from their vacations requiring a rest to enable them even to take up their regular work. A large number come back from their vacations with the germs of disease in them, which sometimes proves serious, and not infrequently may require a period of convalescence for many months. Indeed, it is only those who take a very sensible vacation who come back with that renewed vigor which is supposed to be the primary end of all vacations, and until a large number of people realize the dangers that lurk in certain features of what are now called vacations, this precious institution is likely to miss its proper effect and to do quite as much harm as good. For all those who go away from home there are two things that must ever be in mind, and that were considered so important in the long ago that even Hippocrates, the great father of Greek medicine, said, as a warning, "When in a strange country, guard against the water and the sun."

These still remain, some twenty-six centuries later, the two objects that the tourist must guard against. Unless he does so his vacation is almost sure to leave him less fitted for the next year's work than he was when he began. By water of course Hippocrates meant drinking water, and it constitutes, down to the present day, the principal source of danger for the traveler. It requires a good deal of courage, when one is parched and thirsty, to recall that one must know something about the water that one is drinking in a strange country or there may be serious danger ahead. Ordinarily it is presumed that it is only

city and town water that is likely to contain dangerous elements. Nothing could well be less true than this. Typhoid fever, which is the principal water-borne disease, is a rural rather than an urban infection. It carries off more victims in the cities because of the larger population, and the figures attract more attention, but in proportion to the number of inhabitants, more country than city people die from typhoid fever in the United States, and this practically holds for all countries. As a matter of fact, when typhoid fever breaks out in a city it can nearly always be traced to some case in the country that contaminated the water supply, or to the disease among the farmers who supply the milk, and the vegetables that are eaten uncooked in the city. Above all, in a country place then, even in a farming district, one must not drink the water even casually while passing thru without knowing something about the neighborhood or the source of the water. Water from the small streams that flow thru cultivated fields always looks innocently inviting, but is particularly likely to carry with it the germs of typhoid fever if they are in the neighborhood, for the washing of milk cans in such streams has been known to spread typhoid fever and also to carry the germs of certain intestinal diseases which are conveyed more this way than any other.

Ordinarily, digestive disturbance is referred to the last fruit or green vegetables that were eaten, tho it is often due to contaminated water that has been drunk. It must not be forgotten that the people of the particular neighborhood may have acquired a certain immunity to the effects of water which strangers will not have, and tho it may not be dangerous, it may be productive of serious annoyance. At the beginning of a stay in a strange place, therefore, water should be taken carefully until its effects are known.

More important, very probably, even than the question of water in vacation time is that of exposure to the sun. Here once more Hippocrates, in his wise, old, Greek way, emphasized a most important factor in the production of ill-health. We have heard sunlight praised so much in recent years that we may forget that in this as in everything else the rule must be *ne quid nimium*—don't go too far. Many people seem prone to think that the heavier the coat of tan they wear on their return from their vacation the thicker are the layers of good health that they have accumulated. They forget that the darkening of the skin caused by sunlight is a definite effort on the part of nature to protect underlying important organs from the destructive chemical action of the sun's rays. Before nature supplies this pigment, which deposited in the skin protects the individual from solar actinism, the effects are strikingly destructive. The cuticle loses its vitality and is shed. If the exposure to sunlight has been continued for some time all the effects of a burn are produced. In sensitive people, as the result of the paralyzing effect of the sun's rays, the small nerves that supply the capillaries go out of commission, the circulation is seriously disturbed, leakage of serum from the blood takes place and there is a large amount of edema. Most people have had experiences that have brought home these effects to them so poignantly that they are not likely to be forgotten nor to be misunderstood.

In spite of these warnings, however, many people think that it is the right thing to go without any covering for the head and with large portions of the body exposed. Children are encouraged to wander without hats and the youth of the country, of both sexes, is supposed to be laying up for itself stores of vitality while exposing itself freely to the sun. It must not be forgotten, however, that in the very hot countries—and none of them are much hotter than our own when we have our genuine torrid weather—people maintain their health by hiding from the sun entirely during three or four hours at least in the hottest part of the day, and whenever they go out into the sun they carefully cover their heads with many folds of woolen cloth. Turbans, after all, are the result of the experience of the people in Eastern tropical climates that they are much better for having their heads covered.

Major Woodruff, U. S. A., whose experiences in the Philippines set him to studying the effects of light, has especially warned against the exposure of the

head to sunlight. The skull and the scalp present but very slight obstacles to the passage of dangerously destructive rays of sunlight. The lighter the color of the hair the truer is this, and very thin hair or shingled hair makes an exposure of the head particularly dangerous. There is a tradition that cutting the hair very short improves its growth and prevents baldness, a tradition the foolishness of which can be seen from the fact that it is women who almost never have their hair cut who are also never bald, that is responsible for many men having their hair trimmed very close for the summer vacation. This is extremely dangerous. Indeed, it may be said that the secret of a successful building-up vacation consists in the careful avoidance of the dangers induced by exposure to sunlight as well as to bad water. If these two warnings of the Greek father of medicine be kept in mind by the modern vacation tourist, there will be much less need for a rest after vacation, and that re-creation, which is the purpose of vacation, will be much better accomplished.

Questions in Pedagogy

It occurred to the editor of *World's Work* to ask a number of leading educators:

"What new subject or new method or new direction of effort or new tendency in educational work is of most value and significance and now needs most emphasis and encouragement?"

The question was indefinite enough and the answers might be expected to be miscellaneous, for every teacher will answer along the line of his specialty. President Hadley is crisp and clear. As for the higher education it most needs, he says, "to bring order out of the chaos into which the indiscriminate application of the elective system has plunged us." President Jordan thinks the most important thing is to separate the college from the university, remanding freshman and sophomore years to the junior college. President Northrop wants trade work in public schools and correction of the abuse of the elective system. Pres. G. Stanley Hall is pessimistic enough; he says the scholarship of our university teaching is low and needs raising to the German standard. President Houston, of Texas University, suggests increased business courses and trade schools. He and Principal Booker T. Washington rejoice that the school is now carrying instruction to those not on its list of pupils. President Humphreys, of the Institute of Technology, wants more thoroness in fundamentals and less spreading. President Taylor, of Vassar, wants less straining and specializing. President Stone, of Purdue University, wants trade schools and teaching of agriculture. President Hazard, of Wellesley College, wants technical training for business life the last year before the high school.

These are university or college presidents and these brief abstracts show in what direction they are looking. We would add something from other points of view.

And the first, the most palpable evil and the one most difficult to amend, is the wrong done to little children by our wretched orthography. Learning to read could be made a pleasant and easy victory for the child instead of a burden and cross. Everybody knows this, but we do not all set to work to save our children from the hateful task that not all their elders have conquered. But not one of these learned college presidents thought to mention it. Perhaps they have forgotten the primary schools. The *World's Work* might have asked the schoolma'ams.

Again, all the course of education between the learning to read and the professional school is too much vitiated by the overburdening of topics. The little child takes one study—reading. The professional students takes one study—law or medicine. The child in the grammar school or the high school, and the young man or woman in the college, is jumped every day from one study to another until he has no time to learn to love or master any one of them. Worse than that, he is supposed to take any one study, say Latin or algebra, but three times a week instead of five or six. He does not concentrate; he dissipates, and so forgets. We would like to see a high school in which one-third of the class took for an entire term nothing but algebra, another third nothing but Latin or a modern language, and another third a science, alternating

in successive terms with a very small modicum of weekly reviews so as not to forget what has been learnt. We have intensive farming; let us have some intensive teaching. There have been experiments enough to learn that it pays and gives enthusiasm and not confusion and weariness.

We fear the tendency to finish general education at the end of the seventh or eighth grade, and then set boys to learning a trade. We would rather put off the trade a year, and let the boy give the year to more general study, and let him learn his trade, if he must go to work then, in the work itself. That kind of work does not need much special training to learn it. Equally we fear the trade school as a substitute for the high school, or the tendency to send the young man, at the end of sophomore year, to a specializing work in a university or professional school. What can a sophomore know? Very little of the world of larger knowledge; almost nothing of English literature, the veriest smattering of the sciences, scarce anything of psychology, or political economy, or sociology, or ancient or modern history, or the fine arts, to say nothing of what he has failed to acquire of the ancient and modern languages and their literature. At the end of sophomore year he is but an ignoramus, unfit, because unbased, to think himself a learned man ready to confine himself to the studies of a learned profession. It is a monumental blunder we are making when we tell our youth that they must cut short their course of general study that they may hasten by two years their entrance into bread and butter work.

We do not believe with President Hall that students cannot get as good teaching in our universities as they can get abroad. Nevertheless, those who would be teachers must still go abroad, but chiefly that they may get the feeling of the foreign civilization and command of the languages. Not one of the answers refers to the vast advantage to American scholarship of the little, poorly supported American schools of archeology in Athens, Rome and Jerusalem, and the great need there is of similar schools in Cairo and Baghdad, the very regions where the greatest discoveries in history are being made.

We endorse nearly all these famous educators have said. It is true that we must escape the chaos of the elective system, thru which the heedless student, like the Fiend in his geographical research, "swims, or sinks, or wades, or creeps, or flies." So the approach of the university to the people by correspondence is of great importance, and this department should grow. Doubtless we need more industrial education, whether in business methods, or by agricultural and other schools, but these we already have to some extent in business, agricultural and mechanical colleges. What we fear is that the passion for quick results will tend to shorten the period for a wide and generous culture that fits for any noble sphere of life and commands wide success. President Taylor tells of a Norwegian waitress whose mistress, disgusted at her inefficiency, asked her if there was anything she could do. "I can milk reindeer," was her reply. When a negro girl had told her new mistress that she could not do this, that and the other thing, she was asked "What did you do in the South?" "I brushed the flies from missus," was her equally unsatisfactory answer. Breadth, breadth, and still breadth is the demand of education.

The Farmer and the Forest

We have had warning that both the hard woods and the soft woods of America are being used up much faster than we can replace them on the ordinary methods. Commissioner Whipple, of New York State, is now urging upon the authorities to enter upon a State system of forest planting. He would have the State authorities provide every land owner with trees for private planting. He thinks that upon State lands nurseries may be established at a very low cost, where millions of seedlings may be raised at a trifling expense, to be distributed to all applicants without charge. With these he would distribute instructions which should guide, both as to the variety and the utility. He does not make the planting of a forest a matter that is quite out of reach of any one

possessed of a few acres. Simply keep the roots from the sun while you are digging them, plant very much as Nature had them in the nursery or forest, and the work is done. Here the farmer has the nucleus of a fortune. Wood is rising in price, and is destined to rise much higher.

Government forestry may be able to check the destruction of woods already existing, and it may add very largely to the trees that must be had for future use; but unless the individual farmers thruout the country will unite with the National Government and with the State governments, we cannot catch up with the deficit. It has been estimated, and we think by competent authority, that a farmer owning one hundred acres of land can judiciously assign ten acres to forest growing. It is quite true that he will not begin to reap his crop quite as soon as he will his corn or his wheat, but it is a crop that involves very little uncertainty, and comparatively very little cost for preparation and culture. He will begin during the third or fourth year to be able to cut poles, and these are marketable as well as valuable for home use. By the twentieth year the timber that he may be producing is as valuable as much of that which is now being used in building and for fuel.

In the Northern States the range of trees most valuable for forest planting includes hickory, maple, white ash, oak, chestnut and catalpa. This by no means exhausts the list. In the Southern States pecan growing has become almost a passion. The wood is of only second value to the fruit. The catalpa is quite as valuable as in our Northern States—thriving quite as well in Georgia and Florida as in Kansas and Missouri. The plantations of this single tree already reach the tens of millions. It is the one most important native tree in America, furnishing telephone and telegraph poles and railroad ties. A pine forest will very rapidly replant itself, if allowed. Nature has a special fondness for this tree in all its habitats. Indeed, this is true of many of our most valuable woods, that the work of replanting a lot saved from pasturage will be immediately taken up by Nature.

It must not be overlooked that the trend of investigation is toward the much greater use of nuts in our daily menu A highly reputable scientist has confined himself for some months to the use of bananas and peanuts. The use of the pecan is growing so rapidly that the vastly larger production does not keep up with the increased consumption. Nut food comes perhaps as near as any single food to forming a balanced ration for human beings. The pecan tree, like most of the nut trees, is in itself profitable. The wood is in demand at any period of its growth, and it will last for a century. The nut itself is not a perishable fruit, but can be kept in store for many years. Texas at present furnishes one-half of the annual crop, but the tree adapts itself readily to nearly or quite one-third of the whole United States.

While the farmer is presumably yielding one-tenth of his land to tree growing, it must be kept in mind that the same land can yield other crops until the trees are of considerable size. Where forestry is one of the specific objects of farming, the grower plants Irish potatoes, and in the Southern States sweet potatoes between the rows. In Georgia cotton fields are often found to be also groves of young trees. Corn, peas, beans, are equally adaptable to this purpose. Such crops serve not only as direct producers of wealth, but are also what are technically called cover crops, that is, they cover the soil during the winter against severe freezing, and are plowed under in the Spring, to increase the humus and add to the nitrogen of the soil.

Forestry commends itself to the farmer with increased interest, because new values are constantly being found associated with very common and easily grown woods. The Howard process of vulcanizing some of the cheaper pines and gum timbers is adding enormously to their value. Secretary Wilson tells us that this process renders some of the meanest of all our timber the most beautiful for finishing into furniture. This means a great deal for the wet and least valuable sections of the United States. The cypress has been heretofore considered almost a nuisance, a burden to the land. Under this new process these worthless woods have become equal to mahogany. Another pest of the South-

ern States was the palmetto, and this has recently been found to be one of the richest sources of tannin and a great wealth producer.

Secretary Wilson has submitted to the Senate a special report in which he urges that the Government acquire an area, not to exceed six hundred thousand acres, in the White Mountains, and other areas, not to exceed five hundred thousand acres, in the Appalachians, for the establishment of national forests. He proposes that the nation take up two vast sections that have been deforested into a condition of sterility, and make them a source of national wealth. He tells us that in Pennsylvania alone not less than one hundred square miles of good land is ruined each year by deforestation. The soil is washed away until the land is unusable. The problem is one beyond figures to estimate, and it is impossible that the solution shall come until the nation is waked up to a spirit of co-operation.

Turn the business over to the farmer, and let the case be presented to him precisely as it is. We must have a larger portion of the land restored to tree growing. The Government cannot do the work alone. The use of wood is not growing less and less, but the supply of coal is rapidly decreasing. Professor Orton gave the signal over ten years ago, telling us that there was no possible outlook but in the restoration of the old-fashioned wood lot. It is not lumber and fuel only that we need. We go to our forests for pulp, tar and turpentine, and now Professor Lowe threatens to revolutionize commerce by making coke from wood—in other words, mineralizing wood. We are told that a five hundred strip of land will keep the largest blast furnace in the world going, and produce by-products of great value at the same time. That is, cutting from one end of the strip to the other, before the first cutting is finished the other end will have grown its supply necessary to furnish fuel for the largest blast furnace. The product is as hard as anthracite coal. Alcohol, meanwhile, is extracted from wood, as well as lye, potash and the finest soda. We are just entering a new age of invention and discovery in the simpler affairs of life. We are being compelled to go back to Nature in ways that we little dreamed of.

The Deceased Wife's Sister

The aforesaid lady, while given rights in Great Britain to take her sister's place at bed and board, has yet some bitter troubles. Mr. Alan Banister wished to marry his deceased wife's sister. He is a good churchman and means to obey the law of his Church and of the land. At the time the bill had not been enacted, and he went to Canada and was there married. As he expected to return to England, he had no Canadian domicile, and in the eyes of English law his marriage was illegal. But two weeks later the bill became a law, and as it was retroactive in its effects, Mr. Banister's marriage became at once legal. On his return he went to the parish church, as usual, but was told by the vicar that the communion would not be administered to him and his wife. On correspondence it turned out that the vicar was acting under direction of his bishop. He says:

> "My simple reason for declining to admit you to the Lord's Table is that you knowingly and wilfully contracted a union which was declared unlawful both by the Church and by the law of the land. You can, therefore, have no claim upon the privileges of the Church."

Mr. Banister has appealed to the Arches Court of Canterbury for redress. That is an ecclesiastical court, and the question is whether the ecclesiastical court is subject to the decree of Parliament. There is a difference between the Church of England and the Catholic Church in this matter. The Church of England has held that marriage with a deceased wife's sister is against the law of God. In the Catholic Church such marriages are held to be against ecclesiastical law, and not against divine law; and, accordingly, a dispensation can be given when necessary.

Mrs. Humphry Ward's Attack

In a letter to the London *Times*, Mrs. Humphry Ward tries to put a little courage into Mr. Asquith's faint heart, and into the heart of the high-born ladies who fear the suffragets will force them to vote. Her comfort comes from what she has learned while in this country on her late visit. She says the agitation is sixty years old here, and yet those who favor the reform have succeeded in only four of the sparsely populated States of the

West; that when Washington was a Territory it had female suffrage, but rejected it when it became a State; that Oregon defeats it by a big majority, and that Colorado would withdraw it if it were feasible. She says that wherever a suffrage movement is prest, an anti-suffrage bureau of women gets to work, and so the measure is defeated. Since 1896 five States have by popular vote rejected female suffrage, and the legislatures of thirteen States have rejected bills of that sort. Altho the laws allow women school suffrage in twenty-five States, not in New York or Boston is a woman on the school board. Actually women have more authority to vote on local matters in England than in the United States. All this is as you look at it. We do not believe that the men and women of Colorado would willingly go back to male suffrage, and we think the fact that four States have adopted it is progress, not retrogression. But the main point is, that women are as able to have a judgment on public matters as men, and we do not believe in taxation without representation.

The Georgia Convict Camps

Georgia knows perfectly well that the system of leasing the convicts to the highest bidder is an abomination. She has been told so by her own citizens. The other day at one of those camps when a man was brutally whipt the whole body of convicts struck work. They declared they could be shot down, but they would not work if so horribly treated. The other Sunday at Atlanta Dr. J. E. White, pastor of the Second Baptist Church, preached on "The Cross and the Convict," and reminded his hearers that Jesus was a convict and crucified between two convicts. There are 4,500 of these convicts, and Georgia sells them for $136 per head per annum, and one of the wholesale convict buyers retails them out as high as $570 a head. The State pretends to hold control over their treatment, but practically in the camps it can do little or nothing. The argument for it is that the system nets the Georgia treasury $209,000 a year, which Georgia cannot afford to lose. Is Georgia so poor, poorer than North Carolina? Then it must not be forgotten, what every one knows, that this system leads to great injustice and cruelty, when a strong negro is charged with some petty crime, and the court will send him to the camp for a longer term than it would send a white man, so as to make a profit for the State. It is abundantly confest that this is done. The Legislature is asked to change the system, but the answer comes that the treasury will not allow it, and that a bigger price must be had by the State for their labor. It is a wicked system, which makes it the purpose of the State not simply to protect the people and reform the criminal, but to increase the number of criminals and so the profit from the sale of their labor.

We said last week that Commissioner Draper's statement that but one-third of the children in the elementary schools remain to the end of the elementary course cannot be true in States that have a compulsory school law. But a very competent authority on education declares that it is true, even in New York, which has a compulsory attendance law that is as well enforced as it is anywhere. The trouble is, he says, that children do not begin school early enough, that they attend so irregularly that they progress too slowly thru an elementary course that is too involved, so that before they complete the elementary course they come to an age when the parents feel the need of their labor, and do not believe that their earning power will be increased if they finish the course. If this is true the truancy officers need to be more active.

A most amazing tale is told of the burning up of a coal oil field in Vera Cruz, Mexico. It really was a geological as well as financial catastrophe, and the end is not yet. The fire would seem to have worked down into the ground, toward the central source of the oil, for the crust of the earth was blown out as by a volcano, and a square mile is a mass of flames which are seen sixty miles out at sea, and the whole country is in danger for a distance of a hundred miles. One can hardly compute the danger and damage if, as feared, the fire should ex-

tend thru underground channels to the entire oil field of Mexico and Texas. The explosion will leave a hole like the Arizona crater.

While Presbyterians and Congregationalists are uniting in India to form a common Indian Church, the Methodist Episcopal Bishop's address and their paper, *The Christian Witness,* object and prefer federation, on the ground that the Methodist Episcopal system and that of supervision cannot be harmonized with that of the other denominations. One would think that all denominations exercised a pretty active system of connectional supervision in the foreign field. There is an alternative; let them unite with the Anglican Church of India.

Dr. L. W. Batten, rector of St. Mark's Church, is one of the most careful and competent scholars in the New York pulpit. He was professor in the Episcopal Divinity School in Philadelphia, and now teaches the Old Testament in the General Theological Seminary. He is one of the new adherents of the Emmanuel Movement, and announces that in his church there will be opened in the fall a clinic for those who suffer from nervous diseases. He does not expect to antagonize physicians, but to work hand in hand with them. The movement is spreading.

Dr. Newman Smyth wants union with the Anglican Church, the episcopacy being the unifying element which will bring Protestantism together. He thinks Protestantism is in decay. But why not rather the Methodist Church? In this country, and, perhaps, the world over, it is the larger body, and it has bishops just the same, and it is saved the name "Protestant" which attaches to an Anglican Church. We remember that Dr. Smyth vigorously opposed church union less than a year ago with two other excellent denominations.

Here is one strike which we fully approve, and whose ignominious end we regret. Some thirty of the neophytes, or students, in a Buddhist temple in Kobe, Japan, got tired of going about the city begging for alms and struck and deserted the temple. But they were speedily captured by the temple authorities and compelled to come back and do their duty.

Things must be black yet in the seamen's life when two or three dozen Chinese sailors in one vessel declare that they will tie their queues together and drown themselves if they are not better treated, and two of them actually do it. We think that American sailors, in a sailors' union, would not be treated so badly as this implies.

Twenty thousand men paraded in Manila to demand that Congress grant the Philippines the same trade privileges as are granted to Porto Rico, against which island we make no tariff distinction. They are right, and it is contemptible for tobacco men and sugar men in this country to object.

This week begins the celebration of the founding of Quebec by the landing of Samuel de Champlain. It is not simply a picturesque old town, but it has a famous battlefield, which settled the political character of half the continent. Our country has to go to Florida or the Pacific region to find a city as ancient.

The governments that have been saying, "A plague on Venezuela" did not suspect their imprecation to be fulfilled so literally, but now the plague protects Venezuela against all violence except quarantine.

One of our popular magazines tells us, on the first cover page of its August issue, that this is an "Uplift Number," and the last page of the cover is given to an advertisement of—cigarets! Thus may boys be uplifted to the skies!

It is worth the money it has cost to learn that the votes for Mayor in this city were pretty fairly counted. But we do not quite know yet that they were honestly cast, without colonizing or repeating.

Financial

Good Crops of Grain

LAST week's official report concerning the crops was quite encouraging. Winter wheat is safe, and the indicated yield is 416,514,000 bushels, against 409,442,000 harvested last year. The condition of spring wheat has declined since June 1st, but is still above the ten years' average. It indicates a yield of 276,276,000. The indicated total, therefore, is 692,790,000, or 58,500,000 bushels more than was harvested in 1907. We have had larger crops only twice. The area of the corn fields has been increased by 1,065,000 acres, or about 1 per cent., to 100,996,000. Condition on July 1st indicated a crop of 2,726,000,000 bushels. Last year's was 2,592,000,000. In only one year, 1906, has the yield exceeded 2,726,000,000. It is too early now, however, to estimate with confidence the corn harvest. Probably the crop will be a large one.

There is still a promise of the greatest crop of oats ever known. Altho condition has declined, it points to a yield of 1,012,300,000 bushels, and in all probability the billion mark will be reached this year, for the first time. It is expected that this year's crop of barley will exceed last year's by 18,700,000 bushels, or 12 per cent., and that the yield of rye will fall slightly below last year's.

Reports from Europe say that demand there will make a good market for our surplus wheat. It should be noted, however, that Canada will have an unusually large quantity to sell. The railroad companies now estimate the wheat crop of Western Canada at 125,000,000 bushels, against last year's 80,000,000. As 67,000,000 bushels were sold abroad in 1907, this year's exports from Canada may be as much as 100,000,000.

Improvement in Business

FROM many cities come reports of increasing numbers of employees at work in factories and of growing demand for products. Improvement has been quite noticeable since July 1st. Among those who testify about it is E. H. Gary, chairman of the Steel Corporation, who said last week:

"From the viewpoint of the United States Steel Corporation, the iron and steel business has been better during the last two weeks than at any time since the depression of last October. Undoubtedly the result of the Chicago Convention has contributed largely to this favorable condition. The tendency since the beginning of the calendar year has been toward improvement, with some fluctuations until the readjustments in prices were made in the early part of June, when the placing of orders, in most lines, was practically suspended. This was because many of those who were contemplating additional purchases were in doubt as to whether there would be further adjustments. However, there seems to be a general feeling that bottom prices have been reached, and this, coupled with the satisfactory outcome of the Chicago Convention, has increased buying and also increased specifications against old orders."

The number of idle freight cars has been falling steadily for some time past. In each of the last four fortnightly reports a large decrease has been shown, the latest total being 312,847, which may be compared with the maximum, 413,338, reported in the latter part of April.

....The Farmers Loan and Trust Company, of which Edwin S. Marston is president, has secured a majority of the stock of the Franklin Trust Company, whose main office is in Brooklyn, and has elected as president Arthur King Wood. Mr. Wood, who is thirty-three years old, was born and educated in New York. He entered the real estate business in 1893, and from 1898 to 1902 was manager of the estate of Hamilton Fish. He then entered the service of the Van Norden Trust Company, and held the positions of assistant secretary, secretary, treasurer, vice-president and director. Mr. Marston is vice-president as well as chairman of the executive committee of the Franklin Trust Company. The other officers are William H. Wallace, Gates D. Fahnestock, and George H. Southard, Jr., vice-presidents, and Clinton W. Ludlum, secretary. Charles A. Peabody, president of the Mutual Life Insurance Company, has been added to the executive committee.

VOL. LXV NEW YORK, THURSDAY, JULY 23, 1908 No. 3112

Survey of the World

National Politics

For some days past, the main sources of political news have been Mr. Bryan's home in Nebraska, and Hot Springs, Va., where Mr. Taft is passing the summer. The two candidates are sought and consulted by party leaders and members of the national committees, and each is surrounded by press correspondents, who report the decisions or comments made. Mr. Bryan has promised to place Mr. Kern in his Cabinet if he should be elected. He thinks the Vice-President ought by Cabinet service to become familiar with the work which he may be required to do. He has also offered to give Mr. Kern and his family a home in the White House. In Virginia, Mr. Taft has been writing his letter of acceptance. Publicity for campaign funds has been a prominent subject for discussion and action. The Republicans decided, week before last, that publicity should be given to their receipts and expenditures in compliance with the law of the State of New York. On the 14th, Mr. Bryan, addressing the members of the Democratic National Committee, urged them to enforce at once the publicity plank of their platform. Whereupon they adopted the following resolution, the provisions of which had been suggested by him:

"Resolved, That the Democratic National Committee, in pursuance of the pledge given in the national platform recently adopted at Denver, announces that it will accept no contributions whatever from corporations; that it will accept no individual contributions above $10,000, and that it will make publication before the election of all individual contributions above $100, contributions received before October 15 being published on or before that date, and contributions received after that date being published upon date upon which they are received, and that no contributions above $100 shall be accepted within three days of the election."

In his address, Mr. Bryan remarked that the Republicans by a large majority had excluded a publicity plank from their platform, and had since been attempting to avoid censure by promising "to publish the contributions after election." But, he added, "it is not sufficient to learn after the election of the influences that have purchased the election." He had suggested that contributions under $100 be not published before election, because publication might embarrass contributors; for example, if they were employees of corporations, publication might "subject them to punishment." On the following day he commented as follows upon the Republican treasurer's announcement that his receipts and expenditures would not be published until after election: "What would you think of a sheriff who, when approached by a man from whom a horse had been stolen, said: 'You cannot get your horse back, but I can tell you who has it?'" On the 18th Mr. Taft announced that the Republicans would not accept contributions from corporations. By an act of Congress, approved on January 26th, 1907, corporations are forbidden to contribute. When it was pointed out to Mr. Taft that the courts had held that Presidential electors were State officers and that the election of them was beyond the scope of Federal legislation, he said that this would have no weight with him and the committee; the spirit and the letter of the statute would be obeyed. Mr. Gompers, president of the Federation of Labor, called upon Mr. Bryan and said he intended to do everything in his power for the success of the Democratic ticket. He will go on the stump

for Bryan and Kern. Interviews in the papers show that several who are prominent in the Federation will not follow him. Some appear to resent what they regard as an attempt on his part to deliver the labor vote. Mr. Hearst, when in Paris, last week, received a cablegram purporting to have been sent by Mr. Gompers, urging him not to run a third ticket and saying it would be "an act of the greatest patriotism for the Independence party to indorse the Democratic platform." He replied as follows:

"Tell Mr. Gompers that I am not authorized to speak for the membership of the Independence League, but, according to my personal standards, a purer patriotism consists in laboring to establish a new party which will be consistently devoted to the interests of the citizenship, and particularly to the advantage and advancement of the producing classes.

"I do not think the path of patriotism lies in supporting a discredited and decadent old party, which has neither conscientious conviction nor honest intention, or in indorsing chameleon candidates who change the color of their political opinion with every varying hue of opportunism.

"I do not think the best benefit of laboring men lies in supporting that old party because of a sop of false promise, when the performance of that party while in power did more to injure labor than all the injunctions ever issued, before or since.

"I have lost faith in the empty professions of an unregenerate Democracy. I have lost confidence in the ability, in the sincerity, and even in the integrity of its leaders. I do not consider it patriotism to pretend to support that which, as a citizen, I distrust and detest, and I earnestly hope the Independence party will give me an opportunity to vote for candidates that are both able and honest and for a declaration of principles that is both sound and sincere."

The Negro Voters

Mr. Bryan was asked, last week, whether it was true, as asserted by Bishop Walters, that he had assured a negro delegation that he regarded President Roosevelt's action in the Brownsville case as unjust and had said that he would recognize the negro race in appointments to office. He replied that it was not true. "I have refused to discuss the Brownsville case and I have not discussed the appointment of negroes." He did not intend, he added, to take up issues not presented in the Denver platform. It has since been pointed out that Mr. Bryan said in his paper, *The Commoner*, on December 14th, 1906:

"Whatever constitutional lawyers may decide concerning the power of the President to discharge or reinstate, no unbiased person will deny that the offense was grave enough to justify the President in doing whatever he has the power to do. It is inconceivable that fair-minded people should criticise the President for attempting to relieve the military service of the menace of a body of troops whose members will shield a group of criminals."

This was part of a long editorial article, the character of which is indicated by its title, "The President Sustained by the Facts." There were published, last week, signed statements from several prominent negro Bishops concerning the attitude of negro voters toward the tickets of the two great parties. We quote below passages from them:

Bishop George W. Lee: "The negro had better give the Republican party another chance as the only party that promises him anything."

Bishop A. Grant: "The disposition of Democrats where they control State governments to disfranchise the colored voters makes Mr. Bryan's party objectionable. When it is thoroly understood that Mr. Taft held up the Brownsville order, and at the same time asked the President to postpone action, it will give him strength with the colored voters."

Bishop L. J. Coppin: "The conservative leaders among our people do not hold the Secretary of War responsible for the unfortunate Brownsville affair, and they will advocate the election of Mr. Taft to give him an opportunity to act in the interest of fair play and equal justice to all, as exprest in the Republican platform."

Bishop W. B. Derrick: "With all manly and thoughtful negroes the Brownsville matter will have no effect in the coming campaign. Had the Democratic platform mentioned the rights and privileges of the negro we should have been astonished. . . . We consider that the election of Mr. Bryan would be a calamity to financial and business interests, especially in the South. We shall be found on platforms and in pulpits advocating the election of that champion of equal rights, William Howard Taft."

Bishop H. M. Turner: "Mr. Bryan will be elected unless he defeats himself by delivering too many speeches. The Brownsville affair will have its weight in opposition to Mr. Taft, yet he may overcome it. A large portion of the colored people will support Mr. Taft for party's sake. But some will not vote at all, and others will vote for Mr. Bryan as a rebuke to the Republican party for not allowing them to retain their civil rights, according to the pledges which Republican conventions have been making for over twenty years."

Prohibition Party's Convention

At the national convention of the Prohibition party, in Columbus, O., on the 16th, Eugene W. Chafin, of Chicago, was nominated for President, and Prof. Aaron S. Watkins, of

Ada, O., for Vice-President. There were nearly 1,100 delegates. Mr. Chafin was nominated on the third ballot. On the first there were votes for ten candidates, the Rev. Dr. William B. Palmore, of St. Louis, leading, with 273. On the second he had 418, while only 226 delegates voted for Mr. Chafin, but on the third 636 votes were cast for the latter, whose nomination, upon Dr. Palmore's motion, was made unanimous. Dr. Palmore was then nominated for the second place by acclamation, but he declined, and Professor Watkins was chosen. The two nominees are the candidates of their party for Governor in their respective States. Mr. Chafin is an attorney, and for some years he practised law in Waukesha, Wis., where he was born. The fourteen planks of the platform adopted are as follows:

1. The submission by Congress to the several States of an amendment to the Federal Constitution prohibiting the manufacture, sale, importation, exportation or transportation of alcoholic liquors for beverage purposes.
2. The immediate prohibition of the liquor traffic, for beverage purposes, in the District of Columbia, in the Territories and all places over which the national Government has jurisdiction; the repeal of the internal revenue tax on alcoholic liquors and the prohibition of the interstate traffic therein.
3. The election of United States Senators by direct vote of the people.
4. Equitable graduated income and inheritance taxes.
5. The establishment of postal savings banks and the guaranty of deposits in banks.
6. The regulation of all corporations doing an interstate commerce business.
7. The creation of a permanent tariff commission.
8. The strict enforcement of law, instead of the official tolerance and practical license of the social evil which prevails in many of our cities, with its unspeakable traffic in girls.
9. Uniform marriage and divorce laws.
10. An equitable and constitutional employers' liability act.
11. Court review of Post Office Department decisions.
12. The prohibition of child labor in mines, workshops and factories.
13. Legislation basing suffrage only upon intelligence and ability to read and write the English language.
14. The preservation of the mineral and forest resources of the country and the improvement of the highways and waterways.

E. Scrymgeour, of Scotland, organizer for the Scottish Prohibition party, suggested that the party here should send one of its leading men to make addresses in Scotland, and that in return his associates should be represented in this country by one of their speakers. Three members of the Kentucky delegation had by letter invited Mrs. Alice Roosevelt Longworth, the President's daughter, to attend the convention as the delegation's guest, but when they sought, in caucus, to obtain the approval of their associates in the delegation, it was withheld, and a motion in support of the invitation was voted down. One of the reasons given was that Mrs. Longworth recently attended the horse races at Lexington.

Unrest in Central America

The invading revolutionists in Honduras were defeated on the 17th in a decisive battle at Nacaomo, and President Davila announced that the revolt was at an end. They had captured Choluteca, a strongly fortified town seventy miles from the capital, but had afterward been driven from the place by Davila's troops. On the coast they had been repulsed at Ceiba. Those who menaced the eastern coast were commanded by Gen. Lee Christmas, of Tennessee, who was formerly a locomotive engineer. As the invaders came from Salvador or Guatemala, it was reported that they had the aid of both these republics. Honduras and Nicaragua have made charges to this effect before the new Central American Court of Justice, asserting that both Salvador and Guatemala have violated the new peace treaties by promoting this rebellion. The court, pending an investigation, has issued orders to both of them, commanding them to discourage the revolutionists in all legitimate ways and to place their armies on a peace footing. In reply they assert that their action has been in accord with these orders. The United States and Mexico have impressed upon them the necesity of complying with the provisions of the new peace treaties.——The uprising in Northern Mexico has been completely suppresst and more than 300 of the revolutionists, or outlaws, have been captured. It is reported that fifty have been shot and that more than one hundred have been sent to the salt mines for long terms. The uprising was incited by two agents of the juntas at St. Louis and San Antonio, who traveled in Northern Mexico, pretending to be Bap-

tist missionaries and holding many religious meetings. They were captured and have confest.

Politics in Panama

At the presidential election in Panama there were two representatives of the United States Government at each polling place. José Domingo Obaldia was elected President without opposition, the followers of Ricardo Arias (who had withdrawn) declining to vote, altho their names were on the registration lists. There was no disorder. The Presidential electors will meet on August 1st. In the city of Panama, on the 16th, there was a notable public demonstration in favor of Obaldia. Three thousand women joined 4,000 men in a parade, and at Obaldia's house two women praised him in public addresses, declaring that he was the savior of the republic, and saying that the United States was the republic's best friend. While it is asserted that the followers of Arias (the Government's candidate) show no ill will toward the victors, there is much evidence that the leaders of the administration party resent what they call the interference of the United States. It appears that the messages which are said to have caused the withdrawal of Arias were received from Panama's Minister at Washington and from William Nelson Cromwell, the republic's attorney or fiscal agent. Some of them have been published. They did not advise withdrawal, but predicted intervention if the election should be disorderly or unfair. The administration party's leaders ask the public to believe that it was useless to oppose Obaldia, because he had the open support of the Washington Government. Obaldia, whose father was President of Colombia half a century ago, has been Governor of the province of Panama, Minister to Washington, and Vice-President of the new republic. He has a large private fortune, and in his youth was a student in this country, where three of his nine children now reside.

The Pacific Islands

It is reported that the epidemic of cholera in the Philippine province of Pangasinan is decreasing. In one day last week there were 124 deaths in that province, and 185 in the entire island of Luzon. Since January 1 there have been 3,476 deaths from the disease within 150 miles of Manila.——Ignacio Villamor has been appointed Attorney-General. Isidro Pardez has been made a judge, to succeed Newton M. Gilbert, who recently became a member of the Commission. ——Since the law against the use of opium became effective, in March, the number of the slaves of the opium habit applying for hospital treatment has greatly increased. Of 307 admitted at San Lazaro Hospital, 260 have been discharged as cured.——New England manufacturers of khaki recently complained because the War Department had given an order for khaki uniforms in Manila, where British khaki would be used and the order filled by Chinese labor. The order has been rescinded, and it is officially stated that Secretary Taft was not responsible for it, action having been taken in his absence by Assistant Secretary Oliver. It is asserted that the Manila khaki is cheaper than the American and better suited for use in the islands.——A large band of armed fanatics, whose leader claims to be divine, is threatening the coast towns of northwestern Mindanao. In an engagement with the constabulary, last week, fourteen of these outlaws were killed.——Secretary Garfield returned a few days ago from a two weeks' visit to Hawaii. He said.

"The islands are thoroly American and the American spirit is particularly strong. I spent a busy two weeks in touring them and I found the people happy and prosperous and progressive. Of course, I made a special study of the questions and matters that come under the purview of my department. I observed the operation of the pure food law and was impressed by the favor with which it has been received by the people. The lighthouse system is in successful operation and I have but few recommendations to make with respect to it. There is not the slightest race agitation in the islands. The different races are living in the utmost harmony and I could not help observing the general prosperity of the people. I was greatly impressed by the success of the sugar and coffee industries and the possibility of their future development."

Old-Age Pensions in England

The old age pension bill past the House of Commons on its third reading by a practically unanimous vote, altho it was subjected to severe criticism

by the Opposition in the time allowed by the closure resolution, and it was not very ardently defended by the Ministerialist and Labor members. The London *Times* in attacking the bill referred to the remark made at the Denver Convention that Bryan ought to be nominated because he would be nominated, and said:

"It is much the same with this bill. It ought to pass because it will pass. No one admires it, no one believes in it, no one thinks that it will solve any difficulty, no one expects it to be carried out at the figure named by the Government, and no one knows where the money is to come from to meet either real or estimated expenditure. Yet such is the working of political systems here and in America that a bill or a Presidential candidate desired by nobody may have to be accepted by everybody."

The chief arguments brought against the bill were that it would cost much more than the Government estimate of $37,500,000 a year—Mr. Balfour estimated it at $57,500,000—and that it would be impossible to determine the eligibility of applicants under the provisions of the bill. Many laborers could not prove that they were seventy years old, and, on the other hand, a liberal policy on the part of local committees would open the way to extensive frauds by misrepresentation. It was also feared that the American system of claim agents might be introduced, by which the beneficiary would be robbed of his first year's pension. Objections were also raised to other requirements held to be of an inquisitorial nature, such as the sources of every item of the applicant's income, whether he had received charitable aid, whether he had resided twenty years in the country, and whether he had all his life worked "according to his ability, opportunity and need." It was pointed out by the Opposition that no one, not even a member of the Government, could conscientiously affirm that he was qualified to pass this last character test. Mr. Snowden, speaking as a Labor member, said that to his mind the problem was the more equal distribution of wealth. The question of social reform in his view was the making of the rich poorer and the poor richer. There was no way to equalize the distribution of wealth except by doing that; and he advocated old-age pensions as a means of equalizing the distribution of the wealth of the country. He and his friends were not going to vote against this bill. But personally he exprest no gratitude for it. He was going to take it for what it was worth, and use it as a lever for extorting something more. The most eloquent speech in defense of the bill was that of Mr. Masterson, who concluded by saying that he did not quarrel with the description of the measure as a great experiment. They all knew that it would require in its details many modifications. They all knew that some of the results which they feared and some of the results which they wished would not follow from the bill; and that, not only in matters with regard to which there had been criticism in the House, but in matters which no one had the foresight to consider, there might be changes produced by the bill in the social life of the people for better or for worse. But, tho the Government acknowledged the bill was an experiment, and tho they had, in the main, adopted an attitude of defense toward it in its progress thru the House, as it left them their attitude was very far from being a defensive attitude or an attitude of apology. For years the reproach had been laid on this country that, in the matter of old-age pensions, it lagged far behind the Colonies and even the lesser countries of Europe. But this measure raised this country from a position of the last to a position of the first in a matter which, without insular pride, might be a subject of satisfaction even to the most confirmed of Little Englanders. He knew it would relieve an anxiety which was passing from an obsession into a terror for those who in the heart of our civilization were walking in the shadow of death; that in thousands of humble homes it would remove the desperate and cruel choice of the wage earner between the needs of the parent on the one hand and the needs of the child on the other; and that it would give old men and women a new self-respect, a new hope and a new determination pursued in the knowledge that they were bringing to the family exchequer at least as much as they were receiving from it. Moreover, the bill would enlarge the spending power of the poorer classes, and that would result in one very desirable and immediate effect—the limitation of unemployment, for the enlarged demand for fuel, food and shelter would produce an enlarged demand for the labor required in the supply of those commodities.

French Affairs Shortly after the adjournment of Parliament President Fallières and Foreign Minister Pichon left Dunkirk on the battleship "Verité" on a visit of state to Scandinavia and Russia for the purpose of bringing these countries into closer relations with France and so promoting the peace of the world. The Socialists in the Chamber of Deputies made the same opposition as their comrades in the House of Commons to an official exchange of courtesies with the Czar of Russia.——The Government, altho commanding a substantial majority in the Chamber of Deputies, has not been successful in putting thru its most important measures, which must now go over to the fall session, when the Budget will be the principal order of business. The question of capital punishment was hotly debated but not acted upon, further consideration of it being postponed by a majority of two. The Minister of Justice, M. Briand, favors its abolition, but there is a strong popular feeling that the leniency shown to criminals is responsible for the alarming increase of violence in France. There have been recently some frightful instances of blood lust, and the number of murders has increased 40 per cent. in five years. The guillotine is still officially recognized, but it has become the invariable custom for the President to remit the penalty of criminals condemned to execution and sentence them to penal servitude. Both parties to the discussion in the Chamber agreed on one point, that is, that the exploitation of crime by the sensational newspapers was largely responsible for its spreading, and M. Briand has accordingly issued formal and strict instructions to the police not to furnish photographs of criminals or details of crime to the papers for publication.——The committee of the French Senate having in charge the old-age pension bill has resisted the pressure put upon them by the Government to come to an immediate decision, and will devote the recess to the consideration of its financial consequences.——Another important bill that is held over is that providing for the transfer from the state to the city of Paris of the chain of fortifications around the capital, in order that they may be converted into parks connected by a circular boulevard 215 feet broad. Paris has only 4½ per cent. of its area in park space, while London has 14 per cent. and Berlin 10 per cent.——The income tax bill has been modified to meet the great opposition manifested to the clause authorizing the Government to force the taxpayer to show his books in case of the accuracy of his declaration being contested. The Federation of Shopkeepers organized a national demonstration against such inquisitorial powers, in which 350,000 citizens took part. As a compromise the following substitute for the obnoxious clause was adopted:

"If the Controller accepts the declaration as true, it is taken as the basis of the tax. If he regards the declaration as inaccurate, he invites the taxpayer to alter it within twenty days. If after the lapse of that period it has been impossible to come to an agreement, the Controller makes an official valuation. The Controller justifies his estimate before the administrative tribunals with the help of information resulting from all acts, judgments, declarations, administrative documents, and notes, or proofs and titles of any kind legally in the cognizance of any of the state administrations. The taxpayer may contest the estimate of the administration by the use of any documents which he may consider conclusive. In no case, even if expert evidence is ordered, can the court demand the production of accounts. The tax is doubled, but only on the dissimulated portion of the revenue, in the case of the taxpayer who has made a declaration below the facts."

The Persian Crisis The *coup d'état* of the Shah seems to be successful in Teheran, but in Tabriz and other provincial capitals the revolutionists are still holding out. Colonel Liakoff, the Russian officer who took possession of the capital as commander of the Shah's bodyguard of Cossacks, is ruling with an iron hand. The city has been under martial law for a month now, and is said to be more quiet and orderly than it has been for a year or two. The Parliament is dispersed, the political clubs broken up, and no newspapers are allowed to appear. Arrests and proscriptions are frequent. In British newspapers and Parliament considerable irritation has been manifested at the spectacle of a Russian officer crushing out a nascent representative government, and it is doubtless in deference to this

that the Russian Minister at Teheran has refused to allow Colonel Liakoff to be appointed Governor-General of Teheran, as the Shah desired, and the regulations for the preservation of order which he signed and published have been replaced by orders emanating from the Persian authorities. It appears that the people are still devotedly attached to the Constitution, altho the Parliamentary régime has so far brought them only turbulence and hard times. At Tabriz the people rose in the night and attacked the headquarters of Rachin Khan, who five days before had entered the town to restore the authority of the Shah. The revolutionary movement had the support of the elders in all quarters of the town except one. Rachin Khan withdrew his troops and they are reported to be in the hills without ammunition. The mob afterward looted the houses of six or seven of the Shah's richest supporters, including the Minister of Finance. The United States Government has called the attention of the Persian Government to the danger threatening the American missionaries and consulate at Tabriz, and the latter has promised full protection.

A United South Africa

A convention of the first importance will meet soon in Durban, the port of Natal, in South Africa, to consider the question of either a close federation or an absolute union of the four chief divisions of South Africa, namely, Cape Colony at the south, north of it the Orange Free State and Natal, and further north the Transvaal. Still further north is Rhodesia, which also is British, but it has not yet the population or political organization that would allow it to join in this conference. It is now only six years since it was decided at Vereeniging that Great Britain is to rule South Africa. Two years ago, with great confidence and generosity, the British Government restored to the Orange Free State and the Transvaal their constitutions and self-government. But the four States, while all remaining loyal to Great Britain, remained, excepting Natal, mainly Boer in their white population, and Natal is nine-tenths black and the blacks far outnumber the whites everywhere. Since the end of the war there have been three conferences of the governments of the four colonies held for agreement as to tariffs and the control of railroads, etc., for the four are as independent of each other as were our thirteen colonies after the Revolutionary War, except that they accept the sovereignty of Great Britain. This has created great trouble, as it did with us, and these agreements have no force and are hard to provide for. At the last conference lately held it was agreed by them all that they would advise their several governments to appoint delegates to another conference whose task it should be to consider the question of close federation or absolute union.

Foreign Notes

A new Cabinet has been formed by General Taro Katsura to take the place of that of Marquis Saionji. The incoming premier declares his intention to devote himself to the rehabilitation of the national finances and to maintain friendly relations with all the Powers. His policy is to be "nationally representative and non-partisan" and directed toward "recuperation rather than aggression." The change of ministers does not, however, satisfy the non-military party, as General Terauchi retains his position as Minister of War, and the alternation of premiers does not insure any alteration of policy. Marquis Katsura was premier at the conclusion of the Russo-Japanese War, and was obliged to give way to Marquis Saionji on account of the unpopularity of the peace of Portsmouth. ——The Chinese Government has exprest its thanks to the United States for remitting a portion of the indemnity from China on account of the Boxer depredations, and its intention to use the money in sending Chinese students to America to be educated.——The "Young Turkey" movement in the Monastir district is assuming alarming proportions. The Turkish officers, who are to be tried by court-martial for taking part in the recent Macedonian disturbances, have the sympathy of a number of the officers and troops, who threaten mutiny if the prisoners are not released. General Osman Pasha, in command of the troops at Monastir, was assassinated by one of his officers in the barracks, altho he had promised an amnesty to the prisoners.

John Worth Kern

BY E. I. LEWIS

[Mr. Lewis is one of the editors of the Indianapolis *News*, and is therefore a fellow townsman of the Vice-Presidential nominee of the Democratic party. We reproduced photographs of Mr. Kern, his wife and children in last week's issue of THE INDEPENDENT.—EDITOR.]

JOHN WORTH KERN, of Indiana, nominated by the Democrats at Denver to attend Mr. Bryan on his third appearance on the Presidential race course, is, nationally speaking, an unknown quantity minus a "barrel." His assets are three—first, an attractive personality, that during the campaign will win for him—personally—many friends and admirers, if it does not win votes for the ticket; second, good oratorical powers and satirical wit, with which he combats opposition largely by ridicule; third, one pair of the most picturesque whiskers that have ever been brought into American politics, and which, toyed with by the cartoonists and humorists of the country, should bring him into a full measure of fame within a month.

In addition to these assets he has long been a very close personal friend of Mr. Bryan; he is from Indiana, a State that is always an important factor in national elections, and he has twice been the head of the Democratic ticket in that State. But as for "barrel" and those financial qualifications generally expected in exchange for a fleeting honor of the nomination, or even election, for Vice-President, Mr. Kern is *nil*. Probably he has accumulated $50,000, but more likely not.

If the November election should place Bryan and Kern at the head of the Government, it is not unlikely that the Commoner may find it necessary to make good a promise, given in a jocular way early this spring when he visited Indianapolis and was a guest of Mr. and Mrs. Kern at their home, in North Pennsylvania street. A reception was given for the Nebraskan by the Indiana Democrats, who have always been steadfast, and in the course of that evening John Hollett, president of the Indiana Club, in speaking, turned to Mr. Bryan and said: "This organization of steadfast Indiana Democrats will attend the next Democratic National Convention in a body and we will go by the way of Lincoln and bring with us the next Democratic nominee for Vice-President—Mr. Kern!"

"Ah," remarked Kern as, chewing the butt of his cigar, he arose, "let this stop right here. It is rumored that it is costing my neighbor, Charles Warren Fairbanks, $50,000 a year—I am too poor to think of running for Vice-President. At that rate I could only afford to stop in Washington a day."

Mr. Bryan was on his feet instantly. "Gentlemen and Mr. Kern," he said, "if it is my fortune to be nominated by the Democrats of the United States as their candidate for President, and it is Mr. Kern's fortune to be nominated for Vice-President, and if we are elected, I will give Mr. Kern part of the White House so he will not have to pay rent in Washington!"

It was a mere passing pleasantry of a pleasant banquet and laughingly was dismissed, but should the November election bring Democratic success, Mr. Bryan may find it necessary thus to care for his running mate, and, judging from their associations in the past, such an arrangement, or any one that would bring the Bryans and the Kerns into close relations, would be a happy one for both. In the course of time such close association might ease off the strain that a visit of the Commoner to the Kern home always produces on the Kern boys. They are two—John, Jr., and William—and they are real boys, both under ten years of age.

On an occasion when Mr. Bryan dropped in on the Kerns he came out of strawberry season, but Mrs. Kern found that there were a few very early berries on the market at 50 cents a quart. Now, the Kerns do not wax fat on 50-cent strawberries, and Mrs. Kern, after preparing them, and before admitting Mr. Bryan to the dining room, took young John and William to one side and cautioned them strictly not to say a word when the strawberries were brought on.

She was particular to impress on them that exclamations of surprise or pleasure over the strawberries would not be "good manners." But when the berries were served, Mr. Bryan raised his hands in surprise and declared:

"Why, Mrs. Kern, what beautiful berries; they are the first I have seen this year—where in the world did you get them?" He was told that they were the first offering of the season. The boys and their father ate the berries as though they were accustomed to getting them every day, but the moment that the dining-room door had closed on Mr. Bryan the boys ran to their mother and one of them exclaimed:

"Oh, mamma, Mr. Bryan hasn't as good manners as Pa, has he?"

This story, told to Mr. Bryan later by Mr. Kern, who never can keep a family skeleton under cover, especially if it has a grin on it, has become one of Mr. Bryan's children's stories, told with great easing effect on the children grouped around other family boards to which he is a visitor.

Kern, himself, has some of the distinctive earmarks of Daniel Voorhees Pike in Booth Tarkington's "The Man From Home." Like Daniel Voorhees Pike, he hails from Kokomo, Ind., and, like Daniel, Kern was a long, lean, lank country lawyer that, from the stories told of him in the old days and his witticisms today, seemed—like Daniel Voorhees Pike—to have been a sort of a David Harum of the law as practised and mixed with Democratic politics in the oldtime Hoosier county seats. Whenever the scattered

MR. KERN'S HOME.

Located on Pennsylvania street, Indianapolis, Ind., within four city squares of Vice-President Fairbanks's home and within six squares of the Benjamin Harrison home.

clans gather at Kokomo it is always to Kern and to Tod Sloan—another illustrious son of the old natural gas town—that people refer as the two glittering successes turned out by the community.

Kern came as an early Christmas present on December 20, 1849, to a little home perched on the turbulent Wild Cat, some four or five miles south of Kokomo. His father, Dr. Jacob W. Kern, was a Virginian by birth; his mother, whose maiden name was Nancy Liggett, was an Ohioan, and the two of them came of stock so long planted on this soil that the son John cannot be credited to any other than just plain American stock, unless you go back to Scotland. Both his father and mother are of Scotch descent, his father being a descendant of Robert Bruce, and his greatgrandmother on his mother's side was a sister of Mrs. William Henry Harrison. Mr. Kern's ancestors founded Kerntown, Va. He is a very fine and pleasing type of American — a cultured gentleman, traveled and carefully read, a good talker, an adept in the American art of telling stories, and very nearly a master of sarcasm that does not cut, but that is destructive as ridicule. He looks the American type, being tall, rather lank, and decidedly energetic. And he has that one thing, the indescribable something that we as Americans like to see in all Americans—a good, "warm heart," that makes him beloved by his neighbors and by all who know him.

It was Kern, himself just defeated for Governor of Indiana, who uninvited appeared at the great Indiana Republican celebration held in Indianapolis after the returns of the November election in 1904 had shown that the Republicans had won in State and nation and that Charles Warren Fairbanks had been elected Vice-President, and who at that Republican jollification paid the highest and most touching tribute to Mr. Fairbanks. It is these things that show the character of the man and the reason why he is so well liked by both his own partisans and the rival party leaders that they all joined equally in welcoming him home from Denver, with Mr. Fairbanks as one of the chief orators of the occasion.

The Vice-President and the Democratic Vice-Presidential nominee live within three blocks of each other, and they, and their families, have always been very close friends. Mr. Fairbanks and Mr. Kern often go to the election polls together.

Mr. Kern was not born with a silver spoon in his mouth. His father was a country physician, who followed the old school of liberal applications of quinine and whisky and liberal bleedings, and who, characteristic of those physicians, never accumulated any surplus wealth. In 1854 he moved by wagon to Warren County, Ia., and the character of the settlements in which the Kerns lived is best indicated by the statement that the first railroad train that John Kern saw made his fifteenth year a red-letter one. It also brought him back to the country south of Kokomo, where, by farm work in the summers, he obtained the money with which to complete his education by attending the Indiana Normal School in Kokomo. He rode back and forth from home to school and school to home, ten miles daily, and it was on those rides, with his thin, long legs dangling over the sides of his farm horse, that he began his oratorical training. His plugging old horse, and perhaps the winter birds, were his audiences.

Then he taught school in the country and thus earned the money with which he went to Ann Arbor. He graduated from the law department of Michigan University in 1869. He began his political career when he was twenty-one, by trying to get into the State Legislature in the face of 1,200 majority against him. That campaign opened the eyes of the people and also showed that those ten-mile rides and their oratorical flights were not without effect. He was elected City Attorney of Kokomo as a result of this discovery and his affability, and in 1884 was placed by the Indiana Democrats on the State ticket for the office of Reporter of the Supreme Court. His election took him to Indianapolis, and thus he was introduced to the Indianapolis bar, of which Benjamin Harrison was one of the leading lights.

Mr. Kern was always in the heat of political campaigns, and for many years a Democratic Legislature in Indiana would have meant a seat in the United States Senate for Mr. Kern. But the

Democrats have failed to capture the Indiana Legislature since the days when Daniel Voorhees and David Turpie were retired and Mr. Fairbanks and Albert J. Beveridge were sent to Washington in their places. In 1900 he was nominated for the head of the State ticket, and was defeated with his ticket, and in 1904 the same result attended his second nomination. In 1904 he was spoken of prominently at the St. Louis convention as a running mate for Mr. Bryan. He has always been a Bryan enthusiast in Indiana and a "regular" Democrat.

As a lawyer Mr. Kern has always ranked well, and his legal profession is his sole capital. The accumulated dividends are political honors, the general good will of the people of his own State —irrespective of party affiliations—a modest home in that part of the city that was the home of Benjamin Harrison and is now the home of Vice-President Fairbanks and Senator Beveridge; and a happy family and ideal home life in that home.

Mrs. Kern is a home woman of the Mrs. Roosevelt type. She is prominent in the more solid social affairs of the city. She is a leader in all organized charitable work and in promoting kindergarten work, and is also one of the leaders in the local Council of Women. Mr. Kern was born a Methodist, but the Kerns are now members of the Tabernacle Presbyterian Church of Indianapolis, Mrs. Kern having always been a Presbyterian. There are three children—Miss Julia Kern, a young woman whose education was finished in Miss Gardner's school in New York, and the two boys, John, Jr., aged nine, and William Kern, aged five, who are in the Indianapolis public schools.

As for Mr. Kern's whiskers that will probably become noted—he long has worn chin whiskers. He emerged with them from the whisker days, when in Indiana not to wear whiskers was considered a physical defect, and the days of the smooth-face mania which swept Indiana and the West and spared in that State but few whiskers, notable among them the sluggers of "Uncle Jack" Gowdy, whose, however, fell before the razor during his days as consul-general at Paris, passed without having touched Kern's wind-breakers. As long back as people can remember Kern, he had them, and it was—and is—his habit to stroke them lovingly as he was at work or in an argument at bar. He has withstood long years of joking about those whiskers.

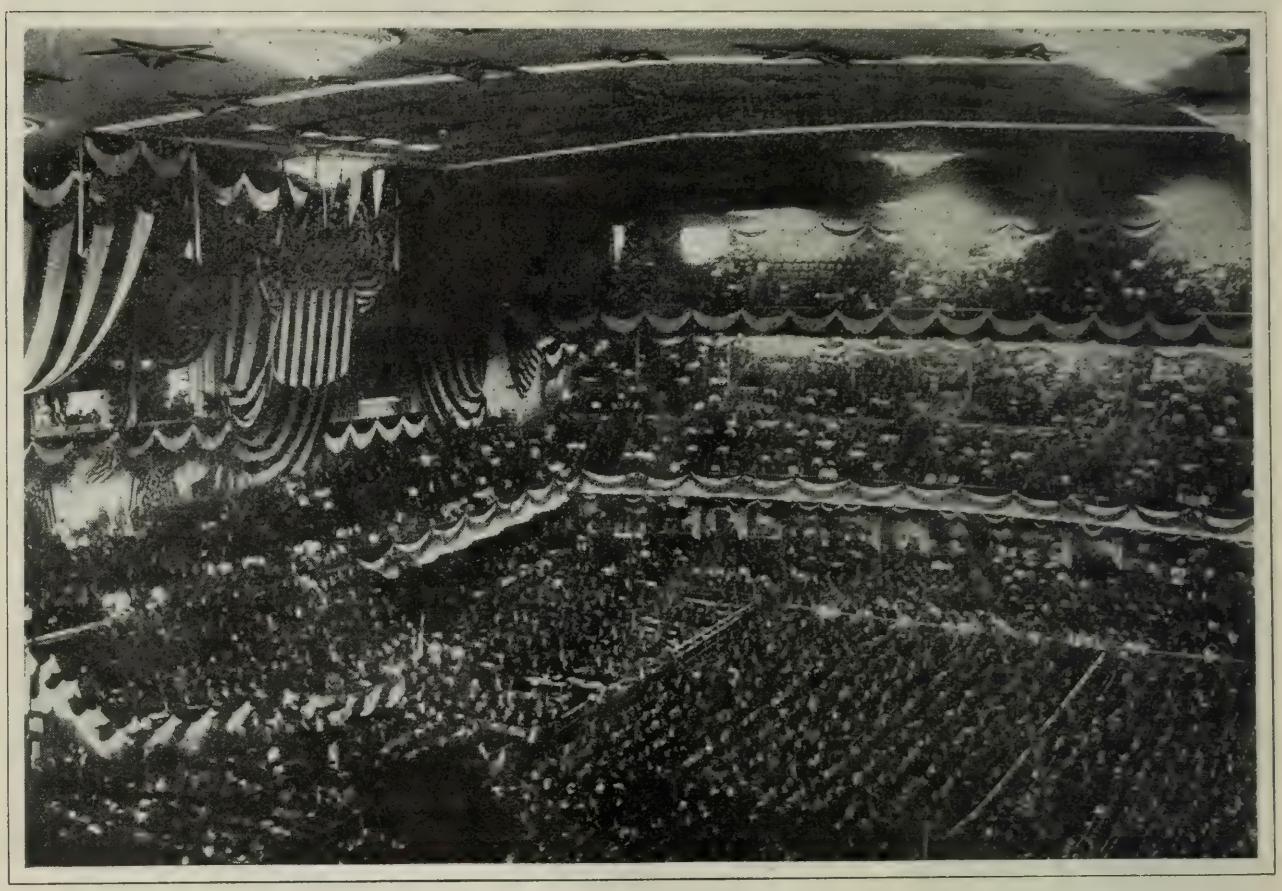
Recently two or three politicians called to see Mr. Kern at his office. One of them jocularly asked Mr. Kern why he wore "those whiskers."

Mr. Kern stroked them thoughtfully and lovingly a few seconds and then remarked:

"Well, boys, I don't know, but I think I wear them chiefly because they belong to me."

INDIANAPOLIS, INDIANA.

The Democratic Convention



BY CHARLES MOREAU HARGER

[Our readers will remember Mr. Harger's article in our issue of July 2d on "The Republican Convention," with which he served as assistant secretary. We were so pleased with that article that we asked him to go to Denver to describe the Democratic Convention to our readers and compare it with the Republican Convention. Mr. Harger is editor of the *Reflector*, of Abilene, Kan., and for some years has been a frequent contributor to our columns.—EDITOR.]

THE Republican convention was to Chicago an incident; the Democratic convention was to Denver an event. The latter was a fête; the former a formal conference on the state of the nation. Therein is expressed their difference. Chicago was interested in the visitors; Denver was eager to have the visitors interested in the city. From the street urchin to the smiling Mayor was a cheerful readiness to point out everything that was lovely and of good repute.

Nor did the city depend on pleasant

words, a sea of bunting and streets a-wave with flags to make a good impression—it thought of the odd and unusual. It put a band of Apaches in full redskin garb and a company of cowboys in plains regalia aboard street cars and rode them up and down the main thorofares for the delectation of the Bostonese. It brought down from the mountains carloads of snow, which was dumped on the asphalt near the handsome new convention hall, and invited the delegates to a snowball battle in the bright sunshine of mid-July. And the visitors responded to it all with praises for the city, for the people, for the climate, for the scenery, for the decorations and for the courtesies.

THE DEMOCRATIC CONVENTION IN SESSION.

So it was a very good-natured company, responsive to the slightest signal for emotion. The delegates cheered even when the chairman announced that a telegram was at the desk for John Jones.

Denver is "a mile high," as was explained at frequent intervals, and that may have had an influence. The hall was arranged so that all could hear the speakers, which also helped. Certainly there was a far more spontaneous response to every exciting event than at Chicago. The audience caught points quicker. When the chairman kissed three little flower girls somebody called out "Hobson!" and the throng fairly chuckled at the joke. When it disagreed with a speaker it did so vociferously, punctuating its suggestions with vigorous exclamations.

Nervous, high-strung, bent on a good time, both delegates and visitors exhibited the typical Western spirit, to which even Eastern attendants surrendered themselves. The chairman used the gavel ten times as much as did the Chicago chairman, and yet the order was better during the real work of the sessions. It is the Western way of doing things—get all there is in it, both of fun and of results.

The "demonstrations" were a better spectacle than at Chicago. The compact hall, the gorgeous interior decorations and the exuberance of being, as aforesaid, "a mile high" helped. Then there

was the Chicago record to beat. Nobody supposes that eighty-eight minutes of noise is all a natural expression of approval. While some delegates and visitors were rending their clothes in vigorous shouting, others sat and calmly read newspapers, as self-possessed as if on their back porches of a quiet Sunday morning. It all depended on the point of view. The cheering "record" is becoming a nuisance, and after that record has been raised a few more half hours it will be necessary to devote whole sessions to it in order to adore properly some favorite son. This performance was planned well and carried out as completely as was ever such a proceeding. It was a similitude of emotion in its highest form, because animated by rivalry—but it was largely machine made.

Obviously the Oklahoma "spirit" was as prominent as in Chicago and much more strenuously expressed. The new State had a fine suite of rooms on the most expensive floor of the most stylish hotel. It brought a delegation of speech-makers and something like eight hundred citizens, all of whom seemed to think it necessary to proclaim Oklahoma's greatness. The orators made addresses on small provocation in hotel lobbies or on the streets, differing from the method at Chicago, where Oklahoma was chiefly notable for its terrific excitability in the convention sessions. The three dominant features of this spectacle were Oklahoma with its overtopping noisiness, Nebraska with its assumed superiority because of its possession of Bryan, and New York with its Tammany braves. These last were reputed to have come with 30,000 bottles of beer and nine bottles of mineral water. They paraded the streets behind a band that repeatedly played "Tam-an-nee" and assumed a position as the real politicians of the sessions. "We are old stagers," one of the tribe declared. "These other cheering, wild-acting delegates are attending their first convention."

It was curious, too, to note the difference between the South's delegates to this convention and those who went to Chicago. To the latter journeyed the younger generation; to Denver came the gray-haired colonels, the men with goatees and a soft accent. The old generation of Southern politicians is in the Democratic party, but it is fast passing, and it will be but a few years when all the delegates to both party meetings will come from the younger set—and then we may have an entirely different sort of line-up in our convention doings. The Southern politician in his most typical aspect gave evidence at Denver, because he was at home and had something to say; at Chicago he was subdued, and only by a narrow margin after a sharp contest saved himself from loss of representation and consequently of influence.

The feminine visitors had much more enjoyment than the Republicans gave them. Two "princesses," Mrs. Longworth and Mrs. Ruth Bryan Leavitt, sat in the same box, and were in the receiving line at the same reception. It was the opportunity of a lifetime to get next to the royalty of the republic. One would think that out in the boasted freedom and independence of the West little attention would be attracted by the presence of the daughters of Presidents and of may-be Presidents—but the craning of necks, the rush for a handshake, the exaggerated desire for approach to the near-great evidenced the lurking love of stately glory. Even the West is impressionable when fame appears.

Woman delegates were here, as at Chicago, but they did not get prominent places on committees, and none was permitted to address the convention. The place of woman in national conventions —at least until she secures suffrage in some States that have a pivotal position —must be confined to gracing the audience with her charming gowns and giving to the gathering a touch of daintiness and of beauty.

The women who journeyed to Denver were as well dressed and as well acquainted with the world's ways as would be found at the average national federation of women's clubs. They were not to be distinguished in the fashionable cafés from the millionairesses of the Colorado capital; they frequented the headquarters, and many remained as reception committees during long, wearisome hours of crowds and annoyance.

It was a striking sign of the widely diffused prosperity that exists in this

country that made it impossible to separate surely the dweller in Connecticut from the resident of Wyoming; it argues a broadening Americanism that does credit to our cosmopolitan citizenship Of course the Westerners wore no silk hats, and there was a breeziness in their ways—but they measured up in dress and manner with their Eastern brethren.

The crowd was long on badges—not merely delegates' and officers' insignia, but decorations of preference. This was to be expected—it was a Western convention and the Westerners are by nature and training "jiners." They wear on their coat lapels strange emblems and weird designs of lodge significance; they take kindly to badges; this was a badge-wearing occasion of great moment, and they indulged to their hearts' desire.

Then there was the music. It was dealt out by a bandmaster who had a keen sense of fitness. He knew when to play "Maryland," when to swing into "Old Kentucky Home," and when to crash out "Dixie"—and bring a wildly enthusiastic yell every time. The band played "Dixie" more than at Chicago; it knew its audience. Effervescence and explosion were the dominant factors and the leaders knew it—why not take the tarts while they were passing? It is a good rule in politics as in some other things to do that.

It is not particularly clear why it is considered as helping the cause to blow horns and yell on the streets after nightfall, but certain it is that such proceeding appeals to the younger generation. The convention spirit blends easily into that of carnival, and this transformation was easy at Denver—which is "a mile high." The blasé newspaper correspondents said it was because of the natural sympathy with the "outs" rather than with the "ins" that actuates many an American to rejoicing. It was really the natural love of noise that animates younger America. Besides, the convention was a big thing for a moderate sized city. While the minority element was the conservatives and dominant forces the radicals, the situation lent itself easily to tumultuous hilarity. But it was all in good nature, for Denver was strictly on its best behavior every hour of convention week. It sent home every visitor imprest with its kindliness, with its climate, with its picture of mountain tops against the western sky—and the jubilant citizenship of its Middle West tributary territory.

Underneath the shouting and the music was a feeling that the convention was in a sense farcical. Probably there was something of the same at Chicago, for in both was the same inevitable result which all the newspaper talk about "stampedes" could not change. That nine hundred men should sit like pawns waiting on orders to move sent by telephone from a farmhouse in Nebraska, to which the cheering was likewise transmitted by 'phone, was not exactly to the liking of many of the Democrats present. With the directions wired in, with the platform submitted sentence by sentence by the same means, of what use was the battery of adding machines on the secretary's desk except to record some vote on the hour of adjournment?

It is a poor commentary on the independence of the American citizen and on our political system when a great national convention degenerates into a formal approval of the will of one or two men. It is a far removal from the plans of the fathers of this Government. This convention was too obviously this; it was without initiative, and because of such conditions it degenerated into a merry-making and a forum for oratory—when the audience liked the sentiments, but not otherwise.

The delegates were submissive to the point of childishness. One delegation sent a committee to find out whom Nebraska favored for Vice-President, and was informed that it would be notified "in due time," which it was—but why should American citizens let others do their thinking for them? The Denver convention not only allowed one man to do the thinking, but it gave approval to his every idea. The Chicago convention likewise had domination, but it was a divided rulership, which made it that much better.

It is such domination that makes delegates sit in their rooms after the day of subserviency and wish there were a better way. Will the time come when the voters will go into booths in their wards and in country precincts and solemnly

make some marks on a piece of paper and so decide the nomination of President and of Vice-President? No more bands or cheers or badges or perspiration or oratory? No more extra editions of newspapers with news two hours ahead of its happening? No more "psychological moments," no more "stampedes"? If such condition come to pass, each party will miss a great deal of fun, will lose a great deal of enthusiasm in the opening of the campaign, and will reduce the thrilling, exciting, gorgeously staged pageant of today to the rank of a cold-blooded surgical operation.

A national convention has its faults; it is ridiculous in some of its features, but it is the biggest spectacle on the boards in a quadrennium and worth the price of admission several times over. This performance, the stage settings and the fervidness of the actors appealed to the onlooker, regardless of his personal ideas of the outcome of it all. Of course, it had a precedent to exceed; there must be more flags, more bands and longer "demonstrations" than at Chicago—and so far it made good. But as a business-like planning for a great campaign, in which the only argument that counts is votes, it was inferior.

The pathetic part of a convention is when the last session has adjourned, when the booms are bursted, when the candidates are out of the running. Few remain to see it, for the rush to the home-going trains is heavy. Central committeemen and managers recklessly pull down bunting, flags, pictures, heaping them on the floor for porters to clear away. Tons of pamphlets, "appreciations," encomiums, are carried to the trash cans. The likenesses of Johnson and Gray and Towne and the rest are past for the present into forgetfulness. Marching clubs discard their loud regalia; street fakers show but one picture on button and pennant—the others to the scrap heap.

It means a great deal of money and time wasted, for it takes money in large rolls and time in weeks to conduct a pre-nomination campaign. Banners and headquarters and publicity come high. One sub-manager showed me his personal expense account—it would have purchased a reasonably good motor car or a fair farm in the Middle West. And there were several such sub-managers in that boom that failed.

But maybe it was not all in vain. To be sure, he and the others who "also ran" did not win, but their followers were cheered to heartier enthusiasm for the ticket and will give it better support next November, when it is necessary to have votes.

That, after all, is the province of the national convention. It is a street pageant to attract the people into the main tent. The Democrats spared nothing on this feature; they had a more startling street parade than the Republicans. It remains to be seen which gatekeeper will take in the larger receipts.

DENVER, COLORADO.

The Fool Wish

BY LA TOUCHE HANCOCK

OF all the wishes that one hears
  What makes me really very wild
Is when a man of fifty years
  Says, "Would I were again a child!"
I'm fifty, but I would not care
  To have my boyhood back again.
In fact, the prospect's apt to scare,
  When I recall the birch and cane,
The lessons, and the lines I had
  To write in Latin and in Greek—
I must have been extremely bad,
  With oh! what quantities of cheek!

The opportunities I missed,
  When I was starting out in life,
The girls I flirted with and kissed,
  The one I—didn't—make my wife!
Such things and half a hundred more
  I think of with no trace of joy,
Nay, I most heartily deplore
  I ever was a little boy!
So now I've given life a test,
  I hate to hear that fool refrain,
Tho some may wish it, I'll be blest
  If I would be a child again!

NEW YORK CITY.

What Is an "Adequate" Navy?

BY PARK BENJAMIN

THE platform adopted by the Democratic National Convention declares that the constitutional provision of a navy means an "adequate" navy. So far as the present writer is aware no one has ever maintained the proposition that the United States should limit its navy to one inherently inadequate—but on the contrary everybody, saving those, if any there be, who believe we should have no navy at all—has insisted that his particular conception of a navy is precisely that which is adequate to the country's needs. And yet the widest possible divergence of opinion exists as to what the size of the navy should be—with the result that the mere term "Adequate" conveys no definite meaning.

For the last year or so the extremists have almost monopolized the discussion, and each party in turn has drawn to itself an unusual proportion of people who ordinarily pride themselves on keeping the middle of the road. On the one hand there is Representative—formerly Naval Constructor—Hobson, young, energetic, brilliant, whose gallantry at Santiago nobody has forgotten, or is likely soon to forget—telling us that nothing short of the biggest navy in the world can adequately meet our needs—and enforcing his advice with all sorts of lurid pictures of dreadful wars lurking just under the horizon. And on the other, there is the Rev. Dr. Jefferson and his three hundred more or less clerical associates bravely holding the pass against the Hobsonian cohorts and telling us that every battleship built means one possible university the less, and that at most a small floating police force is all we ought to support. Between Mr. Hobson and Dr. Jefferson stand the Navy people, whose war cry, first, last and all the time, is efficiency—but whose tendency is rather toward big ships than big fleets; the concerns which build ships and guns and make armor, who steadily work twenty-four hours every day to keep up their market; the submarine and torpedo boat promoters, who detest battleships even more than Dr. Jefferson does—and lastly the man in the street who has been brought up on Captain Marryatt and Fenimore Cooper, and sees everything naval thru the glamour of romance and does not care what sort of a navy we have so long as he, himself, feels that it includes hearts of oak standing by to lick all creation, especially the Britishers and the Japs.

While the assertion that we need an "adequate" navy does not logically advance the solution of the problem a jot, it has the merit of bringing the issue into the form of what is an "adequate" navy for the United States? That involves two questions. To what extent shall the bigness of ships be carried, and to what extent the number of them? In both instances battleships are meant, because on them ultimately rests fighting power—all less formidable vessels being in reality auxiliaries, and dependent both in character and number upon special uses. The strongest ships now in progress are the four German "Nassaus" (18,000 tons), each mounting sixteen guns of the 11-inch type in eight turrets. The British "Dreadnought," 17,900 tons, three "Temeraires," 18,600 tons, and three "St. Vincents," 19,250 tons, all have ten 12-inch guns in five turrets. Two years hence the British will have a "Dreadnought" fleet of twelve vessels carrying 112 12-inch guns, of which 96 are available for broadside fire. The twelve best ships of our present Atlantic fleet can similarly train 64 such guns. Any two of the British ships can present as many 12-inch guns on a broadside as any four of our ships; and they can steam from 21 to 25 knots per hour as against our ships' 17 to 19 knots. Our "Delaware," 20,000 tons, and her three sisters (two authorized this year) are also five turret, ten 12-inch gun ships. The new Japanese program will probably include two 21,000 ton vessels having twelve 12-inch guns in six turrets. Russia, France and Italy all have, or have made provision for, battleships approximating the foregoing in strength, but their rate of building is slower, and before many of their vessels are launched the other nations will probably have made still further progress.

Before assuming that we are to continue to take part in this tremendously expensive competition—and already these great ships are costing $10,000,000

apiece, and no international agreement has been reached or seems likely to be reached which will limit their size, any more than their numbers—it may well be asked whether there is any way in which this country, acting singly, can check it. There is one course open, extreme as it is: By forcing the rate of progress and producing as soon as possible a type of battleship of such tremendous power that the other nations may well hesitate in the face of the vast expenditure involved in bringing their fleets up to that standard. In a dozen years the world has nearly quadrupled the fighting power of the battleship, and this by gradual advances. Why need we make such gradual steps hereafter? Why increase size by a couple of thousand tons at a time? Why not go at once from a 20,000 ton ship to a 40,000 ton ship—or a 50,000 ton ship —or a 60,000 ton ship, and from ten 12-inch guns to twenty or thirty? It may mean larger docks, fewer available harbors, and a vast amount of dredging, and it is undoubtedly true that a single leviathan would not co-ordinate with existing ships in the fleet. But we are not contemplating permanent future conditions and fleets of such monsters, but the erection of a new standard which will compel other nations to measure up to it or get out of the game. Call it "bluff," if you like, but before condemning the notion as extravagant and wild, consider that it reflects the mature opinion of many of the ablest and most conservative officers of our Navy today.

There is still another indirect expedient—already suggested in these columns but worth repeating here, and that is the establishment of an experimental battleship for the trying out of new naval inventions, the invitation by the Government to the inventors to attack present problems carefully defined and placed before them, the assurance of proper reward for successful schemes and ample help toward the realization of those adjudged promising and reasonable. The mere announcement to the world that the United States has set aside a battleship in which new ideas will be tested with the aid of all the resources of the Government, and will prosecute that work vigorously, steadily and *secretly*, will do more to check the building enthusiasms of foreign Admiralties than the knowledge that for every big ship they construct we will follow with another of the same sort. The strength of this country lies in its astonishing inventive genius and originality, and in this it far outdistances all the rest of the world. We are really repressing this talent in its application to naval problems, and not utilizing it, and to do so merely means the establishment of proper fostering conditions.

But assuming that we go on as we are doing now, repeating existing types, when are our ships in point of numbers to constitute an "adequate" Navy? Is the number adequate now? It is not. The "Indiana," the "Oregon," the "Massachusetts," are practically obsolete. The "Kentucky" and "Kearsage" are nearly so. The "Alabama" and "Maine" have just been sent home as inefficient, and much expenditure is likely to be needed to overcome their defects. That is a pretty heavy inroad into a total of thirty-one battleships built and in progress, and all other reasons aside, is perhaps sufficient to account for the President's recent demand for four ships. Now if we are not going to play the game, the fleet may be left to gravitate into the scrap heap, as all fleets ultimately do. But, if we are going to play it, the requirements of it must be met.

The consensus of naval opinion at the present time is that we must maintain a navy capable of preventing an enemy from getting command of the sea. For until that command is got, no enemy will dare to send any invading expedition to our coast. He cannot land troops until that fleet is destroyed, for otherwise their oversea communication, upon which they must depend for military stores and ammunition, would be cut off and their destruction rendered inevitable. Any assemblage of ships which does not meet the foregoing condition is merely to invite defeat, more or less delayed. It is not playing the game. It is not playing it even on the one-sided principle which assumes that we shall never desire the command of the sea ourselves, in order to invade an enemy's territory, but shall always confine ourselves to defending our own. And yet, during the Spanish War, hardly had we got command of the Atlantic before we organized a naval expedition for the express purpose of descending on the coast of Spain.

The foregoing, however, assumes that the only factors to be taken into account are relative naval strengths. This is far from the fact. There are other considerations which must not be overlooked. So long, for example, as Great Britain insists upon keeping up a navy twice as strong as that of any other nation or equal to those of any two other nations it makes no matter what number of ships we build, for she will double it. The logical end of such a contest of naval strength is then pecuniary exhaustion of one side or the other, which is obviously absurd. An active naval force, furthermore, is not "ratio regum" but *"ultima* ratio regum," and every day peace conferences, arbitration treaties, and the increasing common sense and education of humanity are heaping more and more stress on the adjective. Again, we have no colonies worth subdividing the fleets in order to protect, no indispensable food supply routes to keep open, and practically no sea-borne commerce to guard. All of these requirements draw heavily upon the naval resources of other countries; but do not deplete ours. Hence, all our effective ships are available on the fighting line.

Now, perhaps, we can begin to see what the term "adequate navy" implies.

It does not mean a navy more powerful than that of any other nation, unless we desire a squandering race with Great Britain, and that does not necessarily involve any navy at all; for the competition may just as well continue on paper with alternating money votes in Congress and Parliament—auction fashion—until one body outbids the other.

It does not mean two fleets, one in each ocean, each as powerful as any other navy, Britain's excepted, because no nation can send its whole navy into either ocean to attack one fleet, without laying its property elsewhere open to destruction by the other fleet. The world is round.

It does not mean two fleets each as powerful as any fleet which another nation can send against it, under the assumption that the standard of comparison is the condition of the attacking fleet at the instant of leaving its own ports. Fleets which have to travel under all the disadvantages of war restrictions, and transport all their coal, ammunition and supplies, from 3,000 to 15,000 miles in order to reach their objective, do not get there in the same condition as at the start. It is just as well to remember that whatever troubles our ships individually may have, the Atlantic and Pacific oceans are really very serviceable parts of the United States Navy, and that there are no better oceans anywhere.

It does not mean two fleets, each as powerful as any fleet which another nation can send against it, even *minus* the presumable deteriorations and losses due to crossing the ocean; because while the two fleets as a whole represent an insurance premium against the risk of war, the steady diminution of that risk, the increasing stress on the *"ultima,"* may fairly and constantly translate itself into greater reductions in armed force.

It does mean two fleets capable, after all of these matters have been taken into consideration, of preventing an enemy from taking the risk of despatching an invading expedition to our shores.

What, then, is that strength?

Here opinions must differ, just in accordance as one balances, at any given time, the forces making for war, against those making for its prevention. But generally, we may reasonably conclude that any such gigantic navy, as would be indicated if the problem contained no factors but relative strengths pure and simple, is not demanded.

But the efficiency of individual ships must be kept at the highest attainable point, and hence more or less frequent replacing of them must follow. The losses incident to rapid obsolescence may be checked by the setting of a standard far ahead of present achievement, as already pointed out; and those incident to merely tinkering existing types, by the devising of wholly novel types by the inventors, aided by the potent resources of the Government.

To answer the question categorically at the present time is merely to express an individual conclusion for what it may be worth, but in the writer's opinion, an adequate navy of the United States *today*, is two fleets of sixteen battleships each, of the most powerful existing type, to be stationed with their military auxiliaries, one on each coast; twelve ships of each

fleet to be always in commission, and four in reserve, ready for instant mobilization. Therefore our building policy should be such as will insure the continued existence of these two fleets. And whatever the outlay may be, that is what it will cost us to stay in the great world game of national protection on the sea, as that game is now played.

NEW YORK CITY.

Secretary Taft and the Negro Soldiers

BY MARY CHURCH TERRELL

[Mrs. Terrell is herself a graduate of Oberlin, a resident of Washington, a writer and speaker of ability and distinction, and is probably the best known representative leader of the colored women of the country. This article was written at our request.—EDITOR.]

WAITING three or four hours to see a Cabinet officer with whom one wishes to intercede in behalf of three companies of soldiers who are about to be dismissed without honor from the Army, is an experience which a woman does not easily forget. This is particularly true, if during a large portion of the tedious wait one fears she may not be able to see the officer at all. The morning I went to see Secretary Taft I did not know just what I should say to him, even if it were possible to get an audience with him. Whether Secretary Taft could do anything for the soldiers, even if he wished to, after the order to dismiss them had actually been issued by the President and was about to be executed, I did not know. I did know, however, that something desperate should be done immediately in the soldiers' behalf, if the innocent ones were to be saved from disgrace. In the midst of a fit of depression as disheartening and as all enveloping as I have ever experienced, the 'phone rang and somebody in New York began to talk to me. The somebody is a man whom I call the "William Lloyd Garrison" of the present day, because he is as broad and just on all questions concerning the race as a human being can possibly be. When I hung up the receiver, I was determined to see Secretary Taft and make a plea in behalf of the soldiers who were about to be discharged, if he and I lived thru that day. When I reached the War Department, Mr. Carpenter, Mr. Taft's secretary, told me it would be impossible for me to see Mr. Taft, because he had just returned from a long journey, was about to start on another the next morning, and had more business to transact than he could finish. I heard Mr. Carpenter tell a number of people who wished to see Secretary Taft the same thing. I did not press my case unduly, but I sat quietly in the office, until the minutes had made several hours. Convinced that I was determined to remain, Mr. Carpenter asked me why I was so eager to see Mr. Taft. Fearing that my chances of seeing the Secretary would be slimmer than ever if I disclosed the object of my visit, I hesitated to answer the question, till it occurred to me that my prospects could not be much gloomier than they were, and then I hinted broadly what the nature of my errand was. After a moment's reflection, Mr. Carpenter promised to arrange an audience with Mr. Taft for me, if I was willing to wait till the Secretary had attended to some very pressing matters and had seen the newspaper men. When I was finally ushered into Secretary Taft's presence as the afternoon was drawing to a close, I wasted not a second with preamble or preliminary. I urged him to do something for the three companies of colored soldiers who were about to be discharged without honor with all the earnestness, intensity and ardor of which I am capable. "What do you want me to do, Mrs. Terrell?" asked Mr. Taft. "All I want you to do, Mr. Secretary," I replied, "is to withhold the execution of the order to dismiss the soldiers without honor until they can have a trial, so that the innocent ones, many of whom have had excellent records in the Army, shall not be sent forth branded as murderers." "All you

want me to do," quoted Mr. Taft with a merry twinkle in his eye, "is to withhold the execution of that order. Is that all you want me to do?" inquired Mr. Taft, with such emphasis upon the word "all" that I realized for the first time what a tremendous request I had preferred and how difficult it would be to change the status of the soldiers' case. Briefly I referred to the splendid record which many of the soldiers who were about to be discharged had made, particularly those who had served many years, like Mingo Saunders. When I had finished, Mr. Taft replied with an intensity and a sympathy which I shall not soon forget: "I do not wonder that you are proud of the record of your soldiers. They have served their country well." Less than half an hour after I had left Secretary Taft he had cabled the President, who was on his way to Panama, that he would withhold the execution of the order to dismiss without honor the three companies of the Twenty-fifth Infantry until he heard from him—or words to that effect. In spite of my keen disappointment I try to be reasonable. I shall never cease to be grateful to Mr. Taft for the effort he made in the colored soldiers' behalf. I know that when he withheld the execution of the President's order thirty-six hours in response to my plea for the discharged soldiers he did what no other cabinet officer has ever done since the Declaration of Independence was signed. So far as I have been able to ascertain no other cabinet officer has withheld the execution of a Presidential order thirty-six seconds. There was nobody in Secretary Taft's office but himself and myself. The interest he manifested in the colored soldiers and the tribute he paid them were not the flowery words of a politician, uttered to serve personal ends, but they were the genuine expressions of an honest, generous-hearted man, who meant what he said and who intended to do what he could in their behalf. The effort he made was commendable and it required great courage, too.

WASHINGTON, D. C.

The Passing of "Uncle Remus"

BY MRS. L. H. HARRIS

[Tho Mrs. Harris is, we understand, no relation of Joel Chandler Harris, she has long been his friend, and a few years ago when her home was in Atlanta was his neighbor.—EDITOR.]

ON July 3d, Joel Chandler Harris died at "The Sign of the Wren's Nest," his home in West End, Atlanta, Ga. He was born at Eatonton, Ga., December 9th, 1848. He learned printing during the Civil War in a plantation newspaper office, became an editorial writer on the staff of the Atlanta *Constitution* in 1876, retired from active journalism in 1900, but returned to it in 1907, when he founded and became editor of the *Uncle Remus Magazine*. He was the author of a number of short stories which appeared for the most part twenty-five years ago in *The Century Magazine*, of a novel of Reconstruction days in Georgia, of many poems and sundry essays. He was a man of wide and dignified learning, coming up out of his character as bucolic philosopher occasionally to speak with authority and distinction upon purely literary matters. But he is known chiefly as the author of the Uncle Remus stories for children. He was of a retiring disposition, and nothing is known of his ancestry further than that it was probably the spirit of Georgia. For no man ever summed up in his genius so nearly all that was spiritually, temperamentally characteristic of the people of a State who differ in history, manners and nature from those in other Southern States.

"There is a raciness in the soil, a scandalous shillalah wit, a noisy laughter which must come from the fact that the bones of many Irishmen are buried there and have risen again in the high cockalorum spirit of old Erin, along with the fragrance of the cotton blooms. Mr. Harris changed the shillalah wit into a rabbit-foot charm, and the noisy laughter into the teasing reticence of his own dear obscurity."

"He had a quiet sky above him and plenty

of it; a green changing earth beneath his feet, and a plenty of that. He had hard work to do, which is the essential gymnastic part of forming character; and above all, he had a chance to select his own knowledge. If you want to know why he loitered about the negro quarters, listening to tales of Br'er Rabbit and Br'er Fox, why, when he was given the run of a country gentleman's library, he chose to read the great masters, Goethe, Scott, Irving, and Thackeray, I can only reply: That is his secret, the part personal taste plays in the destiny of a man. Doubtless he was born close kin to the great simplicities, and soon discovered his relationship to writers who portrayed them in literature."

And however that may be, it is certain these early conditions had much to do with the subsequent development of Mr. Harris' genius.

He can never be regarded as one of the "foremost" literary men of his times. His was a dim, illusive personality, both in his life and in his writings, to which no ordinary worldly terms of fame apply, least of all, that striver's badge of "foremost." Rather, he was furthest behind of them all, a man who clung to his shadows, not, as some suppose, out of shyness, but because he was familiar only among elemental things and wild to the conventionalities of the world. He belonged deeper in the heart of things, far back where God and the child still live in every man. He was the gold hunter of that long-buried deposit of old races which, when it is found and refined into words becomes the lore, the folk-scriptures that bind all nations and races together by the same traditions. He was the brother of all men, the Homer of little children, the near kin of the creatures. He was a gentle mystic, who lightened mystery with a cunning human word and a smile. He was a seer who foretold the past as if it were the future, a wanderer by the far currents of life, when the life of man and bird and beast flowed more softly in the same channel. He was the one guide in our times who knew the way back home, not thru creeds and dogmas, or theories, but thru the dimmer, less trodden wood paths of history, past all civilizations, out of the din and fret of the evolving mind to the final sources of history in the hearts of the simple, primitive folk. That Mr. Harris should have often been reckoned among the humorists is an evidence of the egregiousness of the modern mind. He had humor, to be sure, but the main reason why we find his lore tales funny is because of the contrast they indicate to what we are now. Mr. Harris was more particularly an historian and philosopher—an historian of man and creature relationships, a philosopher in his power to interpret them to us. His creative genius consisted in the power to present a certain period in the development of mind and memory in the form of a lore which seems to be almost a prenatal part of memory and with an illusion so perfect that to read his Uncle Remus stories was to pass for the time into another far age of men and mind. It was to be simplified, eased back into the wonder and joy of childhood. To have been the "foremost" literary man of his times would have meant nothing to one whose spirit was thus detached from his times. Instead of fame, he won love, more love than any writer who has lived these hundreds of years. And probably no man cared less for fame, for the littleness of mere worldly distinction. In a letter, dated April of last year, sent in apologetic preparation to a friend who was about to visit him, he said:

"I am merely a simple-minded old fellow who is very anxious for a few chosen friends to like him. Many children and a great many dogs are fond of me, and that is a good test."

He was in great trepidation over his visit to the White House last fall, but after his return he wrote thus naively to the same friend:

"I had a delightful time with the President and his family. Mrs. Roosevelt and the little girl were kindness itself, so that in a moment or two I felt very much at home."

And again when he had received an article for his new magazine which contained an appreciative reference to his own writings for children, he returns it thus:

"I am almost despising myself for sending this back, and I hope you can see your way to deleting the charming and highly appreciative reference to your old uncle. If you can do this, I shall be glad to have it back. . . . I heartily agree with the point you make, that children do not like the concrete, the obvious, but have conniption fits over their own illusions and the illusions of others that fit their understandings. I really believe in my own illusions, the illusions I have had all my life, and I suppose that is the reason why people call me shy, when I am not shy at all. While they are discussing the practical affairs of life, the things about us, the things we can handle, I am always thinking of something else—something just out of reach and realization."

His last words were in keeping with

this persistent spirit he had for peering into the dimness. With the serene unterrified curiosity of a child he remarked to those about his bed: "I have always wanted to know what was on the other side." And presently he passed into that silence which he so fittingly described years ago in the story "At Teague Poteet's." The reference is to the death of a simple lad upon the mountain:

"And tho ten thousand ears should listen, the keenest could hear him no more. He became a part of the silence—the awful, mysterious silence—that sits upon the hills and shrouds the mountains,"

and this is a silence with which Joel Chandler Harris was already so nearly familiar that his spirit will be as much at home there as the sunshine falling in a fan of yellow light over the very ancient earth where it has fallen so many, many times before.

NASHVILLE, TENN.

The International Woman Suffrage Congress

BY IDA HUSTED HARPER

[Mrs. Harper is now abroad, where she is studying the woman suffrage movement in the principal countries of Europe. She is the biographer of Susan B. Anthony and has written and lectured much in this country on woman's suffrage.—EDITOR.]

"IF Susan B. Anthony could only see and hear it all!" How many times this exclamation has been made by the American delegates to the Congress of the International Woman Suffrage Alliance in Amsterdam, which has just closed its proceedings. Tears filled our eyes as we saw women from all parts of the world wearing her picture on their breasts, while a large portrait of this great leader looked down from the platform on the representatives from over twenty nations met in unanimous demand for that right which she labored three score years to secure for women. It held the place of honor, with Lucy Stone and Elizabeth Cady Stanton on either side, while grouped around were portraits of women from various nations distinguished for their humanitrian work along many lines, all of whom had asked without ceasing for the political power so needful for the fulfilment of their aims.

All had past away with this petition still denied, but the result of their labors, carried on with the merest handful of allies, was seen in this vast gathering of women pledged to continue these, if necessary, until they, too, should become only a memory. Even more vital with promise and hope was the bright and buoyant crowd of young people present at every session, serving as pages, as ushers, as guides, and in many other helpful ways. And it was still more encouraging that among them were as many boys as girls, showing that in the future women would not be left to fight their battles alone. All of these young people are students in the universities for which Holland is noted, many of the girls studying for degrees in medicine or law, which they do at a much earlier age than in the United States. All were full of animation, crowding close to the speakers with uplifted faces and sparkling eyes, while at the banquets and receptions they joined hands and danced 'round and 'round the big rooms, singing the national songs. One evening they gave the peasant dances in costume, and another a bright little play having woman suffrage as its theme.

There is a tradition that the Dutch are a serious and somewhat stolid people, with not much sense of humor. Never at a woman's international meeting in any other country have the programs and entertainments been so full of wit and fun and never have we seen such spontaneous enthusiasm. At the banquets the speeches of the Dutch men and women have been the cleverest of the occasion, and at the close of the addresses at the evening meeting the audiences again and again have sprung to their feet with cheers and waving hand-

kerchiefs. The opinion is unanimous that the highest honors of the congress have been paid to two American women, the president of the Alliance, Mrs. Carrie Chapman Catt, whose ability as a presiding officer and power as a speaker have been a marvelous revelation to many people, and the Rev. Anna Howard Shaw, who has no equal among women in the true genius of oratory. It is universally accepted that she wears the mantle of Susan B. Anthony, whose high office as president of the National Suffrage Association she now fills and whose memory seems to influence her every word and act.

Miss Anthony did indeed see the beginning of this International Alliance for Woman Suffrage which is growing into a world power, for she was chairman of the committee under whose auspices it was formed in 1902 in Washington, D. C., and at its complete organization in Berlin, in 1904, she was elected honorary president. There were to be official meetings every five years, to correspond with those of the International Council of Women, but the necessity for this no longer existing, it is likely that the conventions for electing officers, altering the constitution, etc., will take place every four years after the first quinquennial, which will be held in London next year, probably the first week in May. Congresses may be held whenever the situation in any country seems to demand it. In 1906 the invitation of the Danish women was accepted, as Denmark had lagged behind all the Scandinavian countries in granting political rights to women; they had no form of suffrage, while in Sweden, Norway and its own colony of Iceland women possessed the municipal franchise. The congress was cordially received by people and press, the latter commenting in a surprised way on the ability and earnestness of the women. This was true also of the Norwegian press, which was well represented, and in the midst of its sessions the delegates from Norway received a telegram from the Prime Minister saying the Government had decided to make the parliamentary suffrage for women a part of its program. This was done and it was granted the following year. The reports of the delegates to the present meeting state that this was unquestionably due in part to the influence of the congress, members of Parliament saying they had had no idea that the movement was so widely extended or that women were so much in earnest. The effect was the same on the Danish Parliament, which, during the present year, twenty months after that meeting, gave the municipal franchise to women on the same terms as exercised by men. The women, however, are now so thoroly aroused that they are not satisfied with this, but are demanding the whole. Within one year they have organized a national association of over 8,000 members, with suffrage alone as its object, while women's organizations for other purposes, having many times that number, are also working for enfranchisement. Next Sunday forty meetings to discuss this subject are to be held simultaneously thruout Denmark.

In the Netherlands women have no vote and male suffrage is not universal. All men may vote who have passed a university examination or one for a profession; all who pay a small tax, earn a small amount or have a small income. A man cannot vote unless he has lived a year in one place, and not if he has received any public charity. In one way or another a large number of men are disfranchised and there has been for a long time a demand for an extension of the suffrage and for other reforms. Last year the Liberal Government appointed a commission to prepare a new constitution, and this, as submited to the Parliament, enlarged the electoral rights of men and included women on the same terms.

The National Woman Suffrage Association of the Netherlands, which numbers about 5,000, invited the International Alliance to hold a Congress here, expecting that it would influence public sentiment as it had done in Denmark, and the Parliament here was already favorably inclined. A few months ago, however, the Liberal Government was overthrown, the Clericals came into power, and all measures for a new constitution were defeated. Nevertheless, as a general election was approaching, the necessity for creating a sentiment favorable to suffrage still remained, and this the congress unquestionably has done.

The president of the Association, Dr. Aletta H. Jacobs, a woman of exceptional force and ability, and her capable committees, organized and carried out a ten days' program of business and pleasure that seemed to be without a flaw. The detail was perfect, from the grand opening session, with its chorus of nearly five hundred voices carefully trained by a woman director and composer, to the handsome banquet given to four hundred guests on the last evening. After this, Rotterdam and The Hague claimed two days for social pleasures which were delightfully refreshing to the mentally tired delegates.

We are told that the effect of the congress already has been to start a discussion of suffrage wherever two or three men are gathered together, and that its proceedings have created an exceedingly favorable public sentiment. A general election takes place next year and there seems no doubt that the Liberals will be returned to power. Members of Parliament and those in still higher positions tell us that within the four years which will intervene before another election, a new constitution will certainly be framed, and that it is equally certain that woman suffrage will be incorporated in the electoral law, probably on the same terms as exercised by men. Therefore every possible justification seems to exist for saying that the women of the Netherlands will be enfranchised within the next five years. Judging from present indications, it will not be five years before the municipal franchise now possessed by the women of Denmark and Sweden will be extended to include the parliamentary vote. Those of Norway and Finland now have the complete suffrage and are eligible for election to Parliament. The same is true of Australia and New Zealand, except that in the latter they have not eligibility.

All of the countries thus far mentioned have national woman suffrage associations and are affiliated with the International Alliance. Even where women are fully enfranchised they still maintain their organization, in order to assist those of other countries. All sent delegates, and there were delegations also from Canada, Germany, Russia, Austria, Hungary, Bohemia, Bulgaria, Italy, Switzerland, Belgium, Great Britain and South Africa. The governments of Australia and Norway sent official representatives, paying all their expenses, and each brought the greetings of her Prime Minister and his wish for the success of the Alliance and its aims. Many countries reported some definite progress. Italy told of the week's congress of its National Council of Women in April, when one entire session of this large body was devoted to a discussion of woman suffrage. Members of Parliament and judges of the highest courts joined the women in the affirmative, and there were only five negative votes on the resolution: "The congress of Italian women calls upon Parliament to confer on women the administrative and political vote on the same terms as granted to men." German women were very happy over the recent abolition by the Reichstag of the law forbidding women to join or organize political associations, and already they have organized seven States for woman suffrage. In Austria the law still prevails and the women dare not form a suffrage society. The Legislature of Natal has granted the municipal franchise to women, but the Englishmen in South Africa are opposed to giving them the national suffrage on account of the large preponderance of Boer women. The question was presented during the past year in twenty-two national parliaments and twenty-nine State legislatures. Nothing has been more evident at this convention than the backward position of the United States at the present time. Once the leader in all liberal measures relating to women, it has now fallen in the rear, and its Congress and legislatures, in their hostile attitude toward the political freedom of women, must now be classed with those of the non-progressive nations of the Old World. At our table each meal there have been over twenty delegates, representing five or six countries, and the American women were the only ones disfranchised.

Universal interest now is focused on Great Britain. It seemed to us that we never had seen a body of women physically and intellectually superior to the large English delegation to this Alliance Congress. None of them has yet reached middle life and some are only a few years out of the university—strong, courageous, devoted women, ready to

live or to die for the cause which they will never put aside for any other while it needs their services. The president of their association and vice-president of the Alliance is the widow of England's honored Postmaster-General, Henry Fawcett, and for twenty-five years she has given her fine abilities almost exclusively to the work for women's enfranchisement. There was present also a noble little band of the "suffragettes," members of the "Women's Freedom League." They came as fraternal delegates only, their unconventional methods not permitting them to affiliate with regularly organized bodies, but they received a hearty welcome from this most democratic organization, which never asks anybody's politics or religion, nor imposes its own rules of action on other people. They were the most demure and peaceful-looking party in the room, but whenever they had a chance to speak the sparks flew. There is a wonderful inspiration in the war cry with which they usually end their speeches—"Votes for Women and the Peace of the World!" It makes one feel equal to attacking the entire British Parliament and understand why Premier Asquith showed the white feather. The women treat that gentleman's recent declaration with much contempt, saying it was merely a ruse to throw them off their guard.

Mrs. Fawcett's association has shown a commendable spirit toward the several new and aggressive societies, not approving their violent methods, but giving them full credit for having made the question a live issue, and clearly recognizing that all classes of people must be appealed to and different means must be used for the purpose. All of the organizations would prefer to have a woman suffrage bill before Parliament free from connection with any other measure, but this seems impossible. They are much opposed to Mr. Asquith's offer to allow it as an amendment to a general electoral reform bill, but just now they cannot foresee what form it will have to take. On one point, however, they are thoroly agreed and determined, that they will not abate for one moment the present struggle. Money is pouring in by the thousands of pounds and every class of women in Great Britain is organizing. The present Parliament gives no promise of long continuance, and woman suffrage will undoubtedly be the principal issue at the next general election, the London papers saying it will take precedence even of free trade. The leaders of the movement look for a complete victory within the next two years. Meanwhile they are preparing to continue the agitation and strengthen their forces at every point, realizing that it would be fatal to allow the fully aroused public sentiment to die out. It seems strange that men should drive women to such sacrifices and force them to leave homes and families and all the good works which the community needs and they are longing to do in order to obtain a right which already belongs to them as much as to the men who withhold it; but this victory in Great Britain will immeasurably hasten the success of woman suffrage in all civilized countries and will be worth all it costs.

The most dramatic feature of the congress occurred toward the close, at the great banquet given in Rotterdam, when the news was received of the Czar's interference with the Finnish Parliament. A resolution of condemnation for Russian tyranny and of sympathy for the oppressed people of Finland was adopted by a unanimous rising vote, and when the head of the Finnish delegation, the daughter of Admiral Furuhjelm, once Governor of Alaska, rose to respond, she was almost overcome with grief, while women were weeping in all parts of the room. At the meeting of the Alliance in Copenhagen, two years ago, we had showered congratulations upon the women from Finland for their new rights and the brave generosity of their men, and here in Amsterdam upon the election of women to their Parliament last year and the candidacy of many at the present time. So it all came very close to us, and it seemed that as women still struggling for our political freedom, we beyond all others knew how to feel for those who were deprived of it. In Russia the power is held by a Czar; in other European countries by a Parliament whom women have no voice in electing; while in the United States all men are absolute political rulers over all women.

AMSTERDAM, HOLLAND.

Doctor Theodor Barth

BY POULTNEY BIGELOW

DR. BARTH, the economist and parliamentarian, has just published in Berlin a little book of personal notes made on his last visit to America.* These will, we hope, soon appear in translation, for they are written in the philosophic spirit of De Tocqueville and Bryce, and from page to page remind us that Dr. Barth saw not simply the things which may be seen from a car window. With characteristic modesty the author gives to his book the title "Impressions of America," and speaks of them as simply cursory letters written to a German paper while on a brief pleasure trip.

Barth knows the machinery of his own country, the commercial side no less than the political. He has traveled widely, has lived in the atmosphere of constitutional England no less than that of the Prussian absolutism. He can see the faults of his compatriots, and point out with equal frankness what most polite foreigners ignore when writing about America.

It is now nearly a quarter of a century since I had the honor of meeting Dr. Barth at the house of the late George von Bunsen—both then members of the Imperial German Parliament. At that time Barth was the center of a valiant group of notable German thinkers, who declined to be carried away by Bismarckian protectionism and log rolling. It was about that time that he founded a weekly called *The Nation,* and those who wrote for *The Nation* announced, *ipso facto,* that they live beyond the pale of court favor.

Of this little group was the famous pathologist, Virchow, who may be called the Father of Modern German Sanitation, an intellectual giant, who had been tried for treason in the Revolution of 1848; then there was the Roman historian, Mommsen; the political economist, Bamberger; Bunsen, himself an intimate friend of the late Emperor Frederick and the son of a distinguished diplomat.

Political persecution is an ambiguous word in these days, because intangible to the jurist and hard to understand by an American. Professor Virchow has an immense European reputation, and was pointed out, more than half a century ago, as entitled to the highest honors in the gift of academic Germany. Why did he not receive them? Answer: He was disliked at court—yet no courtier would admit that there was political persecution.

Let us say Mrs. von Bunsen gives a great party at her beautiful house in order to introduce her daughters into society. Society in Berlin means army officers, the diplomatic corps, government officials, judges, heads of the learned professions, university lights and members of the court. Indeed it would be hard to think of society in Berlin if we eliminate families, directly or indirectly, dependent upon court influence for their advancement. Let a Bismarck say that the government regards it as an unfriendly act that people of society visit the house of Bunsen, and within twenty-four hours that house will wear the appearances of mourning. No one will cross its threshold save the few independents who can afford to be indifferent to the wishes of a military court.

The most potent forces of government are often those we cannot add up in a column of statistics, much less put upon the scales and weigh. Let one of our army officers tell the truth about the campaign of Santiago and its alleged Rough Riders; let a naval officer of experience tell what he knows of favoritism in the Navy; ask an old resident of Panama why he dares not publish the truth about the Canal. We need not go very far from home to find examples which may help us to understand why Dr. Barth and his estimable family have, for nearly a quarter of a century, enjoyed the unique position in that great uniformed world called The Court of Berlin.

The little group of which Barth is the central figure suggests that lovely light of Liberty enlightening the world at the entrance of America's great harbor. She projects her stimulating beams on vessels of all nations—nor does she shine less brightly because the waters about her are foul thru human selfishness.

MALDEN, N. Y.

*"Amerikanische Eindrücke," by Theodor Barth. Berlin: Georg Reimer. 12mo. 116 pages.

Germany's Political Position

DR. THEODOR BARTH

[We are very glad to be able to present to our readers the following article by Dr. Barth, who has probably done more than any other member of his race to explain the United States to Germany. The article is preceded by a brief appreciation of Dr. Barth and his recent book on America by Poultney Bigelow.—EDITOR.]

OLD Europe remains in the semi-barbarous state of armed peace. Everybody, from the penny-a-liner to the powerful monarch, praises peace, speaks of its benefits, of its necessity. But almost everybody doubts the sincerity of everybody's peaceful declarations. Therefore the constant increase of armies and battleships for the maintenance of the blessings of peace. It is somewhat expensive, this mutual distrust. German's burden of the armed peace amounts to $325,000,000 annually. The average German family of five heads has to pay, year after year, at least 100 marks to enjoy this armed peace. More than half a million of men in their best years are constantly under arms. Never before has Europe been such an enormous military camp; altho no nation has any vital interests which could be promoted even by a victorious war.

This intellectual and moral unrest is the inner reason for the continued talk on triple alliances, dual alliances, ententes and detentes. Monarchs and statesmen always seem engaged in maneuvers on the diplomatic chessboard, in order to isolate one Power and to combine others. All this looks very serious for innocent observers. Diplomacy is a secret game and therefore always overestimated. There is less wisdom and less intrigue in all these royal visits and diplomatic conferences than the ever alert imagination of newspapers is accustomed to make the readers believe.

Just now the diplomatic isolation of Germany is treated as one of the chief topics of the year. The German Emperor, reviewing his troops some weeks ago, spoke to his generals of such an isolation as a dangerous experiment. "They, the other Powers," he exclaimed, "may try it; we are prepared." In reality the isolation of Germany, if it would be more than a mere phrase, might become a serious danger for the peace of Europe. A power like Germany cannot be ignored, only the utmost folly could believe that a European concert can be played without the German instrument. Times of cabinet wars have passed away. Every sovereign in Europe risks to lose his crown in an unhappy war. Only national interests of the first order could provoke a European war, a struggle for life and death. Such national interests are not at stake. Therefore the disturbance of European peace is just as unlikely as a war between the United States and Japan.

There are other perils which threaten Germany; dangers arising from the internal policy.

"Make good politics and I will make you good finances." If there is truth in these famous words of a French statesman, German politics cannot be good, because the finances of the Empire are very unsatisfactory. During the last five years the Reichstag has accepted two great revenue measures. In 1903 a tariff reform increased the burden of the consuming masses enormously; duties on breadstuffs, on meat, on butter, on lard, on all the necessities and commodities of life became higher than ever before. The tariff reform was, in the first place, a protective measure. The revenue from these duties represents only a small part of the consumer's burden. For instance, on wheat and rye the consumers have to pay at least 500,000,000 marks annually. Only the fifth part of this sum goes as duty on foreign corn into the imperial treasury, four-fifths go into the pockets of the great landowners, who raise in Germany wheat and rye for the market. Our protective system is principally based on agricultural products. The agrarians, especially the Prussian junkers, govern our government and have been for many years, even in the imperial Parliament, a leading influence. The tariff reform of 1903 has overburdened the consumer, making everything artificially expensive. But the revenue derived from it has been like a drop of water on a hot stone. Therefore, three years

later new taxes became inevitable. In 1906 a series of new taxes was introduced. We were blessed by taxes on inheritances as well as on cigarets, on automobiles and railway tickets, etc. All these taxes proved insufficient for the financial embarrassments of the Empire. Debts increased by hundreds of millions. The courses of our rent went down, till the credit of the Empire has become worse than that of Italy. Now, two years after the last tax reform, the Government has to face the necessity of procuring one hundred millions of dollars a year to cover the huge deficit. This is the result of a protective policy favoring the interests of our agrarian party for decades. Germany has had prosperous and peaceful times. On the other side, free-trade England has past thru the very expensive Boer War. Now, compare England's finances with those of Germany! In England, during a period of three years, forty-five million pounds, or nine hundred millions of marks, have been paid off the national debt. At the same time the increase of Germany's debts amounted to almost the same sum.

Mr. Asquith, the First Lord of the Treasury, showed a surplus of more than one hundred millions of marks in his last budget, and could propose a reduction of the sugar duties by seventy millions of marks. Our Secretary of the Treasury has to deal with an enormous deficit and is constantly hunting after new taxes. There never has been a greater triumph of sound free-trade principles over the system of protection.

The settlement of our financial embarrassments has been postponed to the next session of the Reichstag. Now the Secretary of the Treasury prepares new tax bills. Tobacco, beer and electricity are expected to form the basis of new and higher revenues. An alcohol monopoly is in preparation. The political air is filled with rumors. The poor taxpayer has to fear everything. What will the Imperial Parliament do? The nut to be cracked will be a very hard one. For the financial measures of 1903 and 1906 there was a majority of Conservatives, National-Liberals and the Center party (Catholics). The three groups of the "Freisinn" (Radical Liberals) and the Social Democrats belonged to the opposition. Meanwhile, in December, 1906, the Reichstag had been dissolved and the Center party fell into disgrace. At the following general election the Center party did not suffer from the disgrace of the Government, but social democracy lost three dozen seats, altho it gained a quarter of a million votes. The Chancellor, Prince Bülow, very much surprised by this unexpected victory, tried to form a new majority, consisting of Conservatives, Anti-Semites, National-Liberals and the three groups of the Freisinn. The Freisinn was foolish enough to go into the trap.

This is the origin of the so called Bülow-Bloc. In this bloc the Freisinn plays the role of the good fellow who has to take the chestnuts out of the fire for his bitterest political antagonists. The right wing of the bloc is rewarded by very substantial fruits, the left wing only by flowers. Prince Bülow has legislative facts for his Agrarian friends, and only irresponsible words for his Liberal followers. In reality, the bloc is nothing else than an instrument of reaction. It is directed against the democratic tendencies in socialism, liberalism and in the Center party. The question is, Will the Freisinn be modest enough to carry thru the parliamentary canals the Government's canoe overloaded with new taxes, without getting liberal concessions from the Chancellor? Such a concession would be the reform of the Prussian election system. This system is the most absurd and unjust which can be imagined. It guarantees the parliamentary power to the squirearchy. By far the most numerous party, in Prussia as well as in Germany, is the Social Democracy. It counts even under the Prussian corrupt practice of electioneering (no secret ballot) more votes than the Conservative party. Nevertheless, in the last session of the Prussian Parliament Social Democracy was not represented by one single member, and the Conservatives were represented by more than 200 Deputies. There never has been asked a more urgent reform. The Freisinn would be fully justified not to grant one mark of new revenues to the Chancellor if the Prime Minister of Prussia, who is the

same person as the Chancellor, does not introduce a reform bill in the Prussian Parliament. But it is very unlikely that this will happen. Prince Bülow would not get the consent of his Conservative and Agrarian friends for such a reform measure, even if he would have the inclination of introducing it. He will estimate it a far easier task to get for nothing the consent from the Freisinn for new taxes.

In the midst of this political turmoil general elections for a new legislative period of the Prussian Parliament have taken place in June. The result has been the return of all the reactionary forces. Of 443 seats the Freisinn only got thirty-six, and for the first time in Prussian history the Social Democrats gained seven seats. Of these seven seats six were taken in Berlin from the Freisinn, as a protest against the Freisinn's lack of radical energy. This warning experience makes the political position of the Freisinn still more difficult. Its weakness toward Bülow's bloc policy expels the best democratic elements out of his lines, and so the party is more and more assimilated to the reactionary partners in the bloc. The antagonism against Social Democracy becomes predominant, and the struggle against reaction loses its strength. In order to reorganize the democratic elements outside Social Democracy a new Democratic Union has been created. Only two months in existence, it shows signs of remarkable vitality, especially in Berlin. A good many radical voters, who were prepared to join the Social Democrats, will be kept back from that party if they find their democratic inclinations satisfied by the new party.

The democratization of Germany has become an historical necessity. A great industrial commonwealth with 64,000,000 inhabitants and a well organized labor party of 3,250,000 of voters cannot be governed, under the methods of feudalism, absolutism and bureaucratism. All the troubles, political as well as financial, root in the disharmony between our modern economic and our obsolete constitutional development. Political Germany limps far behind economic and scientific Germany. That is the chief reason of all our difficulties in our home and in our foreign policy.

BERLIN, GERMANY.

The Drummer of Today

BY RUBE BOROUGH

I AM an American drummer. I live my life in the midst of war—in the thick of the struggle of competitive business.

The ruling class of the medieval nation hired soldiers to wrest property and power from the ruling class of a neighbor nation. For the same purpose individual noble contended with individual noble. In the conflict much blood was spilled.

But the world has advanced—the transfer of power from nation to nation, from individual to individual, goes on today, but, in the main, it is effected by subtler means than by the clash of arms.

I am It, today—I am the soldier of the bygone age, the heroic figure of the hour.

Mr. Digby, capitalist, hires me to extend the market for his "Arcadian" shoes. Mr. Burrington, capitalist, hires Jim Brown to do the same for his "Step-over" shoes. Jim's and my objective point is Mr. Dealer. Separately we talk the goods to him and produce samples—declare on our oath as to quality and quote prices, the "lowest on earth," intermingling with all a run of delicate flattery that we ever carry as one of our most effective weapons. If Jim wins Mr. Dealer, I lose. Mr. Digby's shoes never reach the public of Mr. Dealer's town. Mr. Burrington has extended his market, enlarged his profits and increased his power.

And if all of Mr. Digby's drummers

do no better than I. Mr. Digby will find himself eliminated from the strife of competitive industry. He will be down and out.

Don't you believe me? I make or break Mr. Digby. I am It—the American drummer.

I know it, too. That's why I am beginning to carry myself with unshakable dignity. That accounts for the self-respect Digby's son wonders at. Digby's son is a Harvard graduate—I had a hand in making him one.

Digby's son has a head full of fantastic notions handed over to him from the books by the pedagogs, but he doesn't seem to have any idea of how he came to be so fortunate or unfortunate as to "connect" with those notions. I can tell him. A full decade before Digby's son was born Digby made boots, made them by hand in a little shop that eventually became his own. He made good boots and he trained the men that worked for him to make good boots. The people learned to like those boots and they sold well in a local way. Then, about the time Digby's son was born I came into his life. I put strange ideas into his head. The suggestion that Digby's shoes could be sold outside of the county—why, it fairly staggered him! But Digby hired me as a salesman and I went at it. Soon I had his "Arcadian" shoes advertised in a half dozen neighboring towns and I went out and sold them to the merchants of those towns. And the business grew until it covered the State. And it continued to grow until today "Arcadian" shoes are sold all over the Union.

So I have revolutionized Digby and his business. His original idea was to build up by the slow process of earnest individual labor a good local business and to place himself in comfortable circumstances. His sons, should he have any, should learn to work with him in the shop and eventually he should leave the business for them to carry on. But my salesmanship and the revelation of what a sales campaign could do gave this idea a solar plexus. Digby was pulled from his bench one day and established in his office as manager. "Henceforth," said I to him, "you're going to be too busy making money to work."

Since then the plant has been enlarged a number of times and there have been yearly additions of complicated machinery.

Now, Digby had dreamed of laying by a few thousands to meet a rainy day, but instead of realizing his little dream he had become worth over three-quarters of a million. And with a part of this fortune, made from such a vulgar thing as shoes, Digby had been able to purchase for his son those expensive and exclusive notions that the college offered for sale. If it hadn't been for that large market my salesmanship uncovered and helped to win, Digby's son today would in all probability be seated, hammer in hand, in a little shop helping his father repair old shoes.

Quite probably you don't understand me—this modern American drummer. Honest, do you think me a loquacious ass with a dash of the libertine in me? If you do you're all wrong. I am not loquacious and I am not a libertine, today. I am too dead in earnest to be either. The stress of relentless competition holds me together, forces me to keep on the right side of the traces.

Fifteen years ago I might have been a man who looked often in the cup—even a man of decidedly lax morals. For it must be admitted that the life of the road, itself, did not tend to encourage in me a rigid adherence to the moral codes. I lived my days, many of them, among strangers and I was often subjected to peculiar temptations. I was beyond the reach of those restraining influences that family, friends and neighbors exert upon one. And it was to be anticipated that I would overstep the bounds of propriety at least occasionally. But for the past ten or fifteen years I have found the purist in me talking more insistently every day.

"I do not smoke, chew or drink"—I hear salesmen say this very often—"and I mean it when I say that I am strictly decent. I am a married man and I am loyal to my family. I regard vices as encumbrances in my business."

I am quite sure it is true that "good fellows" of the ultra type—the men whose days and nights are marked by excesses of some sort or other, are slowly

but surely being eliminated from the drummer world. There are two reasons for this process of elimination. These reasons may be found, first, in the changing attitude of the dealer or merchant toward the drummer; and, second, in the changing attitude of the house itself toward its representative.

As to the first reason. In the old days the dealer or merchant was the victim of the "treating" habit. Only yesterday I heard a drummer tell a story much like this:

"When I first started on the road I had to be a spender, a 'good fellow' with my prospective buyer. The other drummer was and I had to be or quit the road. This prospective buyer, my dealer, expected me to warm him up—I had to buy the drinks freely. And with a number of my biggest buyers it was necessary for me to go out on a regulation spree before I could write an order.

"But that's all changed today. Why, I have to be careful now even about offering a cigar to a 'prospect' for fear I may offend him. I offered a cigar the other day to a man whom I know to be a smoker and instantly his attitude of amiability changed to one of coldness. He refused the cigar with a curt, 'No, thank you.' Before I left he reluctantly gave his reasons for so doing.

" 'When I buy goods,' he said, 'I want to buy the very best I can for the money. And I want to make my decision as to the line I am to carry feeling perfectly free from the slightest sense of obligation to any man. And this slight sense of obligation I should feel toward you if I smoked your cigar even though I knew on sober second thought that you weren't paying for the cigar, nor was your house. For it has occurred to me that finally the dealer pays the entertainment bill.' "

As the dealer educates himself on the general subject of trade relations, he looks more and more with impatience upon the salesman who, no matter how engaging his personality may be, obtrudes the fact that he is a "good fellow." For the instinct of the intelligent buyer today is to get down to bed rock as soon as possible, absolutely to cut out sentimental considerations of all kinds and to discuss two things—quality and price. Such men, although they may accept entertainment from salesmen, do not desire it. They merely tolerate it.

Now, I am not saying that the successful drummer of today is merely the impersonal mouthpiece of the house. Personality counts tremendously, but it gets in its work in a different manner than it did fifteen years ago. The dealer during his leisure moments will persistently ask questions of the drummer that evince the keenest appetite for the business and political gossip of the hour. How are Smith, Jones and Miller, dealers in three neighboring towns, getting along? Do you think they sell too close? Is the 2 cent passenger rate law a good thing? Hasn't this law been responsible for the recent advance in our freight rates? What do you think of the panic? What caused it? Was it the desire on the part of the Wall street financiers to discredit Roosevelt's administration and thus to nip in the bud any possible third term aspirations? Is business resuming? Where? What do you think of the prices of farm products? Will hogs get back where they were before the money scare? Such are the inquiries the drummer meets today among buyers in metropolis and at cross-roads corners. The drummer has his finger on the trade pulse of the nation. And the dealer looks to him for information as to the condition.

Behold the drummer, then, in a new rôle. He is no longer entertainer. Sharply he observes the facts around him. He studies them in order that he may give the plausible answer. And then he steps forth confidently as an educator of the tradesmen of the country.

Now, as to the second reason for the changing character of the drummer. There is a growing reluctance on the part of the house, particularly of the large business institution, to make allowance for that one-time prominent item of expense—entertainment. In their passion for economy in the production and marketing of their article not a few houses already refuse absolutely to spend a cent to the end of "purchasing the goodwill of the customer." The expense of treating, of all the evidences of "good fellowship," is thereby thrown upon the drum-

mer. And this individual, so long noted for his far-flouted generosity, begins to retrench. He cuts off all the costly excesses—one by one they go until he is left very much like the mass of men.

You see, it pays him to walk the strait and narrow path. And he tries it. And the house applauds him in the effort. For it believes that only along this line can he grow in efficiency from year to year.

No, the man on the road is not a devotee of Folly. He is the strenuous laborer in the business world of today. Whether his mission be as worthy or not, he strives with all the zeal of a fanatical social and political reformer to attain his end. That end, the conquest of territory for his house, enlists his continuously concentrated efforts. Year after year he travels over the field rooting out the prejudices cunningly implanted by his competitors and sowing the seeds of confidence in the line of his house.

Or it is as if his competitor were an enemy in war and he were constantly watching that enemy's defenses to discover a weak point; and when that weak point appears he hurries on to the ground for an attack.

For the drummer of today is, first of all, be it remembered, a fighter; he never admits defeat. Repulsed today, he swings into the struggle tomorrow with conviction unshaken. He is so mastered thru and thru by the passion for ultimate victory that no series of temporary reverses may dampen his ardor.

And these victories of this modern man of exploits, what do they mean? They mean that back there in the factories and workshops dominated by his house the wheels of industry will start to exultant whirling, and thousands of men will find employment. Oh, yes, I mustn't forget, and women and children, too. For the drummer's vigilance of mind and perseverance of soul stand back of all this activity.

You may be thinking of the "traveling man" in George Ade's "The County Chairman." But don't you believe Ade. That "traveling man" in actual life wouldn't last as long as a wreath of cigar smoke in a whirlwind. He isn't real.

My friends sometimes laughingly refer to me as a pedler. But I am not a pedler. I tell you—and I want you to remember it—that I am put on the road to fight for territory, to win territory and to hold it. The pedler concentrates himself on the deal at hand. The future may go hang. He is after just one thing, to sell his article to the interested party *now* and at the biggest possible profit. Tomorrow he will move on. Today he will grossly misrepresent, and tomorrow, of necessity, he will seek a new market. He holds tenaciously to a perversion of that ancient adage, "A bird in the hand is worth two in the bush."

Of course from the viewpoint of social function I am seen to be an evolved pedler. Two parallel streaks of steel glimmering in the sun and crisscrossing the entire country are responsible for the evolution. Big markets were made accessible by steam to thousands of little shops. Markets overlapped. Relentless competition ensued, marked by the wholesale slaughter of the incompetent and by the growth of the small to the large institution. And in this process the pedler, nomad of bargain and dicker, composite buyer and seller, was eliminated, and in his place appeared that modern specialist, the drummer, whose function was to sell continuously in a defined area.

It must be admitted, however, that pedler ethics have not yet been wholly eliminated from the world of the traveling salesman. Only recently I had an opportunity to study a drummer of the "pedler" type. He was an elderly man, with gray hairs, and he had sold goods on the road for thirty years. During my chat with him he complained that business was not what it had once been with him; that now, on a given volume of business a year, he was making much less money for his firm than in the early days. Profits were all shot to pieces today. This man didn't know what a price list was. He confessed that he quoted a dozen different figures on the same product for a dozen different dealers; that he "dickered" with his prospect, set his price high and got all he could get out of his man. Sometimes it was necessary to make big concessions and sometimes only trifling ones.

Now, it is quite probable that the av-

erage progressive, aggressive dealer isn't wasting much of his valuable time on this fellow. For, first of all, the modern dealer demands from the salesman precision of statement and accuracy of information. And the modern drummer is aware of this demand, and in response to it he hands over at the opportune time the modern price list, a schedule carefully built up on a basis of actual cost. "Such and such are our discounts," says the modern drummer; all this taking place, of course, after he has brought into play all the forces of his personality to convince his "prospect" that his stuff has the quality for the money. And such the price remains, and such the discounts. There may be only very minor concessions, if any at all.

Yes, it is true. We drummers *are* getting to be more and more "on the square" with buyers, so far as putting them on a basis of price equality is concerned. But now don't you get maudlinly sentimental and go to talking about the moral and spiritual influences of the day; for these have little, if anything, to do with the modern drummer's "squareness." If you're hunting for causes, I'll remind you of those parallel streaks of glimering steel that tie communities together today. How much these are really back of, anyway!

The ideal community for the drummer to enter is the community of liberal capacity to consume. And if he be intelligent, this drummer will resent any antisocial effort that would result in crippling the purchasing power of the great masses of people. If he sells in the rural community he rejoices to see high prices for farm products. And if his "line" enters the industrial center, he is glad to note a generally high wage scale and the accompanying high standard of living. Despite this latter fact, however, one meets among men of the road not a few bitter antagonists of trades unionism. But the attitude of such is easy to understand when the fact is made clear that the drummer's business and social associates are often men belonging to the employing class, or that the drummer may be a stockholder in the institution he represents, or may hope to become some day a direct employer of labor.

Unconsciously, but irresistibly, the drummer is drawn to a close study of the markets. And you will be surprised at the amount of information he has gathered on this subject. A really imposing array of facts he can marshal relative to conditions in the territory in which he travels. At Butler, Mich., he doesn't expect to sell heavily this year because a bank failure cleaned the farmers about that place out of $120,000. Or a prolonged strike in the iron foundries at Westphalia, Pa., will curtail his sales there this spring. Trade is phenomenal at Jackson, Ill., because the price of corn is high, and Jackson farmers produce heavily for the market. At Wiltsburg, Mich., on the contrary, business is practicaly at a standstill, because Wiltsburg farmers go in heavy on hogs, and hogs have been "off" all winter. Too much of that high-priced corn had to be imported into the community. Bad floods at Wolcottville, Ind., have hurt the wheat, and it just happens that the wheat acreage is heavy there this year. Thus the facts assemble in the mind of the traveling salesman.

And with this intimate knowledge of market conditions the drummer army is often able to do valuable work toward warding off those periodically threatening strokes of industrial paralysis. Imagine, for instance, the tremendous pressure brought to bear by the salesman on the dealer and merchant world during the past winter. Following the panic fear pervaded the minds of middlemen everywhere. But the thousands of drummer got in their work. Insistently they delivered the advice, "Buy, buy now." And they fought fear with a counter fear. "Buy now," they declared, "for you will want to sell later. And if you fellows hang off now you won't be able to get your stuff when you want it." And the middlemen bought, cautiously, but they bought. And their buying kept open the shops that put out the finished product, and these in turn opened the accessory institutions. For the dealer and merchant feared, what the drummer predicted, that with the breaking up of winter, the consumer, able or compelled to buy, would demand the product, and with the sudden rush of

orders from middleman to factory and from factory on thru the line of accessories, he would become the victim of an inevitable delay and confusion that would mean heavy loss to him.

And in return for all this service to the captains of industry drummers are comparatively well paid. I myself know several salesmen representing smaller houses whose salaries nearly equal those of the heads of the institutions. It may be stated as a general truth that the drummer is best paid in those lines where competition is keenest, where salesmanship enters as a factor of great importance, and that the man on the road representing a house that has a practical monopoly in his territory travels on a much smaller salary. Not long ago I met a young fellow who sold "fancy" canned meats, and who in the course of a year swept over a tremendous stretch of territory. He appeared to me from the conversation I had with him to be a faithful and reliable worker, but an individual wholly incapable of developing anything like brilliant salesmanship. This young man spoke frankly with me. "My salary is not large," he said, "but I like the road. I want to know what this country is like. No, I am not a salesman. I am simply an order taker for my house, which in my line has no real competition. I make the calls I am expected to make and the demand for the goods does the rest. It's a simple matter of making calls—that's all there is to it."

But while it may be true that the general tendency in the business world is inevitably toward ultimate monopoly, competition reigns supreme in the majority of the industries, and the selling expense, the price paid for winning and holding a market, is tremendous.

This fact was made the subject of comment the other day by a mild-mannered man who rode into Chicago with me.

"You drummers, the whole vast army of you," he said, smiling pleasantly, "are a big load on the consumers of the nation. You are—pardon me, sir, but you are—parasites. You render society no service; you are not producers of real value. And yet comparatively you are generously paid."

"But we work hard," said I, bristling up, in self-defense, "and whether we are a load on society or not, we are indispensable."

"You work," he retorted; "truly, you work hard—in the effort to do up the other fellow. And your work *is* indispensable—to your house, but not to the public in general."

My companion paused dreamily for a moment, and then continued:

"Of course, I understand that as long as competition survives you drummers are a necessity. But you will have to go, for competition is surely doomed. Every day the trust renders your job less secure. For the trust, when it comes, will not tolerate economic waste, and the selling expense will be cut to the minimum."

"But the trust," I burst out with fervor, "is an enemy of the people. The country will be worse off with it and without us than without it and with us. For the trust, possessing the power, eventually demands high prices, while competition has a leveling effect."

"That may all be true," he replied in his quiet, dogmatic tone, "but the fact remains that the trust, thru the economy of production on a large scale and thru the elimination of the wastes of advertising and selling wars, *could* furnish us goods at a lower figure than your small competing firms, if it wanted to.

"At present the trust's only service to society, I'll admit, is to demonstrate the superiority of a method. But evolution will carry it eventually out of the control of irresponsible individuals."

MARSHALL, MICH.

Literature

Literary Controversies New and Old

Much good time has been wasted vindicating people who do not need it, and tho Mr. Russell's plea for Thomas Chatterton[1] is both interesting and convincing as to the boy's character, the brutal conspiracy of which he makes so much has been more imaginary than real. Yet the story of the boy's life is pleasingly told. Of the humblest parentage, with a trade school training and two years in a lawyer's office, he died at seventeen, bequeathing to the world one of its most foolish controversies, and indebted to Walpole for the exaggerated title of "forger" and the baseless charge of "libertine." Dreaming in the shadows of St. Mary Redcliffe, Bristol, of which his ancestors had for generations been sextons, and finding about him no sympathetic comprehension, the boy created a world of his own, centering about the historic figure of Canynge, the fourteenth century founder of the church, and his imaginary companion, priest and poet, Thomas Rowley—a world so real and dear to him that he scarcely knew the imaginary from the true. When he was beaten by schoolmaster and lawyer for the crime of writing poetry in leisure hours he fled to this happier world, and, clothing his poems in the antique dress he loved, he disguised himself for safety in the cloak of the imaginary Rowley, three centuries dead. Tho the forms of these poems were modern, their spelling but a poor imitation of the old, and their handwriting, which he had laboriously learned from old parchments found in the church, was palpably recent, the so-called forgeries deceived those who first saw them, including Horace Walpole, to whom he sent them in his desire for the appraisement of discerning literary taste. It is for this rather innocuous fraud that the boy who committed suicide in 1770 from disappointment and overwork has been called a forger. The story is a sad one, but Chatterton's life was not so pitiful nor the world's treatment so brutal as the biographer's excessive sympathy would persuade us to believe.

In the days when sententiousness, flaccid sentiment and cold epigrams had usurped the place of poetry, and fatuous indifference characterized the upper classes, Chatterton was a romanticist and a revolutionist. It is a singular proof that new movements, literary as well as social, often spring from the soil, that this boy, apparently quite out of touch with the uncertain beginnings of romanticism in the literary world, and untaught in the principles of democracy save as he had imbibed them from his few apprentice associates, flung himself into the fight, struck boldly the note of spontaneous feeling and untrammeled melody in verse, and stirringly defended popular rights, whether in England or the colonies of America. Altho in 1765 Bishop Percy had published his epoch-making collection of old English ballads, they were as yet ill received, and interest in medievalism was but struggling timidly against the complacency of the age. But from his world of dreams in the gloom of St. Mary Redcliffe Chatterton stepped out a full-fledged romanticist by nature rather than by conviction.

Mr. Russell is as extravagant in his praise of Chatterton's poems as he is undiscriminating in his estimate of his influence upon the romantic movement. Wonderful as the poems are, they have more of promise than fulfilment, and cannot be weighed without remembering the melody of Collins, the nature worship of Thompson, the zeal of Percy and the humanity of Crabbe. Moreover, Robert Burns was a contemporary equally untrained and equally spontaneous as a lyrist. No! the spirit was already in the air; Chatterton was by no means its inspiration, but a startling manifestation of it. Saner judgment as to the value of the boy's work and a broader and more sympathetic account of the rising

romantic movement would have gone further toward putting Chatterton in his proper place, for the movement of which he formed so strange a part was greater and wider than he. Moreover, a careful estimate of Chatterton's influence upon the poets who followed him, upon the Lake School, upon Keats and Shelley, and upon the pre-Raphaelites, would have been welcome. Unsupported statements, however enthusiastic, prove little. Nevertheless, the book is distinctly interesting. The generous spirit and the splendid spontaneous melody of the boy have been too much neglected, and there is no great harm in reiterating the foolishness of the charge of forgery. The so-called Rowley poems reflect far more upon the scholarship of the age than upon their author. They thrust forth in glaring colors contemporary ignorance of language development, of changes in literary form, and of dramatic history. Possibly the fierce controversy over the antiquity of the poems did as much to forward the study of the Middle Ages and their literature as did the romantic feeling of the poems themselves.

The poverty and calumny that in life and death pursued Edgar Allan Poe have been not less strange rewards of genius. The little volume by Mrs. Weiss[2] assumes to be neither a biography nor a critical study, but an attempt to disprove certain misrepresentations by picturing the more intimate side of his life, a task for which the author had special opportunities. Yet we question whether she does more for Poe than the very fair and authoritative book by Woodbury. She paints a darker picture of his relations with women both before and after his marriage, but thrusts into stronger light than hitherto his kindliness and cheerfulness, in opposition to the melancholy and morbid temperament so often ascribed to him. His marriage with his cousin Virginia was, according to Mrs. Weiss, his greatest misfortune. Contrary to general opinion, she regards it as by no means a marriage of romantic love, but the work of Virginia's mother, and tho he of all men needed a wife of strong personality to guide and inspire him, the child cousin was never a real companion, could not appreciate his work, and had not, as he himself said, read all his poems. Since he seems to have grown keenly aware of his misfortune, probably his noblest trait was the unfailing patience, kindliness and affection he showed his wife and her mother. Of Poe's gentleness the book offers new and vivid proof. The author is essentially fair. She has made an interesting collection of personal and authoritative facts and delineated a consistent character. Her contribution to Poe literature is a permanent and wholesome one.

Poe is an inevitable candidate for biographical sets. Mr. Macy,[3] in putting together a truthful, if sketchy, outline of the facts of Poe's life and enlivening the recital with a pleasing epigrammatic twist, has succeeded well in an unpromising task, told his bare facts rather interestingly, and maintained a thoro fairness toward Poe's character, tho perhaps without a sympathetic insight into his genius. If, unfortunately, Poe lends himself ill to a concise and handy treatment, still pocket biographies must needs be written, and for that Mr. Macy is not to blame. Of course it is only old material new told, but, considering its limitations, it is well done. We are glad it was Mr. Macy and not some one else who did it.

Strikingly wholesome to one who has been compelled to read much of the "higher criticism" of Shakespeare is the discussion of the problem of "Hamlet," which leads Professor Lewis into an essay upon the genesis of the play.[4] Dismissing difficulties over which learned commentators have fought with intricacies of interpretation that would have left Shakespeare himself bewildered and aghast, the writer offers an explanation both sane and simple. In "Hamlet" Shakespeare was but revising a previous play, the so-called "Ur-Hamlet," written presumably by Thomas Kyd, and this in its turn was a retelling of the French version of the story. Kyd adapted the narrative to his dramatic purpose without always preserving its consistency. Shakespeare took over some of these inconsistencies of Kyd and introduced oth-

[2] THE HOME LIFE OF POE. *By Susan Archer Weiss.* New York: Broadway Publishing Co. $1.50.

[4] THE GENESIS OF HAMLET. *By Charlton M. Lewis.* New York: Henry Holt & Co. $1.25.

ers of his own, and the earlier hero of action was but partially transformed into the contemplative Hamlet of Shakespeare, the incongruities of whose character are not illustrations of super-subtle psychology, but merely unassimilated inheritances from the old story. The editors have been perpetually barking their shins over problems in Shakespeare because they have assumed in him a superhuman flawlessness and insight, when the fact of the matter is he is often irreconcilable because he was retelling old stories, and didn't see the difficulties made by the changes he introduced, or possibly merely because he wouldn't take the trouble to avoid them. He had the sad habit of slurring over discrepancies that did not vitally interfere with the logic or interest of the play to the audience that saw it acted before them and had neither time nor inclination for careful analysis. He wrote for the stage and not for the study, and was not above sacrificing consistency to dramatic effect.

Professor Lewis's work is an eminently sane and readable essay toward a rational appreciation of Shakespeare. It is a valuable contribution toward the reconstruction of that lost "Ur-Hamlet," which can be got together only from its sources and the plays which were built upon it. The most important of these is the German drama supposed to be a version of the Kydian play. Useful, therefore, in this connection is the volume of the *Bankside Restoration Shakespeare*,[5] which gives in parallel columns a translation of this and the text of the second quarto of "Hamlet," published in 1604.

The History of the Dogma of the Papacy

THIS work,* the very essence of deep and wide scholarship, is among the best which we ever came across, of how to not say a thing. It purports to give a history of the dogma of the Papacy. In vain one finds any trace of such a dogma. It opens with the year 50. The three texts upon which this doctrine rests, "Thou art Peter," "Confirm thy brethren," "Feed my sheep," are not cited in its favor.

The question whether Peter ever was in Rome or not is left unsolved.

> "It must be admitted that the evangelizing of Rome's Jewish colony was done by anonymous workmen, unknown Jews converted in the East and suddenly carried by the needs of life to the banks of the Tiber" (p. 9).

In concluding the discussion on what city is meant by Babylon in First Peter, Turmel declares that either this Epistle must be sacrificed to the Catholic tradition, which puts Peter's tomb in Rome, or Peter's Roman burial place must give way to the First Epistle.

The sketch of St. Cyprian and his dealings with Cornelius and Stephen of Rome would win the admiration of Talleyrand. It is the pen now rather than the tongue which is given us to conceal our thoughts.

According to the African prelate, "Thou art Peter" is the chart of episcopacy and also a symbol of its unity; and in its turn this unity, whose symbol is Peter, has its source in the spirit of fraternal concord, which binds the bishops. The episcopate is therefore a federation. Every bishop is absolute master of that portion of the flock confided to his care. "Rome! It fills but a very modest place in this conception of the Church and the episcopate" (p. 132). The controversy over rebaptizing of the lapsed brought Stephen of Rome and Cyprian to an issue.

Cyprian held his ground; so did Stephen, who during it cited for the first time in support of the Papacy the text "Thout art Peter," and thus gave to the authority of the apostolic see, its most celebrated text of scripture (p. 77), 250 years in finding this out!

The story of the First Council at Nicæa is given in detail. Constantine's letter of convocation is quoted as well as the curious expression he made use of in addressing a number of bishops who were dining with him: "You are for the things done within the Church, but I have been made bishop by God for the things on the outside" (p. 214). So also the fall of Liberius in Arianism, which Döl-

[5] HAMLET AND THE UR-HAMLET. The Text of the Second Quarto of 1604, with a Conjectural Text of the Alleged Kyd Hamlet Preceding it. With an Introduction by Appleton Morgan. New York: The Shakespeare Society. $5.

* HISTOIRE DU DOGME DE LA PAPAUTE DES ORIGINES A LA FIN DU QUATRIEME SIECLE. *Par L'Abbé Joseph Turmel.* Paris: Picard.

linger tells us in "Janus" is hardly consonant with Papal holiness and infallibility, is narrated with a wealth of details.

We close the book with surprise. Turmel uses every one of the stock arguments in favor of the primacy of Peter; but he discusses every known objection and puts the reader in a frame of mind anything but convinced of the soundness of the doctrine.

It will be a wonder if the book escapes the Index. Already heresy hunters are after Turmel as the "Herzog" who wrote the articles in *La Revue d'Histoire et de Litterature Religieuses,* on Mary's virginity, which proves her to have had many children, and also as the "Dupin," whose brochure on the Trinity in the first three ages makes that doctrine a sort of Roman composite between African thought and Greek metaphysics. Turmel has made affidavit that he is not "Herzog" or "Dupin." True, but there is little doubt that both Herzog and Dupin are one and the same Turmel. The heresy hunters have a fresh handle in the new history of the dogma of the Papacy.

The Grafton Historical Series

THE increased interest that the people of the United States are taking in their ancestors and ancestral dwelling places is shown by the number of works on local history now appearing. Among these, the *Grafton Historical Series* * is especially useful because it brings the reader in direct contact with the life of colonial days by their copious quotations and references to the original sources. They accordingly fill a place between the historical novel and the university monograph, being more accurate than the former and more readable than the latter. They serve to dispel the glamor which successive generations of imitative writers and lecturers have thrown round the men of the period, and, at the same time, by showing us the real difficulties and limitations of their environments, enable us to form our own conclusions of their characters and achievements. It takes the edges off our rhetorical admiration of their heroic virtues and denunciation of their bigotry and cruelty, but we gain the acquaintance with more credible and comprehensible human beings.

The most interesting volume of this series is that on witchcraft in Connecticut, for it has, unfortunately, a timely importance on account of the present recrudescence of superstition. How can the author speak so confidently of "this age of reason, of religious enlightenment, liberty and catholicity, when witchcraft has lost its mystery and power, when intelligence reigns"? Does not Mr. Taylor know that if he asks today his nearest neighbors on the street car, that he will get personal narratives of supernatural occurrences quite as incredible and quite as firmly believed as any he records? Mr. Taylor has done a service to psychology as well as to history in searching out and publishing the original documents in the most important of the Connecticut witchcraft cases. Here, for example, is the sort of evidence on which Goody Harrison was convicted of witchcraft in collusion with James Wakely and condemned to death at Hartford in 1669:

"Thomas Bracy aged 31 years testifieth as follows that formerly James Wakeley would haue borrowed a saddle of the saide Thomas Bracy, which Thomas Bracy denyed to lend to him, he threatened Thomas and saide it had bene better he had lent it to him. Allsoe Thomas Bracy beinge at worke the same day making a jacket & a paire of breeches, he labored to his best understanding to set on the sleeues aright on the jacket and seauen tymes he placed the sleues wronge, setting the elbow on the wronge side and was faine to rip them of and new set them on againe, and alsoe the breeches goeing to cut out the breeches haueing two pieces of cloth of different collors, he was so bemoydered in the matter, that he cut out the breeches one of one collor, the other off another collor, in such a manner he was bemoydered in his understandinge or actinge yet neuertheless the same daie and tyme he was well in his understandinge and health in other matters and soe was forced to leaue workinge that daie.

"The saide Thomas beinge at Sargant Hugh

* "The Grafton Historical Series." Edited by Henry R. Stiles. IN OLDE CONNECTICUT. *By Charles Burr Todd* ($1.25). HISTORIC HADLEY. *By Alice Morehouse Walker* ($1.25). KING PHILIP'S WAR. *By George W. Ellis and John E. Morris* ($2.00). IN OLDE MASSACHUSETTS. *By C. B. Todd* ($1.50). A HISTORY OF MATTAPOISETTS AND OLD ROCHESTER, MASSACHUSETTS. *By Mary Hall Leonard and others* ($2.00). IN OLDE NEW YORK STATE. *By C. B. Todd* ($1.50). OLD STEAMBOAT DAYS ON THE HUDSON. *By David Lear Buckman* (($1.25). THE CHEROKEE INDIANS. *By Thomas Valentine Parker* ($1.25). THE WITCHCRAFT DELUSION IN COLONIAL CONNECTICUT. *By John M. Taylor* ($1.50). HISTORIC GRAVES OF MARYLAND AND THE DISTRICT OF COLUMBIA. *By Helen W. Ridgely* ($2.00). New York: The Grafton Press.

Wells his house ouer against John Harrison's house, in Weathersfield, he saw a cart cominge towards John Harrison's house loaden with hay, on the top of the hay he saw perfectly a red calfes head, the ears standing peart up, and keeping his sight on the cart tell the cart came to the barne, the calfe vanised, and Harrison stoode on the carte wch appared not to Thomas before, nor could Thomas find or see any calf theire at all though he sought to see the calfe."

But the life of the Widow Harrison was saved partly thru the action of the ministers, who, far from instigating these persecutions, as is commonly supposed, used their influence against the cruder forms of superstition and the rash acceptance of personal testimony. Thus in case of the Fairfield witches in 1692, the Rev. Timothy Woodbridge and Joseph Eliot give their "concurrance with ye generallity of divines" against the validity of the sink-or-swim test, the stigmata on the body, the dying of cattle and other evidences of collusion with Satan.

The latest volume of the series contains the inscriptions on the tombstones in most of the counties of Maryland and in Washington and Georgetown, an investigation carried out under the auspices of the Maryland Society of Colonial Dames. It has little interest for the general reader, but its 2,000 names carefully indexed may supply the missing links in somebody's genealogy.

On the Knees of the Gods. By Anna Bowman Dodd. New York: Dodd, Mead & Co. $1.50.

This book is in one aspect a sort of "Bekker's Chonicles," while in another it is a thrilling story of two persons, Maia, the heroine, an Athenian, who as a babe had been exposed by a cruel father, Kritios, who wished to unburden himself of a superfluous female offspring. The castaway was reared by a Corinthian chorus-master, and became a wonder in song and dance. But all roads led to Athens, and Maia's talent could not be hidden. With a rich, fond and aged husband who saved her from slavery she came to Athens and fell in love with Ion, a .splendid athlete. At Olympia their love was sealed. But even after the death of old Nerias, family arrangements prevented the marriage. Ion with his splendid horses and his iron nerve won the four-horse chariot race. The description of the victory is thrilling. The Sicilian expedition and the ruin of the Athenians are well portrayed. The return of a single straggler to the Peiræus, bringing the news of the disaster to Athens, sends Maia to Sicily with a swift trireme. She arrives in Syracuse just in time to draw Ion, a living skeleton, from one of the quarries, which were pits of hell. He would have failed at last like most of the captives had he not been gifted with an athlete's physique, and able to sing to his captors the choruses of Sophocles and Euripides. Never in the world did a civilized people give such full rein to cruelty. But Syracuse had great provocation. Maia's anguish at the sight of Ion is overwhelming. She ransoms him and brings him home. She learns that she is of high parentage from a noble mother. To the last chapter the description is sustained. There are some errors to correct. Corinth never had "forty miles of walls," nor did it have "a million or more" inhabitants. The chief blemish is the curious spelling. Samples are "Pollox," "Castilian spring," "Alicibiades," "Alicibiadian," and in constant repetition "Clearckus" and "Thrasybulous."

Seraphica. By Justin Huntly McCarthy. New York: Harper Bros. $1.50.

The scenes of this story are laid in France when Louis XV was King and Philip of Orleans was regent—"An ideal time in the world's history," the author writes. "A gentry wearied of great wars which were not always successful wars, wearied of the sanctimonies that accompanied the dominion of a Maintenon, wearied of formalities, pomposities, shams and braggadocios innumerable, found itself suddenly able to breathe more freely, to sin more liberally, to be more blithe about its vices, more merry about its pleasures, more careless of parade." And the story fits well into such times. The hero is a certain Prince Renaud, already in love with a court favorite. On this account he refuses to marry the pretty young Duchess Seraphica, whom he has never seen, but who has been chosen for him in spite of the preoccupation of his affections. He starts for Paris and his lady love there, and is

joined by a young bantling in breeches home if he would be appreciated at home. who saves his life upon sundry occasions, and in other ways renders himself serviceable. The sequel proves that the bantling is really the duchess in disguise. Cupid could ask no better situation, and he makes the most of this. It is a gay little butterfly romance floating above the tangled ambitions and the graver policies of the times.

The Old Dominion, Her Making and Her Manners. By Thomas Nelson Page. New York, Charles Scribner's Sons. $1.50.

Unluckily, this volume is a year after the fair. In 1907, as preparatory to the Jamestown Exposition, it would have been in the nick of time. It does not pretend to serious historical importance nor to any research, the historical part being avowedly founded on Brown's "Genesis of the United States." There is a curious confusion in the substitution, which occurs more than once, of the dates of the seventeenth for those of the sixteenth century. To show that it is a slip of memory and not a mere misprint, we have the armada year given as "1688" (p. 55) with the addition: "England made herself ready for the final struggle on which was to rest her civilization as more than a hundred years later she made ready to meet Napoleon," when, in fact, it was, of course, more than two hundred years. As a popular account of the "making" of Virginia, Mr. Page's work will by no means tend to supersede John Fiske's. The author is much more at home when he comes to the "manners." The chapters on personal reminiscence, on the University of Virginia, and Hanover County after the war show Mr. Page's attractive personal touch, and are worth reading.

The Iron Lord. By S. R. Crockett. New York: The Empire Book Co. $1.50.

Mr. Crockett is the well-known writer of tales that tend to make the blood run cold—chiefly because he allows persons in them to die on his hands under suspicious circumstances, and because he will not permit the moon to shine upon the darkest nights, so the reader instinctively expects the worse. One cannot feel safe with an author who leads his home if he would be appreciated at home. characters forth in Egyptian darkness, and who will not bring them home till morning. In the present volume he pays little attention to the scenery, having used it so often, but from certain topographical indications we infer that this Iron Lord is the owner of an iron ore mine somewhere in Scotland, an inference confirmed later on in the story. And the initial chapters do tend to chill the blood if the reader is young and has a trembling, ghost-seeing imagination. But after Vida, the spirited daughter of the Iron Master, has been rescued from the ship where her viciously smelted father has caused her to be abandoned along with her dead mother, upon the open sea, the author clears his brow and changes his mood. He intimates more roses and sunshine than authors in general have been willing to admit to be a part of natural phenomena in Scotland. Chapters follow filled with tea and conversation. Mr. Crockett handles half a dozen pairs of lovers with the ease of one accustomed to conducting such romantic cotillions thru this vale of tears. They are all married in the end and live happy ever after, even the Iron Lord, who has been reduced to poverty for this beautiful purpose. Let the reader read if he chooses. The book will not injure his feeblest virtue, but do not let him purchase it under the impression that he is buying one of S. R. Crockett's dark o' the moon tales.

Reminiscences of Oxford. By the Rev. W. Tuckwell, M. A., late Fellow of New College. With 16 illustrations. Second edition. New York: E. P. Dutton & Co. $2.00.

Those who possess the first edition of this fascinating bundle or "fascine" of anecdotes will be tantalized by the amount of new matter the author has added in the second. There are not many Oxonians left alive who are qualified to reminisce about "Oxford in the Thirties." Of one of the few, we read with some surprise: "Goldwin Smith"—"vastiest Goldwin," Rolleston always called him—"towered above his fellows as undergraduate and bachelor. We all saw in him the coming man; but he married, settled in America, and never came."

Evidently an Englishman must stay at home if he would be appreciated at home. The reminiscent knew his Oxford not only in the thirties, but long after, since he continued to reside as a fellow, and has personal recollection of the best in arts and letters, Church and state, remembering the Tractarian movement and the Gothic revival. How could he fail to make an interesting book? The more because he can tell very well what he remembers, and is by no means a mere *laudator temporis acti,* but only "a man of cheerful yesterdays." His stories are mostly new to modern readers, and all good, all, naturally, with an Oxford flavor. We have space but for one little one, of one Ridding, contemporary and rival of Calverley, or Blaydes, as he was at Oxford. Somebody writing a Latin elegy asked Ridding what was Latin for "lying in state." "Splendide mendax," says Ridding.

The Husbands of Edith. By George Barr McCutcheon. New York: Dodd, Mead & Co. $1.25.

Mr. McCutcheon has a proclivity for tangled situations, and a pretty talent for inventing them. He persuades us of their plausibility, and then develops them with contagious enjoyment. In *The Husbands of Edith* he proves the necessity of a young American architect's posing, in Vienna, as his English friend, while the latter foils his enemies in London; and then he weaves the complications about the devoted young man, to the end of the snarled skein of circumstance, appearance and misunderstanding, to his own joy and ours. As the impersonator of the *ci-devant* husband of Edith, young Mr. Brock has an exciting time of it, diverting to us, but trying to himself. He has to learn to manage a monocle, a French lapdog, a baby ostensibly his own but to whom he had never been introduced, and an English accent, all in a day. Mr. McCutcheon has never written a more entertaining tale, nor one better suited to the summer vacation library.

The Symbolist Movement in Literature. By Arthur Symons. New York: E. P. Dutton & Co. $2.00.

A discriminating critic and esthete versed in the seven arts who has read all of Mr. Arthur Symons's books pronounces this to be the best of them; and we may readily accept that opinion. Furthermore, it is the most sympathetic study and the most illuminating interpretation that has yet appeared in English of that curiously interesting group of French writers which it was the literary fashion a few years ago to call "the Decadents." The reissue of the little book, after a lapse of nine years, in a revised edition should be welcomed by all students of modern literature. In its pages Mr. Symons treats of Gérard de Nerval, Villiers de l'Isle-Adam, Arthur Rimbaud, Paul Verlaine, Jules Laforgue, Stéphane Mallarmé, Joris Karl Huysmans, and Maurice Maeterlinck. Intimate personal acquaintance and friendship with several of these writers helped him largely in his purpose, tho that purpose was not primarily to provide information. As he points out in a bibliographical postscript to the volume, the essays are concerned with ideas rather than with facts; "each is a study of a problem, only in part a literary one, in which I have endeavored to consider writers as personalities under the action of spiritual forces, or as themselves so many forces."

The Californians. By Gertrude Atherton. New York: The Macmillan Co. $1.50.

Mrs. Atherton has been quoted as one of those who deplore the "prudery of American fiction," and who demand the "emancipation of American art." After reading *The Californians,* a novel dealing with the fortunes of a little group of millionaires on Nob Hill, in old San Francisco, we cannot see that Mrs. Atherton has denied herself any freedom that she desired in either plot or treatment, nor that the Continental attitude toward certain problems has availed her greatly, to interest or disturb the reader. In truth, the first half of the novel is distinctly dull, except the chapter in which the forlorn young heroine, who has "lost her religion"—the Catholic faith—by overmuch reading of ill-digested science, appeals to her worldly Uncle Jack, an elderly *debauché,* for some sort of moral standard that would never fail her. He rises unexpectedly to the occa-

sion, and his advice is one of the best passages in the book:

"His first impulse was to laugh, so ludicrous was the idea that any one should come to him for spiritual advice; his second to get out of the room. He did neither, however. . . . 'Promise me, Léna, swear to it, that until you are thirty you will never do anything your instincts and your intelligence don't assure you is right—really right without any sophistry. Sackcloth hurts. If you can't get the very best in the world, take nothing."

The second book introduces rivalry, jealousy and dramatic contrasts, but it is not so interesting as many a quiet chronicle of American middle-class life, untouched by the savage light that beats upon Nob Hill and other social peaks and plateaus written by—well, let us say, William Dean Howells, whose gentle artistry is so abhorrent to Mrs. Atherton and others of the "tell-it-all" school of fiction.

John Harvard and His Times. By Henry C. Shelley. Boston: Little, Brown & Co. $2.00.

The little known of John Harvard has made him one of the exquisite, half-legendary figures of our history. It is not wholly a misfortune that, even with the few facts research has added to our knowledge, the young scholar of Cambridge, coming to the New World only to die, leaving his precious books and a portion of his patrimony to the college that existed as yet only in an enactment, is still a figure rather for the fancy to play upon than for the serious biographer to describe. The statue upon the Harvard campus is as near to the personality of the Puritan youth as we are like to come, and if it be not like him in feature it is like him in ideal, which is a matter more vital. The diary of Nehemiah Wallington, who lived on the other side of the Thames from the Harvard household, serves as a foundation of much of the incident suggested, and from this and the scant church and official records an entertaining story has been evolved. Page 62, taken at random, shows how history and biography may be woven of the woof of pleasant fancy with very little of the warp of fact. Its propositions are variously introduced by the phrases: "It is not illogical to conclude," "He may be granted to have been," "John Shakespeare appears to have," "It is practically certain also." Mr. Shelley, knowing himself to be dealing wholesale with inference, indeed, is now and again more cautious than needs be, and had he the courage of his convictions he might have used the indicative mood for many statements that are irritatingly hedged round with "perhaps," "if," "maybe," and all their unreliable kindred. The times of John Harvard are, of course, somewhat familiar ground to the student of American beginnings, and it was a temptation to shed fresh interest on them by connecting their details with John Harvard's career therein. No one can deny the possibility that Shakespeare introduced Harvard's father and mother, or that Harvard was in the habit of traveling down to Cambridge under the safe escort of Hobson, of the famous choice. If it really helps to a conception of the unknown lover of books and learning, let it. Certainly many probabilities and improbabilities, too, are to be overlooked for the sake of the charming pages on the gathering of the precious library, of which but one volume has come down to these times. To make us acquainted with that doughty seller of books, and spreader of sedition, Michael Sparke, is a kindly deed for which every reader will be grateful.

The Sphere of Religion: A Consideration of Its Nature and of Its Influence Upon the Progress of Civilization. By Frank Sargent Hoffman, Ph. D. New York: G. P. Putnam's Sons. $1.75 net.

This book starts out as a philosophical discussion of the nature of religion, thoro in method and clear in insight; it proceeds before many pages to a description and analysis of the chief religious literatures of the world, from the ancient tablets of Babylonia to the "Book of Mormon," "Science and Health," and even Madame Blavatsky's "Isis Unveiled"; after two hundred pages of such description the volume continues and concludes with essays on the most various of religious topics, such as "The Relation of the Fine Arts to Religion" and "The Church and the Right to Property." Professor Hoffman is an able student and a clear writer, of open mind and fearless pen, but the question may be raised whether it is quite fair to intending pur-

chasers and to libraries to give to such a miscellaneous collection of essays a title which implies a thorogoing and scientific examination of the problems of the philosophy of religion.

Literary Notes

....The latest and one of the most clear and convenient of the textbooks of Dr. Zamenhof's international language is *Esperanto in Fifty Lessons,* by Edmond Privat. (Revell, 50 cents.)

....A log house looks easy to build, and so it is, compared with some other forms of architecture. But the amateur builder will do well to consult the attractive little book by Oliver Kemp, just issued by the Outing Co. ($1.25), on *Wilderness Homes,* for plans, estimates and photographs of home-made homes.

....The fiction of spiritualism is increasing in volume at a rapid rate. Richard Harding Davis falls in with the fashion with *Vera the Medium,* a story of a materialized spirit who under the influence of love proved to be all too human. There is in it scarcely a trace of Mr. Davis's former power of vivid narration. (Scribner, $1.50.)

....Mr. William Webster Ellsworth, of the Century Co., well known as a lecturer on "Arnold and André," "From Lexington to Yorktown," etc., has prepared a lecture on Lincoln for the centenary year. He calls it *Abraham Lincoln: Boy and Man.* It contains a great amount of illustrative material lent by Lincoln collectors, and is designed to tell the story of Lincoln in text and pictures, giving special attention to his early life.

....The man who wants to pose in literary circles as an authority on all topics has only to fill his pockets with a half dozen volumes of Routledge's Miniature Reference Library. The latest issues are: *Who Wrote That?* a dictionary of quotations from foreign authors; *Who's Who in Fiction,* noted names in novels, poetry, etc.; *In Praise of Books,* an encheiridion for the booklover; and a *Dictionary of Synonyms.* (Dutton, morocco, 50 cents each.)

....Those whose minds are so constituted that they can find recreation in mathematic processes are directed to a new volume on *Magic Squares and Cubes* by W. S. Andrews and others, published by the Open Court ($1). Here may be found directions for making quadratic combinations that surpass Benjamin Franklin's famous sixteen puzzle, which he said was "the most magically magical of any magic square ever made by any magician." Dr. Paul Carus contributes a chapter on the importance of magic squares in Hindu, Chinese and Greek philosophy.

....Probably no man knows more about Panama from personal experience than Tracy Robinson, for he has lived almost half a century in Colon and been acquainted with all the people of importance who have resided on the Isthmus in that time, and with many who only crossed it. He can tell stories of the days of the California gold fever, of the era of graft and extravagance under the French Canal Company, of the visit of M. de Lesseps and his Mauritian wife, of revolutions and shipwrecks and robberies, and all the strange life of the great tropical thorofare. He does not tell these stories quite as interestingly on paper as he does in person, but readers who have not had the pleasure of meeting him will not realize that. It is important that the history of Panama should be put in print by the few who know it, and we hope that Mr. Robinson will give us another volume from his voluminous memory, dealing more in detail with the events of recent years. (*Panama, 1861-1907.* Star and Herald Co., New York and Panama. $1.50.)

Pebbles

"ARE you related to the bride or groom-elect?" asked the busy usher.

"No."

"Then what interest have you in the ceremony?"

"I'm the defeated candidate."—*Christian Register.*

EFFIE, the little daughter of a clergyman, pranced into her father's study one evening while the reverend gentleman was preparing a lengthy sermon for the following Sunday. She looked curiously at the manuscript for a moment, and then turned to her father.

"Papa," she began seriously, "does God tell you what to write?"

"Certainly, dearie," replied the clergyman.

"Then why do you scratch so much of it out?" asked Effie.—*Harper's Weekly.*

"CAN'T you keep still, David?" asked Mr. Mead from behind his evening paper. "What are you doing?"

"Studyin' Latin," came the muffled answer, "an' I'm stuck."

"Show it to me," ordered his father, resignedly. Mr. Mead's Latin was exceedingly rusty, and he, knowing this fact, was wont to act with due caution.

David brought his work over and explained where the trouble lay. It seemed that a certain word could not be found in the vocabulary, nor could he guess whence the form was derived. His father studied the page for a moment and then said: "Now, David, I don't think I ought to help you. It is a great deal better for you to puzzle things out for yourself. In this case it is merely a question of your knowing your declensions and conjugations."

The lad worked till bedtime without success. The next afternoon he came home from school with a look of triumph.

"I've found out about that word!" he announced.

"Perseverance——" began his father.

"The teacher told us—it was a misprint.—*Journal of Education.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Vice-President in the Cabinet

MR. BRYAN'S announcement that if the Democratic Presidential and Vice-Presidential candidates should be elected he would make Mr. Kern an *ex-officio* member of the Cabinet, suggests interesting possibilities.

As long ago as 1901 Mr. Bryan, in an editorial in *The Commoner,* deplored the general ignoring and belittling of the Vice-President and his office. "He ought to sit next to the President in the council chamber," Mr. Bryan said, giving, among other reasons, the excellent one that, inasmuch as the Vice-President might be called upon to assume the responsibilities of the Presidency, he should be familiar with the discussions of administrative policy which occur at Cabinet meetings. He should also offer his own suggestions and advice.

A reason for such an arrangement that lies deeper in our somewhat imperfect plan of government is the great difficulty that always has been experienced in attempting to correlate the work of the legislative and the administrative branches.

The suggestion made from time to time that the Cabinet should have seats in Congress has never met with general approval, and the plan if carried out would imitate only the form and not at all the substance of British ministerial responsibility. In British parliamentary government the House of Commons is the real governing power, and the Cabinet as an executive committee is responsible to the House. The American plan of government is logically explicable only on the assumption that the electorate back of both Congress and the President is the real governing body, and that both branches of the elected Government are responsible to the people. Consistently carried out our plan of government would involve the Initiative, the Referendum and the Recall.

As Professor Goodnow and other writers on the American system have pointed out, the misunderstanding of the British government for which Montesquieu was largely responsible led to assumptions in America that inevitably broke down in practice. There is no such "separation of powers" in England as Montesquieu imagined, and the independence of legislature and executive, one of another, which we tried to create in America, was from the outset impracticable. Not wishing to make the executive responsible to the legislature, we should have made both executive and legislature directly responsible to the people in a strictly democratic way, as Switzerland has done, and as some of our Western commonwealths are now doing in their State governments. British parliamentary government is a logical and workable system, and so is Swiss democratic government. The American national government as provided for in the Constitution, and as it is described in the textbooks, was logically absurd, and it never for a moment worked in practice. Our actual national government has grown up without constitutional warrant, and it is not described in the texts.

The actual correlating agency in America is the party machine, which has usurped the function which in Great Britain is legally and openly exercised by the House of Commons, and in Switzerland is legally and openly exercised by the entire electorate, namely, the people. In the

United States the real government is, and for three-quarters of a century has been, the organized party. The party determines policies and announces them in its platform. It nominates and elects candidates to Congress and to the Presidential office. It thus serves as the otherwise lacking bond between the legislature and the executive, and establishes such crude, imperfect correlation of function as we thus far obtain.

If both the Vice-President and the Speaker of the House should be made *ex-officio* members of the Cabinet it is possible that the desired correlation might be in some degree improved. There are, however, all sorts of possibilities of failure. Personal jealousies and misunderstandings would find large opportunity. Only actual experiment could determine whether such a plan would be, like the party system, a useful device in practice.

Campaign Fund Publicity

THIS year, for the first time, the receipts and expenditures of the parties' national committees are to be published. We are within measurable distance of a great reform, for there will be no backward step. If the provisions made for publicity in this campaign be inadequate, they will be amended hereafter. A brief review of the record will show how much progress has already been made.

In Congress, the enactment of a publicity law was prevented by the action of the Republican majority in the House, who attached to their bill certain provisions which were probably designed to excite in the Senate opposition which could not be overcome before the close of the session. By the publication of a letter, Mr. Taft showed that he desired publicity. At Chicago, the Republican convention by a vote of 94 to 880, unwisely excluded from their platform a publicity plank. But Mr. Taft, the nominee, caused the collection and the expenditure of his party's campaign funds to be made under the new publicity law of the State of New York. At Denver, the Democratic convention placed in its platform an emphatic resolution for publicity, requiring a public statement of contributions before the election. On the 14th inst., Mr. Bryan asked his national committee to take action in harmony with that platform, and the committee at once decided by resolution that it would accept no money from corporations, would accept no contribution in excess of $10,000, would publish (on October 15th and thereafter) the names of all persons giving more than $100, would receive no contribution exceeding $100 in the last three days of the campaign, and would publish a statement of expenditures not later than thirty days after the election. On the 18th Mr. Taft gave notice that his committee would accept no contributions from corporations, but the Republicans have not yet consented to a publication of contributions and contributors' names before election day.

So far as money from corporations is concerned, both parties are merely obeying the law. A Federal statute enacted a year and a half ago forbids corporations to contribute, and provides for the punishment by fine or imprisonment of any officer or director who shall consent to a contribution by the corporation with which he is connected. There is a similar prohibition in the New York law. The Federal statute may be unconstitutional, on the ground that Presidential electors are State officers, but it has not been tested and it is in force.

In comparing the positions of the two candidates and the two committees, it may be said that Mr. Taft has subjected his fund to the requirements of a law, and that Mr. Bryan has not taken this course, altho we believe that he and his committee will be true to its resolution. By excluding contributions in excess of $10,000 the Democrats will lose little or nothing. Few contributions of more than $10,000 are made, and it may be that none would have been offered to Mr. Bryan's committee. A large majority of the names will be withheld from the public by the provision protecting those who give not more than $100. It will be easy for a person who desires to give more, and to avoid publicity, to distribute his gift in sums of $100, paid by friends or agents. In fact, several requirements of the Democratic resolution can be evaded. We do not expect that the published list will be a long one. Still, the action of Mr. Bryan and his

committee is to be commended heartily. It is a long step in the right direction, and in providing for publication before election the Democrats are far in advance of the Republicans.

Mr. Taft should meet this challenge and order a publication of his committee's collections before election day. Public opinion demands this, and if the Republican leaders insist upon keeping secret both the names and the amount until some weeks after the election, they will inevitably suffer in the comparison which independent voters will make. When Mr. Bryan's committee publishes its receipts and the names of those giving more than $100, on October 15th, can Mr. Taft and his committee afford to be silent? We think not.

Publication should be made before the election, and we should be glad to see such publication required by law. The people have a right to know who give to the national campaign fund of a party, how much there is of it, and how it is used. Party leaders who insist now upon withholding this information take a considerable risk. It has but little value if made some weeks after election. If set forth fully and honestly then, such parts of it as may be objectionable lose force before another national election can take place.

If the Republicans win, the tariff is to be revised immediately after the election. It is commonly believed that by large contributions to the party fund in past campaigns, when tariff revision was pending, protected manufacturers have sought, possibly with success, to affect the forthcoming new tariff rates for their own benefit. If Mr. Taft insists this year upon secrecy until after election, it will be asserted that he and his associates desire to conceal contributions designed to procure legislative favor in the new tariff schedules. There are great corporations which may or may not be violating the Anti-Trust law. Who is to decide whether they shall be prosecuted? If the contributions are concealed, Mr. Taft will hear the public assertion that such corporations are buying immunity by generous additions to the fund. If publicity prevents the offering of contributions designed to influence legislation or executive action, well and good. Mr. Taft will not admit that money offered for such purposes is wanted by his committee.

Public sentiment is more exacting with respect to these matters than it was a few years ago, because it is now based upon a considerable collection of undisputed facts. The life insurance investigation revealed huge contributions made from the funds of the great companies. The New York street railway investigation showed how a mysterious payment of $500,000 from a corporation's treasury to five men might be accounted for by an assertion or a suggestion that it was to reimburse them for contributions to the Republican campaign fund. The controversy over Mr. Harriman's $260,000 and his blighted expectations was full of arguments for campaign fund publicity before, not after, election. Mr. Sherman, now Mr. Taft's associate on the ticket, was the collector whose unsuccessful application to Mr. Harriman for money brought to light the history of that controversy, by which, as he must know, public opinion was enlightened and stimulated.

Mr. Taft should vie with Mr. Bryan in compelling all the campaign fund publicity that the conditions will permit, and this publicity should be given before the election. He should allow no concealment nor any delay to cover up until after election the gifts of contributors whose aim may be thus to obtain something, in legislation, patronage or executive favor, to which they are not justly entitled. We are not saying that if he should be elected such contributors would be in any sense repaid by him. We are confident that they would not be. But if they contribute, the public should be permitted to know it before the polls are opened.

The Brave Old Man

Leo Tolstoy cannot be silent. Twenty years ago there was but one hangman in all Russia; now thousands of men are executed every year, and they are for political crimes. Tolstoy has issued a long protest to the world, that he may free his conscience of all responsibility, by silence, for the awful condition.

His text is the announcement in the

day's paper of twelve peasants hanged in Kherson for an attack made "with intent to rob" on a landed proprietor's estate. But we must repeat the description of the execution:

"Twelve of those by whose labor we live, the very men whom we have depraved and are still depraving by every means in our power—from the poison of vodka to the terrible falsehood of a creed we do not ourselves believe in, but impose on them with all our might—twelve of these men, strangled with cords by those whom they feed and clothe and house, and who have depraved and still continue to deprave them. Twelve husbands, fathers, sons, from among those on whose kindness, industry and simplicity alone rests the whole Russian life, were seized, imprisoned and shackled. Then their hands were tied behind their backs, lest they should seize the ropes by which they would be hanged, and they were led to the gallows.

"Several peasants similar to those who are about to be hanged, but armed, dressed in clean soldiers' uniforms, with good boots on their feet and with guns in their hands, accompany the condemned men. Beside them walks a long-haired man, wearing a stole and vestments of gold or silver cloth, and bearing a cross. The procession stops. The manager of the whole business says something; the secretary reads a paper; and when the paper has been read, the long-haired man, addressing those whom other people are about to strangle with cords, says something about God and Christ.

"Immediately after these words the hangmen dissolve some soap, and having soaped the loops in the cords that they may tighten better, seize the shackled men, put shrouds on them, lead them to a scaffold and place the well-soaped nooses round their necks.

"And then, one after another, living men are pushed off the benches which are drawn from under their feet, and by their own weight suddenly tighten the nooses round their necks and are painfully strangled. Men, alive a minute before, become corpses dangling from a rope; at first slowly swinging and then resting motionless.

"The thing is awful!"

It is awful. All this is done not once or twice, but hundreds and thousands of times, until the business of the executioner has become profitable, and children play execution in the streets! And all this is done in the name of the people, of public order, to protect the tranquillity of the inhabitants of Russia. Tolstoy says that this is then all done for him, as one of the people thus protected; that for him are the evictions, the conscriptions, the transportations, the hundreds of thousands dying of scurvy and typhus in overcrowded fortresses and prisons; for him the destitution of the families of exiles, the spies and the bribery, the hangmen and the gallows; and he cannot endure it. He will free himself of all responsibility for it:

"That is why I write this and will circulate it by all means in my power, both in Russia and abroad; that one of two things may happen—either that these inhuman deeds may be stopped or that my connection with them may be snapped and I put in prison, where I may be clearly conscious that these horrors are not committed on my behalf; or, still better (so good that I dare not even dream of such happiness), they may put on me, as on those twenty or twelve peasants, a shroud and a cap and may push me also off a bench, so that by my own weight I may tighten the well-soaped noose around my old throat."

But the Russian Government will not touch the old man. It will watch him, will not let his words be printed or distributed in Russia, and it will let him alone. Yet he has freed his mind and dared their worst. He is ready to be a martyr for the liberties of Russia.

The world groans that it must bear the burden of Russia. Thru such words and acts as this of Tolstoy's, thru the patient labors of wise but determined men in the Duma, and thru the misguided violence of revolutionists, and the repressive violence of those who advise the Czar, we believe there is rapidly approaching a day of freedom for that unhappy land. Only what is rapid progress in the history of a state seems painfully slow to the vision of the eager prophet. Yet "the vision is for the appointed time, and it hasteth toward the end, and shall not lie. Tho it tarry, wait for it, because it will surely come, it will not delay."

How to Become a Great Discoverer

THERE is no twenty-five cent book on the newsstand with that title and the correspondence schools do not include it among the courses by which the young man is invited to ascend the ladder of success. Consequently any stray bits of information on the subject are worth picking up. We are always trying to guess how genius works by watching how geniuses act, as tho learning a little of the external mechanism would help

us in our efforts to imitate the process —and sometimes it does.

We got one of the rare glimpses into the psychology of discovery thru the frankness of Dr. Alfred Russel Wallace when the Linnean Society presented to him the first of its Darwin-Wallace medals. This new decoration implies a greater equality of achievement than actually existed, but it is well that it bears both names if for no other reason than that it commemorates something almost as remarkable as the discovery of evolution, namely, two scientists in honor preferring one another when they had seized upon the same truth. Dr. Wallace gave another evidence of this when in expressing his appreciation of the honor he said that since the death of Darwin he had been receiving from popular writers more than his share of credit and praise. The idea of natural selection had come to them both independently, but not simultaneously. It had occurred to Darwin in October, 1838, nearly twenty years earlier than to himself, and during the whole of that time he had been laboriously collecting evidence and carrying out ingenious experiments and original observations. How different from this long study and preparation, this philosophic caution, this determination not to make known his fruitful conception till he could back it up by overwhelming proofs, was his own conduct! The idea came to him, as it came to Darwin, in a sudden flash of insight. It was thought out in a few hours, and was written down with such a sketch of its various applications and developments as occurred to the mind at the moment. Then it was copied on to letter paper and sent on to Darwin, all in one week. Dr. Wallace modestly concluded from this that he would have no cause for complaint if the respective shares of Darwin and himself had thenceforth been estimated as roughly proportional to the time that each had bestowed on their theory when it was first given to the world, that was to say, as twenty years was to one week.

Then he went on to explain how Darwin and he came to hit upon the same solution to the problem that had baffled so many of the greatest intellects. He pointed out as the most important of the common factors in the mental processes leading to their discovery three things, which we may summarize as:

1. Beetles.
2. Solitude.
3. Malthus.

Thus reduced to its lowest terms it looks easy enough, and we are inclined to regard it as an algebraic formula of the art of discovery in general. The first essential is the material, the accumulated facts, in this case the beetles. Both Darwin and Wallace became ardent beetle hunters in early life. Now, there are more different kinds of beetles than of anything else on earth, and a man who tries to collect them all gets to wondering how there came to be so many. And the same question came up in regard to everything else the naturalist found on his way around the world in the middle, where it is the biggest. So these two men were for years confronted by The Problem, surrounded with it, immersed in it.

The second factor of success is one that Dr. Wallace thinks a great deal of and most people not at all. On his long sea voyages and tramps in the tropics, each of these men was much alone, alone with his thoughts. There was nobody to dictate to him or bother him or worry about him. If he got started thinking about something at sunrise he could keep at it all day if he wanted to, or go to sleep and dream about it if he preferred. There was no long cue of students waiting outside his office door to have their cards filled out, no committee meeting at 3.30, no laboratory getting into bad habits thru his absence. It is a poor college nowadays that could not give its instructors more books and apparatus and specimens than these men had fifty years ago, but what college is rich enough to give what they had in abundance—that is, leisure to think? We wonder why some one of our patrons of learning does not establish an endowment fund to furnish solitude to our scientists; we wonder also what our scientists would do with it.

Finally, at the critical moment when the minds of Darwin and Wallace were freshly stored with personal observation

and reflection, they had their attention directed toward Malthus's "Principles of Population," and at once this accumulated material began to take an orderly arrangement and a new meaning about the law of the survival of the fittest. Sometimes a chemist gets a solution that will not crystallize. He may keep the thin glass dish on his desk for months and stir the sticky liquid with a sharp rod never so much, but it still remains obdurate. But if he drops in a crystal obtained elsewhere, a single particle too small to weigh or see, the whole mass instantly assumes its regular and predestined form. So the mind of the scientist requires, at just the right time, the fertilizing suggestion, the crystallizing thought, gathered from books or caught from conversation, the stimulus of contact with other minds engaged on similar problems.

It is curious what a fertile seed-thought that of Malthus has been to many minds in divers fields. Equally curious how the ideas that everybody detested and most people denounced have at the end of a century pervaded the philosophy and practice of the world. Malthusianism had three meanings; it was a law, a warning and a policy. In all three lines it has been triumphant. The law that the population tends to increase faster than the means of subsistence evolved into the larger idea of the universal struggle for existence, and in this shape has transformed for us both the past and the future. The warning, that the unchecked pressure of population would lower the standard of life, was derided by his opponents, who relied upon emigration and the improvement of agriculture to relieve them from the iron law. Both the means of transportation and of production have developed beyond their most liberal estimates, and yet the economic customs of all nations have had to be modified to meet the new conditions. That the policy advocated by Malthus, the voluntary restriction of the birth rate, is becoming dominant, the statistics of every civilized country show.

But it is a trivial matter, worth only a moment's attention, whether a dead philosopher has the right to say "I told you so" to the world.

"Our little systems have their day,
They have their day and cease to be."

Already Wallace lingering on the stage can see the younger biologists turning away from the faith in which they have been brought up, and treating with a certain degree of contempt the simple formula which he and Darwin announced to the Linnean Society at that memorable meeting of 1858. Our men of science have stopt arguing about the possibility of new species and are hard at work making them. We now hear it said occasionally that Darwinism does not work. It does not matter. Darwinism has worked. It has done splendid service in organizing and guiding biological science for fifty years. To what extent or in what form it will be of service in the future it remains for the new Darwins and Wallaces to determine. As Professor Thomson says: "A scientific theory is not a creed, but a policy."

The Poet of Present Life

MAY we say that there has not appeared in the poetry of the month a finer poem than "The College of the City," by Deborah H. Silver, in the *Atlantic Monthly*. She points to the "stately palace," nobler than any mightiest fortress, "where a thousand legions sleep," and then turns to the eager youth that throng it:

For a legion camps there, eagle-eyed,
Flushed with the spirit's fires,
They, whom the elder lands would not—
Younger sons of the sires.

Shoulder to shoulder—a stubborn breed—
There stirs in the atrophied vein
The quickened pulse of a soul reborn—
The prophet's dormant strain.

Brother and brother—parched of their thirst!
They drink at the fountain-head;
They taste of the manna long desired,
They eat of the fruit and are fed.

Again, yet again—the waters of life!
You shall hear of them, country mine!
Hewers and builders, captains of men,
Thinkers, poets divine—

These whom the elder lands would not!
Patience, fools! ye shall see,
For a nation reapeth as it has sown,
And the reaping is yet to be!

More magnificent than the stately architecture of the New York City Col-

lege is the troop of American youth, children of alien parents whose fatherland sent them here stript and bare, but who with splendid courage and self-denial make it possible for their sons to drink the cup of learning which the city holds freely out to them. Read the list of the prize names, Russian, Pole, Hungarian, Jew, those "whom the elder lands would not," but who here find their own, and in a few years will repay all that we give them.

Great Britain is now ringing with the praise of Selig Brodetsky, a Russian Jew of twenty, son of a poor emigrant from Odessa, who landed in England at the age of five, ignorant of our language, reared in dire penury, but who was sent to school, won honors and scholarships, and now graduates as Senior Wrangler at Cambridge University, the highest honor British universities can give. We have them here, rising out of poverty, but in our city colleges equaling or surpassing the highest attainments of our best trained American youth.

We like the poem. It has force. It is born of the times. It harks back to no elder convention. We ventured two weeks ago to publish an article on poetry, and several poems, by an eager young poet, because we hope that Harry Kemp has fresh stuff in him. There are critics who tell us there is nothing more in him than in dozens of budding and ambitious writers of verse who would be poets; that he is not like the literary masters, does not regard the old conventions, etc. Well, what of it? To compare great men with small, at least the old with the new, just so they talked about Wordsworth and Shelley and Keats and Tennyson and of late about Kipling. The true critic is the one who can catch the poetic spirit under the new form, or in a new tongue. The greatest pleasure an editor has is to discover a new star. To be sure some are little more than flashes that fade away, *novæ* that burst and die, but some really remain permanent orbs in the heavens. How Lanier was abused! How THE INDEPENDENT delighted to publish his poems! Now all do him reverence. When a young poet seems to arise we would give him welcome and hope.

Isaiah and Rome

THE so-called Prophecy of Isaiah contains sixty-six chapters. The title prefixt to the sixth chapter says it was written by Isaiah, son of Amoz, in the reigns of Uzziah, Jotham, Ahaz and Hezekiah, kings of Judah; that is, during a period of forty years before 700 B. C. The thirty-five first chapters consist of prophetic discourses, and make a section by themselves, and it is to these that the title naturally applies which ascribes the writing to the prophet. Then comes a second section, or book, extending over four chapters, which is historical, and identical with chapters in II Kings. The closing chapters, 40 to 66, sound as if written during the Captivity, two hundred years after Isaiah's time; and even Calvin, before the days of biblical criticism, remarked that portions must have been written during the Captivity. Take this passage:

"Thy holy cities are become a wilderness, Jerusalem a desolation. Our holy and our beautiful house, where our fathers praised Thee, is burned with fire, and all our pleasant things are laid waste."

There was no condition like this in Isaiah's time; the temple was in all its glory. Or this:

"Thus saith the Lord, thy redeemer, . . . that saith of Jerusalem. She shall be inhabited, and of the cities of Judah, They shall be built, and I will raise up the waste places thereof . . . that saith of Cyrus, He is my shepherd, and shall perform all my pleasure; even saying of Jerusalem, She shall be built, and to the temple, Thy foundation shall be laid."

Those conditions did not exist in Isaiah's day. The foundations of the temple did not need to be laid, and Cyrus was not born. The writer himself distinctly indicates that he is living in Jerusalem near the end of the period of the Babylonian Captivity.

What every scholar knows, even conservative ones, what is generally now accepted, what the author of this section himself asserts, is most absurdly and ridiculously discredited by the Papal Biblical Commission. It declares, in effect, that the sixty-six chapters were written by Isaiah alone, and not by two or more authors, and that even the second part, chapters 40 to 66, in which the

prophet addresses the exiles living in Babylon, was written by the prophet Isaiah two centuries before. To be sure it does not exactly say it—it leaves a little loophole of escape to the next generation, but it pronounces the evidence worthless. First it declares that it may not be taught that the prophecies of Isaiah are not real predictions; next, it declares that Isaiah uttered real Messianic prophecies, and not simply those relating to events near his own time; next, it cannot be admitted that a prophet's predictions always related to matters that would be understood by his hearers; and accordingly the fact that the second part of Isaiah addresses the exiles in Babylon is no proof that this was written by a later prophet; next, that there is no evidence in style or language to compel a scholar to believe in more than one author; and, finally,

"There are no solid arguments presented, even taken together, to prove that the Book of Isaiah is to be attributed not to Isaiah alone, but to two, or rather to many, authors."

The reader will see that it is not categorically stated that the historical Isaiah wrote the whole book, but that there is no evidence to prove a dual or multiple authorship. The implication is clear that Isaiah was the sole author, but an anchor is cannily cast to the windward.

It used to be regarded as an obligation of faith to hold that the earth is only six thousand years old because the Bible says so. When geologists showed the fossils in the rocks which indicated a period of millions of years, the easy answer was given that God could have created the rocks with fossils in them. True, but He would not have deceived us so. It is true that God could have put it into the mind of a prophet to describe things as existing, Jerusalem destroyed, the temple burned, the people in exile, when none of these things were true; but He would not have so deceived us, or allowed such inexplicable nonsense to be spoken to the kings and people in the days of Uzziah and Hezekiah. We have to read books old and new with literary sense; and while there is prophecy enough, there is also plainly the description of conditions then present and not future.

Now it is an extremely sad event, and a very serious one, that the Papal Biblical Commission, reorganized by the present Pope to make it conservative, should have made this pronouncement and imposed it on the whole Catholic Church. They make it reprehensible Modernism to believe in two Isaiahs. No Catholic can now teach it. What business have they to tell the Church what it must believe? It is an impertinence, an insult to the scholars in the Church, and even to the intelligence of the common plain reader of the Bible. The natural effect of it, if it has any effect at all, is to drive conscientious scholars out of the Church. Some Protestants would rejoice at that; we do not. We much prefer to see liberty in the Church, and truth allowed to find its own place. The Catholic Church is a mighty power. It holds men to God and righteousness, and we do not want it weakened. But such decisions as this, and that last one on the Pentateuch as all written by Moses, put a strain on loyalty. It seems at times as if some fate were driving the Catholic Church—not here, but in Rome—down the ruinous road of clerical credulity and popular infidelity, as in France and Italy. But we do not believe that this is possible in this country. Here the simple faithful, as Mr. Moody once said, will never trouble themselves about the second Isaiah, so long as they have never heard of the first; and the intelligent laymen and priests, who read and think, don't care much what Rome has to say on what is none of its business. They will keep still and exercise the liberty they have learned to judge for themselves; and the chief effect, we hope and believe, will be to give them a contempt for meddlesome dictators in other men's affairs, telling what they shall think and believe, when they are competent to think and judge for themselves. Our American Catholics are not Frenchmen or Italians. Not many of them will leave the Church, like the Brooklyn priest who withdrew last week, but they will think, and they will not allow the Vatican to drive them into unbelief.

To Educate Chinese Youth

The cost of the Boxer outbreak, as assessed on China and to be paid to the several nations, was probably very excessive. It certainly was if that assigned to America is a fair specimen.

Nearly $25,000,000 was awarded to the United States; and when we came to add up the items we found that it was twice as much as it had cost the Government and our citizens. Accordingly Congress, out of honesty—we do not say generosity—voted to return the balance, a little more than one-half. Now China gratefully accepts this unusual act of international decency and plans to send four hundred chosen youth to America for education with the money returned, so long as the payments go on, nearly thirty years more. China sees the advantage she has gained from the education of her youth in this country. They now are in the highest positions of public service. There could be no greater force for the regeneration of that awakening land. Our universities and their students should give these youth the warmest welcome. We have lost immensely in the chance of good service by the interruption in the stream of Chinese youth coming to this country thru the anti-Mongolian silliness. Just as the United States was the first country to recognize the civilization of Japan by yielding the extraterritorial rights, so we are the first to do justice to China by reducing the exorbitant demands by which China was forced to pay about $330,000,000 to the nations that suffered by the Boxer outbreak in 1900. May our example be followed!

Gompers and Hearst

Mr. Hearst runs popular papers, and thru them and his Independence League controls a considerable number of votes in New York, New Jersey, Connecticut, Illinois and California. Mr. Gompers, who got pretty much all he asked of the Denver Convention, writes a letter begging Mr. Hearst to support the Democratic ticket. He gets vitriol back for his treacle. Mr. Hearst remembers that when he was nominated for Governor of New York by a fusion of Democrats and the Independence League he was defeated by the treachery of New York and Brooklyn Democrats, and he will have no more of them. He says that Bryan and his platform talk well, but it is all hypocrisy:

"I do not think the best benefit of laboring men lies in supporting that old party because of a sop of false promise, when the performance of that party while in power did more to injure labor than all the injunctions ever issued before or since. I have lost faith in the empty professions of an unregenerate Democracy. I have lost confidence in the ability, in the sincerity, and even in the integrity of its leaders. I do not consider it patriotism to pretend to support that which, as a citizen, I distrust and detest, and I earnestly hope that the Independence party will give me an opportunity to vote for candidates that are both able and honest, and for a declaration of principles that is both sound and sincere."

Equally he detests the Republican party, and he and his will have to troop by themselves. But it will be the undoing of the Democratic party in half a dozen States. But he does not care, any more than the Liberty Party men cared when, in the days before the Civil War, they were told they were not merely throwing away their votes, but were giving the country over to the enemies of the old Whig party, which they had deserted. They expected to grow, and they did grow till they elected Abraham Lincoln.

A Farmers' Fund

Mr. Bryan's appeal for funds is not a bad one. He asks for a farmers' fund to elect him. Of farmers he says:

"He has been the victim of all special legislation and has suffered from the control of politics by the great predatory corporations."

We should have thought he would find the farms a poor field to hunt campaign funds in; but Mr. Bryan goes on to say:

"There are hundreds of thousands of farmers who are abundantly able to contribute to the campaign fund. There are thousands who could give $100 apiece without feeling it. There are tens of thousands who could give $50 apiece without sacrificing anything, and still more who could give $25, $10 or $5."

So the farmers alone could give the million or two dollars needed "without feeling it." We are glad to know that they have saved so much from their predatory enemies.

More Centralization

It is interesting and amusing to observe how both parties speak strongly for the reserved rights of States, and yet for more centralization. This is of the Democratic as well as of the Republican platform. For many years States' rights as against Federal power has been the Democratic watchword; and yet the Denver platform demands "such legislation as will increase

the power of the Interstate Commerce Commission"; that an "emergency currency" "should be issued, controlled by the Federal Government"; that there should be "a law to regulate the rates and services of telegraph and telephone companies"; and, further, a law which will "make it necessary for a manufacturing or trading company engaged in interstate commerce to take out a Federal license." Between the two parties it is tweedledum and tweedledee, with the Democratic party, if anything, a little ahead of the Republican in its demands for Federal centralization; at least, trying to keep in advance of President Roosevelt's recommendations.

Woman's Wiles

Representative Glenn has introduced a bill into the Georgia Legislature to prohibit the women from employing any devices of costume calculated to deceive men, such as pads, rats, false hair, false teeth, corsets, cosmetics, lace waists and sheath gowns. We can understand his intention in regard to part of these items, but why does he include the two last as concealments and falsifications? We should suppose the objection to them lay in another direction. Would he not leave the women anything? The sheath gown, or *chiton schistos,* was, if we remember aright, made compulsory by an earlier statesman for the purpose of promoting matrimony, to which the bachelors of ancient Greece were as averse as those of the present. We sympathize with the Southern statesman in his effort to abolish this great evil of feminine falsity, but we hardly expect him to succeed where Solon, Lycurgus, Isaiah, and the long line of medieval makers of sumptuary laws have been defeated. Mr. Glenn seems already to realize some of the difficultes of the task he has undertaken, for he says:

"On acount of the numerous newspaper articles, letters and telegrams I have received from the various and irate female organizations of the country and on account of my wife being a very peculiar woman, and she strenuously objecting to my receiving letters of any kind or character from other ladies, whether they be mad or not, or whether they are members of any organization, kind or charitable, I am compelled to seek the protection of the Legislature.

"My very life has been threatened and I don't know what moment some vengeful woman may attempt to kill me. I had no idea women had so much venom in them until I introduced the bill. I take it that the allegations regarding pads, corsets, etc., are true, or women would not be so angry."

The Rev. Thomas J. Mulvey, for nearly nine years assistant rector of a Catholic church in Brooklyn, has withdrawn from the priesthood, and distinctly gives the reason to be a change in his views and the Papal decree against Modernism. It is hardly generous of Cardinal Gibbons and Archbishop Farley to say that the priest is young, and they presume there is some other motive back of what he gives. But they can comfort themselves for the loss of this one priest from their Church with the thought that sixteen Episcopal clergymen have lately gone over to Rome.

We had not noticed, until we saw it in a Japanese paper, that it is to the Rev. H. Loomis, D. D., of Yokohama, agent of the American Bible Society, that our Department of Agriculture is indebted for the discovery of the parasite of the gipsy moth, which Secretary Wilson is now distributing where it is needed. Secretary Wilson has sent a special message "to express officially to the Rev. Dr. Loomis our gratitude for his invaluable aid in this connection." This is another of the numerous examples in which missionaries aid civilization.

Senator Bourne, of Oregon, who was so noisily insisting that President Roosevelt, whether he would or no, should be his own successor, now wants Mr. Taft to promise that if elected he will not at the end of his term try to select his successor. He thinks it dangerous. If a President can properly seek to perpetuate his policies *plus* himself, he can certainly seek to perpetuate his policies without himself, and we see not the slightest reason why he should not do so. If he misused his office in doing this he could be impeached.

It would be a coincidence if Mr. Bryan should be domiciled in both Washington and Lincoln.

If you could dress just as you please you would not mind the hot weather.

FINANCIAL

A Year's Foreign Trade

THE Government's report upon our foreign commerce for the fiscal year just closed shows that while the exports were almost equal in value to those of 1907 (the decrease having been only $20,000,000), the decline of imports was $240,000,000. Exports were maintained by heavy shipments after the beginning of the panic, because we needed the money. In September they were only $135,000,000, and the average for the three months ending with September was only $130,000,000. But October's shipments rose to $180,000,000, November's were $204,000,000, and the average for the four months beginning with October was almost $200,000,000. With this sudden growth of exports, however, imports as sharply declined. Demand for luxuries from abroad ceased, and the condition of our industries largely reduced the demand for imported raw materials or partly manufactured products. And so the import loss was $240,000,000, and the export balance ($666,457,103) was greater than ever before. The figures for the years since 1899 are shown below:

Fiscal year.	Exports.	Imports.	Excess of exports.
1908..	$1,860,799,097	$1,194,341,994	$666,457,103
1907..	1,880,851,078	1,434,421,425	446,429,653
1906..	1,743,864,500	1,226,562,446	517,302,054
1905..	1,518,561,666	1,117,513,071	401,048,595
1904..	1,460,827,271	991,087,371	469,739,900
1903..	1,420,141,679	1,025,719,237	394,422,422
1902..	1,381,719,401	903,320,948	478,398,453
1901..	1,487,764,991	823,172,165	664,592,826
1900..	1,394,483,082	849,941,184	544,541,898

If the movement of gold and silver be taken into account, the export excess is reduced to about $604,000,000. Imports of gold exceeded exports by nearly $76,000,000, but we shipped $13,000,000 more silver than we received. Panic demand for gold caused the importation of nearly $119,000,000 in November, December and January, but we have recently been sending the gold back, exports since the middle of April having amounted to nearly $50,000,000.

Railway Statistics

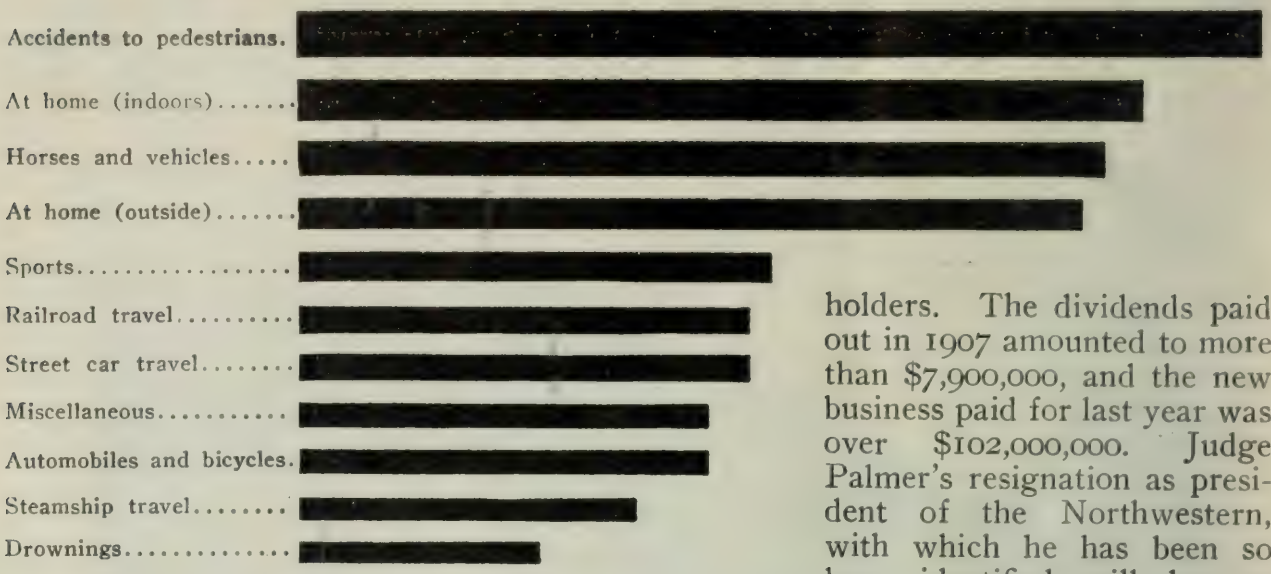
THE Interstate Commerce Commission's annual statistical report, issued last week, relates to the year which ended on June 30th, 1907, three months and a half before the beginning of the panic. We take from it the following figures, those in parentheses representing increases over the preceding year:

Single track mileage, 229,951 (5,588); locomotives, 55,388 (3,716); cars, 2,126,594 (167,682); employees, 1,672,074 (150,719); wages and salaries paid, $1,072,386,427; number of persons carried, 873,905,133 (75,959,017); tons of freight, 1,796,336,659 (164,962,440); average revenue per passenger per mile, 2.014 cents (0.011); average revenue per ton per mile, 0.759 cent (0.011); gross earnings, $2,589,105,578 ($263,340,411); operating expenses, $1,748,515,814 ($211,638,543); net earnings, $840,589,764 ($51,701,868); casualties, 122,855; persons killed, 11,839; persons injured, 110,016; passengers killed, 610 (251); passengers injured, 13,041 (2,277).

An unofficial estimate, recently made in New York, points to a decrease of about $106,000,000 in gross earnings and $121,000,000 in net for the year ending with last month.

Second National Bank of New York

THE Second National Bank, whose new building is an ornament to the city, was established in 1863 with a capital of $300,000. In addition to the usual dividends paid during the past forty-five years, the bank declared an extra dividend of 100 per cent. in 1877. In 1906 its capital was increased to $500,000, and it was again increased this year to $1,000,000. The surplus and undivided profits are $1,667,629, and the total resources are $15,416,477. The former presidents of the bank have been Henry A. Hurlburt, Amos H. Trowbridge, 1864 to 1882; John C. Eno, 1882 to 1884; George Montague, 1884 to 1894; Charles B. Fosdick, 1894. During the past ten years the president has been James Stillman, the president of the National City Bank. The vice-presidents of the Second National Bank are John L. Riker, W. A. Simonson and Edward H. Peaslee. J. S. Case became paying teller in 1867 and cashier in 1885, and still remains cashier. The directors, in addition to the president and vice-presidents, are Daniel A. Davis, Henry A. C. Taylor, John W. Aitken, of Aitken, Son & Co.; H. Blanchard Dominick, president of Dominick & Haff;



Percy A. Rockefeller, of the Standard Oil Company; Wiliam Sloane, of W. & J. Sloane; Louis M. Starr, the jeweler; Isaac Stern, of Stern Brothers; Isidor Straus, of R. H. Macy & Co., and John J. Sinclair, of James Sinclair & Co.

....In the statement of July 1st of the Knickerbocker Trust Company, of which Charles H. Keep is president, the capital stock is $1,200,000, and the surplus and undivided profits are $13,323,006. The amount due depositors is $35,705,811, and the total assets are $51,087,183. Since January 1st the deposits have increased by more than $1,000,000.

THE NEW BUILDING OF THE SECOND NATIONAL BANK OF THE CITY OF NEW YORK, FIFTH AVENUE, CORNER TWENTY-EIGHTH STREET.

Insurance

THE above diagram shows in a striking manner the relative accident hazards from various causes to which all men are exposed irrespective of employment. The diagram is based on the experience of the Travelers Insurance Company and shows the extreme danger of walking along the streets. Next to the hazard of accident arising because of pedestrianism there is the great danger of remaining at home. The diagram shows that next to taking a stroll, either for pleasure or for business, the most dangerous thing any one can do is to remain at home, and our readers will govern themselves accordingly.

JUDGE HENRY L. PALMER, for fifty years president of the Northwestern Mutual Life Insurance Company of Milwaukee, tendered his resignation at the annual meeting of the board of trustees last week. Up to the time the resignation was read there was no intimation that he had determined upon the step. He had several times in the last few years intimated that he would resign, but he has always been dissuaded. The Northwestern Mutual was chartered in 1857 and began business in 1858. It is a purely mutual company, and does business only in healthful portions of the United States. On account of the exceptionally low mortality the Northwestern has always paid large dividends to policyholders. The dividends paid out in 1907 amounted to more than $7,900,000, and the new business paid for last year was over $102,000,000. Judge Palmer's resignation as president of the Northwestern, with which he has been so long identified, will be received with regret. The secretary of the company is A. S. Hathaway and the superintendent of agencies, H. F. Norris.

DESPITE the recent trying times thru which all the insurance companies have gone, they seem to be more prosperous than ever, judging by the new buildings some of them are proposing to erect. Now comes President John F. Dryden, of the Prudential Insurance Company of America, with plans to extend its group of buildings in which its home offices at Newark, N. J., are located, by erecting another group, at a cost of several millions of dollars. The architect, Mr. George B. Post, expects to break ground May 1st. The architectural design and character of the new buildings will conform to those at present in existence, and when the buildings are completed, the Prudential will have increased its frontage on Broad street, on the north side of Bank, by 60 feet, and will occupy all the block to Halsey and Academy streets except for the frontage on Broad street now owned by other financial institutions, which the Prudential has been unable to purchase. With the completion of the new buildings the real estate holdings of the company in its home office will aggregate $15,000,000.

TEN cents a day will buy $7,500 accident insurance. Can you afford not to?

The Independent

VOL. LXV NEW YORK, THURSDAY, JULY 30, 1908 No. 3113

Survey of the World

Oil Trust Judgment Annulled

The judgment of the United States District Court (Judge Landis) in the memorable case against the Standard Oil Company of Indiana, involving a fine of $29,240,000, was annulled in Chicago on the 22d inst., by the United States Circuit Court of Appeals, composed of Judges Grosscup, Baker and Seaman. To this court the case had been taken by the defendant on a writ of error. The opinion was written by Judge Grosscup, his two associates concurring. Its final sentence is: "The judgment of the District Court is reversed and the case remanded with instructions to grant a new trial and proceed further in accordance with this opinion." At the beginning it says that the assignments of error to be reviewed relate:

"First—To the view adopted by the trial court, carried out in its rulings on the admission and exclusion of evidence, and embodied in its charge to the jury, that a shipper can be convicted of accepting a concession from the lawful published rate even tho it is not shown, as bearing on the matter of intent, that the shipper at the time of accepting such concession knew what the lawful published rate was.

"Second—To the view adopted by the trial court that the number of offenses is the number of carloads of property transported, irrespective of whether each carload constituted the whole or only a part of a single transaction resulting in a shipment; and

"Third—Whether, in the imposition of the fine named, the trial court abused the discretion vested in the court."

Errors are found under each of these heads. The reasons and views of the appellate court are considered in our editorial pages, together with its erroneous assertion that the testimony of one Bogardus was excluded. In brief, the court holds that the jury should not have been instructed that it was not necessary to show that the defendant had actual knowledge of the lawful rate; that the defendant was wrongfully prevented from submitting all of its evidence on this point; that the number of offenses should have been the number of money settlements (thirty-six) with the carrier, instead of the number of carloads (1,462), and that the discretion vested in the court was abused because Judge Landis, in imposing the fine, sought "to reach and punish a party that was not before the court," meaning the parent corporation, the Standard Oil Company of New Jersey:

"Can an American judge without abuse of judicial discretion condemn any one who has not had his day in court? That, to our mind, is strange doctrine in Anglo-Saxon jurisprudence. Can that rightfully be done here on no other basis than the judge's personal belief that the party marked by him for punishment deserves punishment? If so, it is because the man who happens to be the judge is above the law."

District-Attorney Sims said, on the 23d, that a petition for a rehearing before the appellate court would be filed. Attorney-General Bonaparte deplored the inability of the Government to appeal from this decision to the Supreme Court. This inability, he added, gave "an unreasonable and unfair advantage to the wealthy defendants in such cases." On the same day the following statement from President Roosevelt was made public by Secretary Loeb:

"The President has directed the Attorney General to immediately take steps for the retrial of the Standard Oil case. The reversal of the decision of the lower court does not in any shape or way touch the merits of the case, excepting so far as the size of the fine is concerned. There is absolutely no question of the guilt of the defendants or of the exceptionally grave character of the offense. The President would regard it as a gross miscarriage of

justice if thru any technicalities of any kind the defendant escaped the punishment which would have unquestionably been meted out to any weaker defendant who had been guilty of such offense. The President will do everything in his power to avert or prevent such miscarriage of justice. With this purpose in view the President has directed the Attorney General to bring into consultation Mr. Frank B. Kellogg in the matter, and to do everything possible to bring the offenders to justice."

Judge Grosscup had come to New York, where his attention was directed to this statement. He declined to comment upon it, saying:

"There is no more reason why I should take notice of the comment of Mr. Roosevelt than I would that of any private citizen, for the office that he fills and the offices that the judges of the Court of Appeals fill are entirely independent, tho co-ordinate branches of the Government. It is not meet that I should enter into a discussion with the President. The court can take care of itself in the court room. The President comes into court with no greater and no less privileges than are accorded to any other private citizen.

"All that can be done is to apply to the Supreme Court for permission to reopen the case. In October the Attorney General may apply to the Supreme Court for a writ of certiorari. Only one out of fifty such applications is granted."

He denied that he was about to resign from the bench and resume practice. "If I do resign, however," he added, "I shall take for clients individuals or corporations whenever I see fit to accept their cases." He is beginning a two months' vacation. Attorney-General Bonaparte published a brief statement. After speaking again of the "unreasonable restriction imposed by existing law" which does not allow the Government to appeal in criminal cases and therefore prevents an appeal to the Supreme Court in this case, he said:

"The Department of Justice will undoubtedly try to obtain an authoritative review of the decision. In my opinion it is of vital moment that the statute regulating interstate commerce should be so construed by our courts that it may not be practically impossible to convict lawbreakers on a vast scale nor practically impossible to punish them, when convicted, with sufficient severity to assure future obedience to the law.

"I think it is the duty of my department to foster a wholesome fear of punishment among those often and strongly tempted to do what the law forbids, and the department has tried in the past, and will try in the future, to faithfully discharge this duty. Such well considered measures will be, therefore, adopted, after due deliberation and conference, as will so far as practicable remove any possible danger which may be thought to exist lest the present decision, as a precedent or otherwise, shall prove an impediment to effective administration of these salutary laws."

It appears, therefore, that the Government will apply for a writ of certiorari to require the appellate court to sumbit the record of the case to the Supreme Court for review. There are now pending, not yet tried, similar cases against the Standard Oil Company, involving more than 4,000 counts. In a case to be tried in November (1,624 counts) the questions very closely resemble those of the case before Judge Landis, the shipments having been made from the same starting point (Whiting, Ind.), but on another railroad, and to places in the South.

National Politics

For some time past it has been understood that Governor Hughes, of New York, was unwilling to stand for a second term, mainly for the reason that he had found the necessary expenses of the office to be considerably in excess of the salary. He has now, however, consented to be a candidate for renomination, owing to many urgent requests that he should do so. In a statement published on the 25th he said:

"Some time ago I said privately that I did not desire a renomination and that I felt that I could not undertake to serve a second term. This, however, was for reasons entirely personal. Upon further reflection, I am convinced that I have no right to regard these reasons as controlling, and that if renominated I ought to accept.

"But it is my desire that the will of the party to which I belong should be freely exprest and that it shall take such action as shall be most closely in accord with public sentiment. I believe that the people thoroly understand the principles which I have sought to apply in administration, and, if they so desire, I shall regard it as a privilege and a duty to continue in office for another term."

An impression prevails that the leading politicians of his party in New York do not regard this announcement with pleasure, altho they admit that the Governor's candidacy will promote the success of the national ticket.——Norman E. Mack, of Buffalo, has been elected chairman of the Democratic National Committee. He was really chosen, of course, by Mr. Bryan. Governor Haskell, of Oklahoma, is the new treasurer, and Urey Woodson the secretary. Henry Watterson was made chairman of a new body

to be known as the Newspaper Committee. The new officers were elected in Chicago on the 25th, and Mr. Bryan at once gave the following statement to the press:

"Mr. Mack's appointment is a recognition of the Eastern Democracy and an announcement that we expect to fight for New York. He is in harmony with our platform, and I can say of him personally that he has been a close and trusted friend in my two former campaigns. One of the strongest arguments in his favor was that he is a successful business man. Beginning at the bottom of the ladder he has built up a business that amounts to more than a half million dollars a year, and the executive ability that he has shown in his work commended him to the committee that made the selection.

"Governor Haskell, the treasurer, is one of the new men, but he has made good as a leading member of the Constitutional Convention of Oklahoma and as Governor. His organizing ability will be valuable to the committee. His selection as treasurer is especially appropriate because he comes from the only State in which depositors are absolutely secured, and the Democratic platform has a plank advocating the adoption of a national system similar to that now in operation in Oklahoma. We do not know how much our campaign fund will be, but we know it will not be lost by any bank failure."

Mr. Bryan has resigned the editorship of his paper, *The Commoner,* the profit of which, above actual expenses, he says, will be paid into the Democratic campaign fund. He has added to this fund $1,000 received by him for talking into a phonograph.——Mr. Gompers is making appeals to labor union men in behalf of the Democratic ticket, and he continues to be opposed by several labor leaders of less prominence. Public attention has been again directed to the injunction issue by proceedings in the boycott case of the Bucks Stove and Range Company. It will be remembered that Mr. Gompers and others were forbidden by a court in the District of Columbia to continue the boycott of this company. It is alleged by the company that they have disobeyed this order. Mr. Gompers, Frank Morrison (secretary of the Federation) and John Mitchell are required to appear in court on September 8th and show cause why they should not be held guilty of contempt.——By unanimous vote, Mr. Taft has been elected a member of the labor union known as the International Society of Steamshovelmen, which was greatly pleased by his successful efforts to settle a wage controversy in which members at work on the Panama Canal were interested.

The San Francisco Bribery Cases

James M. Gallagher, formerly at the head of the San Francisco Board of Supervisors, is an important witness for the prosecution in the bribery cases against Ruef and others, because he not only received bribes for his own benefit, but also acted as Ruef's agent for paying bribe money to other members of the board. Some months ago there was an attempt to kill him by exploding dynamite under his house. A few weeks later, two or three new houses which workmen were building for him were wrecked by dynamite. The prosecutors now have in custody one of the men who sought to assassinate Gallagher. He is John Claudianes, a young Greek, and he has made full confession to Detective William J. Burns. Claudianes says that he and his brother Peter were hired by Felix Pauduveris (said to be an agent of Ruef) to do the work. They tried to destroy the new houses at a time when Gallagher would be paying off his workmen in one of them. The confession, it is asserted, also relates to a plot for the assassination of Prosecutor Heney, Rudolph Spreckels, District-Attorney Langdon and Detective Burns. The two brothers received $1,000 for the work already done. Peter Claudianes and Pauduveris have fled, but it is believed that they are not far from San Francisco, and that they will be captured.

Cuba and Porto Rico

In a proclamation concerning the provincial and municipal elections to be held in Cuba on August 1st, Governor Magoon says that altho the registration lists were revised at a time when each of the three political parties was striving to secure as many adherents as possible, "yet order, respect for the law and obedience to the constituted authorities were observed thruout the entire period." Therefore, he continues, the people are justified in anticipating fair and orderly elections and in expecting that the results will be accepted peaceably:

"Each citizen may rest assured that an untrammeled opportunity will be given to him to vote according to his own free will, and that

any interference with him without just cause, or any failure to count his vote properly, will be met by a vigorous effort of the Government to inflict the penalty prescribed by law for such offenses."

Governors, provincial councilmen, mayors and city councilmen, in all nearly 1,400 officers, are to be chosen. The three parties are the Gomez Liberals, the Zayas Liberals, and the Conservatives, whose Presidential candidate will probably be General Menocal.——Mr. Bacon, Assistant Secretary of State, sails for Porto Rico this week to attend a meeting of the commission appointed to settle the claims of the Catholic Church for the seizure and use of its property there by the Insular Government. He is a member of the commission. The value of the property is about $1,000,000, and the claim of the Church, with respect to a considerable part of it, has been sustained by our Supreme Court.——Since the collection and apportionment of Santo Domingo's customs revenue were intrusted to officers from this country, nearly $10,000,000 has been collected, and $2,654,341 has been paid to the foreign creditors of the republic, who receive 20 per cent in cash and 80 per cent. in new bonds. There remains $1,353,527 on deposit in New York for future payments. The foreign debt was by agreement scaled down to about $17,000,000.

Central America and Mexico

President Davila's assertion that the revolution in Honduras has been suppressed is questioned by many who are familiar with the situation in Central America. They expect that the revolution will soon be revived. It is reported that ex-President Bonilla has left Belize and will lead the insurgents. He has the support, it is said, of the north coast of Honduras. The revolution which deposed him was promoted by President Zelaya, of Nicaragua. There are many rumors that preparation has been made for a war in which Zelaya and President Cabrera (of Guatemala) will be the chief figures. In such a contest Guatemala, Salvador and Bonilla's followers might oppose Nicaragua and the present Government of Honduras, which was virtually set up by Zelaya. It is said that at the beginning of the recent uprising Davila's treasury was empty, and that he obtained money for his troops by disposing of the republic's interest in its chief railway. Further orders have been given by the new Peace Court. Salvador has been directed to withdraw her troops from points near the boundary, and Guatemala to restrain Honduran revolutionists in her territory.——Texas is moving against the Mexican revolutionists who have been sheltered in that State. Nearly 80 of them have been arrested. It is probably on account of the recent outbreak near the Texas boundary that much anti-American sentiment is expressed in Mexican newspapers, some of which ask for laws to prevent "Yankees" from owning mines in Mexico. It is estimated that American investments in Mexico exceed $500,000,000.——Half of the work (of excavation) required in the Culebra cut on the Panama Canal route has been completed, and it is thought that the remainder can be done in three and a half years. ——President Castro has expelled from Venezuela the Minister of the Netherlands, who was informed when he received his passports that, because of opinions exprest in his published letters, he was "incompetent to serve as a friendly medium" between Venezuela and his country. On the night of the 25th, at Willemstad, the capital of the Dutch island of Curacao (about 80 miles from the Venezuelan coast), a mob attacked the residence of the Venezuelan Consul and the house of a Venezuelan who had criticised the islanders in published letters. The latter was forced to apologize and his family to sing the Dutch national hymn. The Consul fled for refuge to the German Consulate, and was in such danger there that troops were sent for his protection.

American Athletes Win in England

The Olympic Games at London came to an end, as far as the sports in the Stadium were concerned, on Saturday. There are several systems of scoring in vogue. By counting victories alone in all contests since the early part of the year the United Kingdom, sole competitor in many events, has a score of 38; America, 22; Sweden, 7; France, 4, and the rest scattering. In the field and track events, counting five points for

first, three for second, and one for third, America leads easily with 115 points, the United Kingdom is second with 86 points, Sweden third with 11, and seven other countries follow credited with smaller totals. America's score in the field and track events is made up of fifteen firsts, ten seconds and eight thirds, in addition to one tie for second and two for thirds. Some of the most notable victories were Melvin Sheppard's, of New York, in the 800-meter and 1,500-meter races, the first made in the record time of 1 minute 52 4/5 seconds. F. C. Irons, of Chicago, covered 24 feet 6½ inches in the broad jump, and A. C. Gilbert, of Yale, cleared 12 feet 2 inches in the pole vault. The finals of the 400-meter race were won by Carpenter, an American, but he was disqualified by the judges for interfering with the English competitor, Lieutenant Halswelle, who finished third. The race was ordered re-run, with Carpenter excluded, whereupon the other two runners, both Americans, withdrew, allowing Halswelle to run over the course alone and be declared victor. The action of the judges caused some ill feeling. The Marathon run created the greatest interest of any event. The distance was 26 miles, and the contestants were 58 in number. The first man to reach the Stadium was Dorando, an Italian, but he collapsed before the finish, and was assisted across the line and subsequently disqualified. The race was awarded to John J. Hayes, an employee of Bloomingdale's department store in New York City, who finished second, in 2 hours and 55 minutes. Of the first ten men to finish, four were Americans and three were Canadians. The first Englishman to cross the line was twelfth. Hayes finished in very good shape, having run a careful race. For the first nineteen miles he held a slow pace and was considerably in the rear, but toward the end he gained rapidly on the leaders. He is a small man, 5 feet 3 inches in height and weighing 125 pounds.——The German Protos car was the first to reach Paris in the transcontinental motor race. The 11,000 miles of road were covered in 130 days. Owing to the fact that the car was shipped by rail from Pocatello, Idaho, to Seattle, a time allowance of fifteen days was conceded to the American Thomas entry. The American competitors also essayed the original route thru Alaska, which they found impassable, and for the time consumed they received an additional fifteen days time allowance. Altho the Thomas car will reach Paris about two days behind the German Protos it will win amply on its time allowance. The Italian Zust was last reported at Tomsk, Siberia, 5,340 miles from Paris. The start of the race was made from Times Square on February 12th, 1908, with six contestants. The Thomas car led in an exciting race across this continent, and held the lead for a time across Asia, before it was past, owing to a breakdown, by the Germans.

The House of Lords on Old-Age Pensions

The passage by the House of Commons of the Government Pension Bill by a vote of 315 to 10 put the House of Lords in an embarrassing position. To have rejected the bill would have placed a powerful argument for the abolition or restriction of the House of Lords in the hands of its enemies, because it would be opposing the will of both parties in the popular house, and also interfering in the finances which have long been recognized as the peculiar province of the Commons. There was, therefore, nothing to do but talk against the bill and pass it. It received a vote of 123 to 16 on its second reading, but it was strongly denounced as a socialistic measure involving the country in incalculable expenditures. Lord Rosebery said:

"I am beginning to think that this empire may at last be destined to be wrecked by its finance, this measure alone dealing a blow to the empire and encumbering its finance to a degree of which no living man can see the limit."

Lord Cromer uttered the same warning in a more specific manner, and startled the world by foretelling a general European war. His words were:

"What in the present condition of Europe is the main duty which devolves upon the government of this country? For my own part I have no sort of hesitation in replying to this question. Their main duty is to make provision betimes for a European conflict which may not improbably be forced upon us before many years have elapsed.

"I am aware that the mass of people of this country, who do not follow foreign affairs with any very close attention, are not alive to the

possibility of any such conflict taking place. I say it is the duty of a government gifted with both patriotism and foresight, who have means of information at their disposal which is not available to the general public, to provide betimes for that danger, a danger of which I in common, I believe, with most people who can speak with real authority on foreign affairs, am firmly convinced exists.

Such a prophecy coming from a man who has so wide a knowledge of world politics as Lord Cromer, even tho he spoke in the heat of debate, has caused considerable uneasiness to the public. His words are supposed to have reference to Germany, possibly in connection with the revolution in Turkey.——The Irish University Bill past the House of Commons by a vote of 207 to 10, and will doubtless go thru the upper House with equal ease. It provides for the foundation of Dublin University, composed of Cork and Galway Colleges and a new college at Dublin. Queen's College at Belfast is to form the nucleus of a second university for the North of Ireland.——Sir William Randal Cremer, founder of the Interparliamentary Conferences, and one of the most active leaders in the peace movement, died on July 22d at the age of seventy. In 1903 he received the Nobel Peace Prize of $40,000, which he gave to the International Arbitration League, of which he has long been secretary.

The Macedonian Mutinies

Disorders in Macedonia being chronic and mutinies in Turkish garrisons occurring so frequently, the recent reports from Monastir were received with only languid interest by Europe and America until it became apparent that a political movement of widespread importance and incalculable consequences was at the bottom of these manifestations of discontent. The efforts made by the Porte to prevent information from reaching the outside world were unusually successful, and even yet we know only the most striking events and nothing of their causes or connection. It appears that the executive committee of the Young Turkey party in Paris has been carrying on propaganda in the army in accordance with the plan of work adopted by the general convention of Turkish exiles and reformers held in that city last fall. In how far the present outbreak was guided and controlled by them is not known. The first revolutionary manifestation reported occurred at Monastir July 3d, probably precipitated by the attempt of the authorities to root out the disaffection in the army. Niazi Bey, Adjutant Major of the garrison at that place, deserted with some eighty of his men and took refuge in the mountains near Resna (Resen). Here he was joined by soldiers and officers from the other garrisons, and a large number of Albanians or Arnauts. The Sultan attempted to check the rebellious tendencies of his officers by a combination policy of threats and bribes. Promotions were made by wholesale and on July 10th thirty-eight officers were shipped from Salonika to Constantinople prisons. The members of the Young Turkey party at the port of Salonika interrupted communications between the capital and the scene of the disturbances by shooting en route the officers going back to report the situation, and those sent out to take the place of officers suspected of disloyalty. Finding that the troops at Monastir and Salonika could not be relied upon to put down the rebels at Resna, General Shemsi Pasha was brought to Monastir with two fresh battalions from Mitrovitza. He notified Constantinople that these men also refused to obey, but in reply orders were telegraphed to him to proceed to Resna in spite of everything. He accordingly took carriage at Monastir with the intention of carrying out his instructions when an officer stept up and shot him dead. The civil officers of the region refused to confer with the military authorities. The soldiers declared that they would fight against the autocracy but never against their comrades. Under pressure of their demands and threats the officers and men imprisoned for mutiny were released. At Seres, Prisrend, Kossovo, Vodena, Kastoria, Ellasona, Serfidji and Gerbena, in short, thruout the vilayets of Monastir and Salonika, the Young Turks were in power. A proclamation from their headquarters at Ochrida called upon the Christian population to unite with them to protect their common country against misrule and foreign tyranny.

The Sultan Grants a Constitution

The Sultan tried in vain to find a loyal regiment in the Balkans. He sent Shukri Pasha to Uskub, but the garrison there would not listen to him, and, before he had got back to Constantinople, it had declared for the Young Turks. The Grand Vizier, Ferid Pasha, an Albanian, had assured the Sultan that he could depend upon the support of his people, but when the news came that 100,000 Albanians had declared in favor of the revolution the Sultan dismissed him and called as Grand Vizier the more liberal Said Pasha. Marshal Osman Feizi Pasha was appointed to the command of the vilayet of Monastir, in place of the assassinated Shemsi Pasha, but he soon disappeared from the scene, being captured, it is said, by Niazi Bey, who entered Monastir at night with a thousand men and carried him off to Ochrida without resistance on the part of the garrison. The Young Turks sent to the Sultan their demands for administrative reforms accompanied by a threat of revolution if he did not take favorable action in eleven days. Abdul Hamid chose to comply rather than attempt to put down the rebellion and meet the impending foreign intervention. On July 24th an irade was issued establishing a constitution for Turkey similar to that of 1876. Orders were sent to all the Valis and District Lieutenant-Governors of the empire to prepare for the elections to the new parliament. The disaffected provinces received the news with demonstrations of great joy. At Salonika soldiers and people paraded the streets cheering for "Liberty" and singing the Marseillaise. In Constantinople the houses were extensively decorated with flags and illuminated, and crowds marched to the Government buildings to express their thanks to the Sultan thru the Grand Vizier. The constitution of 1876 provided for the indivisibility of the empire; the irresponsibility of the Sultan; the equality of all citizens before the law irrespective of creed or race; freedom of worship, of education and the press; reform of taxes; inviolability of domicile; and a parliament of two houses, the upper one appointive, the lower elective.

Fighting in Tabriz

The city of Tabriz, in Northwestern Persia, is still the scene of perpetual conflict between the soldiers of the Shah and the revolutionary and parliamentary parties. Rakhim Khan, a commander of Karadaghi horsemen, was sent by the Shah to Tabriz with authority to use any measures to put down the rebellion. He attempted to disarm the people, but was driven out of the city in three days by the rising up of the population, and established himself in the suburbs. The revolutionists have fortified another quarter of the town and desultory street fighting is carried on between the opposing forces. The chief of the revolutionists is Sata Khan, formerly a brigand, later a horse dealer and now a political leader. He protests that he is not fighting against the Shah, but against his ecclesiastical advisers who have induced him to repudiate the constitution. The revolutionists seem to be gaining ground and have surrounded the residence of the Governor with their earthworks. The oldest son of Rakhim Khan fell in a recent engagement. The Shah is said to be secretly negotiating with a Russian bank for a loan of $1,250,000, and is preparing to send another expedition to Tabriz. The resistance offered by the revolutionists at Tabriz has encouraged the parliamentary party at the capital, and the Shah has been obliged to call in the aid of tribesmen from the country and to fortify his palace as a protection against an uprising in the city. Abdul Fath Mirza, the second brother of the Shah, who headed an insurrection at Zoristan in 1907 and has since been kept a prisoner in a suburban palace, made an unsuccessful attempt to escape recently and is now confined in a fortress. A party of rebels is said to be marching against Teheran from the north. Members of the parliamentary party are being searched out and severely punished, some of them, including Mirza Ahmed, editor of a Liberal paper, having been impaled. ——Persian subjects in Constantinople have telegraphed the Shah informing him that the Sultan has granted a constitution to his subjects, and declaring that if the Persian Constitution is not restored they all will adopt Ottoman nationality.

The Preliminary Social Duty

BY H. G. WELLS

Author of "The War of the Worlds," "A Modern Utopia," "The Future of America," Etc.

THE belief I have in the development of the collective being of man as the individual's meaning and duty, and the formulæ of the socialism which embodies this belief so far as our general and common activities go, give a general framework and direction how a man or woman should live. (I mean man or woman equally when I write of "man," unless it is manifestly inapplicable.) And first in this present time he must see to it that he does live; that is to say, he must get food, clothing, covering, an adequate leisure for the finer aspects of living. Socialism plans an organized civilization in which these things will be a collective solicitude, and the gaining of a subsistence an easy preliminary to the fine drama of existence, but in the world as we have it we are forced to engage much of our energy in scrambling for these preliminary necessities. Our problems of conduct lie in the world as it is and not in the world as we want it to be. First, then, a man must get a living, a fair, civilized living for himself. It is a fundamental duty. It must be a fair living, not pinched nor mean nor strained. A man can do nothing higher, he can be of no service to any cause, until he himself is fed and clothed and equipt and free. He must earn this living or equip himself to earn it in some way not socially disadvantageous; he must contrive as far as possible that the work he does shall be constructive and contributory to the general well-being.

And these primary necessities of food, clothing and freedom being secured, one comes to the general disposition of one's surplus energy. With regard to that, I think that a very simple proposition follows from the broad beliefs I have chosen to adopt. The duty of a man, his existence being secured, is to *educate*, and chiefly to educate himself. It is his duty to live, to make all he can out of himself and life, to get full of experience, to make himself fine and perceiving and expressive, to render his experience and perceptions honestly and helpfully to others. And in particular he has to educate himself and others with himself in socialism. He has to make and keep this idea of synthetic human effort and of conscious constructive effort clear first to himself and then clear in the general mind. For it is an idea that comes and goes. We are all of us continually lapsing from it toward individualism again. He needs, we all need, constant refreshment in this belief if it is to remain a predominant living fact in our lives.

And that duty of education, of building up the collective idea and organization of humanity, falls into various divisions, depending in their importance upon individual quality. For all there is one personal work that none may evade, and that is thinking hard, criticising strenuously, and understanding as clearly as one can religion, socialism and the general principles of one's acts. The intellectual factor is of primary importance in my religion. I can see no more reason why salvation should come to the intellectually incapable than to the morally incapable. For simple souls thinking in simple processes, salvation perhaps comes easily, but there is none for the intellectual coward, for the mental sloven and sluggard, for the stupid and obdurate mind. The believer will think hard and continue to grow and learn, to read and seek discussion as his needs determine.

Correlated with one's own intellectual activity, part of it and growing out of it for almost every one, is intellectual work with and upon others. By teaching we learn. Not to communicate one's thoughts to others, to keep one's thoughts to oneself, as people say, is either cowardice or pride. It is a form of sin. It is a duty to talk, teach, explain, write, lecture, read and listen. Every truly religious man, every good Socialist, is a propagandist. Those who cannot write or dis-

cuss can talk, those who cannot argue can induce people to listen to others and read. We have a belief and an idea that we want to spread, each to the utmost of his means and measure, thruout all the world. We have a thought that we want to make humanity's thought. And it is a duty, too, that one should, within the compass of one's ability, make teaching, writing and lecturing possible where it has not existed before. This can be done in a hundred ways—by founding and enlarging schools and universities and chairs, for example, by making print and reading and all the material of thought cheap and abundant, by organizing discussion and societies for inquiry.

And talk and thought and study are but the more generalized aspects of duty. The believer may find his own special aptitude lies rather among concrete things, in experimenting and promoting experiments in collective action. Things teach as well as words, and some of us are most expressive by concrete methods. The believer will work himself and help forward others to his utmost in all these developments of material civilization, in organized sanitation, for example, all those developments that force collective acts upon communities and collective realizations into the minds of men. And the whole field of scientific research is a field of duty, calling to every one who can enter it to add to the permanent store of knowledge and new resources for the race.

The mind of that civilized state we seek to make is evidently the central work before us. But while the writer, the publisher and printer, the bookseller and librarian and teacher and preacher, the investigator and experimenter, the reader and every one who thinks, will be contributing themselves to this great organized mind and intention in the world, many sorts of specialized men will be more immediately concerned with parallel and more concrete aspects of the human synthesis. The medical worker and the medical investigator, for example, will be building up the body of a new generation, the body of the civilized state, and he will be doing all he can, not simply as an individual, but as a citizen, to *organize* his services of cure and prevention, of hygiene and selection. A great and growing multitude of men will be working out the apparatus of the civilized state; the organizers of transit and housing, the engineers in their incessantly increasing variety, the miners and geologists, estimating the world's resources in metals and minerals, the mechanical inventors perpetually economizing force. The scientific agriculturist again will be studying the food supply of the world as a whole, and how it may be increased and distributed and economized. And to the student of law comes the task of rephrasing his intricate and often quite beautiful science in relation to modern conceptions. All these and a hundred other aspects are integral to the wide project of constructive socialism as it shapes itself in my faith.

When we lay down the proposition that it is one's duty to get one's living in some way not socially disadvantageous, and as far as possible by work that is contributory to the general well-being and development, when we state that one's surplus energies, after one's living is gained, must be devoted to constructive work, it is clear we condemn by implication many modes of life that are followed today.

For example, it is manifest we condemn living in idleness or on non-productive sport, on the income derived from private property, and all sorts of ways of earning a living that cannot be shown to conduce to the constructive process. We condemn trading that is merely speculative, and, in fact, all trading and manufacture that is not a positive social service; we condemn living by gambling or by playing games for either stakes or pay. Much more do we condemn dishonest and fraudulent trading and every act of advertisement that is not punctiliously truthful. We must condemn, too, the taking of any income from the community that is neither earned nor conceded in the collective interest.

And it follows evidently, from our general propositions, that every form of prostitution is a double sin—against one's individuality and against the species which we serve by the development of that individuality's preferences and idiosyncrasies. And by prostitution I

mean the act of any one who, to gain a living, suppresses himself, does things in a manner alien to himself, and subserves aims and purposes with which he disagrees. The journalist who writes against his personal convictions, the solicitor who knowingly assists the schemes of rogues, the barrister who pits himself against what he perceives is justice and the right, the artist who does unbeautiful things or less beautiful things than he might simply to please base employers, the craftsman who makes instruments for foolish uses or bad uses, the dealer who sells and pushes an article because it fits the customer's folly; all these are prostitutes of mind and soul, if not of body, with no right to lift an eyebrow at the painted disasters of the streets.

These broad principles about one's way of living are very simple; our minds move freely among them. But the real interest is with the individual case, and the individual case is almost always complicated by the fact that the existing social and economic system is based upon conditions that the growing collective intelligence condemns as unjust and undesirable, and that the constructive spirit in men now seeks to supersede. We have to live in a provisional state while we dream of and work for a better one.

The ideal life for the ordinary man in a civilized—that is to say, a socialist—state would be in public employment or in private enterprise aiming at public recognition. But in our present world only a small minority can have that direct and honorable relation of public service in the work they do; most of the important business of the community is done upon the older and more tortuous private ownership system, and the great mass of men in socially useful employment find themselves working only indirectly for the community and directly for the profit of a private owner, or they themselves are private owners. Every man who has any money put by in the bank, or any money invested, is a private owner, and in so far as he draws interest or profit from this investment he is a social parasite. It is in practice almost impossible to divest oneself of that parasitic quality, however straightforward the general principle may be.

It is practically impossible for two equally valid sets of reasons. The first is that, under existing conditions, saving and investment constitute the only way to rest and security in old age, to leisure, study and intellectual independence, to the safe upbringing of a family and the happiness of one's weaker dependents. These are things that should not be left for the individual to provide; in the civilized state the state itself will insure every citizen against these anxieties that now make the study of the city article almost a duty. To abandon saving and investment today—and to do so is, of course, to abandon all insurance—is to become a driven and uncertain worker, to risk one's personal freedom and culture, and the upbringing and efficiency of one's children. It is to lower the standard of one's personal civilization, to think with less deliberation and less detachment, to fall away from that work of accumulating fine habits and beautiful and pleasant ways of living contributory to the coming state. And in the second place, there is not only no return for such a sacrifice in anything won for socialism, but for fine thinking and living people to give up property is merely to let it pass into the hands of more egoistic possessors. Since at present things must be privately owned, it is better that they should be owned by people consciously working for social development and willing to use them to that end.

We have to live in the present system and under the conditions of the present system, while we work with all our power to change that system for a better one.

The case of Cadburys, the cocoa and chocolate makers, and the practical slavery under the Portuguese of the East African negroes who grow the raw material for Messrs. Cadbury, is an illuminating one in this connection. The Cadburys, like the Rowntrees, are well known as an energetic and public-spirited family, the social and industrial experiments at Bourneville and the general social and political activities are broad and constructive in the best sense. But they find themselves in the peculiar dilemma that they must either abandon the most profitable portion of their great manufacture and to a considerable extent

extinguish themselves, or continue to buy produce grown under cruel and even horrible conditions. Their retirement from the world of cocoa and chocolate under these circumstances would mean no diminution of the cocoa and chocolate manufacture or the horrors of this particular slavery; it would mean merely that less humanitarian manufacturers would step in to take up the abandoned trade. The self-righteous individualist would have no doubts about the question; he would keep his hands clean, anyhow, retrench his social work, abandon cocoa, and pass by on the other side. But, indeed, I do not believe we came into the mire of life simply to hold our hands up out of it. Messrs. Cadbury follow a better line; they keep their business going and exert themselves in every way to let light into the secrets of Portuguese East Africa, and to organize a better control of these labor cruelties. That, I think, is altogether the right course in this difficulty.

We cannot keep our hands clean in this world as it is. There is no excuse, indeed, for a life of fraud or any other positive fruitless wrongdoing, or for a purely parasitic, non-productive life, yet all but the fortunate few who are properly paid and recognized state servants must, in financial and business matters, do their best amid and thru institutions tainted with injustice and flawed with unrealities. All socialists everywhere are like expeditionary soldiers far ahead of the main advance. The organized state that should own and administer their possessions for the general good has not arrived to take them over, and in the meanwhile they must act like its anticipatory agents, according to their lights, and make things ready for its coming.

The believer, then, who is not in the public service, whose life lies among the operation of private enterprise, must work always on the supposition that the property he administers, the business in which he works, the profession he follows, is destined to be taken over and organized by the commonweal, and must be made ready for the taking over; that the private outlook he secures by investment, the provision he makes for his friends and children, are temporary, wasteful, unavoidable devices, to be presently merged in and superseded by the broad and scientific provisions of the co-operative state.

SANDGATE, KENT, ENGLAND.

Nocturne

BY KATHARINE LEE BATES

THE love of the world it slides away.
God send us quietness!
The night is stiller than the day,
And tho the light be less
White stars are gleaming from the deep
And purple vast of sky.
The road unto the stars is steep,
But dreams may fly.

The stillness of the night is kind,
And when the stars wax few
There steals upon the cheek a wind
Of sweetness and of dew.
Slumber advances and recedes
In delicate caprice,
That life may learn how much it needs
And longs for peace.

The dulcimer of patience hath
A music all its own;
Outwearing joy and grief and wrath,
A tender monotone
To soothe us till o'er sense and sprite
The enshadowing hush is drawn,
And down the solemn tides of night
We drift toward dawn.

CARMEN SYLVA.

Bringing Up Children

BY CARMEN SYLVA,

ELIZABETH, QUEEN OF RUMANIA.

THE only good definition which I have ever heard of the word *Education* was given by our great poet Alexandri:

"Education is the art of circumscribing one's own freedom, in order not to trespass upon that of others."

At the risk of being considered frightfully old-fashioned, I should like to define my own idea of education as "self-discipline and devotion to duty," and in order that these two things may not make us bitter, I should like to add, for our recreation, access to the world of romance and fairy lore.

The only way in which children can be taught the first self-discipline is thru the stomach. For children are like little animals; they are greedy and want everything they see. Therefore they must learn to deny themselves and be able to eat even things that are objectionable to them.

Every day of my life I thank my mother for my Spartan-like rearing, which has become the discipline of my entire life. Nowadays children are so indulged that when I relate what was the rule and custom in our home, people will consider it something terrible.

And yet my parents thought that they came very near spoiling us, and were

much too mild in their discipline, because their own bringing up had been so immeasurably severer. We were never given anything to eat but dry bread (from the day before), without butter, meat, vegetables, stewed fruit and milk. We were never allowed to eat a dessert, and, of course, such a thing as bonbons was never seen in our house—they would never have been endured for a moment on account of the injury to our teeth, which we were made to brush three times a day until the blood came. As a result I have not a false tooth in my head at the age of sixty-four. My mother ate no bonbons, because she considered it an incredible weakness, and had a great contempt for parents who permitted such a thing. Our last meal of the day, consisting of dry bread, milk, and sometimes an apple, was eaten at six o'clock.

We commenced our studies at six in the morning, but had no breakfast until half past eight. I was often weak from the long fast, but my mother would have considered it an unpardonable lack of consideration if we had not waited breakfast for my sick father, however hungry we were. If we, by chance, let fall a word of complaint, she answered shortly and severely:

"One must conquer such feelings!"

Morning and evening we had an ice-cold bath, and were put to bed in a narrow field-bed, on a hard mattress. If one of us children was ill he was put to bed in a jiffy and thrown into a profuse perspiration.

Until I was twenty years old I never had a physician or tasted medicine. Once I lay for six hours and took this heroic "sweating" cure without moving, and as a reward my mother came and stroked my cheek. I can still feel her touch! That was an enormous compensation, as caresses were not encouraged in our family.

"So much kissing is not necessary!" said my mother. "People can love each other very dearly without so much demonstration; that is only a bad habit!"

We were obliged to eat what was set before us: it was not a question whether we liked it or not—we *had* to like it. And that which was not eaten at dinner time was set aside and appeared again at supper, on the same plate, and took the place of our customary bowl of milk.

And if we fairly choked with it we simply had to choke—swallow it we must, even if it were swallowed with tears and sobs. If the milk was smoked we dare not make a face, nor leave any of it; every drop had to be drunk.

If in winter an egg was a trifle musty it must be eaten; if, when we were traveling, no hair pillow was to be had, we either had none at all or slept directly on the hard mattress, which was particularly painful when one's hair was done up in curl-papers.

When we were twelve years old my mother considered that we must be treated as grown up, and ordered all the various dishes to be presented to us. "You know what you should refuse!"

This was a discipline doubly hard, to be obliged to decline a thing of which one was very fond. Until I was seventeen years old I had never tasted sweets, butter, salads or anything spiced. Highly seasoned food is certainly particularly harmful for children, and as to sweets, they get sugar enough in milk, fruit and vegetables.

Under this treatment I fairly glowed with strength, and all the illnesses which came to me later in life I was able to endure with calmness, as in such cases my mother had accustomed us to iron discipline and to suffering without complaint.

I do not know the meaning of the word nervousness and cannot sympathize with people who are nervous. I have never had such a feeling—that which is disagreeable had simply to be endured. I accustomed myself to an indifference toward eating and drinking that bordered on asceticism.

So much for self-discipline!

As far as devotion to duty is concerned, it was taught us by means of very little tasks and very small sacrifices; these were repeated daily, and were always prefaced by *"You may!"* instead of *"You must!"*

With an education based on these principles, one grows accustomed to the thought that nothing else is possible but self-discipline and devotion to duty. It was not until I was nineteen years old

that we read a novel together for the first time in the evening. This first novel (how well I remember it) was "Ivanhoe," of Sir Walter Scott, and after that came Gustav Freytag's "Soll und Haben." My mother really did not allow us to read fairy tales, but there our governess came to the rescue and read them to us. I consider fairy tales as necessary for children as bread, and they do not understand anything else. It is because the Bible indulges so freely in pictures and fairy tales that it seems so natural and simple to the children.

When I was told that the dear God had sent me a little brother I found it perfectly natural that it had fallen thru the ceiling. Whether it had been in any way hurt by the fall did not enter into my mind; what the dear God had sent He certainly knew how to send properly. When I was about eight years old my mother followed the usual Christmas story with the explanation that children lie under the mother's heart, and that their coming into the world means much pain and danger to the mother. This filled my heart with deep devotion, and I asked: "How does the mother know that a little child is coming?" "Have you not seen in pictures the angel announcing the birth of Christ to Mary? The dear God puts it in every mother's heart to know when she is going to bring a child into the world."

I was perfectly satisfied with this explanation.

I now come to the question of marriage and its sacredness. If all children who are not the children of love were obliged to be crippled, deformed and mentally weak, there would scarcely be a sound, healthy child in the royal families. And yet we turn out just as well as other people's children, with fairly well proportioned limbs and enough intelligence for daily use. How rare are love matches among royalty, how rare among people in general. And yet geniuses are born into the world.

I have but little opinion of so-called love. I think that here a devotion to duty can perform wonders. The children of normal marriages are generally stronger the more there are of them, providing, of course, that they have enough to eat and drink and live in comfortable circumstances. As every generation is sacrificed for the succeeding one, just as the leaves of a tree drop off to give place to younger and stronger ones, it is my opinion that we should think only of the children. For that reason I am, in very few cases, in favor of woman's work.

A SKETCH PORTRAIT OF CARMEN SYLVA.

The highest thing on earth is to be a mother, and if a woman is a real mother she can do nothing else but fulfil the duties of motherhood. If a woman is not willing to sacrifice herself for her children, then she should not marry. For why does one marry at all if not to bring children into the world? When God withholds them or deprives her of those she has, then the hour has struck for the heavily afflicted one to ask herself: "How can we serve humanity, as if we were father and mother to as many people as possible?"

When we see the glory of the flowers,

of which not one is a failure, we should be overcome with humiliation at not being able to bring as perfect beings into the world.

The century which has just closed proves that we have never made such gigantic progress, since the history of the world began. We have fought our way thru from the most primitive conditions to an almost ultra-civilization, and we cannot know what our children and grandchildren will accomplish. They build on the education which they have received from us, and the better we equip them the greater the possibilities which their children will inherit.

In my younger days it was not the custom for young women to be enlightened on every possible subject. I was sent out into the world when I was very young. I visited at the various courts of Europe. Much that I saw I did not understand, but I was so protected by the breastplate of innocence that my curiosity was not aroused, and I returned to my parents and home as pure and innocent as when I went away.

My mother often said that complete innocence was a far greater protection than knowledge, and that self-defense was not necessary, because everything impure recoiled upon coming in contact with absolute innocence.

As a young wife I was naturally enlightened in my new home about many things which, until then, I had never thought about. The result was that I wanted to die. I said, if the world is such a terrible place, then I would rather be dead. It is my opinion that it is unbearable for a young and innocent soul to be told of all the disagreeable things in the world. I know many men who spare their wives as much as possible all knowledge of such matters, and I know many sons who would not dare to speak to their mothers of life except from its right side, or to act as if they knew anything at all about it. This is not hypocrisy; it is simply decency.

I lift the hem of my spirit when I am forced to walk thru the mud, and yet must I draggle my brain in it? No, a thousand times no! When I was young it was considered as bad form to speak of money as it was to speak of one's underwear. What is not discussed nowadays! Are good manners, then, so much of a hypocrisy that we are obliged to repudiate them?

Have we exhausted all topics of conversation that we listen gladly to the most unspeakable things?

To my mind the world is so full of surprising beauties that we should fall on our knees in reverence and gratitude. If the children are told how the flowers grow, blossom, love each other and bear fruit, then they know all that is necessary of natural history. I believe that a sort of over-excitement has come from the many discoveries, from the incredible achievements of science, so that men are beginning to play with their power, a little like naughty children. They should take care lest the dear God takes the riding whip in His hand and teaches them what good manners and what good discipline mean.

In Nature everything is based upon devotion to duty, and it seems to me that Nature is continually bringing together two people from whom shall spring a certain family in no way resembling those which already exist.

And this great scheme of Nature we would arbitrarily disturb! That we secure to ourselves a greater or less degree of happiness has nothing to do with the matter.

We are only factors in the great family; we have only to obey, and when we think we have made a mistake, this thought is often the biggest mistake of all. We are brought together in order to accomplish a certain work or create a certain family which otherwise would not come into existence. What we have to transmit to posterity must have a certain value, else it would not exist and would not bring such results.

I belong to the century of the greatest scientific achievements, and must therefore conclude that the marriages contracted during this past century were happy ones—possibly not for the individual, who, as I have already said, is a secondary matter, but for the progress of science and the general good of mankind.

If one has lived long, one sees many remarkable things and comes to understand the strangeness and the purpose of it all. There is no injustice except

among mankind. Nature and Fate always act with a purpose. Schiller says: "Hunger and love hold mankind, in fact, the entire globe, together."

It is not agreeable to belong to those upon whom the sins of the fathers have revenged themselves, but at least we can learn to remain sinless, in order that our heirs may have a better, purer legacy than the one we ourselves inherited.

Again, "Self-control and devotion to duty"—those two unpalatable words! No one wishes to hear the word "virtue" any more, and it is very often ridiculed, but it is nothing more than the result of self-control and devotion to duty. It is by no means necessary to put one's hand in the fire in order to prove one's heroism; the little daily occurrences, the silent enduring of other people's peculiarities (which make many marriages unbearable), are all things which education should teach us to meet with fortitude.

CARMEN SYLVA AT HOME.

I notice that the women of the present day all wish to become Amazons, because they have found that they are bringing too weak a race into the world. They act from pure instinct, without knowing what they are doing or what they wish. They call it "sport," but in reality it is the instinct of self-preservation and motherhood, a realization of the fact that the coming race must be hardier if it is to meet life and its conditions successfully.

I once asked a woman how she managed to have such beautiful sons. Her answer was: "I am not pretty, but my husband is handsome, but that had less to do with it than the fact that we both had a very strong love for art; everything beautiful was dear to us beyond all measure."

I have often found that people not at all endowed with good looks have brought beautiful children into the world, entirely from this lofty, artistic feeling.

Nowadays no one wishes children! How foolish! Possibly among these interdicted children would be found a Röntgen, a Curie, an Edison or a Morse! Who can tell where the divine spark will fall? We can do much toward this by self-purification; we can achieve much by the ever-increasing education of each succeeding generation. The great severity of which I have spoken is perhaps no longer necessary, as the parents are already so cultured that they can transmit to their children a refined taste and manner of living.

I still retain the standpoint of Schiller's "Bell," which, at the age of twelve, I declaimed with such glowing enthusiasm. There are undoubtedly many others who hold the same views, tho they have not the courage to confess, for fear of being laughed at. It is a matter of indifference to me, as I have long since grown accustomed to being laughed at for my old-fashioned ideas. Possibly it seems to me, the childless one, that nothing is more sacred and beautiful than an enormously big family!

"Self-control is the chief essential in all the conditions of life.

"Learn to have perfect control of your body and your soul!

"That is education!"

BUCHAREST, RUMANIA.

The Anti-Saloon League

BY FRANK C. LOCKWOOD

THE author of the Anti-Saloon League movement was Howard H. Russell, a young Congregational minister, a graduate of Oberlin College, and a man who had already achieved remarkable victories against the saloon by his courage and skill as an organizer. For several years he had seen the wisdom and necessity of a unification of the energies of the Church against the saloon; and on two occasions, first in Ohio and later in Missouri, he had temporarily effected State-wide combinations of the Church for aggressive work against the saloon. Finally, in 1892, while he was in charge of the Armour Mission in Chicago, so insistent became the conviction that upon him devolved the duty of rallying the Church to combined and concentrated effort against the saloon, that he gave up his work in Chicago, and set himself heart and soul to the new cause. At Oberlin there was a band of temperance workers who had more than once come to his relief in the past; and now, again, he turned to them for support. They were at first reluctant to enter upon such a vast enterprise, but Mr. Russell's common-sense plans at last won them over; and on May 24th, 1893, at a meeting held in the library of Oberlin College, this sturdy company of temperance reformers, the Oberlin Temperance Alliance, adopted his plan, and formally voted to fix a nominal salary for his support and to stand by the work until he should be able to effect a State-wide organization. It was decided also to call a union meeting of the churches of Oberlin on Sunday evening, June 4th, in order that they might formally and publicly adopt Mr. Russell's plan. So it is to this Sunday evening meeting, held in the Old First Church at Oberlin, that the Anti-Saloon League traces its origin.

"The Church in action against the saloon." This trenchant phrase characterizes the movement. It is interdenominational, embracing all creeds, yet so practical and tolerant that it ignores all creeds. It solicits the support of all churches; and recognizes any church or organization that will adopt the idea for which it stands. In most of the States it is the official, authorized agency of the Church in its warfare with the saloon. It is the creature of the Church, having no entity apart from the Church. It does not seek to enlist membership; and, indeed, has no membership apart from the ties of allegiance that men owe to their respective churches. Its officers are members of the church appointed to this particular work by their respective organizations, and elected to their positions in the League by trustees chosen by the various churches and temperance organizations. It draws its financial support, as well as its moral authority, from the Church. It is manifest, therefore, that its power and effectiveness are conditioned by the devotion the churches show toward it. It can go just as far and just as fast as the Church permits—no farther, no faster.

The League is omni-partisan. It is here that the common sense of its founder is most apparent; for the conviction that the saloon is a menace to all that is high and pure in civic and social life is common to hundreds of thousands of Christian men regardless of party. In the past temperance movements have been ineffectual because they have not been able to register their opposition to the liquor traffic in any telling and practical way. But it is the peculiarity of this movement that it isolates the saloon interest from all the complicating issues with which it has hitherto been able to ally itself, and so makes it possible for Christian voters to express themselves upon that naked issue. The Anti-Saloon League "pledges itself to avoid affiliation with any political party as such, and to maintain an attitude of neutrality upon questions of public policy not directly and immediately concerned with the traffic in strong drink." So it is not so much interested in parties as in measures

and men. It uses its influence to secure the nomination of men in the various parties who favor its ideals, and throws the weight of its influence for the men who are most friendly to its interests. It is, too, very active in bringing forward measures for advanced temperance legislation, and then in arraying the Church vote solidly for the measure when introduced. It is on the alert against adverse legislation. It, moreover, defends at the polls officers who have wrought faithfully in the cause of temperance, and uses its influence to defeat men who have put themselves on record as adverse to temperance legislation, or delinquent in the enforcement of temperance laws. It grasps the possible while reaching for the perfect; and so, while seeking as its ideal aim the complete overthrow of the saloon by legal prohibition, with cool common sense counts that day lost that views no worthy intermediate action done.

The watchword of the Anti-Saloon League from the first has been agitation. The temperance cause has everything to gain from agitation and nothing to lose; the saloon has everything to lose and nothing to gain. This work of agitation is a necessary preliminary to effective effort against the saloon, and must be kept up continually. It is important, too, that the representatives of the League should come often before the people in order to keep them posted concerning the progress of temperance reform, in order to instruct them in the practical task of combating the saloon and holding what they gain, and in order to encourage them to still greater activity. By a stroke of economic genius on the part of the founder of the League, this agitation work is put on a self-supporting basis thru the collections taken in the churches on every occasion when an Anti-Saloon League representative occupies a pulpit. Thousands of churches thruout the land open their pulpits to the League speakers once a year, with twofold advantage to the League, an aroused and instructed congregation and a substantial addition to the treasury of the organization. By this means—together with private gifts solicited by the officers of the League—a large force of paid workers is kept in continual and active commission against the saloon.

A second essential activity of the League—one that is the direct outcome of agitation—is law enforcement. There is frequent misconception concerning the policy of the League with respect to law enforcement. Many people seem to think that the Anti-Saloon League obligates itself to see that the liquor laws are strictly observed in any community where its aid is invoked. Some think of it as a sort of infallible and invincible executive of anti-liquor laws. But here, again, the wisdom of its leaders is in evidence. The League does not often take a case into court; it does not keep in its employ a far-reaching detective force; it does not, in short, profess any magic "painless, dustless process of closing saloons or compelling them to obey the law, that works while the people sleep." What it does attempt to do is to keep the public sentiment in a given locality up to the law; to instruct the people as to their rights and the surest way to secure them; and to give expert legal advice in any exigency. But it seeks to lay the burden of law enforcement upon the regularly appointed officers of the law. It does not believe that it is the duty of a private citizen to take the initiative in prosecuting lawbreakers, when there are regular officers of the law, sworn to perform this duty. It believes that harm rather than good usually results from such interference on the part of the reformer. So it aims to bring the pressure of public opinion to bear upon the officers themselves, and in this way force them to do their duty. Officers who do thus, even tho reluctantly, discharge their duty faithfully the League supports at the polls and encourages with its moral support. The delinquent officer it does its utmost to remove from office and to bring about the election of an honest and zealous official in his place.

But the supreme aim of the League is the legal suppression of the beverage liquor traffic. To this end it seeks to arouse public sentiment thru agitation; to this end it makes use of such repressive laws as have already been enacted, however weak and imperfect these laws may be; to this end it restricts, harasses, and combats the saloon by every temporary and intermediate process at command; but this is its ultimate goal—the absolute

extermination of the saloon. It does not despise the day of small things. It does not refuse the legislative crumb because it cannot get the entire crust, nor the crust because it cannot get the whole loaf. But tho it gladly avails itself of the possible good at hand, it rests in nothing short of the ultimate best. It will not halt to quarrel either with those who insist in demanding more than can be achieved, or with those, who, tho announcing themselves friendly to the cause, are either quiescent or reactionary. It moves on bravely and strongly, and continues to do the best possible with the means at hand. It has "put the saloon in the path to extinction," and with the utmost possible rapidity it seeks to hurry it along that path.

The Anti-Saloon League adopts local option as the most effective legislative expedient. In principle local option is American and democratic, submitting, as it does, the issue to a majority vote in any community interested. It transforms large areas into prohibition territory while less fortunate adjoining regions are gathering strength, also, to expel the saloon; it keeps the temperance people thruout the country in heart by reason of continuous victories. By means of frequent local-option elections the issue is kept constantly agitated, and the saloon is kept under open and continuous condemnation; and it has, besides, strategic advantages, as every community gained for local option becomes a new center of propagation, the result being that the local-option sentiment rapidly spreads from township to county and from county to State.

From its origin the Anti-Saloon League has had trained and able leaders. The chief men in the movement have taken up the work because of special fitness and natural taste for such a moral enterprise. From the beginning, too, the League has been able to pay these men regular salaries, so that they have been free to devote their energies and talents to this particular work. The result is that the Church has in its employ a small army of gifted specialists whose sole aim is the destruction of the saloon.

The founder of the League, the Rev. Howard H. Russell, D.D., of New York City, is a brave, modest man who seems to have been peculiarly fitted for his great task and definitely called to it. He is a man at once of vision and practical wisdom. The Rev. P. A. Baker, D.D., general superintendent of the Anti-Saloon League in America, has been an officer in the League since 1895. He is a quiet, fearless, sagacious man—somewhat resembling General Grant in stature, bearing and temperament—with a heavy square-set jaw that speaks volumes for the cause he champions. He is a born general and tactician. He is cautious, resolute, tenacious. Next to his sustained and concentrated passion for the cause he leads, is his sanity, sobriety, moderation.

The growth of the Anti-Saloon League has been rapid. It was set going at the psychological moment. In fifteen years the League has grown from an idea in the brain of its founder to an organization of vast extent and resources. It is now organized thruout the United States; it maintains a hundred well fitted and well ordered offices; it supports thirty-seven papers and publishes millions of pages of literature every year; it keeps four hundred people in continual employment, paying them regular salaries out of the four hundred thousand dollars a year which it raises from its constituents; and, best of all, it has back of it a solidly federated and splendidly mobilized Church, which renders it prompt and enthusiastic support.

It is difficult to estimate even approximately the concrete results of the movement, but the following are some of the things that have been accomplished. The army canteen has been banished, and thru the efforts of the League more than two and a quarter millions of dollars have been set aside by Congress for the construction and equipment of recreation buildings at army posts thruout the nation; the sale of intoxicating liquors has been prohibited in both wings of the Capitol at Washington; the sale of liquors has been abolished at emigrant stations and soldiers' homes; local-option laws have been past in Ohio, Indiana, Virginia, Kentucky, Tennessee, Missouri, Illinois, Colorado, California and many other States in the Union; and by virtue of these laws the saloon has been voted out of large areas of almost every State

in the Union. Seventy-one of the one hundred and fourteen counties in Missouri have rid themselves of the saloon. In Tennessee the saloon exists in only four of the ninety-six counties. At the last session of the legislature of Colorado, after a hard fight, the Anti-Saloon League forces secured the passage of the Drake Local Option Bill, which gives the commonwealth, municipal, ward and precinct local option. Of the one thousand and sixteen townships in Indiana, seven hundred and twenty-four are now dry. In Virginia 78 per cent. of the one million nine hundred thousand inhabitants live in local-option territory, and seventy-three of the one hundred counties in the State are free from the saloon. In Illinois at the last session of the legislature the temperance forces were not only able to defeat all attempted liquor legislation, but were able to secure the passage of a local-option law by means of which the saloon has already been driven from many cities and a number of counties. Also at the same session of the legislature a law was past prohibiting the location of saloons within a mile and one-eighth of military posts and naval training schools. At the recent election in Illinois more than twelve hundred saloons were voted out in a single day. In Ohio the saloon has been expelled from eleven hundred and fifty of the thirteen hundred and seventy-six townships in the State, from four hundred and ninety towns and from residence districts in great cities to such a degree that four hundred thousand people in these cities now live in dry territory; and very recently a county local-option law was past that will result in eliminating the saloon from all but eight or ten counties. Most astonishing of all, the State of Kentucky seems to be entering upon a long dry spell.

Very recently a prominent distiller of the State said to a newspaper man: "I am an old man and have spent my life in the whisky business. If a young man were to seek my advice as to going into that business today, I should advise him, Young man, get out of Kentucky." Ninety-eight per cent. of the area of the State is dry; 75 per cent. of the population live in prohibition territory; and ninety-four of the one hundred and nineteen counties have voted the saloon completely out.

Space does not admit of a further enumeration of results State by State; but in all but five or six States of the Union the liquor business is steadily losing ground and the Anti-Saloon League is steadily making gains. A number of large cities have recently taken advantage of local-option laws to banish the saloon, among them being Knoxville, Tenn., with a population of sixty-five thousand, and Worcester, Mass., twenty-ninth in size of the great cities of the United States. During the past year five States, Oklahoma, Georgia, Alabama, Mississippi and North Carolina, have absolutely prohibited the liquor traffic; and, finally, one-half of our national domain is free from the saloon; more than thirty-nine millions of our people live in no-license territory; and such territory is increasing proportionately much more rapidly than our population.

Kismet

BY INA LORD McDAVITT

There fell a light upon my soul,
The white light of his love!
Not God himself can take from me,
Not all the Saints above,
Can take the glory that it left—
The white light of his love!

There fell a flower upon his soul,
The violet of my love!
Nor earth nor sea can bar its way,
It fell from Heaven above,
Not Heaven itself can take from him
The violet of my love!

Vineland, N. J.

CHARLES RANN KENNEDY,
Author of "The Servant in the House."

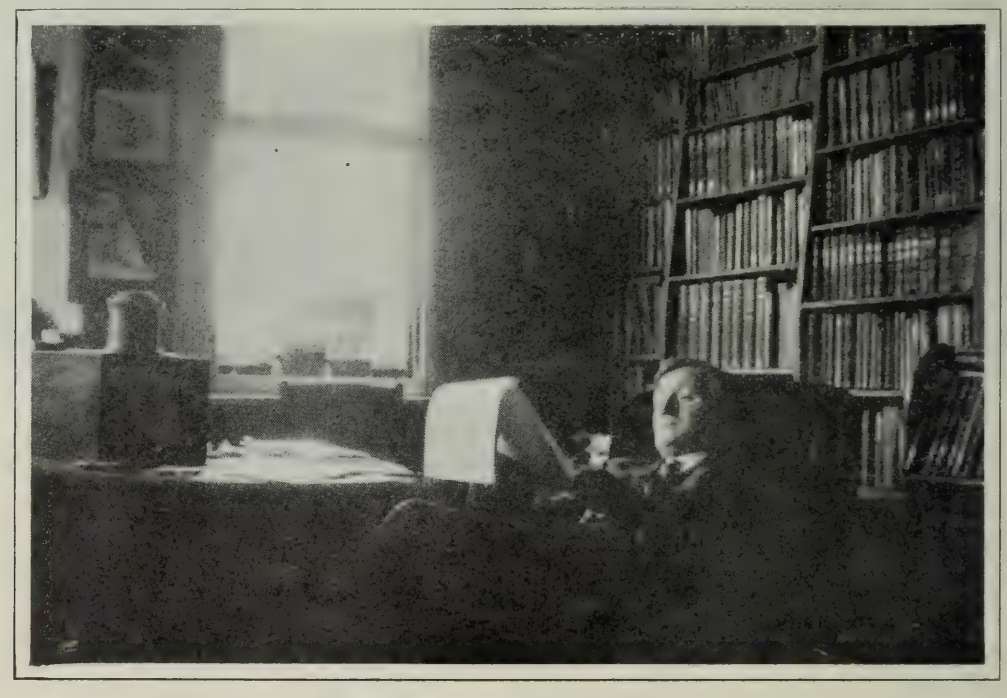
"The Servant in the House" and Its Author

MONTROSE J. MOSES

Author of "Famous Actor-Families in America."

CHARLES RANN KENNEDY was practically unknown to Americans before his drama, "The Servant in the House," was presented, unless we except the few who recollect his playing with Ben Greet some five years ago. He was the Reverend Doctour in the production of "Everyman," a morality play which brought distinction to his wife, Edith Wynne Matthison, in the title rôle. Only to a few of his friends did he, at that time, confide his ambitions as a playwright, and when he returned to England he still continued his career as an actor, awaiting the opportune moment.

As a dramatist Mr. Kennedy's beginning is very well assured; in the midst of an average dramatic season "The Servant in the House" stands forth as something to be reckoned with; it is a play that leaves no one unmoved, yet in every essential it deals with truths as old as the ancient hills. Tho it attempts, thru the symbolic significance of the Servant, to suggest by innate characteristics and by outward semblance the person of Christ, the attractive power of the play is something more than this. After all, the success of "The Servant in the House" may be attributed to the ripeness of the time for the acceptance of the doctrine of brotherhood, to the unshakable faith of the author in the



regeneration of mankind thru love, and finally to the practical application of its philosophy to immediate conditions.

There is much of Ibsen in such an attitude. Mr. Kennedy is an ardent believer in the will to do; he came to America firmly convinced of the ultimate success of "The Servant in the House." It is this faith, this courage, this determination which constitutes his personality, and personality has been a large factor in the success of the play.

The story is not so unique in its details as it is vital in its general significance. Three types of men are ranged side by side—an English bishop of the sordid class, who gives as little and grabs as much as he can; an English vicar whose conscience is stirring dissatisfaction in his soul; and his brother Robert, low down in the scale of life, who toils with his hands and is by profession a drainman. Against this group is pitted the picturesque figure of the Bishop of Benares, a man of pure spirit and simple intent, a brother by blood to the vicar and to Robert, a brother in love to all the world, a servant in the house who has his work to do.

Like Ibsen, Mr. Kennedy believes in his *active* symbol. The Bishop of Benares, known as "Manson" to all in the vicar's household, and only dimly seen in flashes as the spirit of Christ made manifest, is the regenerative principle. He awakens Robert to a sense of his manhood; he preaches the dignity of labor, whatever it be, so it is done with a high purpose; he points the way for the vicar and his good wife, who have, out of the narrowness of their views, heaped injustice upon the erring brother of labor, and kept him a stranger to his daughter.

But the whole value of Manson is seen in proper proportion by the side of the calculating Bishop of Lancashire. The church in the little English country vicarage is in a bad condition; a stagnant odor keeps the people away, and instead they stand on street corners listening to the opinions of a supposed atheist. The two bishops are at opposites as to how this church may be made a living thing. In India the Bishop of Benares has raised an edifice to God, not the product of mere stone, but out of heroic shouting and great laughter, and the joyful working of comrades, willing to sweat in unutterable anguish, since each man had his work to do. Robert understands, but not so the Bishop of Lancashire; *he* is after the worldly consideration, and it is upon him that the scorn of Mr. Kennedy's play falls.

"I WANT TO DO SOMETHING GOTHIC."

If you are a drainman, be one to the

greatest extent of your power; the active symbol of "The Servant in the House" now centers in Robert's discovery. From the vicar's study this laborer, with the spirit of God dominant within him, traces the root of all the trouble to the depths of a cesspool beneath the church. If this vicarage household is to dwell in the way of Christ, then it must be rid of its abominations. The Bishop of Lancashire is asked to leave. It must be cleansed of its corroding impurities. Here one questions, Shall the drainman alone look after the world's cesspools? The vicar is resolute; neither the collar nor the coat makes the priest. It is the deed alone. By having Robert and the vicar go together into the basement of the church Mr. Kennedy not only upholds the brotherhood idea, but as well glorifies labor and brings religion into its essential relation with men.

The author of "The Servant in the House" is thirty-seven; he is a self-educated man, born of a line of English scholars, one of whom held the chair of Greek at Cambridge, preceding Dr. Jebb. Should one turn to Irving's "Sketch Book" and read his essay on rural England, there will be found a quoted passage from a poem by the Rev. Rann Kennedy, M. A.

But tho circumstances forced Mr. Kennedy to work at the age of ten, his individual determination gained for him a broad culture which sometimes seems to flourish better when freed from university harness. The aptitude for Greek was in the blood, and the consequence is he found no difficulty in grasping its essentials. The ecclesiastical tendency of mind was in the family, so it is not surprising to learn that he gave himself a four years' theological training. There is something of the parson in Mr. Kennedy's general bearing—a momentary ecclesiastical pressure of the lips. The same combination of forces appears to have affected him as influenced Ibsen—his religious views bear the impress of the pagan, the Hebrew, and the Christian of the third century.

There is no aloofness about Charles Rann Kennedy; he is genial, eager, and always intent on being understood. He is a big brother to mankind, and to balance his keen enthusiasm for Fabian socialism, one finds him in thoro accord with the idealism of the Greeks. In art, while he is mostly in sympathy with the large, sweeping elements, he is, none the less, a formalist in every particular. As a craftsman he is eager to develop small things.

The author of "The Servant in the House" is big, broad-shouldered and sincere; he is hardly ever without a pipe, and in the midst of clouds of smoke he will run the gamut of philosophy, art and economics. He possesses the Kennedy "epic gesture," the Kennedy initiative in argument, and he has the gift of critical penetration and the terseness of conversational phrase.

In fact, Mr. Kennedy is a believer in phrases that hold the mind. He is the inventor of the "Society of Inspired Persons Standing for the Real Things Thruout the World," a society as yet unformed, but which may come with the awakening of the social conscience. He is a believer in the efficacy of "boosting," and when some critics tried to make out that "The Servant in the House" was "knocking" the Church of England, no one was more surprised than he. "Being a faithful son of the Church, 'as by law established,' God help her," he said, "I exercise the common right of the baptized to up and speak."

As a formalist in his art, it is significant to note Mr. Kennedy's method while at work. He is not a man of one idea; his enthusiasm prompts him to reach out in all directions. This perhaps accounts in part for his intention to write seven plays in the series of which "The Servant in the House" is a part, and tho organically each will be a complete and separate whole, in motive they will be antitheses of each other.

The exact meaning of this is that whereas "The Servant in the House" upholds the love and truth which save and preserve, "The Winterfeast"—which will be presented next fall, and which in atmosphere is an Icelandic saga tale of the eleventh century—deals with the hate and the lie which destroy. A discussion of freedom in life in "The Idol Breaker" will be offset by the psychological analysis of bondage in life which will form the basis for the fourth drama.

It is the boyish enthusiasm of a very vigorous nature which prompts Mr.

Kennedy to look ahead and to plan his work for seven years to come. His seven plays for seven players, if they see accomplishment, will be a veritable dramatization of Emerson's law of compensation. In the far corner of his brain there exists a dim realization of the dramatic possibilities of such motivations as the courage that saves, and the fear which destroys. He would touch upon all the world-problems, without regard to their popular relish, but with a special intention of keeping them vital. However over-large and all-embracing his desire, the Kennedy daring is an invigorating example for young dramatists.

With easy confidence which in no way is an exaggeration of his own ability, the author of "The Servant in the House" would write a big drama on militarism and one on the racial problem; he would deal with the topics of woman's freedom and of the hope of the child. But the play over which he is most enthusiastic

EDITH WYNNE MATTHISON (MRS. KENNEDY) AS "MARTHA" (AUNTIE) AND HER COUSIN, GLADYS WYNNE AS "MARY" IN "THE SERVANT IN THE HOUSE."

is the one on citizenship, which will be the product of that Fabian socialism and Greek idealism already mentioned. With a characteristic stretching of the arms Mr. Kennedy avers that he has proceeded sufficiently in the planning of this play "to see a speech so long in the final act for Edith," meaning Mrs. Kennedy.

It is no exceptional case to find an author with a theory of composition, and to say that Mr. Kennedy in technique is a formalist prepares one for his method in writing "The Servant in the House" and the "Winterfeast." Sidney Lanier held that stress and accentuation in music could be applied to poetry; to him the science of verse was only one step removed from the science of music. The unaccountable fact about the workings of the human mind is that no two persons see or feel alike. Mr. Kennedy draws inspiration from music; it is more easy to explain his indebtedness to Sophocles than to indicate wherein Beethoven has materially influenced him. He interprets the sonatas in terms of human motives; the melodic gradations have passion-values for him; in the combination of certain tone effects he traces the entrance of certain dramatic elements in music. This is the way a drama should be constructed: the orchestra persists in sounding particular motives; they recur at regular intervals, and pile one upon the other in gathering storm to a climax; they sink to the merest melodic whisper. Beethoven means all this to Mr. Kennedy; he loves the music because it is large in its sweep and not sentimental in its tone color. He likes to be swept away by volume, and Beethoven to him is massive even in gentle moments.

Thus, musically, the dramatist has his scheme or method. While writing "The Servant in the House" he played sonata, op. 110, with its accentuation of bass tones, with its steady progression and persistent force. "The Winterfeast" was helped by the "Passionata," op. 57, and the largo, No. 3, op. 10, together with op. 26 and its variations. Knowing his Beethoven thoroly, when the idea for "The Idol Breaker" first occurred to him, he turned to op. 111, with its savage grandeur and with its hammer-like percussion of sound; the cumulative force of the piece is what he wants to produce in his play.

Mr. Kennedy's aspiration keeps pace with his enthusiasm.

"I picture my plays in form," he said, "and having pottered around in the classic, I now want to do something Gothic. I can't say what I mean exactly by Gothic, but I feel what I mean. I love to experiment. I want to accomplish something purely symbolical—not in the Maeterlinck sense—but to discover how, in a flash of expression and thru the medium of words, I may best reveal the inner essence of things. I desire, in fact, to accomplish something outrageously different from what others have done."

Mr. Kennedy is not so original as he is invigorating. To talk with him on art is to sound deep waters, and to hear him uphold the brotherhood idea is to gain a fresh hold on faith in human nature. He is simply making clear to himself the simple facts of Christianity when he says:

"Why need we bother about the false if there is a spark of truth near by to maintain? Is it not possible to seek out the worthy in everything and boost it? This Brotherhood is very simple. Let us give royally; if we seek the interest of the other person, we will receive our rightful deserts in the end. It is the diplomat, after all, who gets nations into trouble. The King goes over and shakes hands with the Emperor; the result is that England and Germany become bosom friends. This is so much more simple and human than studying over maps and puckering the brow over useless technicalities."

There is a state of things beyond the dreams of avarice; intellectual socialist tho he be, the author of "The Servant in the House" is a Platonist as well. As tho in support of this statement, he argues:

"Justice depends on spiritual poise; it is the spiritual centre of gravity in the actual squabble of the moment . . . so far as it is a practical affair, so far as it is a relative affair. On the theoretical side, it is an adumbration of the absolute justice, which is God. Between two persons trying to help each other, each trying to supplant the other's work, this justice is nearer than it ever would be thru display of piety, which does not guarantee the absence of hate in the heart of the pious."

Here to me lies an explanation of that Christian socialism which permeates "The Servant in the House." The brotherhood policy is no mere theory to Mr. Kennedy and to the associate players who form his company. The members are each organic part of the whole organization, bound to remain no longer

than the spirit prompts. Mr. Henry Miller, as the manager, believes in the ultimate conquest of this brotherhood scheme. The theatrical business has been run in far different channels, but managers are now looking with piqued curiosity at this novel doctrine of service which is centuries old in conception.

These general ideas are what Charles Rann Kennedy stands for; he came to America to proclaim them, since youth is always attracted to youth, and the optimistic confidence which he possesses is a national characteristic with us. There is no question of censorship regarding "The Servant in the House"; it has already passed the reader of plays. That is not the reason for Mr. Kennedy's starting in America; he wanted spontaneity in the beginning and the American people are spontaneous; he wanted to get for his play a fair impetus, freed from that mental viewpoint which is limited by custom and by prejudice. The drama will be given a production in London next spring.

NEW YORK CITY.

"THE APTITUDE FOR GREEK WAS IN HIS BLOOD."

Japan and Her Critics

BY MATSUZO NAGAI

[Mr. Nagai is Third Secretary of the Imperial Japanese Embassy at Washington, and the following article has the approval of the Ambassador, Baron Takahira. The importance of this reply to the charges of unfairness brought against Japan is manifest.—EDITOR.]

IN reviewing international events one may well keep in mind that there exist multifarious interests for which political games are often played by countries, as much by those who have no direct concern as by those who have immediate interests. It may also be borne in mind that nowhere is there lacking the mischief-making spirit, whose Mephistophelian playfulness, if left unchecked, has on various occasions inflicted disastrous results upon its victims. Having these facts in view, it is no wonder that so unwarranted an excitement was caused a short while ago over the relations between Japan and America. All the admonitions and warnings constantly given proved of no avail, and the

merits of the contention seemed to the misguided and excited part of the public to justify the beginning of hostilities between the two countries, which have the unprecedented history of a sincere and enduring friendship for more than half a century.

Under the circumstances, no more efficient means can be conceived to allay controversy between countries than the conclusion of a general arbitration treaty, by virtue of which every cause which might lead the countries to war can be peacefully considered. A hearty welcome should therefore be given to the new arbitration treaty between the United States and Japan, under which the whole fabric of imaginary alarm has completely crumbled away.

It may be noted in the conclusion of the present arbitration treaty that a high order of statesmanship was shown to the world by the statesman who holds the elevated position of Secretary of State. It is said that true statesmanship is to utilize opportunities, not merely for the sake of settling particular questions of moment, but to lead mankind to a higher sense of human civilization. When the reader is told that the treaty Japan has just entered into with America is the first arbitration treaty to which Japan has ever become a party, he will readily understand what the writer means. It has been the sincere desire and unremitted effort of the Japanese Government—as the archives of the Peace Conferences held at The Hague, as well as the records kept of the two cases of arbitration in which the Japanese Government willingly became a litigant, will amply prove—to avoid hostilities, which should only be resorted to after every conceivable means of peaceful solution of vexatious problems is exhausted. In the present arbitration treaty Japan has given expression, in an explicit manner, to the principle previously enunciated by her, and has solemnly pledged herself to observe the same.

One who appreciates the position Japan occupies in the Far East must see that the treaty is of great importance in another direction. Is it not Japan who has heartily welcomed the advance of Western civilization into her domain? If the soil where Western civilization promises to bear its fruit is to be found outside of the garden where it has flourished in the past, then the Flowery Empire may justly assert its fertility by past evidences. It should be remembered that, beyond Japan, there is another land bordering the vast expanse of the Pacific Ocean. It is a country of immense territory, of great population, and possessed of immeasurable potentiality, yet to be exploited. That country, in which a high civilization once prospered, has not, unfortunately, kept its onward progress, but, with the expansion of Western civilization, is bound to be modernized. Japan has revealed to the East, no less than to the West, how the civilization of the West can be adapted to the benefit of her people, and at the same time she is the country which has extracted the essence of the civilization derived from China. In this unique position, Japan naturally is more suited to fill the rôle of a reconciler of the customs, notions and ideas of the West and the East, and, therefore, she should be permitted and encouraged to assume the part of an exemplar in the propagation of modern culture and progress in that large human community. Importance may, therefore, be attached as much to the conclusion of this first general arbitration treaty in which an Asiatic nation is a party as to the introduction of any other products of Western achievement. In such a position Japan cannot be insensible of the responsibilities which such a treaty as this has imposed upon her; yet she has stepped forward to assume the added obligations which a treaty like this lays upon her as a civilized nation. It would be needless to reiterate that the already cautious and sensible mind of the Japanese will cheerfully look forward with hopefulness to the ideal fulfilment of these stipulations. It may well be said, "Japan always abides by her pledges."

The fear is often expressed that the prestige Japan has newly acquired in the East as a military Power may surely induce her to take a more arbitrary course in the handling of affairs which may arise. Some apprehend that Japan, being conscious of her power in the Orient, may ignore the faith she ought to keep, and display a Machiavellian duplicity, conducting herself without that restraint which modern nations ought to observe. Such apprehensions are absolutely with-

out foundation to any one who is conversant with the history of modern Japan, for he must be aware of the guiding spirit embodied in the Chapter Oath taken by the Emperor at the outset of his reign. The spirit which was therein announced was that the nation's course shall be controlled by the highest ideals of the age, and the nation must reap the fruits of the best civilization. It is this spirit, as every scholar of Japanese history of past generations agrees, which permeates the policy and the administration of national affairs, and which has brought to her that fame of which she is now so justly proud. It can be readily seen that the Government has constantly, in framing its policy, emphasized this fundamental and guiding principle. The eagerness of the Japanese people in adapting to themselves the best theories and principles of the present age, and in raising their position among other peoples as a civilized nation, has been intense; and the sincere efforts made by the Government to comply with the people's wish have always gained their hearty support. Consequently, it is next to impossible that Japan will capriciously alter her course heretofore pursued and insidiously attack the principles which the civilized countries of the world are now striving to maintain for the common welfare.

Japan is charged by uninformed writers and cursory observers with being insincere in enforcing her avowed liberal policy in matters pertaining to Manchuria, but Japan has kept silent in the midst of expostulations and tauntings based upon the unfounded statements which appeared in the papers of this country. Her reticence, however, must not be considered as an acknowledgment of her defenseless position. Such is not the fact. The reason why she has not attempted to vindicate her acts was that the dream of the pessimist, who sees the phantom of the invincible supremacy of Japanese influence and the final exclusion of Western interests in Manchuria, is ridiculous and is nothing but the nightmare of a sick and peevish intellect. So vast a territory as Manchuria, possessing so many inherent elements of strength and wealth, should not be dominated and ruled by any one foreign country. The exploitation of her natural resources and the modernization of her great population should be carried on thru the co-operation of the countries interested in her development. Japan sees the necessity and benefit of such co-operation. To ignore the "open door" policy in Manchuria has never lurked in the minds of the Japanese authorities. To quote from a writing which is apparently from the hand of the late Mr. Stevens and endorsed by the representative body of English merchants at Shanghai: "People who distrust Japan's adhesion to the open door policy do not give the Japanese credit for common sense and for clearness of head."

The chief complaint seems to be that Japan is exercising undue discrimination, and, consequently, while the merchants of her own nationality are enjoying preferential advantages, the merchants belonging to Western countries are placed in a helpless situation by being deprived of many privileges the Japanese authorities grant only to their own countrymen. Such a policy would finally result in a revival of the sphere of influence which only a few years ago grievously menaced all the commercial interests existing in Manchuria. One must, however, remember why Japan undertook to preserve the "open door" policy in Manchuria. On more than one occasion during the late war Japan proclaimed to the rest of the world her objects and desires in regard to Manchuria, and, upon the signing of the treaty of peace, she again solemnly declared that no variation from her avowed policy would occur in her occupation of the disputed territory. Japan well knows what the true well-wishers for herself thought of her bold yet righteous course; she does not err in attributing her achievement in great part to the sympathy and encouragement tendered to her from the other countries where her sincerity in giving the pledges was not questioned.

A few instances may be given to illustrate the lack of foundation for such evil complaints. One which is often heard is that the harbor improvements, especially the piers, at Dalny are limited to the sole use of Japanese companies, thereby forcing ships under foreign flags to anchor in an unsafe part of the harbor, and in support of the complaint, the damages suffered by a steamer belonging to a

British company are cited. To determine whether such partiality really exists it is necessary to state what has happened to Japanese ships entering the same harbor. Two of them, one a steamer and the other a mail boat, have met disasters of a similar sort to that which occurred to the English steamer, and one of these Japanese vessels was completely wrecked. It will be thus seen that there is no discrimination exercised by the authorities in assigning anchorage places along the piers in the harbor of Dalny. All incoming ships, whether foreign or Japanese, are subject to the same treatment at present, and have been from the beginning. The use of the piers is accorded to ships according to the precedence of their arrival, allowing no preference even to the Japanese mail boat, and this was the cause of the unfortunate accident which befell the latter. Cyclones frequently happen in this district, and the South Manchurian Railroad Company is not sparing any labor for the betterment of the harbor.

Another specious complaint is made in regard to the preference given Japanese over foreigners in the use of the Japanese telegraph and railways, and in the investment of capital. There is no foundation for this charge. The same treatment is accorded to all, and Japan does not arrogate to herself or her subjects special privileges relating to the use of telegraph lines, railroads or the investment of capital. In fact, the railroad and other telegraph lines, which were built by China in Manchuria, and their future development, of which Japan has no intention—indeed, no right—to interpose any opposition, make it quite evident Japan is not interfering with the enterprises of others. The inadequate equipment of the railroads and telegraph lines is indeed much to be regretted, and the Japanese merchants submit to as much inconvenience as foreign merchants, to whom neither higher rates have been charged nor unaccountable delays caused, malicious reports to the contrary notwithstanding. Every effort is being made to improve the facilities of the telegraph and railroads, and it is believed that in a short time adequate accommodations will be established.

The allegation which may be of particular interest to American readers is that which discloses the arrangement made by the Japanese Government with certain Japanese merchants by which the latter receive a subsidy to export Japanese cotton goods into Manchuria, which will result in destroying the market for American cotton goods. It is further asserted that the source of the fund of the alleged subsidy is from the foreign loans Japan has floated in America and elsewhere. It is true that, thru a system of exchange instituted by the Japanese Government, certain privileges are extended to Japanese merchants, but these privileges are also extended to foreign merchants who handle Japanese cotton goods and also to foreign merchants who export cotton goods of foreign manufacture, provided they comply with the conditions which are imposed upon Japanese merchants. The reason why the Japanese Government has formulated this modern scheme of exchange may be summarized in a brief statement: The Government desired to relieve itself from the inconvenience of sending the necessary cash to defray the current expenses incurred in maintaining the military force in Manchuria, and entered into an agreement with a Japanese bank which has branches in that district, whereby the bank from time to time borrows from the Government money at a low rate of interest, which it advances to merchants dealing in cotton goods; and, in consideration of this low rate, issues its own notes to pay the expenses of the military force. From this it is obvious that there is no subsidy whatever. The whole arrangement is nothing but a business transaction, the utility of which must be apparent to the most captious critic. By this simple system of exchange a currency will be established upon a sound basis which will materially foster commercial enterprises in Manchuria, to the benefit of Japanese and foreign merchants.

In conclusion, it may be said, Japan has never wavered from the great mission entrusted to her nor from the additional obligations assumed by her under the treaty of Portsmouth. She is keenly alive to her responsibilities and will carry them out to the full extent.

No deeper gratitude has ever been felt by Japan to any country than to this great republic for the noble attitude which America has always shown to

Japan. Both nations have immense vistas of singular advantage and unique opportunity opening before them in the future of the Pacific. Picturing to the mind the ideal relations between America and Japan for the past half century, one can but cherish the hope of maintaining them forever. The new arbitration treaty has swept away the cause of uneasiness so unnecessarily felt. The mutual trust and reliance between America and Japan was again manifested in the conclusion, two weeks later, of the treaties between those countries regarding the protection of inventions, designs, trademarks and copyrights in China and Korea, whereby the industrial and commercial welfare of Americans and Japanese will be safeguarded. All these evidences of friendship tend to strengthen the unswerving belief that the close ties now holding Japan and America together will never be severed. This is the belief happily and sacredly entertained by most of the Japanese.

WASHINGTON, D. C.

The Milking Machine—A Valuable Invention

BY CLARENCE B. LANE, B. S.

ASSISTANT CHIEF, DAIRY DIVISION, UNITED STATES DEPARTMENT OF AGRICULTURE.

THIS age is one of invention. Hand labor of all kinds is rapidly giving place to machinery. This is true in the agricultural world as well as in other fields of toil. We find the old hand plow of our fathers replaced by one propelled by steam; the hand that formerly wielded the old-fashioned "cradle" in the grain fields now guides a combination machine which removes the heads from the wheat, threshes out the grain and grinds it into flour. In like manner the milkmaid, famous in song and story, has become a memory, and the milking machine, lacking in poetry but much more practical, has come to take her place.

For more than a quarter of a century machinery has been successfully used in separating the cream from the milk and churning it into butter, but a machine for milking the cows has been more difficult to supply. It has long been realized that a successful and practical cow milker would mean a profitable revolution of the dairy industry, as it would render the work of milking much easier and reduce the necessity for hired help, thus making the dairyman more independent. Efforts have been made by scores of inventors for more than half a century to construct a machine that would milk cows in a satisfactory manner and without injury. The German writer, Martiny, states that twenty-nine different milking machines known to him had been patented in different countries or mentioned in the dairy literature between the years 1877 and 1898.

Naturally, inventors have attempted to imitate the way in which the calf sucks its dam. The difficulty has been to reproduce the peculiar influence which the sucking calf has upon the cow and to devise a machine which will not irritate the animal and which will do its work without injury. Another difficulty in devising a cow milker has been to construct it so that it could be adjusted to all cows. Cows vary greatly in disposition and temperament. A successful cow milker, therefore, must meet all these different conditions. Since milking must necessarily be an artificial process, it has been thought for some time that animals would become accustomed to being milked by machinery just the same as they become accustomed to hand milking, provided a milking machine could be perfected that would be comfortable to the animal when in operation. A heifer, for example, coming into milk the first time, would take as readily to one artificial method as to another, other things being equal.

While no milking machine yet invented has shown its practical value in a way that has led to its general use, recent

improvements in machines of this type have resulted in greater simplicity of construction and effectiveness in operation, and consequently they are in practical use in a limited number of the larger dairies.

While a dozen or more machines have been experimented with from time to time, not more than three or four have survived a practical test. Of these we may mention a foot-power milker.

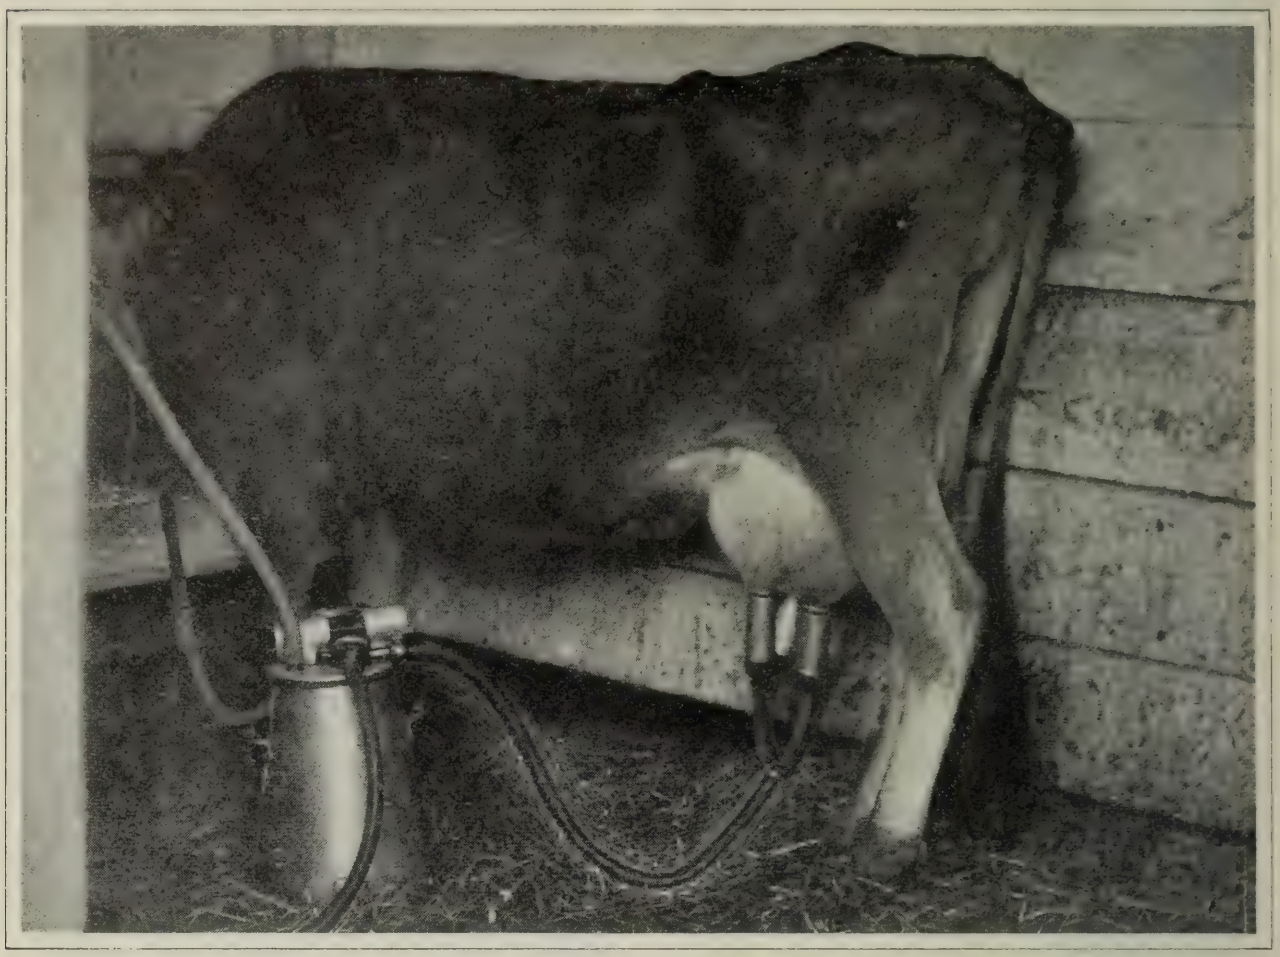
This machine is designed for use in small herds and has no stationary fixtures. It consists of a suction pump worked by foot power, two pieces of rubber hose, and eight suction cups, to be attached to the teats of the two cows, which can be milked at the same time. The milk passes thru the cylinder and also thru the valve in the pump piston itself. The operator sits between the two cows and works the pump with his feet. On opening the spigot the suction rapidly draws the cups over the teats and the milk begins to flow into the milk pail, which is hung on the spout of the pump.

The teat cups are hollow and conical. Nearly an inch from the large end the cup is almost closed by a soft rubber diaphragm; this disk, being elastic, fits airtight around the different sized teats. The teats fill the conical cup except at the small end, where suction is applied. The cup is made of three pieces of smooth, hard rubber. To the end of the cup is attached a piece of glass tubing, thru which the milk may be seen, and this is again connected with a small rubber tube. By means of a spigot in the tube the suction may be cut off when the teat is empty. The milk is conveyed from the spigot to the head, where the milk from all four teats unites and passes into the large hose which carries it to the pail. This machine has been in operation since 1892.

Another machine is designed for either hand or power, the hand machine being convertible into a power machine by simply bolting an air device to it.

In the operation of a power machine, it is necessary to pipe the stables, a compressed air tank being required, which must be filled by some power running an air compresser. The milk is drawn by intermittent suction. The suction may be created by a vacuum pump or a steam ejector. Connected with the vacuum pump is a vacuum reservoir, and a pipe running the whole length of the cow stable, with a connection valve or vacuum cock between each pair of cows. A safety valve is connected to the reservoir to prevent the vacuum from running higher than is desired.

The machine itself consists of a heavy tin pail, which is cone shaped and holds about 55 pounds of milk. The cover of this pail is a disk in which is a vacuum motor, which produces the pulsations in drawing the milk from the teats. The cover fits the pail tightly and excludes all air.



To operate the machine it is placed between the pair of cows to be milked. A rubber tube connects the pail top or pulsator with the vacuum cock above the stanchions. On opening the cock the air is drawn from the pail and the motor immediately starts. The degree of pressure maintained is about one-half atmosphere, or 7½ pounds to the square inch. Leading to the pail cover or pulsator are two flexible tubes besides the one leading to the vacuum cock above the stanchions. At the end of each tube are four cups, which are fitted over the teats of the cows. The milk from the two cows is discharged into one pail. In operation the machine makes a low, clicking sound, which is caused by the motor. The vacuum pulsations run from 50 to 70 per minute and may be easily adjusted to the speed required. The milk, in passing from the cow to the pail, goes thru a glass inspection tube, so that the operator may watch the flow. When the milk ceases to flow the suction is turned off and the action of the machine stops.

The kind of power employed to operate cow milkers is not important provided it is uniform and can be depended upon. Gasoline engines, electric motors, or steam and tread power, may be used. Connection is sometimes made with the adjacent trolley wire and power supplied very cheaply in this way.

Milking, either by hand or machine, is an artificial process. Some have contended that the personal contact of the milker with the cow has the effect of bringing forth the largest flow, and that milking by machinery is more artificial and hence is resented by the cow. In more than one instance, however, cows have been known to turn their heads and lick the machine during the process of

milking, in the same manner that they would their calves.

It is interesting to note how the milking machine affects a herd of cows the first time it is used. The writer was present in a barn of about forty cows on one occasion the first time the machines were put in operation. Some of the animals were a little restless at first, owing to the sight of the machines and the click of the pulsators, but soon they became quiet and reconciled to their action. One feature which is perhaps a little surprising is that the heifers took to the machines as readily as the older cows.

THE MACHINE IN OPERATION.

There is in almost every herd one or more kicking cows which delight in upsetting the milk pail without warning. Such cows do not usually attempt to make any disturbance where the milking machine is used.

Naturally one of the first questions asked when a dairyman is considering the installation of milking machines is: How much time will be saved by their use? In an experiment it was shown that the average time required for one man to milk four cows with the machine was 13.02 minutes in the morning and 13.57 minutes in the evening, or a total of 26.59 minutes for the day. In case of four cows milked by hand, it took an average of 21.88 minutes to milk them in the morning and 18.71 in the evening, or a total of 40.59 minutes for the day. There was, therefore, a daily saving of 3.5 minutes per cow, or 14 minutes on four cows, thru the use of the machines. It should be noted, however, that the time saved by the employment of machines was not the result of greater speed in milking, but in the operator's ability to milk several cows at once. The writer has seen a dairyman milk a herd of sixty cows in 60 minutes with six machines without any assistance. In this instance twelve cows were milked at a time. The pulsator can be adjusted so that the action will be fast or slow; 50 to 60 pulsations per minute is the rate usually recommended. The more rapid the pulsations, the faster the machine will milk, up to a certain limit. The writer saw one cow, giving a good flow, milked absolutely

clean with a machine in 2¼ minutes, the number of pulsations being 150 per minute. It is believed, however, that such rapid milking for any length of time has a bad influence upon the cow, and after a time she might object to the machine and refuse to give down her milk.

The yield of milk is perhaps the most important matter to the dairyman. Any method of milking that has a tendency to decrease the flow to any appreciable extent can hardly be considered practicable. This point was considered for a period of thirty days in an experiment with the milking machine. The total yield of milk for four cows during thirty days was 1,898.75 pounds from hand milking and 1,960.25 pounds from machine milking, not including strippings, a difference of 61.5 pounds, or 3.24 per cent., in favor of the machine. Where the work is carefully done by hand and by machines, the results have indicated that there was no great difference in the yield or quality of milk, but the saving of time is the item of greatest importance in the use of the machines.

One of the greatest problems of the cow milker has been that of keeping it clean. It is not a difficult matter to sterilize the parts, and when this is done the milk is clean, as it is entirely protected from outside contamination, but careless cleaning may result in greater contamination than in case of hand milking.

Milking machines are successfully used in "certified" milk dairies, where it is required that the bacteria be kept below a certain standard. At a recent milk contest, where a large number of dairies were competing, milk drawn by machinery won first prize. The machine is rapidly gaining favor with dairymen, and no less than 25,000 cows are milked by this method at the present time.

Naturally, the large dairyman will be the first to adopt the cow milker, for the reason that his equipment will cost him less per cow than the small dairyman. Again, the large dairyman has more at stake and has to depend entirely upon the hired men to do the work. If they fail him, the work falls upon himself or perhaps upon a very limited number of helpers. With the installation of the milking machine, the large dairyman is

THE FOOT-POWER MACHINE.

much more independent, and, if necessary, could milk a herd of fifty cows without assistance. This would be next to impossible without it. However, there seems to be no good reason why a dairyman with a herd of even ten or twelve cows could not use a machine with profit. The power required could be secured at small cost, and the time saved could be used to advantage in working the team longer on the farm or in other ways.

THE MODERN DAIRY.

The scarcity of milkers and the unreliability of many of them has had a tendency to keep many men from going into dairy farming. Some dairymen who have been in the business have been obliged to give it up for this reason. Great interest, therefore, centers around the milking machine, especially where the above difficulty exists. With its introduction, only about one-half the labor will be required to milk the cows, and it is believed that the labor employed will be of a higher class than heretofore and will also command higher wages. It is believed also that the advent of the milking machine will have a tendency among farmers who now have small dairies to enlarge their plants and to make dairying their chief business. The trouble has been in the past that too many farmers have made dairying secondary to other work, and when anything had to be neglected, it was always the dairy. For this reason, the profits from their dairies have been small. Where the milking machines have been introduced they have influenced dairymen to clean up their barns and take more pride in their work. This naturally will result in the production of cleaner milk, and perhaps in some cases in better prices. Any new apparatus which has a tendency to improve dairy conditions should be welcomed by the industry.

What the cotton gin has been to the South the milking machine will surely be to the dairy business thruout the country.

WASHINGTON, D. C.

Literature

Herbert Spencer

An autobiography can rarely or never suffice as the only record of a man who has played a large part, whether in thought or in action, in the world's history. When Herbert Spencer's "Autobiography" was published a few years ago no claim was made for it that it was a complete history of the life of one of the greatest, if not the greatest, of the thinkers and philosophers of the nineteenth century. The autobiography extended over sixty-two years of Spencer's life, but it left uncovered the still fruitful years between 1882 and his death at the close of 1903. In writing, also, Spencer depended chiefly on his memory. He had not at hand the letters he had written to his various correspondents, which have been available for his biographer, and he was also at the disadvantage a man must always experience in writing of himself, of being unable to appraise himself impartially and of being frequently withheld by modesty from putting the best possible light on his actions and conduct.

Spencer himself recognized the shortcomings of his autobiography, and it is in fulfilment of his own wish that Mr. David Duncan has prepared the *Life and Letters of Herbert Spencer.** It is a work well worth doing, for it is the permanent and authentic record of a man who, by his individual life work, created a new era of philosophical thought. And Mr. Duncan has done the work well. As is natural and right in a biographer, he has endeavored to show Herbert Spencer in a favorable light, to clear away the many myths and misconceptions that had gathered around his personality, and to secure for him due credit for the greatness and originality of his philosophy. But a man who, like Mr. Duncan, had been closely associated with Herbert Spencer, to whom the slightest insincerity was abhorrent, and with the little group of "lovers of truth" who were his friends and who were all fellow-seekers after knowledge—Lyell, Huxley, Tyndall, Owen, Darwin, and Mill—could scarcely have other than a most scrupulous regard for veracity, and no degree of hero worship could induce Mr. Duncan to set down either more or less than the truth, as he saw and understood it.

As regards the "Synthetic Philosophy" and its permanent value to human thought, Mr. Duncan does not assume to be a judge. He puts forward, forcibly and ably, Herbert Spencer's claims to originality, and his defense against the accusation, frequently repeated, that he had obtained an essential part of his system from Auguste Comte. Mr. Duncan shows clearly also that Spencer had already defined his theory of evolution years before Charles Darwin pointed out an effective means of evolution in "the survival of the fittest thru natural selection in the struggle for existence." Spencer embraced whole-heartedly Darwin's biological theory, and also the theory of Lamarck, put forward half a century earlier, that changes of species were due to the inheritance of functional modifications. He opposed, almost with bitterness, the theory of Weismann, who denied this inheritance of functional modifications. It seemed to Spencer impossible to account for the gradual perfecting of species—the upward growth of mankind and of plants and animals—if the achievements of one generation were not inherited by the next. In this respect the preponderance of opinion among modern biologists is on the whole against Spencer; and if his system of evolution were as dependent upon this one link as he himself supposed, the system might have to be relegated to the lumber room of outworn philosophies. But evolution has become a part of all modern thought—it has become the warp into which modern thinkers weave the weft of newer discoveries and later ideas, and the men who most emphatically deny the inheritance by offspring of characteristics acquired by the parents do not dream of attempting to controvert the general

*Life and Letters of Herbert Spencer. *By David Duncan.* With Illustrations. Two Volumes. Pp. xiii, 414; vii, 444. New York: D. Appleton & Co. $5.00.

theory of evolution. They look only for some other working method by which evolution has been carried out, and they continue to use the phraseology and to hold the basal idea of evolution, while skeptical of a factor which Spencer himself held to be essential.

In another respect Spencer's evolutionary philosophy may be said to be greater than its author. In his volumes on sociology, Spencer works out the gradual evolution of human society. Society, like the human body, or the solar system, must go thru the process of "integration of matter and concomitant dissipation of motion." A nation, like the nebula out of which a cosmos is being evolved, passes from an "indefinite, incoherent homogeneity to a definite, coherent heterogeneity." But Spencer, in politics, thought to arrest this process, and the conviction that England as a nation was repudiating the individualistic doctrines of the Manchester school of *laissez faire* made him wail over her impending fate, like a pessimist rather than a philosopher. He opposed on every occasion the extension of Government activity. He feared always the organization of any new society, whatever its purpose. He was against national education and any state training or examination of teachers. He opposed free libraries, state care for children, and even of paupers and the insane. He disapproved of the appointment of sanitary inspectors, factory inspectors, and in fact of every kind of inspection. He was an anti-vaccinationist, an anti-imperialist, as well as an anti-war man, and an advocate of the reduction of armaments, and of the cessation of all expansion of Britain's empire. He was continually in despair at the "bovine unintelligence" of his countrymen, who were preparing new tyrannies for themselves thru their stupidity in rushing into trade unions and into any kind of organization which tended to restrict individual freedom. He wrote to Tyndall in 1893:

"What a world we are living in, with its socialism and its anarchisms and all kinds of wild ideas and destructive actions! I, in common with you, look at the state of the world with dismay; but I have for a long time past seen the inevitableness of the tremendous disasters that are coming. But you and I will not live to see it. Happily—I think I may say happily—we shall be out of it before the crash comes."

It seems strange that the man who gave his whole life to the promulgation of the philosophy of evolution should be so terrified at its processes when he found himself and his nation caught up in their working. For what were all these disturbing ideas but the gradual integration of the nation? From the indefinite, incoherent homogeneity of savage society Spencer was willing to recognize that the nation had evolved into a definite, coherent heterogeneity. But he was convinced that the process had gone far enough, and he used all his energies in political controversy to prevent any further integration of the discrete particles called individuals, with the resultant loss of motion or freedom to each individual, but with the also resultant increase of power of motion to the integrated whole. It seemed impossible to Spencer that a man could wisely give up his individual freedom of action to go into a trade union; and yet a trade union, in comparison with the unorganized mass of individual workers of whom it is composed, represents in every particular the process of evolution as enunciated by the author of the "Synthetic Philosophy."

There is in the *Life and Letters* no expression of opinion by Herbert Spencer concerning another manifestation of the working of the universal law of evolution—the formation of great industrial combines and corporations, the gradual integration of capital and the money power. Had Spencer, in the later years of his life, looked across the Atlantic to the United States, where the process of evolution was more advanced and more striking than in England, he might have changed his mind about the efficacy of unrestricted individual liberty and freedom of contract in securing for every man, woman and child the best opportunity for life and development. He might have been able to see some truth in Professor Ferri's contention, against which he wrote an indignant protest in 1895, that some form of socialism is "the logical outcome of the positive theory of universal evolution," and instead of continually anticipating "some dreadful social disaster" as the result of modern tendencies in democratic government, Herbert Spencer might hopefully and

philosophically have looked on at the rapid working out in Anglo-Saxon civilization of the processes of evolution, the theory of which he had been the first to formulate and enunciate.

Ancient Italy

THREE years ago Professor Pais brought out in America his "Ancient Legends of Roman History," in which he declared that Roman history prior to 400 B. C. was largely legendary, since "the majority of Roman annalists were patriots, genealogists and demagogs rather than true historians." He also denied the authenticity of coins and inscriptions prior to 350 B. C., and held the "tomb of Romulus" to be not earlier than that date. This put him outside the pale of Italian scholars and cost him his position in the museum at Naples. The field which he covers in the book before us* is immense, and inevitably rouses controversy.

History has shown us what a busy hive was Magna Græcia. But it is little more than a geographical term. The Greeks who fringed Southern Italy and Syracuse were fully as far from being united as those in Greece. Even Dorian Tarentum hated Dorian Syracuse, and the flourishing Achæan colonists fought one another like tykes. When rich Sybaris went down before sturdy Croton there was little mourning over it except by the vanquished. War and pillage were the custom. Sicily was no more a unit than Europe. When Carthage projected itself on Sicily in 480 B. C. only the two cities, Syracuse and Akragas, bore the brunt of the attack. And when nearly eighty years later the Carthaginians attacked Selinus, no one came to her rescue. Here we are dealing neither with a nation nor a state.

We thank the author for publishing a fine but badly battered archaic relief from Acræ in two zones. The upper shows two dancing satyrs in the presence of a man holding a jar. Below is a group of two sphinxes back to back with a palm between them. They are probably of the sixth century B. C.

The head of Dionysos, which Pais found near Sorrento, is by no means "a work of the sixth or the beginning of the fifth century." It is archaistic, like several heads in museums, especially at Athens.

A burning question is "By what river were the Athenians brought to grief?" Pais, after much reflection, has decided that the high, round tower, which he calls a "Doric tower," marks the spot. It seems meant to commemorate some great event. But it is near the Heloros, too far south. Holm has fixed upon the stream which passes Noto, and the high banks seem to point to the Assinaros.

It will be a surprise to some to find that Etruscans remained dominant in Campania in 424 B. C., holding Herculaneum and Pompeii until they received a crushing blow at Sentinum 295 B. C.

One may here note a curious error of spelling, calculated to puzzle the reader. After speaking of the Phocæans who founded Marseilles, in the very next page the author proceeds to call the mercenaries from Phokis Phocæans also. The two peoples were extremely unlike. The error recurs more than a dozen times.

The book ought to have a map of Sicily and Southern Italy.

Together. By Robert Herrick. New York: The Macmillan Co.. $1.50.

Robert Herrick has taken a north light, a large canvas, a big brush and set his palette somberly with all of the darker colors, to paint the picture of marriage in America. It begins with the wedding of the hero and heroine. Victor Hugo says that at the rose-strewn threshold of the bridal chamber "an angel stands smiling, with his finger on his lip," but Herrick rushes in where Hugo fears to tread, and writes his book of revelations. The publisher's advertisement might read: *"Together;* a novel of incompatibility. An assorted lot of unhappy marriages at $1.50 a dozen." The worst thing in the book is the episode apparently intended to teach that adultery is not wrong, but an ennobling experience if it is parenthetical; if the relation is broken off at the end of the three days'—or three weeks'—moral vacation. What sort of "sacred love" is this, which claims earthly fulfilment in defiance of the moral

*HISTORICAL AND GEOGRAPHICAL INVESTIGATIONS IN CENTRAL ITALY, MAGNA GRAECIA, SICILY, AND SARDINIA. *By Ettore Pais.* Translated from the Italian by C. Densmore Curtis. Chicago: The University of Chicago Press. $5.

and social law? It seems a cowardly evasion of the difficult problems of divorce. Men and women strongly attracted to each other should be decent or part. That is the only "solution" for sane and wholesome human beings. If the "unfortunately married" find a "soul-mate" too late, let it be a mating of souls, not bodies. None of these miserable people have any religion or call upon any very high motives to help them. Some are frankly pagan and selfish, some are constitutionally immoral, and some seem to be just plain, ordinary fools. One or two of the men have a sense of honor and decency—we cannot see that any of the women have either—except the big, calm, blonde Alice, who is hopelessly dull and heavy. She resembles too much the heroine of Zola's "Fécondité" to interest us as she should. Her husband, Steve, is also "dull and good." If novelists had the happy fortune of the rest of us in knowing people who are both good and brilliant, modern fiction would be less hopeless. Robert Herrick's novel, large in its intention and painstaking in its working out as it is, fails in reality, in humor, in wisdom. Its contention that, in order to secure happiness, husband and wife should work together with sympathetic comradeship, is just. But how this ideal is to be brought about in selfish, frivolous, irreligious, worldly, unmoral married people the author seems to know as little as the reader.

The Power Supreme. By Francis C. Nicholas. Boston: R. E. Lee Co. $1.50.

A romance of the rubber forest, not on the Kongo, but in the wildest part of South America; a passionate indictment of the Church in her dealings with the Indians, who, at the expense of frightful labor, bring down the loads of rubber to the river; a description of a revolution which the Indian helps win but is betrayed by his leader; such is the story of *The Power Supreme.* It is told in the first person by an Indian of the forest in a simple and straightforward narrative style that does not gloss over his own vices and failures, and is not devoid of graphic force in its portrayal of anti-clerical and revolutionary feeling. But the author, altho he has camped in the wildest spots of South America, does not give us the "feel" of the forests as does Kingsley, who never saw them, in "Westward Ho," nor do we get the sensation of smothering trees and struggling vines as from Stanley's travels in Africa.

The Metropolis. By Upton Sinclair. New York: Moffat, Yard & Co. $1.50.

Mr. Sinclair has chosen to publish the notebook in which he recorded the observations of his year of slumming among the Four Hundred rather than to construct from this crude material a novel of the customary type. That this is a matter of choice with him, and is not due, as in the case of some contemporary writers, to limitation of dramatic ability, is proved by the introductory chapter, which forms the connecting link between "Manassas" and *The Metropolis,* between the civil war of history and that of prophecy. But we resolved long ago never to find fault with an author because he had written another book than the one we wanted him to write, so we must say that, since he has deliberately sacrificed what is technically called "human interest" in favor of what he regards as a more important aim, he has not failed to accomplish that aim, which was to give a vivid impression of modern American life under the pressure of excessive wealth, of inartistic, aimless, idle, ineffectual, silly, competitive, vicious extravagance and luxury. He has presented a complementary volume to "The Jungle," the contrasting evils of poverty and superfluity, the troubles of those who have to earn more than they get to spend and the troubles of those who have to spend more than they can earn. It is useless to attack Mr. Sinclair's accuracy. He probably has up his sleeve affidavits for each individual item. Most of them are familiar to us thru the Sunday scares of the yellow press. It is, however, safe for a critic to say, even tho he be not a member of the Smart Set, that the book does not present a true picture of high life in New York, because it does not really present a picture of life at all. A large part of it reads like the prospectus of a hotel or the advertisement of a department store, with the prices in plain figures on every article. But in pillorying the vice of luxury the author

is likely to do more good than in depicting the hardships of the poor, for the most important thing now is to get the people to realize that the wealth thus squandered is as really and wholly lost to the world, to them, as tho it were burned up, as tho there were in the metropolis a perpetual conflagration consuming millions a month.

Charles the Bold, Last Duke of Burgundy. By Ruth Putnam. New York: G. P. Putnam's Sons. $1.35.

It is rather startling to find Charles the Bold among the "Heroes of the Nations," and the author of the volume anticipates our incipient wrath at the publisher's device by the first sentence of the preface, in which the admission of the Duke of Burgundy into this noteworthy series is justified on the ground of his relation to events rather than by his national service or heroic qualities. Charles the Bold—or the Rash, as our author very wisely would have translated *le temeraire*—was the last Duke of Burgundy, and he might have been a national hero if he had been able to weld into a political unity his heterogeneous possessions scattered from the Zuyder Zee to Switzerland. His attempts to consolidate these scattered domains filled his life with turmoil and petty wars, which afforded him plenty of opportunity to be both bold and rash, and without avail, for he was working against racial, geographic and linguistic forces too strong for his genius, if not for that of any maker of kingdoms. He is, nevertheless, to be reckoned among the many powerful lords of that ruinous feudal fifteenth century which gave us Hotspur, Warwick the Kingmaker, and Richard III; and he warred right and left without achieving anything comparable to the triumphs of his mighty contemporary Louis XI. Those who like to see their Harrimans and Rockefellers in armor, however, will enjoy Miss Putnam's account of Charles the Bold, from his picturesque initiation into the Order of the Golden Fleece at the ripe age of twenty days to his luckless ending at Nancy (at which his cunning enemy, Louis XI, laughed right merrily). The book possesses the rare double charm of engaging the interest from page to page and winning the reader's confidence in the reliability of the narrative. The illustrations are selected with discrimination, and a really useful map is appended to the volume. Miss Putnam's work will surely take first rank in the series to which it belongs.

Yolanda of Cyprus. A Night in Avignon. By Cale Young Rice. New York: The McClure Co. $1.25 and 50 cents respectively.

Here are two clever plays, in irregular meter, the one of four acts, the other of one. The latter, which has been already staged, conjures with the names of Petrarch and Laura, and tho spidery enough, hardly more than a sketch, is happy in an ingenious and telling motive. To some extent, indeed, they are both ingenious rather than dramatic; if anything the circumstantial element is too pronounced for the moral, particularly in the former, and the tragedy is identified too closely with situation. Nor is it quite clear why a writer who is dealing with perennial human passions and emotions should estrange them by a remote *mise en scène* and by a medieval atmosphere. But tho Mr. Rice seems occasionally in danger of betraying the essentials to the accidents of drama, his plays have still sufficient life to animate them, even when read in the study.

Letters of Literary Men. Vol. I, Sir Thomas More to Robert Burns. Vol. II, Nineteenth Century. Arranged and edited by Frank Arthur Mumby. New York: E. P. Dutton & Co. $1.00 each.

The present collection or anthology of letter writers has been made, so says the editor, for the purpose of illustrating "the history of English literature from the end of the fifteenth to the beginning of the twentieth century," as well as of tracing the development of the art of letter writing itself. With regard to the first of these purposes, tho comparatively easy to illustrate in this way the life and manners of an author's times, it is a rather more ticklish business to interpret his own character by a small selection from his correspondence. And in this respect the critic may now and then be inclined to question Mr. Mumby's choice and perhaps his sense of proportion. On the whole, however, the collection is a

good one—particularly so for those numerous readers who have no great stomach for a bulky correspondence, like Cowper's or Walpole's. All the great writers and most of the small ones are represented, while the letters, whether or not they quite realize the editor's more ambitious hopes, are interesting individually and are usually of the writers' best.

Western Asia in the Days of Sargon of Assyria, 722-705 B. C. A Study in Oriental History. By A. T. Olmstead. 16mo, pp, vi, 192. New York: Henry Holt & Co. $1.25.

The present volume is the second in a series of "Cornell Studies in History and Political Science." The author presented it as a thesis at Cornell University. It represents seven years of study during which he was for a year a Fellow at the American School for Oriental Studies, under Professor Schmidt, and had the inestimable advantage of a careful topographical study of a portion of the territory covered by Sargon's campaigns. It is an admirably careful, thoro and adequate study of Sargon's campaigns, and has close bearing on biblical accounts. Among the points most valuable is his study of the perplexing "Muzri" question raised by Winckler. The author with good arguments flatly denies that there was a Negeb Muzri different from the Mizraim of Egypt. Also of much interest is the account of Sargon's campaigns to the north against the Mannai and Khaldians (Chaldeans) until he was slain in battle with the Cimmerians, as this brings him into relation with tribes whom our author recognizes as Aryan. We may expect much in the future from so careful a scholar. A promising school of Oriental students has arisen at Cornell University under Professors Sterrett and Schmidt.

Vida y escritos del Dr. José Rizal. Por W. E. Retana. Madrid: Librería de V. Suarez, 1907. 4to, pp. 516. Price, 15 pesetas.

Rizal is genuinely the political saint of the Filipinos, and perhaps no violence was done to ecclesiastical usage—tho it all seems strange in modern life—when the Independent Philippine Church (the Aglipay schismatics) solemnly canonized him, two or three years back. He is a rather mythical—one might, in some respects, say a mythological—character among the Filipino masses; and he is likewise, tho for other reasons, still a mythical personage abroad, especially in the United States. Only the rough outlines of his career have been sketched for American readers, and they have often been distorted either in praise or misrepresentation. A good biography of him and real translations of his two political novels would make available to American readers the best sources of information as to Filipino aspirations, and incidentally would afford insight into Filipino character and possibilities. So long as such works are not available, however, the few Americans who do study the subject must turn to Spanish sources. And the material for the biography of Rizal has lately been made available in a "Life" of him by the bibliographer, W. E. Retana. Retana ceased to be the editorial spokesman of the Spanish friars in the Philippines when their cause collapsed in the disaster of 1898. He is now abjectly apologetic for his former political writings, and goes to the opposite extreme to ingratiate himself—and his writings—with the Filipinos. With the aid of various associates of Rizal, whom in life Retana abused, he has given us the raw materials for his biography, reproducing many documents which make the work indispensable for every student of Spanish rule in the Philippines and of the Filipino reform propaganda of recent years.

The American Constitution. By Frederic Jesup Stimson. New York: Charles Scribner's Sons. $1.25.

Professor Stimson's lectures, delivered in Boston on the Lowell foundation, have been published under the title of *The American Constitution.* It is the design of the author to apply to the consideration of current politico-economic problems in the United States principles drawn from the study of the evolution of the English Constitution, but his lamentable neglect of all the recent authorities on English constitutional history has led him into numberless gross errors, such as, for example, the long-exploded notion that Magna Charta guaranteed trial by jury, provided for *habeas corpus*

and was drafted by a "representative body." In short, the historical part—that is about one-half—of Professor Stimson's volume is utterly worthless. When he comes to American government he is on securer ground, and his eminence in several fields of public activity makes his views on private rights, divions of powers, and control of commerce and corporations worthy of respectful attention. Professor Stimson is an ardent opponent of the present centralizing tendencies, state interference tralizing tendencies, State interference with "industrial liberty," and of all attempts to secure thru the Federal Government a general uniformity of civil and criminal law. It is a pity that he did not state his views on these questions without undertaking such a display of historical learning, for he undoubtedly has some wise and timely things to say.

Ludwig the Second, King of Bavaria. By Clara Tschudi. Translated by Ethel Harie Hearn. New York: E. P. Dutton & Co., 1908. $2.50.

An English translation of Clara Tschudi's *Ludwig the Second* is another evidence that the mysterious ways of the bookmaker are entirely beyond the ken of the most patient and sympathetic reviewers. Neither his relations with the great musician Wagner nor his infantile part in the Franco-German War ought to have saved this neurotic and silly Bavarian King from a deserved oblivion—at least outside of Germany. It will be admitted that the author had done the best she could with a morbid, extravagant, incompetent dawdler, who from his tempestuous childhood to his sad death at his own hand never did a right royal or heroic deed worthy of perpetual record. The book will no doubt have its value for those who delight in the scandals of royal houses or in the mad enterprises of a mad king, who found comfort in imagining that he was the Grand Monarch Louis XIV, or in dashing around on stormy nights alone in his gilded coach. The sole interest of the book for normal persons will be in the chapters dealing with Ludwig's service to Wagner, who found in the music-loving King the patron and protector in a time of sore need. There is no doubt that Ludwig did give the musician the means which afforded him leisure and opportunity for some of his best work, and for this we are all grateful—so grateful indeed that we would willingly forget all the rest of the history of the unhappy sovereign. The students of insanity and consanguineous marriages will find useful pathological materials, but surely the publishers are not addressing the book to such an audience alone.

The Cry of the Children. By Mrs. John Van Vorst. New York: Moffat, Yard & Co. $1.25.

The title made famous sixty years ago by Mrs. Browning is still the fit name for a tract upon child labor. Mrs. Van Vorst's book is an account of her visits to the cotton mill communities of the South and of Maine and New Hampshire. She has sought rather to arouse concern for these enslaved children of the cotton industry than to discuss economic causes and effects and methods of cure, and pictures vividly the deformed minds and bodies of the thousands of little children she saw in her journeys from factory to factory. No one who reads these incidents will forget that we are making miserable lives today and running a bill against the future, to be surely paid in a people physically and mentally degenerate. Mrs. Van Vorst shows with sympathy what is not often so clearly brought forth, the curious charm of the mountain whites, their innate courtesy and refinement of feeling, never wholly destroyed even amid the squalor, the ignorance and the shiftlessness of the life in the mill town. Senator Beveridge, in his introduction, makes his plea for a National Child Labor Law, such as he fathered at the last session of Congress. His argument of an analogy between the closing of interstate commerce to the products of child labor and the forbidding of the use of the mails to lotteries is not quite convincing to those who still hold to the old-fashioned theory of the delegation of some matters to the separate States. Indeed, the tendency of the book, so far as it has constructive aim, is toward a compulsory school law and a longer school term for the South, and closer inspection and more faithful enforcement of existing laws for the North.

When it is considered that these aged children and these wretched homes are but a friction of the cotton workers, and that there are little breaker boys still in the mining regions, and sweatshop babies in every city, one is inclined, however, to welcome any plan for fighting the horror, whether it seem feasible in itself or not, certain that agitation spreads knowledge, and knowledge cannot but hasten to its end one of the gravest wrongs that ever stained this country.

The Under Groove. By Arthur Stringer. New York: The McClure Co. $1.50.

The narrator of the adventures in *The Under Groove*, by Arthur Stringer, is a composite cracksman, possessor of a convenient double personality caused by a crack on the head when he was discharging his duty as a train-dispatcher. The combination of criminal and expert electrician is a good one for his business, but a very bad one for various banks and brokers. Incidentally, the story is lively reading, of a somewhat higher order than many of the "Rafflesiana" we have endured since that gentleman-burglar set the fashion for novels of excitement.

Fynes Moryson's Itinerary. New York: The Macmillan Co., 4 vols., $3.25 each.

Fynes Moryson was an English gentleman of some property, who spent ten years at the close of the sixteenth century in journeyings about the then civilized portion of the globe. The work was published in London in 1617, and in 1903 Mr. Charles Hughes edited extracts from it under the title of "Shakespeare's England." It is now reprinted in full for the first time, unchanged save in the shapes of some letters and the correction of obvious printers' errors. Mr. Moryson was driven to his wanderings, he says, by "a kind of virtuous envy of any who had seene more Cities, Kingdoms, and Provinces, or more Courts of Princes, Kings and Emperours then myselfe." He was an indefatigable sightseer, never wearied of new places, and never troubled by the difficult traveling of those days. Only in Palestine, where the methods of transportation seem much the same today, did his imperturbable attitude toward the discomforts of travel desert him. The wanderings included Germany, the Low Countries, Switzerland, Denmark, Poland, Austria, Italy, France, Turkey and Palestine, and the British Isles, and the account is a mine of detailed information concerning these lands. Moryson took his world as he found it, troubling himself not at all about the governments under which he past, or the civilizations he met, or the state of learning or religion in which he found a people. To him foreigners were foreigners, all alike objects of kindly curiosity. To much of the work the title Itinerary is strictly applicable, telling in bare outline what was done, day after day, what routes taken, what time needed for travel from point to point, and the cost of living in the different lands. Into this the traveler enters in detail, and he provides a careful table of comparative values of coin, for the convenience of those who should follow in his footsteps. When he is in this prosaic mood the general reader is well content to leave him to the delver into original sources, but Moryson has happy moods in which he has saved curious customs and quaint bits of beliefs to delight us three centuries later. Here, for instance, at Fribourg silver mines, the same divining rod was in good and regular standing as a discoverer of silver that it is today in New England as a discoverer of water. The dreams which come to him and his brother alike, announcing at different times the deaths of their father and of their mother should be handed over to the Society for Psychical Research. Adventures such as we like to fancy were to be met at every turn in the Europe of the sixteenth century Moryson mentions few. He was robbed on his way to Paris, to be sure, but he makes more of his servant's fear that he would not be paid, and of the indignity which he in consequence suffered, in being led to a second-rate inn, than of the danger thru which he had past. An account of the Rebellion in Ireland, of which he was eyewitness, being secretary to the successful Lord Deputy, Montjoy, takes one volume, and gives the wild history from the English point of view. The chapters of advice to travelers throw light on many matters belonging to the daily life

of the times, and the salads of Italy, the beer and the housewifery of Germany, the oat cakes of Scotland, here prove by his experience to be of no recent origin. The volumes, tho large, are light and pleasant to hold, the print and paper particularly satisfactory. They are illustrated by Moryson's diagrams of cities and old prints of the battles in Ireland, and there is a full index, in which, however, it is a little curious to find no mention of Wales.

Literary Notes

....Anything relating to housing in New York is of interest because of the crowding of the population, and so the Third Report of the Tenement House Department of the City of New York, for the year ending December 31st, 1906, which has just been issued, will be welcomed because of the progress it marks in improved tenement conditions—altho it must be realized that a great work in this direction must still be done.

....Montrose J. Moses, who writes about the author of the modern morality play, "The Servant in the House," in this issue, has prepared a new and revised edition of his *Everyman*, the fifteenth century morality play in which Mr. and Mrs. Kennedy appeared for the first time in this country. Among the additions to this volume is a letter from Mr. Kennedy giving his interpretation of the symbolism of the play. (New York: Mitchell Kennerley. $1.00).

....Dr. Maurice H. Harris, of New York, has personally published as a text-book a *History of the Medieval Jews. From the Moslem Conquest of Spain to the Discovery of America.* It deals with a golden age of the Jews, when their literature had a splendid development in Spain until they were forced out by cruel persecution at the end of the fifteenth century. The period includes the time of the mystic Nachmanides, the philosopher Maimonides (the author of "The Guide of the Perplexed"), and the poets Jehuda Halevi and Ibn Gabirol. Translations of some of the works of these poets are given.

....The speeches which a candidate has made to all sorts of audiences thru a public career of many years give far more reliable information as to his ideas and aims than a platform constructed for the occasion by the politicians of his party. The volume entitled *Present Day Problems,* published by Dodd, Mead & Co. ($1.50), ought therefore to have a wide reading this summer, for it has the most important addresses of William H. Taft. Two deal with the Philippines, two with China and Japan, two with the judiciary, two with the administration and the others with the panic, the army, the Panama Canal, labor, etc.

....Our current literature seems to be keeping closely in touch with the current stage. Not only do we note a tendency on the part of publishers to novelize every big success of the theater, such as "The Chorus Lady" and "Paid in Full," but an additional move seems to be to forestall a drama by the issuance of the novel from which the play is taken. Simultaneously with the announcement by Charles Frohman that one of his early fall productions will be Cecily Hamilton's *Diana of Dobson's,* comes the book itself (Century, $1.50), and the question that strikes us is whether or not a previous knowledge of the rebellious shopgirl's adventures will take from the freshness of the comedy which follows so closely on its heels. The stage, as a source of our fiction writers, has always had its attractions, and Charles Belmont Davis, like his brother Richard Harding Davis, in his *The Stage Door* (Scribner, $1.50) tries to catch the atmosphere of theatrical life as it occurs on and off "the boards." But we think that perhaps the best way, and certainly the most profitable way, of gaining that atmosphere is thru the reading of stage biography. There one obtains the quaint flavor of the greenroom, besides becoming familiar with personality. And with such a personality as Richard Mansfield—this actor's art was distinctly individual—Mr. Paul Wilstach, who for years was personal representative and literary adviser of Mr. Mansfield, should be able to present an interesting series of articles, the first of which will appear in the September *Scribner's.* After all, the stage is so colored with the romance of fiction—by reason of its very inherent glamor—that it matters little to the average reader whether the book be a series of tales or an actual life—the effect is the same—theatrical infatuation.

Pebbles

SUMMER BOARDER—You wrote me that mosquitoes were nowhere in this neighborhood.

Farmer—I reck'n there's some mistake, pardner. I must o' writ that mosquitoes were now here in the neighborhood.—*Judge.*

"SHOULD a man go to college after fifty?"

"Well, he might pass muster at tennis," answered the expert. "But a man can't expect to do much in baseball or football at that age."—*Louisville Courier-Journal.*

MR. ASQUITH was recently speaking in a Welsh town when he was somewhat rudely interrupted by a voice in the audience, which demanded to know his position as to woman suffrage. "That," Mr. Asquith replied blandly, "is a subject I prefer to discuss when ladies are not present."

"HELLO!"

"Hello!"

"Is that you, Henry?"

"Yes."

"Will it be possible, do you think, for you to come home a little earlier than usual this afternoon? I wish to"——

"Say, is Mrs. Highmore calling on you?"

"Yes. How do you know?"

"You're using your company dialect and articulation on me."—*Chicago Tribune.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Standard Oil Fine

In the United States District Court, at Chicago, the Standard Oil Company of Indiana was found guilty of accepting unlawful concessions in railroad freight rates and was required by Judge Landis to pay a fine of $29,240,000, or $20,000 on each of 1,462 counts of the indictment. An appeal was taken, and now the three judges of the Circuit Court of Appeals have reversed the lower court's judgment and remanded the case for a new trial under conditions that are favorable to the defendant, in that they will make it more difficult to secure conviction and surely will prevent the imposition of so large a fine.

It is of the highest importance that defendants in our courts, whether rich or poor, should be tried fairly, and that both procedure and judgment should be in accordance with law. Believing that the guilt of the defendant in this case had been lawfully and clearly proved, and having some knowledge of the company's similar offenses in a long series of years, a large majority of the American people, we think, regarded the great fine as one justly imposed. The appellate court now says that it was excessive, and that certain evidence for the defendant was improperly excluded.

It is held by the appellate court that Judge Landis erred (1) in excluding certain testimony, part of it being that of one Bogardus, the company's traffic manager, to the effect that he did not know that the rate paid by the company was much lower than the lawful published rate, and also in charging the jury that a shipper could lawfully be convicted even if he did not know what the lawful published rate was; (2) in deciding that the number of offenses was the number of carloads of oil shipped, and (3) in abusing the discretion vested in the court by imposing a fine designed to punish a corporation that was not on trial. We have not at hand the text of Judge Landis's charge. It may be that he erred in instructing the jury that knowledge on the part of the shipper's agent was not essential, but the average man will say that in all probability the corporation knew whether it was paying the lawful rate or not, and that there might have been an understanding between the corporation and the railroad company, as to which the subordinate employees were not informed.

It appears that the appellate court is not free from error on this point. It asserts that Judge Landis excluded the testimony of Bogardus. But the record shows that it was admitted by him, almost exactly in the words of the appellate court's summary of it, over the objection of the Government's counsel. This affects the higher court's position with respect to one of the grounds of its decision.

It is asserted by Judge Grosscup and his associates that in the case of a rate concession the offense is not completed until there is a money settlement with the carriers, and that therefore each separate offense must include all the carloads and shipments covered by one settlement. There were only thirty-six settlements for the 1,462 carloads named in the indictment, and under this rule the permissible fine would have ranged from $36,000 to $720,000. Judge Landis is severely criticised because he did not "ascertain the number of offenses in accordance with these principles." He held,

with the grand jury, that the shipment of each carload was a separate and distinct violation of the law.

This was regarded by many as extreme severity in the application of the statute. But the law imposes a penalty for "each offense." What constitutes a separate offense in the practice of a corporation whose shipments are so great and so continuous? There is need of a final decision on this point by the Supreme Court. Under this intermediate appellate court's ruling, a shipping corporation and a railroad company could agree to have settlements only once a year, or even less frequently, and thus reduce the penalty to a few thousand dollars. If Judge Landis's method of ascertaining the number of offenses is too severe for a convicted defendant, the appellate court's is also objectionable because it is too lenient.

In sharply rebuking the trial judge for abusing the discretion vested in the court, Judge Grosscup and his associates say his reason for imposing so large a fine was that it was shown, after conviction, that the defendant company (the Standard Oil Company of Indiana) was owned by the Standard Oil Company of New Jersey, which is the central or parent corporation of the Standard's oil interests, as everybody knows. This New Jersey corporation, they assert, was not before the court, was not on trial. They add that Judge Landis said, while imposing sentence, that with respect to such violations of law "the New Jersey corporation was not a 'virgin' offender." So far as their criticism is based on this remark, it should be withdrawn, for the record shows that Judge Landis spoke in this way not of the New Jersey corporation but of "the defendant." He did say, however, while imposing the fine, that the Indiana company was merely the nominal defendant, and that the real one was the parent corporation in New Jersey. Was not that true?

He ascertained by inquiry in court that for the three years during which the offenses named in the indictment were committed, the parent company's net earnings had been $199,800,000, and that the payment of $117,603,000 in dividends had left a surplus of $82,000,000. The Indiana company was practically a local agent of the controlling and owning central corporation. The fine was about one-seventh of the net earnings, or a little more than one-third of the three years' surplus. Probably it is true, as a strictly legal proposition, that Judge Landis should not have permitted the fine to be measured by any consideration of the parent company's huge profits, but the appellate court's rebuke appears to be based upon an assumption that each of the two corporations is independent. As everybody knows that one was and is practically an agent of the other, this was very weak foundation for the appellate court's attack upon Judge Landis, altho reference to the technical separation of the two corporations might fairly have been made in a calm criticism of the fine.

It may be that the original judgment in this case ought to have been annulled, because of Judge Landis's errors, but the appellate court's decision leaves something to be desired, both in reasoning and in tone. We do not see why any one should accuse the trial judge of vindictive zeal for the prosecution, or the appellate judges of a desire to protect "malefactors of great wealth." But the trial was not a model exhibition of calm judicial procedure, and some of its heat has been transmitted to the appellate tribunal.

Mr. Roosevelt's comments, also, are marked by much warmth, together with an erroneous view of the meaning and effect of the decision on appeal. This decision really does "touch the merits of the case," beyond "the size of the fine." The effect of the admission of the testimony which was excluded cannot be foreseen. We have referred merely to the testimony of Bogardus; there is other evidence covered by the appellate court's opinion. As the conviction has been annulled, the President's assertion that "there is absolutely no question of the guilt of the defendants" might better have been withheld. In what he says about a possible miscarriage of justice and an escape from "the punishment which would have unquestionably been meted out to any weaker defendant guilty of such an offense" there are indications of anger, accompanied by what many will call a suggestion that the appellate judges are not strictly just. They may have erred,

but it does not appear that they deserve to be censured for bias. The President must have spoken without due consideration of the meaning that might be given to his words.

The questions involved in the appellate court's decision should be laid before the Supreme Court. This decision ought not to be final. Unfortunately, the Government has not the right to appeal in such a case, altho the Department of Justice has repeatedly urged Congress to grant this right by statute.

The Artist and His Public

THE middleman between the producer and the consumer, like the peacemaker who interposes in a quarrel, gets knocks from both sides. An editor is such a middleman engaged in bringing together the author and the readers, and he has abundant evidence that he is not giving entire satisfaction to either party to the transaction. The authors find fault with him because he will not print whatever they may want to write, and the subscribers because he will not print whatever they may want to read.

Now the public is, for the most part, a dumb and patient creature, tho obstinate and unruly. It does not talk back much, but manifests its displeasure by a silent stubbornness, using very effectively the tactics of "passive resistance." But the authors and their fellow artists are a voluble set. They talk so loudly and eloquently and frequently about how they are abused that they have come to beleve that the right is altogether on their side of the controversy, and have even convinced a large part of the public that it is wrong in its treatment of the artists, altho, of course, that conviction makes no difference with its conduct. We have found on our occasional visits to the coast of Bohemia and short trips into the interior that the inhabitants of that country have few subjects of conversation except the oppression imposed upon them by the public thru its nefarious agents, the editors, publishers, picture dealers, theater managers, etc. We are inclined, therefore, to say a few words on the other side from that which has been so ably argued by those most concerned, and to call attention to the fact that the public also has its rights in this matter of the disposal of esthetic products.

For it takes two to make a bargain, and the sale of pictures, statues, poems, novels, dramas, music, etc., is a bargain. Art becomes a commodity whenever it seeks a purchaser, and is then, whether we like it or not, subject to the general laws governing commercial transactions. The rights of both parties are equal. The public has a right to refuse to buy, read, hear or look at what it does not like, no matter how bad its taste. The artist has the right to create what works of art he will, however bad his taste.

"And only the Master shall praise us, and only the Master shall blame;
And no one shall work for money, and no one shall work for fame;
But each for the joy of working, and each, in his separate star,
Shall draw the Thing as he sees It for the God of Things as They Are!"

This, the artist's heaven, he may to a large extent realize now upon earth. If he cannot get paid for his art he can earn a living at something else and still have time enough for his own esthetic expression. Does not art thrive best in a garret and on a diet of dry bread? And have we not heard that the true artist, so far from selling the offspring of his genius, shrinks even from exposing them to the vulgar gaze of the public?

The artist in any craft can do what he pleases in his own studio. It is only when he descends to the market place that he is liable to get jostled by the crowd or taken up by the police. The playwright does not have to go on his knees to the syndicate for permission to write closet dramas that are true to name. The eyes of the Third Assistant Postmaster-General cannot penetrate to the desk drawer where the author keeps the precious manuscript for which the world is not yet worthy. The minions of Mammon have so far not crushed under their iron heels the unpublished novels and poems.

Now, while we admire the artist who works according to his own pleasure and for his own delight alone, and have often wished that more of them lived up to that ideal, we believe that the artist gains when he makes a bargain with the people, even tho he may not get quite his terms. The true amateur spirit is an admirable

thing, but, after all, the best work comes from the professional. This is not because he has greater natural ability than the amateur, or better training, or more time; it is chiefly because he is working for the public instead of for himself. The great artist takes the world into partnership with him. He is a great man because he includes so many other men. His words are heard around the world because he speaks with the voice of a multitude. They have thrown their burdens upon his shoulders and it has made him taller. His responsibilities have given him strength. He knows that he is no longer altogether his own master, but he has learned that it is not well for him that he should be. He feels that he is set upon a hill in the midst of a great throng of men and women, all looking up to him with admiring and trustful eyes, and that beyond them, farther than he can see, there are still other thousands, who have chosen him as their leader, as the interpreter of their deepest emotions, and the guide to their highest aspirations. He rejoices that he has been able to lead this multitude to the delectable land by the secret way that he alone had found, and he prays that he may never betray the trust which he has earned, by leading them falsely or blindly where even the least of them may be lost in the wilderness. He knows he needs them all as much as they need him.

When an artist complains—which is much of the time—that he is not free to work as he likes, it really means that people will not pay him what he thinks they ought to for doing what they do not want him to do. It is a technical trope, just as when a man says that he cannot find work. There is never a shortage of work. Each of us has more work that he wants done than ten of us can do. Money, not work, is what is hard to find. Art is long; it is the artist that is short. If an artist were freed from the obligation of serving others and deferring to their tastes, he would in most cases spend his time in devising fantastic modes of expression for his own morbid idiosyncrasies.

The word "public" is one of those general terms that tend to ambiguity of thought. We can give a clearer idea of the relation we have been discussing if we substitute for the public one of its component parts, an individual:

The Artist stops a Stranger on the street.

ARTIST—"I am going to paint a picture."

STRANGER—"What for?"

ARTIST—"For the pure joy of working."

STRANGER—"I wish you joy of it. How nice it is to be able to paint a picture for yourself!"

ARTIST—"I am not going to paint it for myself. I paint it for you."

STRANGER—"Well, now, that is kind of you, to do so much for a stranger for nothing!"

ARTIST—"Not for nothing. You must cook for me while I paint."

STRANGER—"Now, that's a horse of another color. Still, I don't know but it's a fair offer, seeing that I can't paint pictures for myself, but can cook for another man. I'll try it. I call myself a pretty good cook, but if I don't get the seasoning to suit you, all you have to do is to say so. Between meals I will give you pointers as to how I want my picture fixed up."

ARTIST—"No. The artist can only work in perfect freedom. You are to have nothing at all to say about the picture. I shall paint what I like and as I like. You do not understand Art."

STRANGER—"Oh, I don't pretend to. But I know what I like."

ARTIST—"No, you do not know what you like. I alone know that. I am going to paint the picture to suit myself and you've got to take it and pay for it and pretend to admire it."

By this time the Stranger, realizing that the Artist is crazy, tries to get away quietly, but the Artist chases him down the road, shouting "Philistine!" "Robber!" "Bourgeois!" and "Bromidiot!" and accuses him to the gathering crowd of assault on the highway with intent to commercialize.

Young Turkey

THE Powers have been busy for many months past in planning the foreign and domestic policy of the Turkish Empire. Austria wanted to run a railroad thru the country from west to east; Russia said if so she must be allowed to go across from north to south; Germany wanted to build to Bagdad. Great alarm was felt lest some one of the Powers should object to these startling proposals, but to everybody's surprise nobody did, except the Sultan, but he was not consulted. Then Great Britain called attention to the fact—which has been filling the newspapers for the last ten years—that Macedonia was in disorder, and proposed a plan for the virtual administration of this unruly district by the Powers, in the interests, of course, of the Sultan and his subjects. Another flutter in the chancelleries, the proposition pre-

posterous, but again all come to a speedy agreement, and are ready to urge it upon the Sultan with the necessary insistence, when now these fine plans have to be pigeonholed on account of the appearance of a new factor in the problem which the Powers, for all their care, had failed to take into consideration—that is, the people themselves. The Sultan decided that if he had to share his sovereignty he preferred a Parliament to the Powers, so he has granted a constitution and called for the election of a national assembly.

Abdul Hamid knew what to do in this emergency because he had been there before. He himself had been put on the throne by a Young Turkey party after the reigns of his uncle and brother had come to tragic ends within three months. Most of his empire was in revolt, and the Powers were arranging for its partition to their mutual satisfaction.

The new Parliament did not do anything except to find fault with the administration and, having served his purpose, that of giving a vocal outlet to the discontent of his subjects and of ameliorating the action of the Powers, it vanished and was heard of no more till now. It only held two sessions, the first opening March 19th and the second December 13th, 1877. On the latter occasion, immediately after the fall of Plevna had left Constantinople defenseless before the Russians, the Sultan delivered a speech from the throne filled with such excellent sentiments as the following:

"The salvation of the empire depends entirely upon the complete and sincere carrying out of the constitution. Our greatest wish has been to see all classes of our subjects enjoy the benefits of complete equality and our country profit by the progress of modern civilization. . . . It is by means of complete liberty of discussion that one can arrive at the truth in legislative and political questions and thus protect the public interest. The constitution renders this a duty on your part."

The Sultan could do no better than use the same speech when he assembles his new parliament. The constitution, too, could hardly be improved upon today. It is as good as new, having never been used.

Nobody expects much of Abdul Hamid. He is now sixty-six years old and has spent nearly half his life fooling the people and the Powers. Whether a constitutional government can exist in Turkey depends, not upon him, but upon the men of younger generation who have long been striving to get a share in the government of their country. They have been deprived of all opportunity for political training and nobody knows whether they have the ability and sobriety essential for their exceedingly difficult task. They have been tolerably successful at assassination for many years. It appears, from the events of the past week, that they have carried a mutiny to a triumphant conclusion. But this does not imply the possession of the capacity for self-government as the present condition of Russia and Persia show. The young Turks have at last their chance, and if they can give the country a decent administration and keep these turbulent races from cutting each other's throats they will do more than absolutism or benevolent intervention has been able to accomplish.

Constitutional Despotisms

TURKEY falls into line behind Persia and Russia in establishing a nominally constitutional form of government. These three great powers together exercise political dominion over that vast area of Western Asia and Eastern Europe in which civilization possibly had its origins, and at any rate achieved its first great triumphs over barbarism, but which has never yet attained to civilization of the highest type. The government of this area has from the earliest times been imperial and despotic, and for a long time to come it will continue to be such, notwithstanding the pretense of parliamentary institutions.

No people can enjoy the reality of constitutional government until it acquires political habits and discipline. It must have law and liberty in its blood and must think in terms of legal ideas. To acquire these habits and ideas, something more than an enthusiasm for them is necessary. They grow more slowly than a forest of oaks, and no one generation can witness both their germination and their maturity.

The experience that now awaits the Turkish liberal will certainly be not very different from that which the liberals of

Persia and of Russia are passing thru. Imperial promises will be as lightly broken as they have been made, and such parliamentary discussion as is permitted will lie wholly within those limits which the Sultan considers safe. We shall read of reorganizations, following upon dissolutions and specially ordered elections; of the banishment or execution of liberal leaders, whose zeal deludes them until they imagine that the era of true constitutionalism has dawned, and that they can urge reforms with impunity. There will be conflicts between the parliament and the Sultan, from which the Sultan will emerge with one eye squinting and his thumb on his nose. It will be the story of the Duma and the Megliss over again.

What, then, is the use of a merely nominal constitution in a half barbaric land? Can it more than bring constitutionalism into contempt, and so strengthen the contention of those essentially bourbon minds — who are numerous enough in our western nations, including the United States—that popular government is still a questionable success at the best and in the most enlightened lands, and for the vast majority of mankind unsuitable?

We do not share this pessimistic view. The reader of history does not have to go back so very far, even in the annals of the English-speaking folk, not to mention the Continental European nations, to discover that parliamentary institutions as we know and work them were not created in a day. It does not demand an extraordinary development of the historical imagination to see that the England of William the Conqueror did not differ greatly from the Russia of today, or that matters in the rude age of Stephen were not greatly superior to the Persian politics of A. D. 1908. In the age of the Stuarts learning and wit were flourishing in England more than they are today in Constantinople or in Asia Minor, but the case of the political liberal was probably not much better under Charles I than it is under Abdul Hamid II.

It is probably a substantial point gained when even a merely nominal constitutionalism is conceded. The parliament may be made up entirely of men supposed to be conservative and safe; its discussions may for the most part be perfunctory, and its enactments may merely give formal expression to measures which the imperial power assents to. Nevertheless, it does an educative work. Some discussion, some publicity, some formality of procedure will prove in the long run to be better than none at all. Like the first blundering attempts of the child to walk alone and to talk, they seem to amount to little. But the day will come when the peoples that practice them will be politically stronger and clearer headed than they are now.

Some constitutions are better than others, but by comparison with unconditional despotism, there are no bad constitutions.

President Roosevelt and the Navy

THE President is not going to give up his fight for a big navy. Last week, in his address before the Naval War College, he again appealed to the country for more battleships, on the assumption that thus peace would be insured.

Nowadays no one dares to advocate a big navy for the aggression of war but only for the preservation of peace. For this we are thankful, and paradoxical as it seems it is the only argument that can appeal to a peace-loving people.

We suppose everybody agrees that we should have an "adequate" navy, but how many battleships are adequate is the question. It is absurd for the nations to determine to outbid each other in armaments. Such a policy would inevitably lead to the bankruptcy of all except the one that had the greatest resources. The nations will, we fancy, prefer to risk the improbability of war than to tax themselves into security and starvation.

So far as the United States is concerned we do not see what conceivable motives could induce any of the world Powers to engage in a war of aggression against us. The odds would be against them, even if we did not have a single warship. No one argues, on the other hand, that we should invade them. Moreover, all the world Powers are about as civilized as we are, and the two Hague Conferences have perfected methods that are already ample for civilized states to employ in settling their disputes. We do

not need a big navy in dealing with Powers calling themselves civilized, and a small navy is sufficient to take care of such minor nations as Turkey and Venezuela.

But the President says a big navy is the only guarantee of the Monroe Doctrine. Perhaps he forgets that the Second Hague Conference practically made this a canon of international law, and tho the nations conceivably might not obey the rules of international law, except at the cannon's mouth, yet as a matter of fact, history shows that they do. The moral law has been sufficient to make the nations live up to the award of every dispute between them settled by arbitration.

The President also fears we may need a big navy because friction may be caused by our increasingly exclusive immigration policy. It may, and doubtless will, produce friction, but that is a different thing from predicting that a nation would be foolish enough to go to war because of the exercise of our right to keep aliens from entering our ports.

The truth is the American people have borne more from Theodore Roosevelt in respect to his big navy hobby than they would from any other President. Our history, our geographical position, the virility of our people, the advances made in the substitution of law for war at the Hague Conferences and in the numerous special arbitration treaties, all make it absurd for us to embark on the great militaristic policy which is universally admitted to be the greatest curse of Europe. Let President Roosevelt initiate a movement that will make the United States the first of the World Powers to begin to disarm. That would be an achievement worthy of the recipient of the Nobel Peace Prize. He has already grasped the philosophy of the arbitration movement, as his letter accepting the honorary presidency of "The Peace and Arbitration League" attests. When he wrote: "We must do everything possible to secure agreements with all the governments to respect each other's territory and sovereignty and to arbitrate all other questions," he seized the leadership in the whole world-wide arbitration movement.

Let him follow out his professions and devote his time and prestige to the negotiation of treaties between the United States and other nations along these lines, and then we can begin to decrease our armaments and law will rule the world as it now does each nation.

The Four Religions of Japan

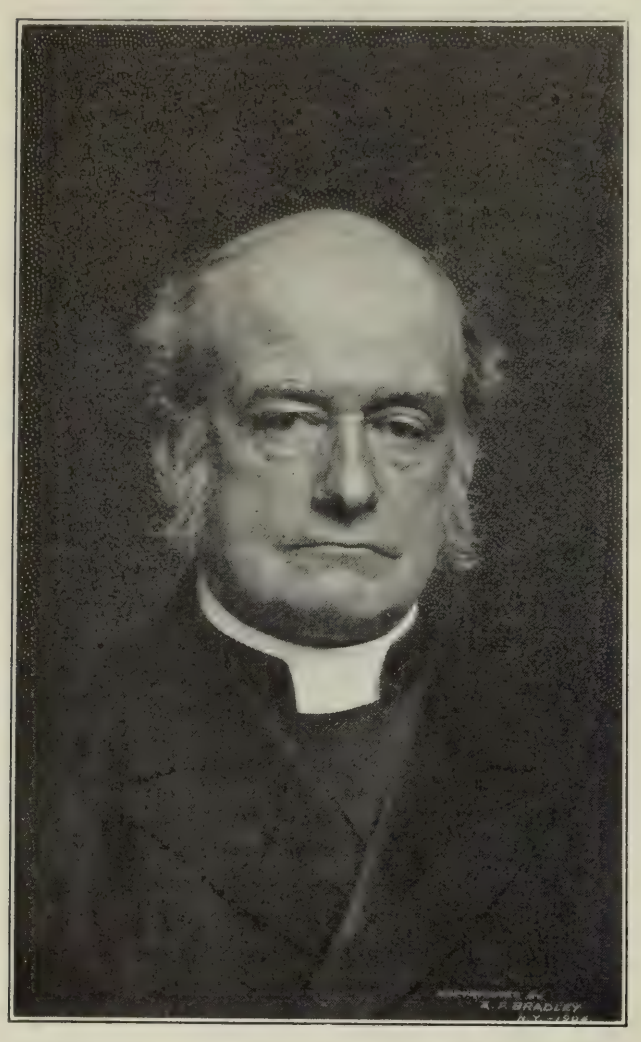
JAPAN now has a fourth religion, Christianity. Thirty-five years ago it had but three, if they may be called religions, Shintoism, Confucianism and Buddhism. We have a curious story in *The Japan Mail,* told by a Japanese scholar, Mr. Kume, of the discussion a generation ago among a company of the most intelligent Japanese statesmen, on the question whether at that time Japan had any religion at all.

In 1872 a commission led by Prince Iwakura was sent to Europe and America to study Occidental ways and learn what Japan could copy. In the company were such distinguished men as Ito, Okubo and Kido. Mr. Kume went in the capacity of a Chinese scholar and as one versed in the Japanese literature. The main object of the mission being to inquire into the nature of Western civilization and everything connected with it, the subjects to be investigated were divided up, and each subordinate member of the commission had his task allotted to him. To Mr. Kume and Mr. Tanaka was given the subject of religion. So on the voyage across the Pacific they approached a Catholic priest and asked what Catholics believe. He told them about the Ten Commandments and other things, and then wanted to know what the Japanese religion was. That was a poser. So the commission held a consultation. The story proceeds:

"The Japanese had a meeting in the smoking room at which we fully considered the attitude we ought to assume in America and Europe in respect to religion. Messrs. Fukuchi, Tanabe, Count Hayashi and many others were present. The first question that we thought it important to settle was what we should say when asked by Americans or Europeans what our religion was. Some proposed that, as Buddhism was well known in the West, we should say we were Buddhists, but to this others objected on the ground that none of us knew anything about Buddhism, and it would be a bit awkward if we were probed with questions bearing on Buddhist doctrines. Better tell the truth, observed one of the speakers, and say that tho religion is believed in in Western countries we Japanese have no re-

ligion. Others proposed that we should say that we believed in Confucianism, but this drew forth the remark that Confucianism is not considered by Occidentals to be a religion at all. It is regarded as a political educational organ. When Shinto was proposed, the objection was made that the world knows nothing of our native cult. It is poorly developed, is without sacred books and is not regarded as one of the great religions of the world. By a process of exclusion we reached the conclusion that there was nothing to be done but to say that we had no religion. But those of our party who had been in the West before and were well acquainted with the views of Europeans and Americans on the subject of religion affirmed that it would never answer for us to represent ourselves as religionless, as we should thereby raise great suspicion in the minds of Christians. They believe that all people are naturally bad and that they can be made good by religion alone. Heathens are, they think, no more to be trusted than tigers and foxes. So to say we have no religion would be to confess our inferiority as human beings. We could not make up our minds what course to take. As things subsequently turned out, we found that we need not have troubled ourselves over the affair. We got thru America without being questioned as to our religious faith."

Mr. Kume says that nothing is more remarkable than the manner in which the attitude of the Japanese mind toward religion has changed. Today the study of religion is regarded with favor as part of a thoro education. The majority of the Japanese have derived their religious sentiments and opinions from three sources, Confucianism, Buddhism and Shintoism. Since the opening of Japan, Christianity has been regularly taught, so that, says, Mr. Kume, "there are today four religions in the country." Two of them, Shintoism and Confucianism, he describes as essentially "present life" religions, while the other two are "future life" religions.



Just as Shintoism and Confucianism gathered many accretions from Buddhism, so we may add that Christianity is greaty affecting the teachings of the three earlier religions of Japan. The same we see in the development of Brahminism and Mohammedanism. As Christianity has a simpler and purer doctrine of God, so these religions, in their reformed sects and in their general teachings, take as far as they can a more spiritual phase and drop their coarser elements. But we see the same thing true in the history of Christianity itself. And Christianity does a great part of its service outside of its own followers.

The distinction which Mr. Kume makes between "present life" and "future life" religions is an important one, and it calls to mind that Judaism has in its past development had to rise out of a simply "present life" religion into a "future life" one. It is hard work to keep a religion morally effective which is concerned simply, in a Sadducean way, with this world.

Bishop Potter

Of not many ecclesiastics can so much good be truthfully reported as of the late Bishop Potter. He belonged to a family of bishops, his father being Bishop of Pennsylvania and his uncle of New York. For two years he was assistant rector of Trinity Church, Boston, and then for seventeen years rector of Grace Church in this city, until he was elected bishop, as associate with his uncle, in 1888, and soon after his successor. He was one of those most useful men who have strong democratic principles and aristocratic instincts. He associated with the rich, was admired by them for his social qualities and his executive ability, and he had the most desirable quality in a bishop to be able to persuade men of wealth to give largely for religious and benevolent objects. A principal illustration is to be seen in his work for the Cathedral, which will cost perhaps fifty million dollars, and which he made possible and then certain. But he was the friend of the poor, was willing to live one hot summer in a settlement in a poor district that he might himself see how the people live. He took a very active part in efforts for the betterment of the people in the congested districts, and was a leader in the work of compelling the police to protect those exposed to temptation. He had the courage of his opinions, and did not care whether he offended those who differed from him. One example was to be seen in his taking part in the effort, which failed, to establish more decent saloons under the title of the Subway Tavern. Another was his inviting a negro bishop to his table at the meeting of the Episcopal Convention in Richmond, an act which greatly offended many. He did not fear to castigate the idle rich, while he praised the simplicity of early times; but yet he was the friend of the busy and

forceful men of wealth. Under his direction the diocese of New York has grown in strength and in good works, and is an example to all the other denominations, which it much surpasses in influence. He belonged to the Broad school of Churchmanship, which greatly prevails in his diocese, and which is represented also by his much loved associate bishop and successor, Dr. Greer.

HENRY CODMAN POTTER.
Bishop of New York. Born May 25, 1834. Died July 21, 1908.

The Olympic Games

Americans have good reason to be proud of their representatives at the Olympic Games in England. They have competed with marked success against the athletes of the world, and have made a favorable impression by their clean sportsmanship. The ovation given by the Americans to a winning South African, who had barely snatched a victory from a runner from the United States, particularly appealed to the English. There seems to have been some ill-feeling among the American managers against the alleged unfairness of the English referees, but the competitors themselves have not complained openly. It is to their credit that they preserved dignified silence, and even if aggrieved, took the decisions uncomplainingly. They are in a sense representatives of this country, and the impression they make abroad is fully as important as the contests themselves. The advantage that local competitors obtain is so marked, that it would seem advisable to hold the Olympic Games in neutral territory, where the athletes of the greater nations would meet on the same footing. The judges should form a committee international in character. Greece seems the logical country for the games, where the historic Marathon run would be over the original course. It is hoped by all interested in the continuance and success of the games that Athens will be chosen as the permanent place for the contests.

Marrying Cousins

Seventeen of our States prohibit the marriage of first cousins, yet the grounds for such legislation have always been in doubt. Biologists have searched in vain for any proof that the marriage of kin, even of the closest possible relationship, is necessarily injurious to their offspring. It remains, therefore, a mystery why most, tho not all, primitive tribes should have developed such a strong antipathy to incest, altho they have widely different ideas of what incest is. They could hardly have discovered for themselves any deterioration of posterity resulting from the practice, since such an effect, if present, is not discernible by science. Nor can we call as an explanation the usual phrase "the universal and instinctive horror of incest," for it is certainly not universal and we have no reason to think that it is instinctive. What one ecclesiastical code forbids another encourages, and the civil legislation is equally inconsistent and arbitrary. For example, in England now a man may marry his deceased wife's sister, but a woman is not allowed to marry her deceased husband's brother. The most thoro study of the subject of consanguineous marriages in America has been made by Dr. George B. L. Arner, in a

monograph just published by Columbia University. He comes to the conclusion that first-cousin marriages in the United States average about one per cent. of the total number of marriages, altho in isolated mountain or island communities it is five per cent. or higher. If we add to this the marriages between second cousins and between one and a half cousins the total number of consanguineous marriages amounts to two or two and a half per cent. The number is decreasing because of the greater mobility of population. Dr. Arner's results are mostly negative. His careful canvass of genealogical reports and other available statistics does not substantiate any of the popular theories on the subject. "Consanguinity in the parents has no perceptible influence upon the number of children or upon their masculinity, and has little, if any, direct effect upon the physical or mental condition of the offspring." But since the inheritance is duplicated any family peculiarities, either good or bad, are liable to be intensified. This accounts for the many cases of epilepsy, idiocy, deafness and blindness reported from consanguineous marriages. It is against this specifically that legislation should be directed. There is no apparent reason why two healthy cousins, especially if not too much alike, should not marry, but there is abundant justification for prohibiting by law the marriage of any two persons who have a common inheritable defect or taint of blood.

Military Discipline

The dismissal of eight West Point cadets for indulging in some mild forms of hazing seems severe, but it must be remembered that the offense is especially heinous in the case of young officers, because it is an abuse of the exceptional power that the Government has placed in their hands. The plebes were probably not injured by bracing or fagging or herding a hundred nice fat ants in their caps. A hypodermic injection of formic acid is a powerful stimulant. But the upper classmen who imposed these indignities were injured because they had fallen early victims to the greatest temptation of their life profession, that of petty tyranny. There is less harm done when a sophomore in an ordinary college maltreats a freshman because he may never in after life be placed in a position where he can exercise authority over the personal habits of a subordinate, but the army officer must have a strong character to restrain him from exceeding the legitimate limits of his large authority. The frightful cruelties practised upon the recruits in the German army as revealed in the recent trials in court show what this tendency leads to when it is unchecked. So long as our caste system of military discipline prevails this abuse of it must be carefully guarded against. But this raises the question whether this system is necessary or desirable. It has not been found so outside the army, altho in many industrial enterprises obedience and order are just as necessary. Our railroad employees are in more danger of wounds and death than soldiers in war time, and failure to carry out an order instantly and implicitly often results in disaster almost as great as the loss of a battle. Yet the railroad men do their work as faithfully and meet death as bravely as the soldier boys with all their fuss and feathers. The section boss has no need for stripes on his arms or the yardmaster for epaulets and gold cord. Neither is it regarded as essential to efficiency and discipline that the train gang be drawn up once a day and compelled to go thru some fancy calisthenics and to salute the trademark of the railroad while band and the district superintendent go down the line. In spite of this the men are not lacking in loyalty to the road or in obedience to its officers, altho they may at times relieve their feelings by "cussing the Co" and talking back to the Boss.

Forest Destruction

One who travels thru the States on the Atlantic seaboard, as well as Michigan, hears the same story everywhere. The magnificent forests have simply been slaughtered. We go for days thru a horrid stretch of ruin and decay. Vast sections of Georgia and the Carolinas are absolutely stripped of yellow pine. The stumps only remain, with strewn brush. In a few cases oaks are trying to take the place of the noble monarchs that have been destroyed. Pennsylvania can show us some of the most blasted sections of the whole country. The superb chestnut

forests of Connecticut have been obliterated, and rocky hills, bare of all vegetation, take their places. The editor of the Jackson *Patriot,* of Michigan, tells us that he went last summer, for two days, on the Au Sable River, right thru the heart of the white pine region, before he saw a single white pine. The great furniture-building interests of Grand Rapids are warned that their work is about done. It is of very little interest for us to create great irrigation plants for the Far West while we turn our own beautiful inheritance into a desert. Is there no way possible of waking up our legislatures to co-operative action for self-preservation? The Chicago *Record-Herald* states that in Illinois nearly one hundred and fifty millions is invested in industries approaching extinction. We heartily endorse Secretary Wilson's position, that the time has come when the Government, the State and the individual must co-operate, and that right vigorously, to save us from a disaster that would be irremediable.

Co-operative Stores

Co-operation in America has had no more successful illustration than in connection with our universities and colleges. Harvard reports sales at its co-operative store, known as the "Coop," for the past fiscal year to be $300,000. Any member of the university, or Radcliffe College, or the Theological School, is entitled to become a member of this society, securing a dividend on all purchases made at the society store. This dividend amounted to 8 per cent. during 1907; and during the twenty-five years that the society has been operating it has saved one hundred thousand dollars for the students—or made it, rather. The basement floor is devoted to furniture, the main floor to books and stationery, and the upper floor to men's furnishings and athletic goods. The whole establishment is strictly run in the name of and for the benefit of Harvard University. The Cornell society is thriving, as it always has done, while the Princeton and Yale co-operative stores, established to supply books, athletic goods and general merchandise at a discount, are reported as highly successful.

Mr. Bryan says he will confine his attention in the campaign to the issues presented in the Denver platform. The occasion of this declaration was the report brought to him that Bishop Walters, who is favoring Bryan's election, has alleged that Mr. Bryan has said that President Roosevelt's action in the Brownsville matter was unjust, and that he had discussed the appointment of negroes to offices. He declared these statements to be untrue, and refused to talk on the subject. It is a great trouble to the negro adherents of Mr. Bryan that the Republican platform has a very satisfactory plank on negro rights under the Amendments, while the Democratic platform studiously avoids the subject; and so does Mr. Bryan.

We stand with the outspoken Mrs. Kern, who says plainly that she is against the Sunday saloon and the army canteen; but her prudent husband says she is strong on moral questions, but is not running for Vice-President; and on these subjects he is non-committal. Certainly, just as Mr. Bryan and his platform are non-committal on the rights of the negro to suffrage.

The little Central American Peace Court, the most advanced international tribunal in the world, has auspiciously begun its career by enjoining Salvador and Guatemala from fighting Honduras. This is government by injunction with a vengeance, and we suspect the United States and Mexico will act as marshal for the court, as they ought to in case of necessity.

How many children in your neighborhood have to spend the hot days in the scorching and quivering city? Surely you can help some of them find the green country.

America rejoices at the progress of other nations. The growth of Young Turkey is an occasion for Thanksgiving in all parts of our country.

If Mr. Taft defeats Mr. Bryan on Election Day it will be a case of the survival of the fattest.

Insurance

Workmen and the Cost of Accidents

THERE has been a most alarming increase of accidents during recent years. According to statistics compiled by the *Chicago Tribune* the number of persons killed because of automobile accidents alone during 1907 was 327, as compared with 200 in 1906. During the year 1907 1,224 persons were injured, as against 851 during the preceding year. The cost of accidents to workmen thus becomes a vital matter. In this connection the statistics printed in *The Saturday Evening Post* take on more than passing interest. The journal in question states that workmen's compensation laws, embodying the principle that the laborer should be indemnified for injuries received in the course of his employment, have been enacted in twenty-two foreign countries. Continuing, the *Post* says:

"In every case these laws fix the compensation to be paid, which, except in Sweden, is based upon the wages of the injured person. Compensation consists of medical and surgical treatment, periodical payments for temporary disability, and pensions, or lump-sum payments, for total disability or death. Nearly all the laws are framed particularly to avoid legal proceedings, so that the injured man gets his indemnity much as one ordinarily collects an insurance claim.

"Even Russian law provides that, in case of death, funeral expenses shall be paid and dependent heirs shall receive a pension not exceeding two-thirds the annual wages of deceased. In case of total disability, the same pension is paid. For temporary disability compensation consists of one-half the victim's wages, paid from the day of the accident until full recovery. A disputed case may be carried into court, but is not chargeable with court costs, and attorney's fees are fixt by law.

"Nowhere are the compensations nearly so large as those often awarded by American juries; but American juries know that, at best, the victim gets only a moiety of the award. With essential justice, they assess not only the injury but all costs and delays upon the employer. Employers complain of excessive verdicts and "contingent-fee" lawyers. They can avoid both evils by agreeing to an honest scheme for compensating injured workmen."

THE *Chicago Tribune*, which always publishes the statistics of important things, finds that the annual Fourth of July holocaust this year resulted in the loss of half a million dollars' worth of property by fire and the following casualties:

DEAD.	
By fireworks and resulting fires	37
By cannon	3
By firearms	16
By gunpowder	6
By toy pistols	2
By runaways	5
Heart failure, due to explosions	2
Total	71
INJURED.	
By fireworks	1,109
By cannon	212
By firearms	396
By gunpowder	551
By torpedoes	60
By toy pistols	211
By bomb canes	50
By runaways	35
Total	2,624

These figures of the *Tribune*, added to those of *The Journal of the American Medical Association* for the five previous years, give totals of 1,224 dead and 24,144 injured.

CHICAGO follows New York's lead (not for the first time), and has just launched two fireboats, each of which is capable of pumping 45,000 gallons a minute thru its turbine pumps.

IF all the people who died by accident last year had been insured for only $1,000, the companies would have paid out over $50,000,000.

SIX per cent. of the deaths in the United States result from accidents. Have you a policy?

FINANCIAL

Decline of Immigration

It is well known that immigration was greatly affected by the panic and the ensuing depression, but the official figures have not been accessible. These are now at hand. High water mark was reached in May and June of last year, when 339,610 immigrants arrived. The decline first became noticeable in December (66,574), but January saw only 27,220 admitted, and the total for the first six months of 1908 has been only 192,656, against 743,952 in the corresponding months of 1907. In the following table the movement for the last three and one-half years is shown:

	1908.	1907.	1906.	1905.
January	27,220	54,417	51,127	56,236
February	23,381	65,541	68,346	67,105
March	32,517	139,118	133,245	127,908
April	41,274	145,256	150,397	137,050
May	36,317	184,886	150,927	127,511
June	31,947	154,734	119,900	112,366
July	....	97,132	84,403	76,194
August	....	98,825	81,592	63,409
September ..	....	98,694	95,341	78,941
October	....	111,513	99,974	86,758
November ...	....	117,476	94,721	61,374
December	....	66,574	85,466	61,116
Total	192,656	1,334,166	1,215,439	1,055,968

These figures do not tell the whole story, for since the beginning of the year the number of aliens departing has largely exceeded the number of immigrants arriving. Accurate reports for the classification of those departing cannot be obtained, but in the statements which cover all departures there is evidence that since January 1st the gain in new immigrants has not made good the loss of old ones.

Walker in Prison

William F. Walker, who robbed a savings bank in New Britain, Conn., of $540,000, and also stole $56,000 belonging to the Connecticut Baptist Association, is now in the penitentiary. There, in all probability, he will pass the remainder of his days, for he is sixty-two years old, and it is said that allowance for good behavior will not reduce his term to less than sixteen years. Shortly after his arrival from Mexico, on the 24th, he pleaded guilty to one of the indictments against him, and was sentenced without delay. He disappeared in February, 1907. A few months later he was in Nevada. In December last he was found and arrested at a mining camp near Ensenada, Mexico. Altho it is said that he then had less than two dollars, he was able so effectively to resist extradition that more than six months elapsed before he could lawfully be brought to Connecticut. To New Britain, where he had been a prominent and respected citizen, he returned a broken and shabby old man.

This was a remarkable case of embezzlement. Walker, as treasurer of the savings bank, controlled the institution's funds. He lived simply and practiced such economy that he could not be persuaded by his family to keep a horse. Everybody trusted him. The Baptist Association was glad to make him its treasurer. And while he seemed to be a model of integrity he was, for years, stealing the bank's securities, losing large sums in speculation, and then losing more to rascals of a low type who made him believe that by aiding them in cheating the unlawful poolrooms he could gain even more than he had lost in stocks. It is said that these "wire-tappers" took $200,000 of the money stolen from the bank and the Baptists. It is not easy to understand how a man of his age, training, habits, surroundings and position could have been so led astray. To restrain others in similar positions of trust, his capture and punishment were much to be desired. The officers of the bank deserve credit for the energy they have shown in pursuing him and bringing him to justice.

....M. Neymarck, of France, has made detailed estimates of the world's negotiable securities. His total is $111,077,000,000, which includes $75,000,000,000 for twelve European countries, $34,514,000,000 for the United States, and $1,563,000,000 for Japan. As the population of these countries is about 565,500,000, the average for each person is about $196.

....In 1907 the Pennsylvania Railroad Company, with 4.98 per cent. of the country's railway mileage, showed 12 per cent. of the gross earnings, 10½ per cent. of the net earnings, and 13½ per cent. of the dividends paid.

The Independent

VOL. LXV NEW YORK, THURSDAY, AUGUST 6, 1908 No. 3114

Survey of the World

Mr. Taft's Speech of Acceptance

Formal notice of his nomination was given to Mr. Taft on the 28th ult. at the home of his brother, in Cincinnati. His speech of acceptance would fill nearly twenty of our pages. "The strength of the Republican cause," said he, "is in the fact that we represent the policies essential to the reform of known abuses, and that we are determined to maintain and carry them on":

"For more than ten years this country passed through an epoch of material development far beyond any that ever occurred in the world before. In its course, certain evils crept in. Some prominent and influential members of the community, spurred by financial success and in their hurry for greater wealth, became unmindful of the common rules of business honesty and fidelity and of the limitations imposed by law upon their action. This became known. The revelations of the breaches of trust, the disclosures as to rebates and discriminations by railways, the accumulating evidence of the violation of the anti-trust law by a number of corporations, the overissue of stocks and bonds on interstate railways for the unlawful enriching of directors and for the purpose of concentrating control of railways in one management, all quickened the conscience of the people, and brought on a moral awakening among them that boded well for the future of the country.

"The man who formulated the expression of the popular conscience and who led the movement for practical reform was Theodore Roosevelt. He laid down the doctrine that the rich violator of the law should be as amenable to restraint and punishment as the offender without wealth and without influence, and he proceeded by recommending legislation and directing executive action to make that principle good in actual performance."

Mr. Roosevelt's action in support of the new laws concerning railroad rates, pure food and meat inspection was then pointed out by Mr. Taft, together with his suits to enforce the Anti-Trust law. The beneficial moral and legal effect of the new statutes was explained. By what he had said, by what he had recommended and by what he had done, Mr. Roosevelt had shown the sincerity of his efforts to secure equality of all before the law and "to save the country from the dangers of a plutocratic government, toward which we were fast tending." But the moral standards set by him would not continue to be observed "by those whom cupidity and a desire for financial power may tempt, unless the requisite machinery for maintaining them is introduced into the law":

"The chief function of the next Administration, in my judgment, is distinct from and a progressive development of that which has been performed by President Roosevelt. The chief function of the next Administration is to complete and perfect the machinery by which these standards may be maintained, by which the lawbreakers may be promptly restrained and punished, but which shall operate with sufficient accuracy and dispatch to interfere with legitimate business as little as possible."

Such machinery, he continued, was not now adequate. The Interstate Commerce Commission should be relieved of its jurisdiction as an executive directing body. There should be "a classification of that very small percentage of industrial corporations having power and opportunity to effect illegal restraints of trade and monopolies, and legislation either inducing or compelling them to subject themselves to registry and to proper publicity regulations and supervision of the Department of Commerce and Labor." New legislation should make possible quick enforcement of the principles laid down by Mr. Roosevelt, in the great variety of cases which are constantly arising, and with respect to which only typical instances of prosecution are possible with the present machinery.

Taking up the question of a physical valuation of railways, Mr. Taft considered it at much length, saying that such a valuation was an important, but not necessarily a controlling, factor in ascertaining the fairness of rates; for the value of a road as a going concern, including its good will, due to efficiency of service and many other circumstances, might be much greater than the value of its tangible property, "and it is the former that measures the investment on which a fair profit should be allowed." Various elements were mentioned which, if ignored in a consideration of rates, might so seriously impair settled values as to "destroy all hopes of restoring confidence and forever end the inducement for investment in new railroad construction." Good railroad business was essential to general prosperity. Injustice to railroads would affect not only stockholders and capitalists, but also the wages of employees. The consensus of opinion was that rates generally in this country were reasonably low. Few complaints of excessive rates were filed with the Commission:

"The valuation by the Commission of the tangible is proper and may from time to time be necessary in settling certain issues which may come before them, and no evil or injustice can come from valuation in such cases, if it be understood that the result is to be used for a just purpose, and the right to a fair profit under all the circumstances of the investment is recognized. The Interstate Commerce Commission has now the power to ascertain the value of the physical railroad property, if necessary, in determining the reasonableness of rates. If the machinery for doing so is not adequate, as is probable, it should be made so."

Such a valuation would be an important factor in assisting Federal authority to supervise future issues of stocks and bonds. If all corporations engaged in interstate trade were required to take out Federal licenses or charters, "the burden upon the interstate business of the country would become intolerable":

"It is necessary, therefore, to devise some means for classifying and insuring Federal supervision of such corporations as have the power and temptation to effect restraints of interstate trade and monopolies. Such corporations constitute a very small percentage of all engaged in interstate business."

The Democratic suggestion that a corporation be forbidden to control more than 50 per cent. of an industry's product had been made, he said, without regard to the possibility of enforcement or to the real evil of Trusts. It would be utterly impracticable, also, to compel corporations to sell at the same prices thruout the country:

"If it can be shown that in order to drive out competition a corporation owning a large part of the plant producing an article is selling in one part of the country where it has competitors at a low and unprofitable price, and in another part of the country where it has none at an exorbitant price, this is evidence that it is attempting an unlawful monopoly, and justifies conviction under the anti-Trust law; but the proposal to supervise the business of corporations in such a way as to fix the price of commodities and compel the sale at such price is as absurd and Socialistic a plank as was ever inserted in a Democratic political platform.

"The chief difference between the Republican and the Democratic platforms is the difference which has heretofore been seen between the policies of Mr. Roosevelt and those which have been advocated by the Democratic candidate, Mr. Bryan. Mr. Roosevelt's policies have been progressive and regulative; Mr. Bryan's destructive. Mr. Roosevelt has favored regulation of the business in which evils have grown up so as to stamp out the evils and permit the business to continue. The tendency of Mr. Bryan's proposals has generally been destructive of the business with respect to which he is demanding reform."

Mr. Taft defended manufacturing combinations that were legitimate and properly controlled, showing in what ways combinations might become injurious and unlawful monopolies:

"Unlawful Trusts should be restrained with all the efficiency of injunctive process, and the persons engaged in maintaining them should be punished with all the severity of criminal prosecution, in order that the methods pursued in the operation of their business shall be brought within the law. To destroy them and to eliminate the wealth they represent from the producing capital of the country would entail enormous loss, and would throw out of employment myriads of workingmen and workingwomen. Such a result is wholly unnecessary to the accomplishment of the needed reform, and will inflict upon the innocent far greater punishment than upon the guilty."

Tariff and Labor Questions

To remove the tariff on imports coming into competition with Trust-made goods, as proposed by the Democrats, said Mr. Taft, would destroy not only the Trusts, but also all of their smaller competitors. This would not restore prosperity. He pointed to the

Republican platform doctrine that a tariff duty should be large enough to equal the difference in costs of production, together with a reasonable profit to the American producer:

"In 1897 the Dingley Tariff bill was passed, under which we have had, as already said, a period of enormous prosperity. The consequent material development has greatly changed the conditions under which many articles described by the schedules of the tariff are now produced. The tariff in a number of the schedules exceeds the difference between the cost of production of such articles abroad and at home, including a reasonable profit to the American producer. The excess over that difference serves no useful purpose, but offers a temptation to those who would monopolize the production and the sale of such articles in this country to profit by the excessive rate.

"On the other hand, there are some few other schedules in which the tariff is not sufficiently high to give the measure of protection which they should receive upon Republican principles, and as to those the tariff should be raised."

As the Democratic party proposed to make a revenue tariff, their success in the election would prevent recovery from depression and cause business disaster "compared with which our recent panic would seem small indeed." Labor questions are the subject of more than 2,000 words of the speech. Employees, Mr. Taft says, may well unite, because in union there is strength, and without it each individual laborer would be helpless in controversies with employers having great capital. The rights of laborers not organized into unions are exactly the same before the law as those of union men, "and are to be protected with the same care and watchfulness." Workmen have a right to strike in a body:

"They have a right to use such persuasion as they may, provided it does not reach the point of duress, to lead their reluctant colaborers to join them in their union against their employer, and they have a right, if they choose, to accumulate funds to support those engaged in a strike, to delegate to officers the power to direct the action of the union, and to withdraw themselves and their associates from dealings with or giving custom to those with whom they are in controversy.

"What they have not the right to do is to injure their employer's property, to injure their employer's business by use of threats or methods of physical duress against those who would work for him, or deal with him, or by carrying on what is sometimes known as a secondary boycott against his customers or those with whom he deals in business. All those who sympathize with them may unite to aid them in their struggle, but they may not thru the instrumentality of a threatened or actual boycott compel third persons against their will and having no interest in their controversy to come to their assistance. These principles have for a great many years been settled by the courts of this country. Threatened unlawful injuries to business, like those described above, can only be adequately remedied by an injunction to prevent them. The jurisdiction of a court of equity to enjoin in such cases arises from the character of the injury and the method of inflicting it and the fact that suit for damages offers no adequate remedy."

Only in rare cases should an injunction be issued without notice, and then to prevent irreparable injury. Generally, in industrial disputes, he said, there was no need of such action. In accordance with the Republican platform, a statute might be framed defining the exceptional cases in which issue without notice may be made. Speaking of the Democratic demand for jury trials in cases of indirect contempt, he said that the same demand in the platform of 1896 was regarded as a most dangerous attack upon the power of the courts to enforce their orders and decrees, and that "it was one of the chief reasons for the defeat of the Democratic party in that contest, as it ought to have been." Such a change would greatly impair the indispensable power and authority of the courts. The chief beneficiaries of it would be, not the poor working man, but wealthy and unscrupulous defendants, able to employ astute and cunning counsel:

"The administration of justice lies at the foundation of government. The maintenance of the authority of the courts is essential unless we are prepared to embrace anarchy. Never in the history of the country has there been such an insidious attack upon the judicial system as the proposal to interject a jury trial between all orders of the court made after full hearing and the enforcement of such orders."

Other Topics Discussed

Commending the proposed establishment of postal savings banks, he attacked the Democratic demand for a Federal guarantee of bank deposits, saying that "the proposition is to tax the honest and prudent banker to make up for the dishonesty and imprudence of others," and that, "if adopted exactly as the Democratic platform suggests, it would bring the whole banking system of the country down in ruin." The experiment of a National

Assembly in the Philippines had justified itself. The policy of increasing partial self-government should be continued there, altho it was unlikely that the people, owing to the dense ignorance of 90 per cent. of them, would be ready for complete self-government and independence before two generations had past. The "stable government" mentioned in the Democratic platform had already been established, and therefore the Democratic proposition was that the islands be turned over to the people at once. This would lead to ultimate chaos. There should be free trade with the States, subject to limitations of quantity affecting sugar and tobacco. For five or six years past the annual cost of holding the islands had been not more than $6,000,000. In a brief passage concerning the negroes he commended their progress and said he stood with his party in demanding justice for men of all races and the enforcement of the Thirteenth, Fourteenth and Fifteenth Amendments in letter and spirit. We should insist upon a constant improvement in our navy and its maintenance at the highest point of efficiency. As for Asiatic immigration, the present Administration had been able by diplomatic negotiation to minimize the evils suggested by the Democratic platform. Pointing to his party's voluntary submission of its campaign fund to the New York law, he promised, if elected, to urge the enactment of a law requiring publicity for contributions. He believed that whenever an income tax should be needed it could be obtained without amending the Constitution. · He was inclined to favor the election of Senators by the people, but said this was hardly a party question. Concerning the Democratic denunciation of the increase of expenditures and of the number of offices, he asserted that this increase was due mainly to legislation which the Democratic party approved and supported. He regretted that the mail subsidy bill had not been past. In closing he reviewed the Administration's record with respect to Panama and all foreign affairs. A mere statement of things done at home and abroad, he asserted, showed a marvel of successful accomplishment by reason of which the party richly deserved a renewed mandate of power from the people.

Nominations of the Independence Party

The Independence party, whose leader has been William R. Hearst, at its national convention last week in Chicago, nominated Thomas L. Hisgen, of Massachusetts, for President, and John Temple Graves, of New York (formerly of Georgia), for Vice-President. The addresses of Mr. Hearst (temporary chairman) and others were of such a character as to preclude fusion with any other party. J. I. Sheppard, a delegate from Kansas, attempted to nominate Mr. Bryan and was harshly treated by the convention. His action was repudiated by his associates from Kansas and he was expelled from the party. The platform stands for direct nominations, the initiative and referendum and the right of the people to recall public officers from the public service. It demands severe legislation against corrupt practices at elections, and would have the use of money in campaigns prohibited except for meetings, literature and the traveling expenses of candidates. Calling for economy, it denounces the "gross extravagance of Federal administration." It advocates the enactment of laws to prevent watering of stock, and remarks that the labor planks of the Republican and Democratic platforms are "political buncombe and contemptible claptrap unworthy of national parties claiming to be serious and sincere." "We assert," it continues, "that in all actions growing out of a dispute between employers and employees concerning terms or conditions of employment, no injunction should issue until after a trial upon the merits, that such trial should be held before a jury, and that in no case of alleged contempt should any person be deprived of liberty without a jury trial." It calls for the eight-hour day, laws against any conspiracy to blacklist employees, stringent laws fixing employers' liabilities, a rigid prohibition of child labor, a central government bank, tariff revision involving a gradual reduction of duties, a withdrawal of protection abused by Trusts, a physical valuation of railroads, an interstate commerce court, imprisonment for violation of the anti-Trust law, government ownership of telegraphs, postal savings banks, a rapid extension of the parcels post system, a national system of

good roads, prohibition of fictitious sales of farm products for future delivery, an exclusion law protecting American workmen against Asiatic cheap labor, a strong navy, a graduated income tax, and the popular election of Senators and of judges, both State and Federal.

Dismissed Cadets Reinstated

Eight West Point cadets were found guilty, on the 23d ult., by a board of officers, of hazing. Their dismissal was recommended by this board and by Colonel Scott, superintendent of the Military Academy, who ordered them to go to their homes and there to await the action of the Secretary of War. The law says that "any cadet found guilty of participating in or encouraging or countenancing" hazing "shall be summarily expelled." Secretary Wright was temporarily absent from Washington, and the papers in the case were forwarded to the President. It was announced by Secretary Loeb on the 25th that the recommendations of the board and of the superintendent had been approved by the President and that the cadets could be reinstated only by act of Congress. On the 1st inst. the President's action was reconsidered. The cadets were reinstated and sent back to West Point, "subject to discipline there for violation of the regulations." It appears that the change was due to the arguments of Secretary Wright. He had not issued the order of dismissal, and at a conference with the President he insisted that such punishment would be too severe. After further examination of the case, the President agreed with him. The cadets had appealed to the Secretary, and he had been imprest by their manly attitude. In a published letter, Superintendent Scott had commended a newspaper's editorial article urging that his recommendation should be enforced and that no leniency should be shown to the cadets.

The Celebration at Quebec

With the departure of the Prince of Wales, on the 29th, the celebration of the 300th anniversary of the founding of the city of Quebec by Samuel de Champlain really ended, altho the pageants were seen for the last time two days later. The celebration began on the 23d and was opened by the Prince. On following days there were reviews of troops on the historic battlefield of the Plains of Abraham, processions of historic characters in costume, exhibitions of fireworks, banquets, balls and other festivities. In the harbor were ten battleships (a majority of them British), and these were brilliantly illuminated at night. The United States was represented by the "New Hampshire," and among England's ships was the great "Indomitable," which had brought the Prince of Wales. In sharp contrast was a reproduction of the little 80-ton vessel from which Champlain had landed. The official guests who received the most attention were the Prince, Field-Marshal Lord Roberts and Vice-President Fairbanks. The latter's public address of congratulation has been highly commended on both sides of the Atlantic. At the grand review of troops, the title deeds to the old battlefield were presented to the Dominion. A national park for the use of the people of Canada was thus created. The pageants were among the most interesting features of the celebration. These represented many historic characters and events. One was a reproduction of the chief figures of the court of Henri IV. The bronze statue of Champlain was the center of many ceremonies. On the 26th great wreaths of flowers were placed upon it by L'Association Catholique de la Jeunesse Canadienne Française, whose members sang patriotic songs and listened to addresses.

The British Parliament

Parliament adjourned on August 1st until October 10th. The number of acts past during the past season are 159, of which the most important are the bill establishing two universities in Ireland and that providing for pensions to laborers over seventy years old. The House of Lords emphasized its protest against the Old Age Pension bill by adding several amendments, the most important of which was that proposed by Lord Cromer, to limit the operation of the bill to seven years, providing that those who have obtained pensions during that period shall continue to receive them for life. When the amended bill was returned to the House of Commons, the amendments, with the exception of a few

of minor importance, were rejected, as it was held by the Speaker that such interference with financial measures was a violation of the privileges of the House of Commons. A resolution was passed in the House of Lords protesting against this action, and refusing to regard the rejection as a precedent, but the amendments were not insisted upon.——The Seventeenth Universal Peace Conference met in London, July 27th, with delegates from over one hundred societies in sixteen different countries. A deputation of twenty-four delegates was received by the King and Queen at Buckingham Palace. At a Government banquet given to the delegates, Prime Minister Asquith said he could not hope that the youngest person now alive would witness the advent of the day of universal disarmament. He was not impressed by the contention that the completeness of the mechanism of destruction and the vastness of the scale on which war now was organized would prevent statesmen and diplomatists from light-heartedly indulging in war. The expenditure of civilized nations for armaments was now roughly $2,500,000,000. The nations did not buy these things for ornaments. They were intended for use, and some day they would be let loose upon the world. The alliances, defensive or offensive, sometimes hindered peace rather than helped it. The most important progressive steps were the formation of international agreements and the promotion of a better understanding between the countries.

French Labor Troubles

As a result of a manifestation by the Federation of Labor of its sympathy with the strikers of Vigneux, near Paris, a fatal conflict with the authorities was precipitated. Several thousand strikers from Paris entered Vigneux Thursday morning waving red flags and singing Socialist songs. A squadron of cavalry passing thru the streets was stoned and fired upon, but no one was injured. In the afternoon the cavalry dispersed a crowd which was gathered upon the railroad tracks, slightly wounding several of them. The strikers then took possession of a building in the course of construction, put up barricades and defended themselves against the troops with stones and revolvers. The soldiers at first fired in the air and then at the mob. Three men were killed and sixty injured. The mob then returned to Paris by train, carrying their wounded with them. The General Federation of Labor placarded the walls of Paris with a manifesto, ordering a general strike of all the affiliated trades as a protest against the action of the Government

> "preparing an ambush and turning loose the soldiery, who, by charging and sabring, had stung the manifestants into replying, thus giving the troops an excuse to massacre. The authorities do not dare to announce the real number of workers assassinated at Vigneux. This crime cannot pass unnoticed, and the only reply possible is a twenty-four hour strike."

Premier Clemenceau is determined to maintain order and will take stringent measures against the revolutionary manifestations of the Federation of Labor. The police have arrested a number of the leaders, and precautions have been taken against rioting in Paris.——For the purpose of checking the injurious strife between the employers and the laborers, the Government has secured a law providing for advisory Councils of Labor, whose duties are "to be the organs of the material and moral interests concerned; to furnish, either on their own initiative or on the demand of the Government, advice on all questions which concern these interests; and to facilitate any investigations ordered by the Government." They may be established by a decree of the Council of State in any industry or group of industries where they may be needed. The councils are composed of an equal number of employers and employees elected by the two parties, and they may meet separately or in general session; in the latter case the council is to be presided over alternately by the president of each section.——The contractors in the building trades, which have suffered most severely from labor conflicts, have attempted to solve the question for themselves, by the organization of a Union for the Protection of Labor in the Building Trades. This provides for insurance against sickness and interruption of work, for the support of widows and orphans, and for retiring pensions. Workingmen are admitted as

associate members, with representation on the governing committee. Such associated workingmen have the first right to any employment offered by members of the Union, and are themselves obligated to give preference to the employers with whom they are associated.

The New Régime in Turkey

So far the revolution in Turkey appears to have gone with marvelous smoothness and ease. Except for the preliminary assassinations of army officers there has been no bloodshed, and Macedonia is quieter than it has been in many years. As soon as the constitution was proclaimed at Monastir, the Greek bands which had been preying upon the country round about came into the town and returned to Greece by way of Salonika. The Bulgarian bands fraternized with their late enemies, the Turks and the Greeks, and departed for their homes. The Young Turks are, therefore, able to say to the Powers that there is no reason for their proposed intervention for the restoration of order in Macedonia. Altho the reform party has doubtless little confidence in Abdul Hamid, there is a general disposition to give him a fair chance to carry out his new intentions, but the first manifestation of insincerity will be the signal for an imperative demand for his abdication. In Adrianople, however, where the Young Turks dismissed the Vali and military commandant, they seem to have a stronger prejudice against the Sultan than in Constantinople and Macedonia. At an open-air mass meeting held in Adrianople cheers for the Sultan were supprest, and placards bearing the words "Long live the Sultan" were torn from the walls. In Constantinople the enthusiasm of the people for their sovereign was so great that a proclamation was issued requesting them to moderate their demonstrations. On Friday, when the Sultan went, according to his custom, to the Selamlik at the mosque near the Yildiz Kiosk, he was greeted by a crowd of a hundred thousand people, representing all classes, creeds and races. After his return to the palace the Sultan received the congratulations of the diplomatic corps. The Persian Ambassador presented a special address from the Persians resident in Constantinople. The Sultan is also reported to have made a speech to the people from a window of the Yildiz Kiosk, and to have walked thru the streets of the city incognito, with a single attendant, for the first time since his accession to the throne in 1876. On July 28th the Sultan took oath upon the Koran to maintain the constitution, in the presence of the Sheik-ul-Islam, the highest dignitary of the Mohammedan faith. The new parliament is called to meet November 1st. The Young Turks have already attacked the most difficult of their new political tasks, that of the reform of the finances, and have secured from the Grand Vizier a promise that salaries of high officials will be reduced and sinecures abolished. By order of the Sultan all political prisoners were released and exiles permitted to return. There are many thousand refugees from Turkey in the United States, chiefly Armenians and Syrians, who will have their disabilities removed by the proclamation of amnesty. In Constantinople the order resulted in the release of all the ordinary prisoners, in spite of the protest of the Young Turks, who feared that emptying of the jails would cause disorder and give an excuse for repression. The officials whom the reformers regarded as most responsible for the evils of the old régime have been dismissed from office, and in some cases fled from the country. Izzet Pasha, sub-secretary to the Sultan, was appointed president of the commission to inaugurate the new Hejaz railroad, and managed to escape the vigilance of the Young Turkey committee by taking refuge in the German Legation at Therapia, from which he was conveyed in a launch to a private tug and so put on board a British tramp steamer bound for Mediterranean ports. Selim Melhamed Pasha, Minister of Mines and Forests, got away in a launch obtained by a subterfuge from the Italian Ambassador, and fled to Brindisi. Zekki Pasha, Inspector of Military Schools and Grandmaster of Artillery, was dismissed on demand of a large body of artillery officers and men, who appeared before the Yildiz Kiosk and made their wishes known in an emphatic manner. The reformers have demanded the discharge of Tahsin Pasha, one of the advisers of the Sultan, and of Abdul Houda, his astrol-

oger. A public subscription is opened in the capital to procure swords of honor for Niazi Bey and Envers Bey, the leaders of the Macedonian revolt.

Foreign Notes

For the last four months the Spanish Cortes has been occupied by a hot contest between the Conservative or Administration party and the Liberal party over a measure for the promotion of local self-government. It has long been recognized that one of the things retarding the progress of Spain is its extreme centralization, for the municipalities and communes have been reduced practically to the Alcade and his secretary, acting as the agents of the Madrid Government. The Premier, Señor Maura, made several vain efforts to come to an agreement with the leader of the Liberal party, Señor Moret, to secure the passage of the law, and finally, by threatening to force the Cortes to give up its vacation and continue in session thruout the summer, he compelled the Opposition to abandon its obstructive tactics and permit the bill to take its course. The Cortes then adjourned for the summer, and the question will be taken up in the fall. The measure will lead to such a degree of independence on the part of the provinces as to practically change the kingdom of Spain into a federation.——The Republican leader in the Portuguese Chamber of Deputies, Alfonso Costa, has introduced a bill for the restoration of the law of 1751, by which the religious orders were expelled from Portugal. Senhor Costa has secured the passage of a bill for the arrest and impeachment of the members of Franco's Cabinet whose abuses of power led to the assassination of the King. As the investigation into the conduct of the Government continues, the revelation of financial corruption becomes more appalling and involves the leaders of both parties which have alternately controlled the Portuguese Government. Not only the late King Carlos, but most of the Government officials, generals and members of the nobility are proved to have helped themselves liberally from the funds from the national treasury, for sinecures, loans and advance salaries. The Portuguese Minister to Pekin had drawn his salary twenty years in advance. Senhor Costa was compelled to fight a duel on account of his charges against the former Minister, Count Penha-Garcia, in which the latter was slightly wounded in the arm by a sword thrust.——The struggle between the Nationalist party and the British authorities in India has reached a crisis thru the conviction of Bal Gangadhar Tilak, in the Bombay High Court, for sedition. Mr. Tilak is one of the leaders of the anti-British movement in India, and the publisher of a Mahratta newspaper, the *Kesari,* where his articles advocating, in discreet and ingenious language, the use of violence against the British Government, have appeared. He called attention to the weakness of the British military power in the following language:

"Compared with the imperial sway of the Moguls, the English Empire in India is extremely weak and wanting in vigor from the point of view of military strength. . . . Were the English Army in India to be confronted by difficulties similar to those which Aurangzeb's forces had to face, then the English rule would not last even for a quarter of a century."

Bomb-throwing he alluded to as the outcome of "a natural excess of patriotism," and he expatiated upon the ease with which bombs could be manufactured by the people. Mr. Tilak was sentenced to transportation for six years and the payment of a fine of $1,600. As a demonstration of sympathy for Tilak, 20,000 mill hands in Bombay went on strike. Rioting soon ensued, Europeans were jeered and stoned wherever they appeared on the streets, a magistrate's house attacked, and a mail train was held up. The military were called upon to disperse the mob, and a number of the rioters were killed by the volleys of the infantry.——Asiatic cholera has spread along the River Volga from Nijni-Novgorod to its mouth, and both coasts of the Caspian are infected. The Government is taking energetic measures to prevent the extension of the disease to St. Petersburg and Moscow. Isolation hospitals have been erected at twenty-five points along the Volga, floating hospitals established, and passengers on the railroads and rivers will be examined. Six steamers have been commissioned and furnished with physicians for inspection service on the river.

The General Education Board

BY WALLACE BUTTRICK, D.D.

[The largest amount of money ever given for educational purposes is that under the control of the General Education Board, and its policy will have an incalculable influence on the future of the intellectual life in America. Dr. Buttrick, the secretary of the Board, has favored THE INDEPENDENT with the first popular account of the establishment and aims of the organization.—EDITOR.]

THE General Education Board is an organization chartered by Congress, with offices at No. 2 Rector street, New York City. It employs a force of experts in the continuous and systematic study of educational conditions in all of the States of the Union, and the promotion of education, by means of gifts and otherwise, in the discretion of the board of trustees. The idea of such a board originated with Mr. John D. Rockefeller's Committee on Benevolence, and was under advisement in his office from time to time for several years before the organization was finally effected. The plan of such an organization was designed and adapted to assist Mr. Rockefeller in distributing his gifts to education; but it was not the purpose to confine the work of the organization to the administration of funds given by Mr. Rockefeller. It was designed to meet a wider need and to afford a medium thru which other men of means, who desire to promote education in its various forms in the United States, could do so in a systematic, intelligent and effective way.

The gentlemen forming the first board were the late William H. Baldwin, Jr., Wallace Buttrick, the late Hon. J. L. M. Curry, Frederick T. Gates, Daniel C. Gilman, Morris K. Jesup, Robert C. Ogden, Walter H. Page, George Foster Peabody, John D. Rockefeller, Jr., and Albert Shaw. They were already members either of the Peabody Board or the Slater Board or the Southern Education Board, or of other societies aiming to foster education in the United States, and were chosen for their knowledge of educational conditions and their experience in educational benefaction.

These gentlemen met at the invitation of Mr. John D. Rockefeller, Jr., at his home in New York, on February 27th, 1902, Mr. Edward M. Shepard being present also as counsel. A temporary organization was there formed pending the securing of a charter by Act of Congress.

A few days later Mr. John D. Rockefeller pledged the sum of $1,000,000 to the work of the board, confining its use particularly to the study of education in the Southern States and the promotion of the same—a contribution which he had long had in mind to make so soon as a suitable organization could be prepared for the proper administration of the fund.

A broad and generous charter, prepared by Mr. Edward M. Shepard, was past by Congress and signed by President Roosevelt on the 12th day of January, 1903.

The permanent organization of the board was completed at a meeting in the city of Washington on the 29th day of January, 1903, when formal bylaws were adopted. Mr. W. H. Baldwin, Jr., was chosen chairman, Mr. George Foster Peabody, treasurer, and Mr. Wallace Buttrick, secretary and executive officer.

Subsequently the membership of the board was enlarged by the addition of Mr. Hugh H. Hanna, of Indianapolis; Mr. Starr J. Murphy, of New York; the late President William R. Harper, of the University of Chicago; Chancellor E. Benjamin Andrews, of the University of Nebraska; President Edwin A. Alderman, of the University of Virginia; President Harry Pratt Judson, of the University of Chicago; Principal H. B. Frissell, of Hampton Institute; President Charles W. Eliot, of Harvard University, and Mr. Andrew Carnegie. The board has been depleted by the death of Mr. W. H. Baldwin, Jr., Hon. J. L. M. Curry, President W. R. Harper and Mr. Morris K. Jesup.

The board opened an office in New York City on April 1st, 1902, and for-

mally began its work. Its first attention was given to a careful survey and study of educational conditions and needs in the Southern States. Thru the courtesy of State officers conferences were held with State and county superintendents and leading educators in eight of the Southern States. Blanks were prepared and sent to incorporated schools of all grades and to county superintendents of schools. Agents of the board traveled extensively in all of the States of the South, conferring with school authorities and other citizens interested in education. Catalogs of colleges and schools, and other published material, were gathered, studied, filed and cataloged in the office of the board. Monograph studies of the several States were prepared for the use of the office and for the members of the board.

As one result of its studies the board decided that it could best aid in the promotion of elementary schools in the Southern States by seeking to increase the productive efficiency of rural life. The board was led to this conclusion by the following considerations:

(1) The elementary school cannot be given to a community, but must represent community ideals, community initiative and community achievement.

(2) The South is rural; 85 per cent. of the people of the Southern States live in the country and are engaged in agriculture. With the exception of certain favored localities, farming is not sufficiently profitable to support elementary schools of high grade and full term; schools are poor, homes are poor, farms are isolated and the community spirit does not prevail.

(3) There is a large body of agricultural knowledge which has not been put to practical use.

(4) The best way to improve elementary schools in the South, therefore, is to train present farmers in scientific farming so that thru the renovation and renewal of soils, the rotation of crops, the choice of selected seeds, and thoro cultivation, more money can be made by farming. In other words, it is first necessary that the farmer shall possess in a practical way the great body of agricultural knowledge that has been developed and published. But the average man is not trained to interpret and apply the knowledge contained in scientific documents. The place to write that knowledge is on the soil by the farmer himself, in such way as to increase his income. When so written it will be understood and appreciated.

Learning of the demonstration farms and fields established in Texas by the United States Department of Agriculture under Dr. S. A. Knapp, special agent of the department, the board sent its representative to look into this work. It was found that by demonstration fields and farms Dr. Knapp and his assistants had not only been able to overcome the ill-effects of the boll weevil, but had so taught scientific farming as greatly to increase the agricultural output of Texas, enhance the value of land, and to create a condition of hope and general prosperity among the farmers of the State.

In conferring with the Secretary of Agriculture it was learned that the department could co-operate with the General Education Board in promoting this work in other States of the South. The board therefore entered into such an agreement with the Department of Agriculture for the promotion of this work in Alabama and Mississippi, and the work has since been extended to Georgia, South Carolina, North Carolina, Virginia and Florida. At present there are eighty-nine supervising agents and about fifteen thousand demonstration farms. Testimonials to the value of the work have been received from many people, including directors of United States experimental farms, presidents of agricultural colleges, members of Congress, etc. It is the conviction of the board that the prosecution of this form of work thru a period of years will so increase the productive efficiency of rural life as to make it possible for rural communities to support an efficient system of elementary schools.

A further result of the studies of the board was the conviction that one of the special educational needs of the South is that of the efficient system of public high schools. In the past the "preparatory" schools of the South were among the best in the country. In the cities of the South excellent high schools have been established, and many graded

schools have added from one to three high school grades. But for its population the South has but a limited number of standard public high schools.

The board decided that it could best promote the founding of high schools by co-operation with State universities. It therefore made appropriations to several State universities for the salaries and traveling expenses of "Professors of Secondary Education" who are regular members of the university faculties and whose

"main and principal work shall be to ascertain where the conditions are favorable for the establishment of public high schools not now in existence; he shall visit such places and shall endeavor to organize in such places public high schools in accordance with the laws of the State, shall endeavor to create in such community a public sentiment that shall permanently sustain such high schools, and shall endeavor to place the high schools under such local leadership as shall give them intelligent and wise direction, and he and the university shall exercise a fostering care over such institutions."

Professors of secondary education, under the above plan of co-operation, have been appointed in the State universities of Virginia, North Carolina, South Carolina, Georgia, Alabama, Tennessee and Florida, and at the Department of Education in Louisiana. The monthly reports of these men are manifolded, bound together, and sent to the several professors of secondary education, the presidents of the universities, and to the members of the General Education Board. The work has now been thoroly defined and organized, and more than five hundred new high schools have been established.

On June 30th, 1905, the board received the following communication:

"I am authorized by Mr. John D. Rockefeller to say that he will contribute to the General Education Board the sum of ten million dollars ($10,000,000), to be paid October 1st next, in cash, or, at his option, in income producing securities, at their market value, the principal to be held in perpetuity as a foundation for education, the income above expenses of administration to be distributed to, or used for, the benefit of such institutions of learning, at such times, in such amounts, for such purposes and under such conditions, or employed in such other ways as the board may deem best adapted to promote a comprehensive system of higher education in the United States.

"Yours very truly,
"(Signed) F. T. GATES."

This large gift Mr. Rockefeller paid in cash, and the board, in accepting it, designated it as "The John D. Rockefeller Foundation for Higher Education."

The income of this large foundation for higher education enabled the board to extend its work thruout the whole country, as contemplated in its charter. Studies had already been made of the colleges in the Southern States, and such studies were at once made of the colleges in other parts of the United States. After such comprehensive study and the careful consideration of how best to aid in the development of an adequate system of colleges in all of the States of the Union, the board adopted the following principles as defining its general policy: *To co-operate sympathetically and helpfully with the religious denominations; to choose the centers of wealth and population as the permanent pivots of an educational system; to mass its funds on endowments, securing in this work the largest possible local co-operation.*

On February 7th, 1907, the following letter was received from Mr. Rockefeller:

General Education Board, 54 William Street, New York City:

GENTLEMEN—My father authorizes me to say that on or before April 1st, 1907, he will give to the General Education Board income bearing securities, the present market value of which is about thirty-two million dollars ($32,000,000), one-third to be added to the permanent endowment of the board; two-thirds to be applied to such specific objects within the corporate purposes of the board as either he or I may from time to time direct, any remainder not so designated at the death of the survivor to be added also to the permanent endowment of the board.

Very truly,
(Signed) JOHN D. ROCKEFELLER, JR.

Conditional appropriations have been made to forty colleges, in the States of Maine, Massachusetts, Connecticut, New York, New Jersey, Pennsylvania, Virginia, North Carolina, South Carolina, Georgia, Alabama, Mississippi, Louisiana, Tennessee, Kentucky, Ohio, Indiana, Michigan, Illinois, Wisconsin, Minnesota, Iowa, Missouri, Kansas and Colorado.

Twenty-five of these colleges have secured subscriptions for the supplemental sums required and but one has failed. The remaining fifteen colleges report satisfactory progress.

The total amount thus appropriated by the board is $2,437,500; the supplemental sums, when completed, will aggregate $10,397,000.

From the original $1,000,000 gift to the board by Mr. Rockefeller appropriations have been made to schools in the South amounting to about $700,000, one-half of which has gone to schools for the colored people. The high school propaganda and the agricultural demonstration work have also been supported from this fund.

From the foregoing it will be seen that, in the Northern States, the board devotes itself exclusively to the promotion of higher education, having always in view the desirability of aiding such institutions as, taken together, will constitute an adequate system of higher education for each of the several States, thus seeking to correct and prevent duplication and waste and securing the highest efficiency.

In the Southern States its work for colleges is similar to that done in the North, and, in addition, it seeks to promote public high schools thru the State universities and the State Department of Education, to promote elementary education (or common schools) by increasing the productive efficiency of rural life, and to aid in developing schools for the training of leaders among the colored people.

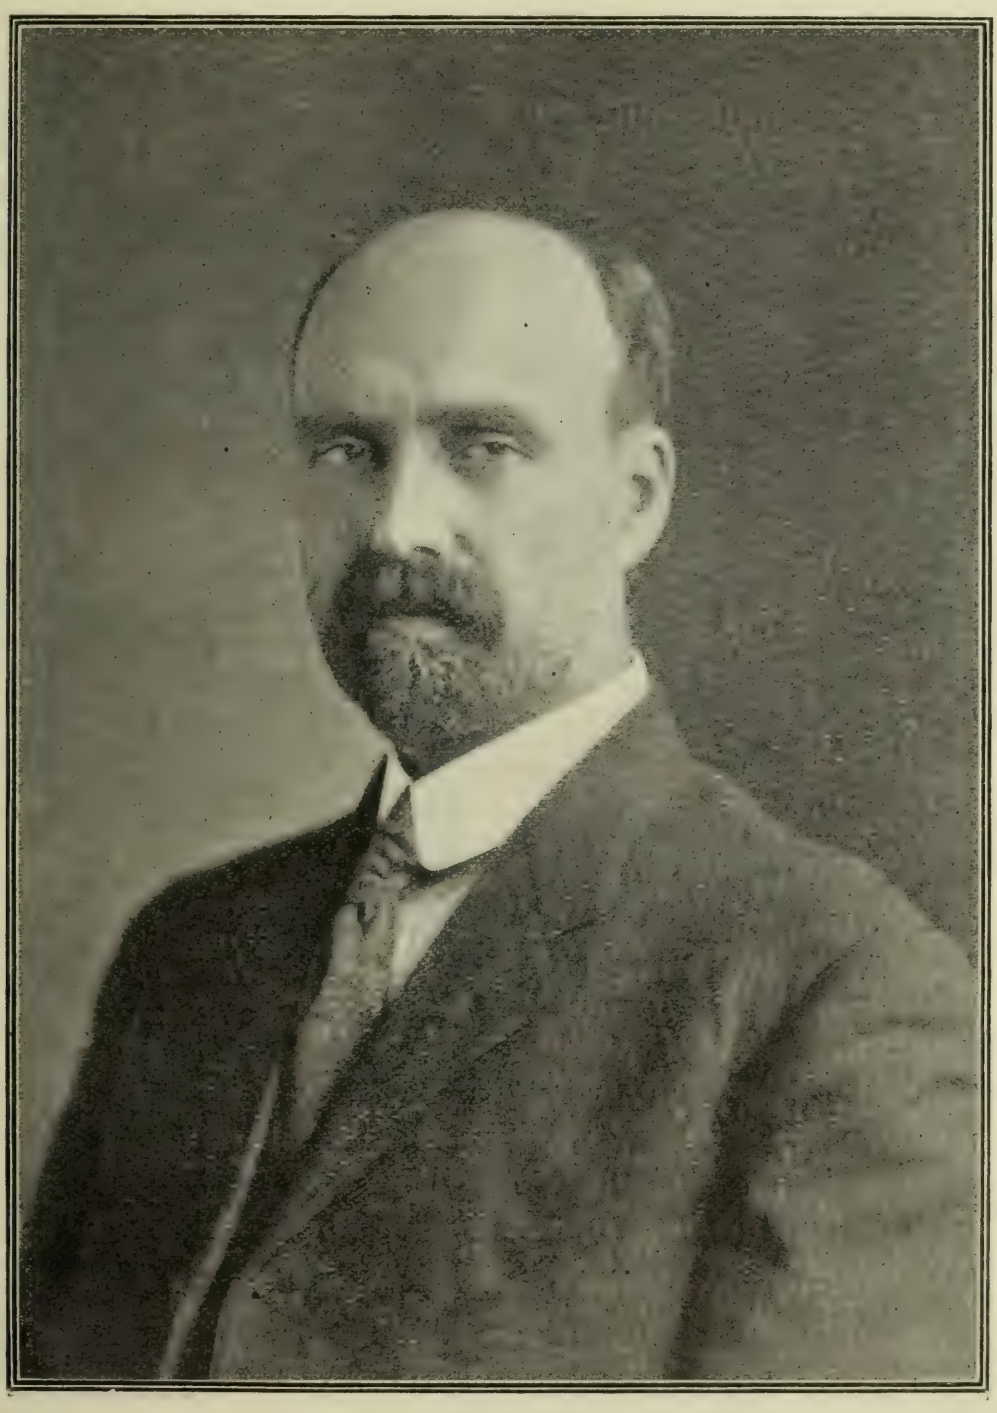
The officers of the board for 1908 are Frederick T. Gates, chairman; George Foster Peabody, treasurer; Wallace Buttrick, secretary.

New York City.

International Co-operation in Education

BY ELMER ELLSWORTH BROWN, Ph D.

Commissioner of Education of the United States.



THE suggestion recently discussed by the National Education Association that steps be taken to bring that body into closer co-operation with similar bodies in other lands, represents a conviction that the greater part of the work of education in all lands is one work, and that all teachers among civilized peoples have a common cause. There is abundant ground for this belief. The legislative bodies of many nations have found enough of common interest to make possible an Interparliamentary Union, and that international body has profoundly influenced the course of recent history. Yet parliaments are the centers of positive nationalism. We may fairly expect to find more elements of unity in the schools of different nations than in their legislatures. And such undoubtedly is now the case.

The world relationships of universities have been recognized, with varying clearness, for seven or eight centuries. The earlier development of schools for the people was more closely connected with the rise of modern nationalism. This gave us higher schools which emphasized unity, alongside of lower schools which emphasized difference. Such a distinction, of course, goes down to the fundamental constitution of society. It cannot be maintained, as a principle of sharp separation, where the distinctions between social classes have been smoothed out or are in the way of disappearing. Nations which have a traditional enmity to keep alive toward some of their neighbors—a memory of ancient quarrels which colors all their history—are at a disadvantage in this regard. In so far as class distinctions persist in such societies, with something of the finality of caste distinctions, a lower class will be taught to hate another people while the highest class is learning to understand other peoples.

But this condition can hardly continue, unmodified, in our modern world. The many care to learn what the few have known. The scientific spirit forbids us to teach in the lower schools what is untrue from the standpoint of the higher schools. Then, there is a New Human-

ism in the world, which is surely spreading abroad. This new humanism recognizes the fact that to know and understand living men, both individuals and nations, is a great part of any complete education. This humanism tinges all of the social and the international striving of our time. It tinges our education.

We live already in a world in which men are trying to understand one another. Men are trying to understand their neighbors, and that is the better part of democracy. Men are trying to understand other peoples and nations, and that is the foundation of our new world-politics. The reason why we may hope to understand the rest of the world, the reason why we even care to understand the rest of the world, is that our differences stand out from a background of agreement, a substratum of ultimate unity. The differences are picturesque and interesting, and at times they command the whole field of attention. Without national peculiarities and even oppositions, our world-unity would be a poor thing, a dull and insipid uniformity. But we must not forget that, after all, the

ELMER ELLSWORTH BROWN.

differences get their life and worth from that underlying unity. The time has come when men can give attention to the common human purposes of all the tribes of men without suspicion of treason against their own government. In our own land this is pre-eminently true. As Mr. Stead has said of us, "America is the one great international country of the world."

When Professor Payne, of the University of Virginia, a few years ago made his comparative study of the public elementary school curricula of the leading culture nations, he found an approximate agreement in the subjects of instruction and in the relative amount of time devoted to different subjects in the schools of representative cities. Aside from differences as to the inclusion or exclusion of religious doctrine, the most important variations were those relating to the language employed and studied and the content of instruction in the national history and literature. Even here the instruction in the schools under consideration might readily be compared with reference to its form and the principles guiding the choice of materials in those subjects. So striking, indeed, was the agreement which his study revealed that Professor Payne was led to make the following remarks:

"It is to be feared that our educational theorists have sometimes excused themselves from making a comparative study of these different curricula by an exaggeration of the supposed disparity of aim and the consequent improbability of gaining suggestions of worth. The tables . . . show such a slight difference of curricula in the elementary schools of the several countries, that it makes one suspect either that the aim of education does not determine what shall be studied, or that the aims of the several countries do not differ as much as has been supposed."[1] And again: "No one can fail to be impressed with the fact that the general principles which govern the selection and arrangement of the subject matter of the elementary curriculum are practically the same in the four educational systems here studied."[2]

Without doubt, national differences must still be more influential in determining the teaching of the lower schools than in that of the universities. In some degree this difference must, I think, be regarded as permanent. A strong nationalism and even a certain wholesome provincialism are to be cherished in those schools. But it is quite as important, and is in truth essential, in this modern age, that the lower schools preserve their continuity with the teaching of the universities and their loyalty to those common aspirations in which the nations of the world shall be able to understand one another.

WASHINGTON, D. C.

[1]Payne, Bruce Ryburn. Public elementary school curricula. Silver, Burdett & Co. [1905], pp. 15-16.
[2]Idem, p. 182. The four educational systems studied were those of the United States, England, Germany and France.

Laus Deo

Psalm MCMVIII

BY LYMAN H. BAYARD

PRAISE ye the Lord. Praise God in his universe: praise him in the firmament of his power.
Praise him for his mighty acts: praise him according to his excellent greatness.
Praise him with the sound of the steam-engine: praise him with the motor and dynamo.
Praise him with the microscope and telescope: praise him with the spectroscope and wireless telegraph.
Praise him in hospitals and peace conferences: praise him in the laboratory and observatory.
Praise him with biology and astronomy: praise him with psychology and chemistry.
Praise him all atoms and electrons: praise him all star systems and nebulæ.
Let everything that hath life or law praise the Lord. Praise ye the Lord.

ELGIN, ILL.

Perturbations in English Public Opinion

BY JUSTIN McCARTHY

THIS session of Parliament will last, it is expected, almost to the end of the year. There is still a great deal of most important legislative work to be got thru before the present session can have come to a satisfactory conclusion. A persistent, determined and unscrupulous opposition might, indeed, render any such satisfactory conclusion practically impossible even despite all the new regulations, recently established with the object of giving the authorities of the House more adequate means than they had before for dealing with mere obstruction. But it seems to me that the leaders of the Opposition in the House of Commons just now have not been dealing with the Government measures in anything like a spirit of mere obstruction.

There are, indeed, some members of the Opposition to be found, especially among Irish Tories, who illustrate the practices of factious obstruction as vigorously and vividly as ever. But the leaders of the Conservative Opposition seem to have recognized fairly and indeed fully the great importance of some of the ministerial measures now making their way toward parliamentary fulfilment, and are seeking only to make such alterations in these measures as seem to the Conservative mind likely to be of advantage to their successful operation when past into law.

I do not see, therefore, that the Government have any reason to complain of the manner in which the leaders of Opposition have lately been dealing with the ministerial measures, nor indeed have I observed that any such complaints have come from the ministerial benches. I have, however, noticed on several occasions that radical journals and radical speakers have written and spoken as if they were inclined to make the leaders of Opposition responsible for the tactics displayed in the House of Commons by some of the Ulster Tory representatives and their backers among British Tories. I cannot recall to mind any instance in which the leaders of the Conservative party have shown an inclination to identify themselves with or to patronize the eccentric movements of that small knot of British Conservatives who have gone out of their way thus to misrepresent the general feeling of British Conservatism.

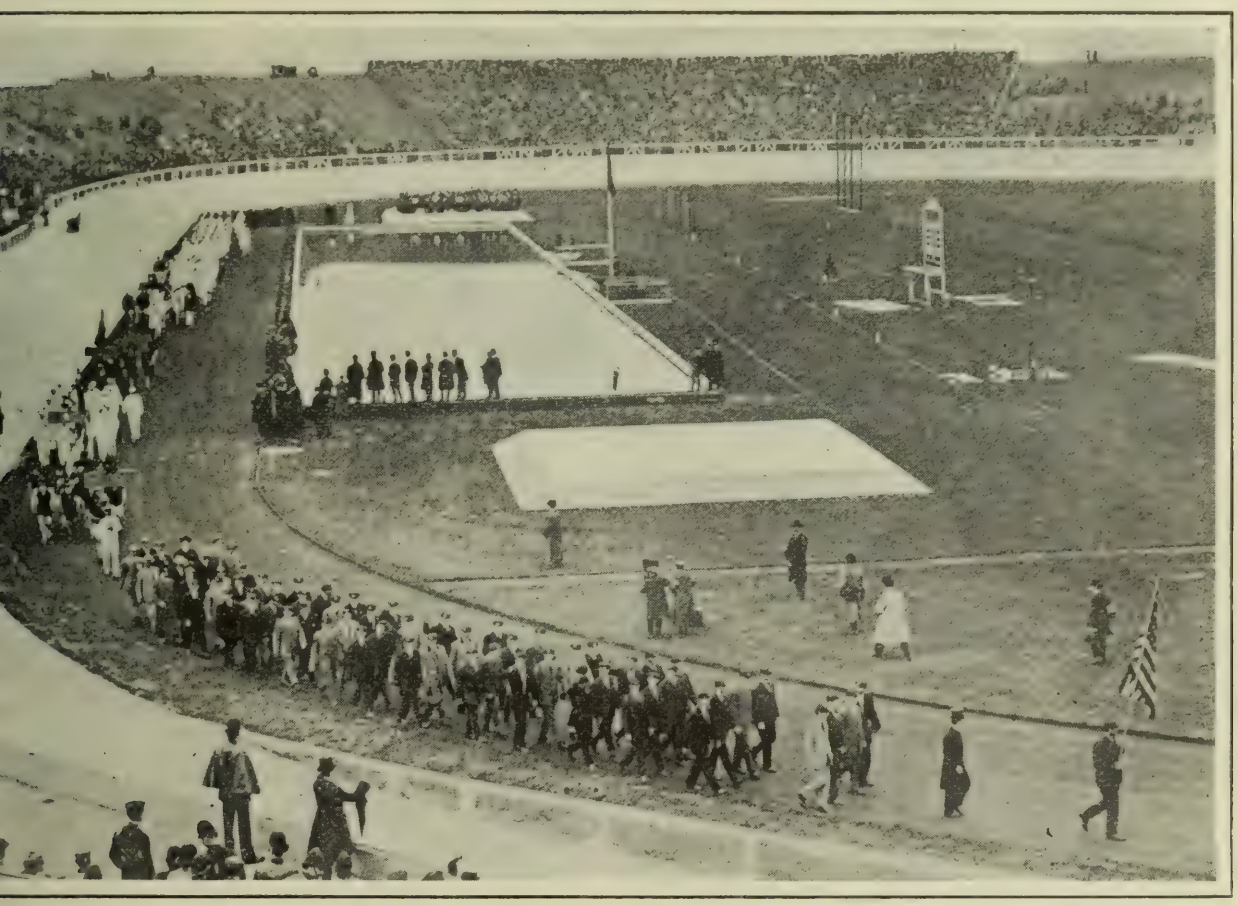
When this heavily worked session comes to its end we shall have to look out for decisive movements on the part of the Government. These movements will make themselves manifest with the opening of next year's session, and will be so arranged as to prepare the way for a definite appeal to the country thru the medium of an immediate general election. That appeal to the country will be for a decisive settlement of the question long at issue concerning the relative constitutional powers of the House of Lords and the House of Commons. The Government of Mr. Asquith, if it accomplishes its purpose in that struggle, as I feel no doubt it ultimately will, must secure for itself a place in our history like to that which was obtained by the administration of Lord John Russell in the triumph of the great Reform Bill. Mr. Asquith, it should be said, has thus far maintained his position as leader with great skill, patience and self-control. The world has not yet seen, at all events, any actual evidence to justify the alarms which were at one time so common as to the want of sympathy between the Prime Minister and some of his ablest colleagues concerning certain of the most important principles of reform held in prospect by Mr. Gladstone and Sir Henry Campbell-Bannerman.

The public mind here, and, indeed, thruout Europe generally, is very much engaged in a study of the working of aerial navigation. We read with intense interest the newspaper accounts which come to us day by day concerning the movements of this or that air-ship, what vast area of space this one has traversed within a certain time, how and why and wherefore this other has failed to accomplish the like success, and what may be expected to come of the promises proclaimed over Europe concerning some

SIR JOHN FISHER.
First Lord of the Admiralty.

new skyscraper constructed on a different plan, which is announced as destined to leave all rivalry nowhere. The peculiarity just now about all this manifestation of absorbing public interest is that we seem to be thinking, not of the benefits to science, to human life, and to human interests in general by the creation of a new, a more rapid, and a more comfortable mode of travel than the world we live in has yet known, but our principal interest seems to be in the question how far the creation of the air-ship travel may enable this or that nation to accomplish the successful invasion of some other nation's territory. Here in England one of our most engrossing topics is made for us by the question how far this new science may enable Germany to laugh at the British fleet and to land her whole army suddenly and noiselessly from the skies one day on some British city or plain specially selected by German war councils for that purpose.

One might surely venture to suppose that if Germany had such plans and purposes in her mind, she could hardly, even if she had another Bismarck in her councils and another Moltke at the head of her war movements, contrive to prepare an aerial navy for its invading sail thru the central blue and its descent upon poor, defenseless England with such noiseless and invisible operation that no hint of alarm should be given to England until that particularly chosen hour of the dark night when the whole German forces should suddenly make their appearance—let us say, midway between Dover and London.



Nevertheless it is quite certain that, to a very large portion of our public here, the very keen interest taken in aerial navigation is mainly, if not altogether, inspired by belief that the first great manifestation of the new scientific miracle is to be displayed in the German invasion of England.

I should like very much to know whether in some foreign country there may not be a prevailing conviction that the first great manifestation of England's success in the noble science of aerial navigation is to be the sudden invasion of that country itself by the combined forces of the British army, the British navy and the British volunteers, or, as these would

ADMIRAL LORD CHARLES BERESFORD.

ow be called, the British territorial rces. As regards the alarm about Ger- any's making preparations first for the vasion and conquest of England, and en no doubt for the invasion and con- est of the rest of Europe, I only know, an absolute and admitted certainty, at the naval forces of Germany are at esent much inferior in strength to ose of England, and that it would take any years of the most lavish expendi- re to bring the German navy up to a

AMERICAN COMPETITORS IN THE OLYMPIC GAMES PARADING BEFORE THE KING.

vel of that of England—but then, of urse, the British alarmist would tell me at Germany does not propose to accom- ish the conquest of England by her onclads, but by her aerial navy falling om the skies.

In the meantime, however, and seeing at the aerial navy is not yet afloat in e skies, I think it would be a very wise urse on the part of the English Admi- lty if they were to put their own house to somewhat better order than it seems possess just at present. My American aders must already have heard much out the disputations, the actual quar- ls which have lately been going on be- tween the official chief of the Admiralty and Lord Charles Beresford, commander of the Channel squadron, and therefore one of the foremost men in the naval service of the Crown. I do not profess to have any personal knowledge what- ever as to the rights and wrongs of this noisy and vehement controversy. I do not suppose that, if the whole dispute were fully and deliberately expounded to me by the leading exponents on both sides, I should be able to form any judg- ment worth having as to which was the right and which was the wrong side. But we all know that Lord Charles Beresford has for many years been rendering splen- did service to his country as the com- mander of a fleet, and I had the honor of knowing him well when he and I were both members of the House of Com- mons. I remember spending some very pleasant hours with him at his Richmond home during those times, and he always seemed to me a man whose great desire was to do faithful work for his country, and a man far too enlightened and too patriotic to be swayed by any mere feel- ing of jealousy or of impatience with

regard to the officials who held control of the Board of Admiralty. I therefore cannot help thinking that if Lord Charles Beresford has strong reasons for finding fault with any decisions come to by the Admiralty, there must at least be a good deal to be said on his side of the question, and that the public ought to be admitted to a knowledge as to the causes and the meaning of the whole controversy.

I have seen in several London papers the statement that Lord Charles Beresford intends to resign his position as commander of a squadron and to seek at the hands of some constituency his readmission to the House of Commons. He could certainly find no difficulty in obtaining such an opportunity, and it would, as it seems to me, be of immense advantage to the public interest that he should be thus given the means of submitting his view of the whole question to the judgment of these islands and of the civilized world.

The Olympic Games, which have just begun in London and were opened at the beginning of this week by King Edward in person, have been a subject of interest thruout this country and many other European countries and in America as well. The opening day last week was something of a disappointment but only because of the state of the weather. We have had a somewhat fitful summer thus far thruout England—some weeks of blazing, tropical heat followed by fitful bursts of what might be called ill-temper on the part of the weather gods displaying itself in fierce rains and furious winds. Monday was the occasion for an almost continuous downfall of rain during several hours, and the downfall appeared as if timed by the unfavoring divinities with the object of preventing the public in general from enjoying the sight of the Olympic Games that day.

The ordinary mortal in most countries does not find much enjoyment in spending many hours in the open air while torrents of rain are pouring down, and therefore the exhibition on the first day of the great international festival was attended by rather less than one-third of the anticipated number of spectators. Even the presence of the King and Queen did not prove attraction enough to draw reluctant numbers to the sight of the great pictorial scene. However, the weather next day became bright and favorable, and while I am writing there is every hope that the Olympic Games may find ample attendance of spectators.

At the same time I am much inclined to believe that in this country at least the interest of the public, including in that word all classes from the highest to the lowest, from the peer to the costermonger, has of late years been drawn more and more away from games which are only contests of skill, courage, dexterity and intelligence, to games which involve the winning or the losing of sums of money. There has been a great change in this way during recent times. The passion for gambling seems to be spreading everywhere. Fortunes are made and lost every day and we have had various acts of parliament past with the object of controlling to some extent the betting mania, and these acts seem on the whole to have had mainly the effect of setting busy brains to work in order to devise some new methods of evading the law and making the competition all the keener.

In his latest novel, "Love and the Poor Suitor," just published by Messrs. Hutchinson, Mr. Percy White again shows the great variety which is one of the charms of his novels. The last one of his, of which I wrote, "Mr. Strudge," was in his most cynical mood, and tho I do not hold with the great orator, John Bright, that stories would be better if written altogether or chiefly about good people, I admit that I enjoy a novel more in which there are characters which are, if not *too* good, at least sympathetic. In this story the hero and heroine have one's sympathies from the beginning, and one is rejoiced when they get thru all their troubles successfully. Sonia, indeed, seems, in the first part of the story, almost too perfect, tho Mr. Percy White has the art to make her very real and living, too, but toward the end she is, perhaps, less perfect tho still very human and lovable.

One hopes that the charming young husband and wife may always be as happy as when one has reluctantly to part from them.

St. Isaac's, St. Petersburg, 365 ft. 17. Cathedral, Salisbury, 400 ft.

The Great Towers of New York

BY GARDNER RICHARDSON

WHEN the construction of the Singer Building was projected, almost doubling in height any evious skyscraper the world had ever n, it was prophesied that many years uld pass before a rival would chalge its lofty pinnacle. But before the nger Building was completed, work s begun on the Metropolitan Life ver, which overtopped the former cord-breaker by 90 feet, and now in rn the proposed Equitable Life Buildg will surpass all former records with nammoth structure over 900 feet high. is building will have a greater altitude an any natural elevation in the States Delaware, Florida, Louisiana, Mississpi, Rhode Island and the District of lumbia. The Washington Monument will reach only a little above the middle of the structure.

The Singer Building, which is now completed, stands 612 feet above the curb, and contains forty-seven stories. The weight of the tower is 18,365 tons. The steel used, if made into a ¾-inch wire cable, would reach from New York to Buenos Ayres, a distance of 7,100 miles. The building contains 5,033,800 bricks, which, if laid end to end, would reach from New York to Detroit, or 635 miles. They would pave a footpath 12 inches wide from New York to Boston. The structure required 101 tons of sheet copper, an amount sufficient to coin 46,208,000 United States pennies. The telephones, elevators and electric light service required 3,425 miles of wire,

THE METROPOLITAN LIFE TOWER.

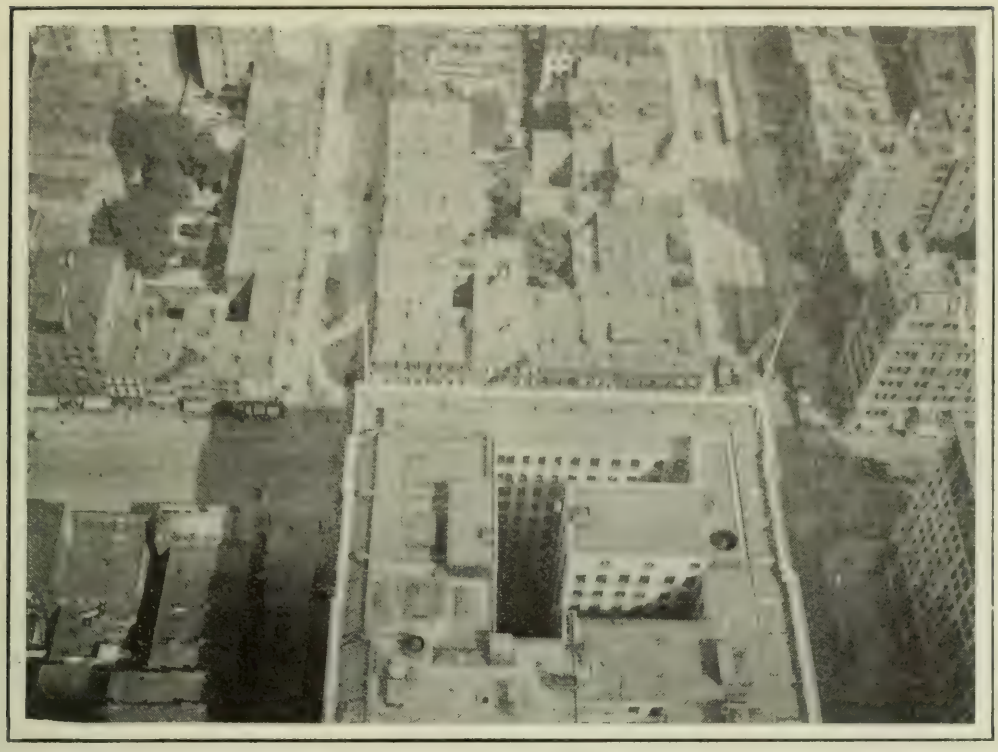
FROM THE SINGER BUILDING.
Looking toward the Hudson River, showing the docks and the United States Express Building.

enough to extend from the top of the Eiffel Tower in Paris to the top of the Singer Building, with 300 miles to spare. The floor space in the entire building is 9½ acres.

The Metropolitan Life tower was originally planned for 658 feet, but alterations were made in the designs during the construction, with the result that the top is now 700 feet above the sidewalk.

The writer, after some difficulty, obtained a permit to ascend this building. A release was signed on the ground floor, waiving all claims against the company for possible injury to life or limb. The first forty floors were ascended by means of a temporary elevator, with board sides, plentifully bespattered with mortar. The remainder of the ascent was made on shaky ladders lashed to the steel framework. While little wind was noticeable below, it seemed to be blowing a gale at the top, necessitating a firm grasp on the rungs. The city lay so far beneath that the customary dizziness was lacking as much as in a balloon. People on the sidewalk were mere specks, and the trolley cars looked like ants. On a clear day

VIEW FROM METROPOLITAN LIFE TOWER
Looking toward Blackwell's Island Bridge.



THE SINGER BUILDING.
Towering 612 feet above the street and 762 feet from the bottom of the foundation to the top of the flagstaff.

the country lies before the observer like a map. He can look over Long Island into the Atlantic Ocean and see the greyhounds passing Fire Island on their way to New York harbor. He can see over the Hudson River and Newark Bay far into the interior of New Jersey, and up the Hudson Valley beyond Peekskill. The range of vision from the observation platform is a circle 72 miles in diameter to the sea level, and any elevations can be seen at a much greater distance. One-sixteenth of the whole population of the United States lies within this circle, so that it is safe to say that the homes of more human beings can be seen from the tower than from any point on the globe.

The total floor area of the building is 1,085,663 square feet, or about 25 acres, almost three times greater than the Singer Building. The weight of the structure is 85,000 tons, and it contains 16,287,034 cubic feet. Half way up is a giant clock three stories high, with a dial face 26 feet in diameter. It is second only to the clock erected by Colgate & Co., in Jersey City, which has a diameter of 38 feet.

The projected building of the Equitable Life Assurance Company is designed by D. H. Burnham & Co., the Chicago architects. The hight will be 909 feet above the sidewalk, exclusive of a flagstaff 150 feet long. It has been calculated that the air pressure at the top will be 70 pounds to the square foot less than at the bottom, and that there will be a difference of a full inch in the barometer. The present structure is only about forty years old, and when completed, was the finest office building in New York. Visitors to the city were escorted there and shown the view from the seven story roof. The interior furnishings and equipment are very elaborate. It is probably the most expensive building that has ever been torn down to give place to another. The site is valued at $15,000,000, and the projected tower will cost $10,000,000.

On a cloudy or foggy day it is impossible to see the tops of these new sky-

To get the best effect lay the magazine on the floor.

scrapers. Conversely, a business man dictating letters at his desk hundreds of feet above the ground would be as effectually above the clouds as tho on a lonely mountain top, and only the dull roar from the streets would remind him that far below lay a teeming city, with congested traffic and thronging thorofares.

THE EDUCATIONAL BOOKS OF THE YEAR

THE tendency in education of late is toward an increased use of text-books, even in university classes, so the question of choice becomes increasingly important. Owing to the enterprise and competition of our publishers, the American teacher has placed before him an array of school books more numerous and varied, and better printed and illustrated, than any other country possesses. But this embarrassment of riches makes his selection the more difficult. He may be quite satisfied with the book he is using, which has come to fit him like an old coat, yet when he turns a deaf ear to the agent who has "something new" to show, his conscience troubles him with the suggestion that he is becoming a fossil. It is our purpose, in this annual survey of school texts and professional reading, to call the attention of the teacher to the new publications of importance and give him some hints as to their relative value and distinctive points.

English

Grammar and Its Reasons. By Mary Hall Leonard. Barnes. $1.50.

English Composition. By Charles Lane Hanson. Ginn. 80 cents.

An Introductory Course in Exposition. By Frances M. Perry. American Book Co. $1.00.

Lives of Great English Writers. By Walter S. Hinchman and Francis B. Gummere. Houghton, Mifflin. $1.50.

English Poems. Ed. by Edward Chauncey Baldwin and Harry G. Paul. American Book Co. $1.00.

English Poems. By Walter C. Bronson. University of Chicago Press. $1.50 (School ed. $1.00.)

A Collection of Eighteenth Century Verse. Ed. by Margaret Lynn. Macmillan. $1.10.

Specimens of Modern English Literary Criticism. Ed. by William T. Brewster. Macmillan. $1.00.

The Short Story. Ed. by Brander Matthews. American Book Co. $1.00.

An Introduction to the Study of Rhetoric. By Helen J. Robins and Agnes F. Perkins. Macmillan. 90 cents.

Linguistic Development and Education. By M. V. O'Shea. Macmillan. $1.25.

Words and Sentences. By Alfred M. Hitchcock. Holt. 35 cents.

Teachers' Outlines for Studies in English. By Gilbert S. Blakely. American Book Co. 50 cents.

The Little Helper. By Millicent Baum. Books I and II. Silver, Burdett. 28 and 32 cents.

A First Practice Reader. By Libbie J. Eginton. Silver, Burdett. 30 cents.

The Bailey-Manly Spelling Book. Houghton, Mifflin. 25 cents.

The Beginner's Primer. Houghton, Mifflin. 30 cents.

The Child World Primer. By Alys E. Bentley and Geneva R. Johnston. 30 cents.

The Lamb Shakespeare for the Young. The Tempest, A Midsummer Night's Dream, As You Like It, The Winter's Tale. Ed. by I. Gollancz. Duffield. 80 cents each.

The First Folio Shakespeare. Romeo and Juliet, The Winter's Tale, Othello and The Tempest. Ed. by Charlotte Porter and Helen A. Clarke. Crowell. 75 cents each.

The Old Spelling Shakespeare. Ed. by F. J. Furnivall and W. G. Boswell-Stone. Twelfth Night. Duffield. $1.00 each.

Spenser's The Fowre Hymnes. Ed. by Lilian Winstanley. University Press. 50 cents.

Select Translations from Old English Prose. Ed. by Albert S. Cook and Chauncey B. Tinker. $1.25.

The New Hudson Shakespeare, Julius Cæsar. Ed. by Ebenezer C. Black and Andrew Jackson George. 35 cents. Ginn.

Eclectic Readings. Cooper's Adventures of Deerslayer. Ed. by Haight. 35 cents. The Story of Two Boys. By Clifton Johnson. 35 cents. Famous Pictures of Children. By J. A. Schwartz. 40 cents. Explorers and Founders of America. By A. E. Foote and A. W. Skinner. 60 cents. Second Fairy Reader. By James Baldwin. 35 cents. Another Fairy Reader. By James Baldwin. 35 cents. American Book of Golden Deeds. By James Baldwin. 50 cents. Japanese Folk Stories and Fairy Tales. By Mary F. Nixon-Roulet. 40 cents. Chinese Fables and Folk Stories. By Mary Hayes Davis and Chow-Leung. 40 cents. Swift's Gulliver's Travels Retold. By James Baldwin. 35 cents. American Book Co.

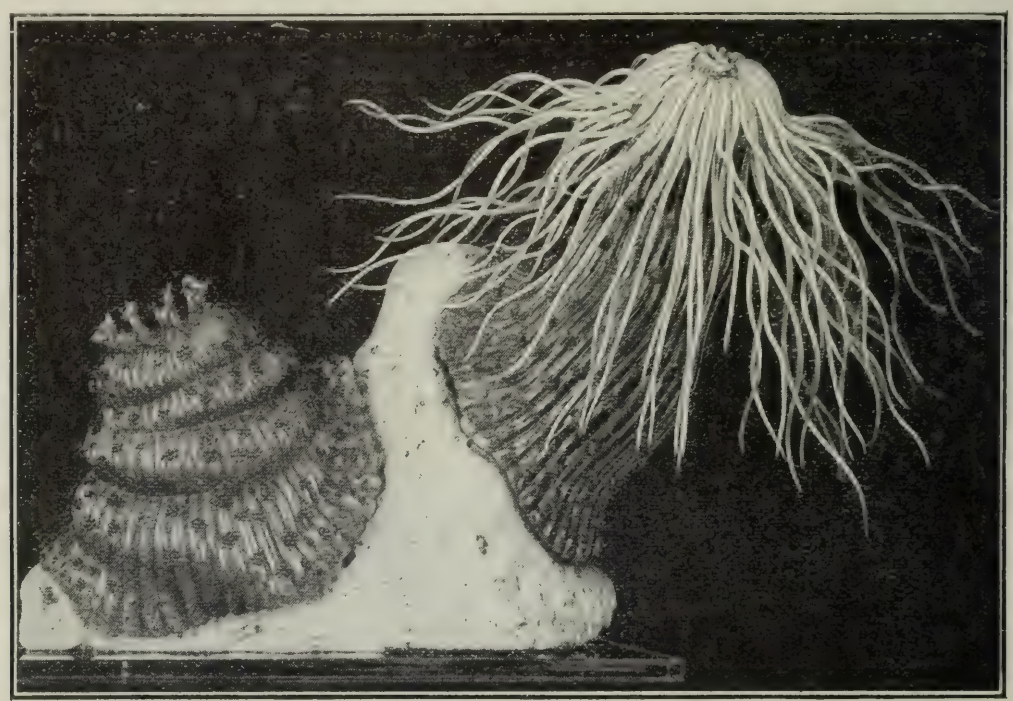
Gateway Series of English Texts. Irving's Sketch-Book Selections. Ed. by Martin W. Sampson. 45 cents. Goldsmith's Vicar of Wakefield and The Deserted Village. Ed. by James A. Tufts. 45 cents. Franklin's Autobiography. Ed. by Albert H. Smyth. 40 cents. American Book Co.

Riverside Literature Series. Shelley's Selected Poems. Ed. by G. H. Clarke. 50 cents. Emerson's Selected Poems. Ed. by Mary A. Jordan. 40 cents. Bacon's Essays. Ed. by C. S. Northup. 40 cents. Lamb's Essays of Elia. 40 cents. Afoot and Afloat. By John Burroughs. 25 cents. Memoir of Whittier. By Bliss Perry. 25 cents. Finding a Home. By Kate Douglas Wiggin. 25 cents. My Garden Acquaintances, etc. By James Russell Lowell. 15 cents. The Flag Raising. By Kate Douglas Wiggin. 25 cents. Houghton, Mifflin.

Stevenson's Master of Ballantrae. Ed. by H. Adelbert White. Macmillan. 25 cents.

The Essays of Francis Bacon. Ed. by Mary Augusta Scott. Scribner's. $1.25.
Winning Orations. Ed. by Charles Edgar Prather. Topeka: Crane & Co. $3.00.
Argumentation and Debating. By William Trufant Foster. Houghton, Mifflin. $1.25.

To begin with the rudiments—a useful book for teachers, if not for pupils, is *Grammar and Its Reasons*—a series of chapters, not only on the parts of speech, inflection, construction and similar topics, but also on questions connected with the teaching and the general significance of the subject, such as the place of grammar in the school course and the like. The discussions are uniformly plain and clear, marked by good common sense and a disposition to simplify the study as much as possible—to reduce it to its lowest denominations without in any way sacrificing its genuine properties or diminishing its real importance.



For younger students Mr. Hanson's *English Composition* offers much the usual course—a mixture of grammar, spelling, punctuation and rhetoric—without any very great improvement over the ordinary methods. Like most of his kind Mr. Hanson is far too eager for original composition. "Think for yourself," is his admonition to the pupil, as tho that were the beginning and not the end of discipline. From this point of view, it must be confest, his illustrations are well chosen, most of them being themselves the work of pupils and hence quite within the reach of others. But what they gain in "availability" they lose by the very fact of being on the student's own plane. Indeed, the fault of this theory lies in the fact that the student is constantly urged to do something which is hardly worth doing—tho if such a system is to be imposed upon the teacher at all, Mr. Hanson's book has the advantage of making it fairly practicable.

For a higher grade of work Miss Perry's *Exposition* contains a clear and methodical presentation of a kind of writing which is at least comparatively logical and substantial and which may be made to represent some definite thinking. Miss Perry divides her *Exposition* ingeniously and intelligibly into two processes, definition and analysis, and three functions, presentation, interpretation and in-

DIPTYCH WITH PORTRAITS OF HONORIUS.
From Jones's "Story of the Roman Empire."

terpretative presentation, whose treatment constitutes the bulk of her volume. Unfortunately the book ends with a rather disproportionate chapter on literary criticism—one third of the entire contents. This, again, is to exaggerate the importance of "originality." It is bad enough to find the youth in training for story-tellers and even novelists—but when it comes to making them literary critics, it seems as tho the absurdity of the thing should be apparent. And yet with this exception Miss Perry's *Exposition* is not unpraiseworthy, either for its general plan or for the numerous exercises with which it is accompanied.

SEA ANEMONE.

From Hunter's "Biology."

As a preparation for the study of literature Professor Gummere and Mr. Hinchman have written a series of short lives of the great English writers. Ten biographies, which are supplemented in a manner by occasional chapters of transition on such subjects as the eighteenth century and the age of romanticism, are not uninteresting in themselves and are well adapted to the kind of readers for whom they are intended. The final chronology and bibliography too are useful in their way. But it is doubtful, after all, whether such a book is likely to supply the literary stimulus which its authors expect from it, in contrast with the usual "preliminary courses in literary history, with their third-hand comments on esthetical and critical questions." No doubt such courses are bad enough; but the biographical method itself seems something of a retrocession. Nor is it at all certain that the best way of encouraging a taste for literature and an understanding of it is not by direct and copious discussion of the writings themselves rather than of their authors, provided such discussion be good and suited to the capacity of the beginner—for what we hear much talked about that we finally interest ourselves in. Good criticism is not so uninteresting as is often pretended; and if our teachers of literature were only properly qualified, we should probably have by this time an admirable series of good school criticism for all sorts and conditions of pupils.

Something of this kind is, indeed, beginning to be supplied by anthologies or "collections" intended for school use, which would answer the purpose very well if the teacher could be depended upon to supply the discussion so necessary as a vehicle. Unfortunately the best of such compilations are confined at present to poetry. This year there are at least three new ones. The most comprehensive, by Professors Baldwin and

Paul, is intended to cover the whole field from Chaucer to Tennyson, and, while a convenient book, is in no wise superior to others already in existence. Some idea of a "comparative" study of selections which seems to have guided the editors to some extent in their choice of material is hardly obvious enough to be useful to the teacher; while the questions, inserted among the notes at the back of the volumes, in the hope of drawing the pupil out and arousing his interest, are hardly abundant or lively enough for the purpose.

On the other hand, Professor Bronson's *English Poems,* of which the present volume covers only the nineteenth century, has one or two new features. Besides the usual matter, the notes aim to include some sort of statement of the "poet's theory of poetry and his philosophy of life when these can be given in his own words," and also "specimens of contemporary criticism on some of the leaders of new literary movements." Unhappily this sort of material is still too scanty and is, besides, so microscopically printed as to be read only with some pains. Professor Lynn's *Eighteenth Century Verse,* as its title implies, is much more restricted in its scope than the preceding collections, but is pretty well representative of its province, inclusive of the ballad.

With prose the difficulty of making a handy compilation is much greater than in the case of poetry, as the specimens must be either very short or very carefully selected. Professor Brewster's notion, in his *Modern English Literary Criticism,* of limiting his selections to some one *genre* or type and making them representative rather than exhaustive, is a good one. What is particularly admirable in the execution of his plan is the broad and generous introduction, which discusses freely and interestingly, not only the general type of literature included, but also the particular selections themselves. With such a judicious model it seems as tho it would be easy to do much the same thing for other prose forms. Indeed, Prof. Brander Matthews's *Short Story* is based on the same principle, and consists of stories from various sources so arranged as to illustrate not merely the *genre* itself, but also the history of its development. The selections are set in the right light by a general introduction and conclusion, while each is properly focused by little commentaries fore and aft.

That the system of intercollegiate oratorical contests popular in the West has been successful in making ready speakers is proved by the career of many a man now prominent in national politics, but the verbal product as it appears in cold print in the two volumes of *Winning Orations* cannot be regarded as a contribution to good literature or social science. The new system of debating is undoubtedly superior to competitive oratory if the participants follow the methods laid down by Professor Foster in his *Argumentation and Debating,* for in the study of the question and preparation of the briefs they will get a valuable training in thinking. An appendix of 150 pages contains specimen debates, suitable questions and exercises.

Greek and Latin

A Short History of Greek Literature. By Wilmer C. Wright. American Book Co. $1.50.

Macmillan's Latin Classics. Livy. Book I. Ed. by Walter Dennison. 60 cents. Three Tragedies of Seneca. By Hugh MacMaster Kingery. 60 cents. Macmillan.

The Trachiniæ of Sophocles. By Sir Richard C. Jebb and Gilbert A. Davies. University Press. $1.00.

Since Charles Francis Adams and the Emperor William, almost a generation ago, "gave Greek a black eye," the friends of the classics have comforted themselves in watching the intensity with which the fewer students are devoted to the study of Greek. In past years students were forced to it, but now those who climbs the steeps of Parnassus do so for the love of it. The most splendid of all literatures, which may be compared to the sun, seems about to go the way of good things neglected. For good or for ill, we are tending to the practical.

But we are not going to grieve over the fact that the average college graduate of today no longer quotes Greek or even Latin. The list of new books of the year in the classics is rather meager. This may be a sign of the times; but something has been done to enliven the interest of the subjects. The Macmillan Company furnishes *Three Tragedies of Seneca,* which are merely translations of

Greek into Latin. A "Seneca question" has recently broken out, in which it is mooted whether Seneca is really the author of these plays. We know that this man of high morals, but little backbone, fell under the ban of Nero. Dennison's *Livy* puts before us the first book and extracts from the succeeding nine, with lucid and excellent notes and introduction. Such condensation will do something to keep alive an interest in Latin authors. *The Trachiniæ of Sophocles,* with notes condensed from Jebb's monumental work, is here adapted to classroom work, with probably less success than would accompany an entirely new presentation. In the *Short History of Greek Literature,* Dr. Wright has followed the beaten track; but he has scattered along it a fragrance which is agreeable to the traveler. His translations are felicitous, this one especially:

"Some Thracian strutteth with my shield,
For, being somewhat flurried,
I left it in a wayside bush
When from the field I hurried;
A right good targe, but I got off.
The deuce may take the shield;
I'll get another just as good
When next I go afield."

No one has better rendered into English the spirit of the devil-may-care Archilochus.

French

Mole's Dictionary of the French and English Languages. Ed. by Louis Tolhausen and George Payn. Macmillan. $1.50.

Chardenal's Complete French Course. Ed. by Maro S. Brooks. Allyn & Bacon. $1.00.

Heath's Modern Language Series. Choix de Contes de Daudet. By C. Fontaine. 40 cents. Victor Hugo's Selected Poems. Ed. by A. Schinz. 80 cents. Lectures Faciles. My Mary Stone Bruce. 60 cents. Extracts for Composition in French. By J. E. Mansion. 60 cents. Halévy's Un Marriage d'Amour. Ed. by R. L. Hawkins. 25 cents. Heath.

Simplicité. By Julius Tuckerman. 50 cents. *La Comedie Classique en France.* By Edith Healy. 50 cents. *Laurie's Mémoires d'un Collégien.* Ed. by J. L. Borgerhoff. 50 cents. American Book Co.

Renan's Ma Soeur Henriette. Ed. by William F. Giese. Holt. 35 cents.

The French text-books present no surprises to the observer, and, if anything, indicate a weakening of the output. Well edited is a volume of Victor Hugo's Poems, a comprehensive selection based upon a sensible principle and reinforced by explanatory notes. A vocabulary, however, is missing. An old friend is Chardenal's Grammar, refurbished to meet criticism and attack. The revision is, however, detailed rather than essential, and leaves one with the feeling that it comes too late. The Chardenal method, highly valuable in its day and still maintaining a certain vogue, is nevertheless doomed to perish before the attacks of the more modern text-books, armed with deeper pedagogic as well as practical insight. Laurie's *Mémoires* is too long to be of use to lower grades, and will serve for rapid reading in the upper high school grades. Renan's reminiscences of his sister, couched in his soft-flowing, feminine style, demands for sympathetic reading a sensitive taste rare to the rank and file of college classes. Halevy's work will likewise appeal only to a sustained interest and a complexer hold upon vagaries of style. *La Comédie Classique* is paved with good intentions, but fifteen slices of comedies will not serve either to whet the appetite or cultivate the taste for French literature. *Lectures Faciles* is an elementary reader, probably of use to girls' academies. *Simplicité,* which seeks to initiate the beginner into the mysteries of French pronunciation, might rather have been named *Complexité,* for no work on pronunciation, with all its mighty array of rules, will substitute for the living tones of the teacher.

German

Muller's Neue Märchen. Ed. by W. F. Little. 30 cents. *Grimm's German Fairy Stories Retold.* Ed. by James R. Kern and Minna M. Kern. 30 cents. *Selections from Schiller's Ballads and Lyrics.* By L. A. Rhoades. 60 cents. American Book Co.

A German Grammar for Beginners. By Paul Valentine Bacon. Allyn & Bacon. $1.25.

Alltägliches. By M. B. Lambert. 75 cents. *Bohlau's Ratsmädelgeschichten.* Ed. by Emma Haevernick. 40 cents. *Kellar's Das Fähnlein der Sieben Aufrechten.* Ed. by W. G. Howard and A. M. Sturtevant. 40 cents. *Der Weg zum Glück.* By Dr. Wilhelm Bernhardt. 40 cents. Heath.

Dictionary of the English and German Languages. By William James. Macmillan. $1.50.

Grillparzer's Die Ahnfrau. Ed. by F. W. J. Heuser and George H. Danton. 80 cents. *Moltke's Die Beiden Freunde.* Ed. by Karl Detlev Jessen. 35 cents. *Hoffmann's Meister Martin der Küfner und seine Gesellen.* Ed. by Robert H. Fife. 40 cents. *Am Anfang.* By Julius Tuckerman. 50 cents. *Baumbach's Der Schwiegersohn.* Ed. by Otto Heller. 40 cents. *Ernst's Überwunden.* Ed. by James T. Hatfield. 30 cents. Holt.

To a careful observer of the textbook field, the present gleanings from German literature show a certain exhaustion; the clearly good books are diminishing, the doubtful increasing. The main source of supply still, as ever, is the *Novelle,*

too useful a literary form to be easily discarded. The *Novellen* chosen range from the artless boys' tales of Blüthgen and Lohmeyer to the rich, historic tale of old Nuremberg by that weirdest of romanticists, Hoffmann. The former are meant to inspire and to warn the youth, and are written in the simple but masterly German of the leaders of the *Jugendliteraturbewegung*. The volume is to be commended for first year high school classes, and has the advantage of being short enough for a term and long enough for a year. Hoffmann, poet, musician, government official, lawyer, writer, contributes to this year's crop his *Meister Martin*, which deals with a somewhat similar theme as the "Meistersänger von Nuremberg" of Wagner, who received much of his impulse from Hoffmann. The text suffers from too much introduction, a disease common to books of this variety, but will prove valuable material for a second or third year high school class. Easy reading, of primary character, is to be found in *Am Anfang*, in thirteen selections from Grimm's tales, the children's pabulum for more than half a century. Of a similar nature, with a trifle more difficult German, is the *Neue Märchen*. Of material pleasing to students of the early years of high school is Kellar's story of the Swiss political agitations of the last century, well interwoven in the interesting love story. A more serious work of a military character is Von Moltke's *Die Beiden Freunde*. More subtle, it is meant for older students. Girls of the younger high school grades will enjoy a thoroly feminine story of the three daughters of Rat Kirsten, of the Weimar of Goethe's day. A conversation book in which real people speak naturally about real things is certainly a *rara avis*. Such is Lambert's *Alltägliches*. It has a commonsense choice of subjects, and particularly does it make an effective appeal to the average boy's daily interests. Only one drama lies before us in textbook form, but that is a masterpiece. Grillparzer's *Die Ahnfrau*, the first published work of the greatest Austrian dramatist, contains within it all the strange elements of his character—his gloom, his tragic intensity, his weirdness, his sensing of the fate motive of life. Only mature students will feel the drama understandingly. A new undertaking in the field of German grammars would seem to be venturesome in these days. Bacon's is therefore all the more a surprise. It proves to be an excellently arranged grammar, compact in form, strongly emphasized in content. An additional merit lies in the inclusion of good first year reading selections.

MOSS CAMPION.
From Brown's "Alpine Flora."

Spanish

Spanish Correspondence. By E. S. Harrison. $1.00. *Schilling's Don Basilio.* Ed. by Frederick Zagel. $1.00. Holt.

Health's Modern Language Series. Tamayo's Lo Positivo. Ed. by Philip Harry and Alfonso De Salvio. 45 cents. Spanish Composition. By Alfred Remy. 60 cents. Gutierrez's El Trovador. Ed. by H. H. Vaughan. 40 cents. Heath.

Spanish Prose Composition. By G. W. Umphrey. 75 cents. *Cuentos Modernos.* Ed. by Albert Bushnell Johnson. 60 cents. American Book Co.

For those who would speak Spanish with ease and accuracy, it would be hard to find a book more eminently practical in its plan and in all its details than Dr. Umphrey's *Spanish Prose Composition.* It embraces interesting topics suitable for reading, translation and conversation, and is especially fitted for classes in conversation. There is a very full vocabulary, both in Spanish and English, for which, however, there is not any apparent necessity, as all the words are explained in the text, and a fairly diligent student will hardly need it. *Don Basilio* is an entirely original work, written in dialog form, and in an easy, colloquial style. We are first introduced to the hero in his bedroom, then follow him to breakfast, then visit with him his tailor, etc. In this way a wide range of subjects is introduced, each being illustrated by abundant notes. The second part deals with private and business correspondence, bills of exchange, receipts, etc., and there is a very complete vocabulary. The method is original and natural, and the idioms are introduced in an effective and pleasing manner. The student who has thoroly mastered "Harrison's Correspondence" ought certainly to be able to write a letter in Spanish on any ordinary business subject. It contains specimens of every imaginable class of correspondence, a fine collection of idioms, and concludes with a number of "Letter Outlines," which add considerably to the value of the work. Remy's *Spanish Composition* will serve a cultural as well as a practical purpose. The selections presented for translation deal exclusively with Spain, Spanish life, customs and institutions, and thus the student is led, almost unconsciously, into the very life and spirit of both the foreign language and the foreign people. Those acquainted with the rather inane libretto of Verdi's "Il Trovatore" will be agreeably disappointed by a perusal of Gutierrez's *El Trovador,* upon which it is based. It is a romantic drama, in which genuine humor is combined with dramatic intensity. The present edition is in many respects excellent. The notes, however, might be fuller; there is a paucity of allusions to manners and customs, the ignorance of which often increases the difficulties of grammar and vocabulary for the student. Tamayo y Baus's play, "Un Drama Nuevo," has been heard in America, but his greater *Lo Positivo* is but little known outside Latin countries. The editors have done their part of the work in a scholarly and effective fashion, and the introduction, notes and vocabulary are sufficient to make the path of the reader easy.

Mathematics

Elementary Algebra. By J. W. A. Young and L. L. Jackson. Appleton. $1.12.
High School Algebra, Elementary Course and Advanced Course. By H. E. Slaught and N. J. Lennes. Allyn & Bacon. $1.00 each.
High School Algebra. By J. H. Tanner. American Book Company. $1.00.
Elementary Algebra. By Frederick H. Somerville. American Book Company. $1.00.
Graphic Algebra. By Arthur Schultze. Macmillan. 80 cents.
Elements of Plane and Spherical Trigonometry. By James Howard Gore. Putnam $1.20.
Differential and Integral Calculus. By William F. Osgood. Macmillan. $2.00.

Intruction in mathematics has become so completely standardized that great individuality and diversity in text-books cannot be expected. Even if an original and revolutionary method of presentation occurred to the well-regulated mind of the professional teacher the exigencies of the curriculum and the rigidity of college requirements would keep him from the temptation of putting it in a book. Progress in the teaching of mathematics has to be made by concerted action such as is now being provided for by various committees and associations, and the competition between publishers keeps the text-books of any year in close rivalry. To make an adequate distinction between the six algebras before us would require at least a year's use of each in the schoolroom in order to detect the defects which we may presume they all contain and to disclose their comparative merits. They have obviously all felt the pressure that has in recent years been brought to bear upon the mathematical instructor by physicists and engineers, and they have all responded to it, tho in various ways and in different degrees. Mathematics, oldest and most venerated of the sciences, and in times past the most haughty, has been compelled to abrogate her aloofness, and minister more directly and specifically to needs of the newer sciences and of everyday life. The distinctions, more historical than logical, between the branches of mathematics

that go by different names are breaking down and the pupil is trained to use any method that will get his result with a freedom that would shock the purists of the past. Of the text-books on algebra above mentioned the two that will be of most interest to the teacher who is in search of something new are those of Young and Jackson and of Slaught and Lennes. Both give unusual attention to the practical use of algebra in physical science and in commercial problems. Both are careful to keep in touch with arithmetic on the one hand and geometry on the other. It is becoming daily more important that every educated person should become familiar with graphic methods, for they are not only used in all the sciences, including now the biological, but are even appearing in newspapers and magazines in such elementary forms as temperature charts and rows of men of various hights and costumes representing the growth of population. All the algebras in hand devote considerable space to graphs, Tanner differing from the other three in confining the subject to a separate chapter, and we have also a welcome little volume by Schultze especially devoted to it. In Gore's *Trigonometry* condensation and simplification are carried to the extreme. Osgood's *Calculus* is the product of Harvard experience for the last twenty-five years and of the influences which we have outlined above as affecting the teaching of all mathematics.

Physics and Chemistry

The Mathematical Theory of Electricity and Magnetism. By J. H. Jeans. $4.50. *Modern Electrical Theory.* By N. R. Campbell. $2.25. Putnam's.

Practical Physics. By W. S. Franklin, C. M. Crawford and Barry Macnutt. 3 vols. Macmillan. $1.00 each.

An Intermediate Course of Mechanics. By Alfred W. Porter. Dutton. $1.50.

Physics for High School Students. By Henry S. Carhart and Horatio N. Chute. Allyn & Bacon $1.20.

A Text-Book in Physics. By William N. Mumper. American Book Co. $1.20.

General Physics. By Henry Crew. Macmillan. $2.75

First Priniciples of Chemistry. By R. B. Brownlee, W. J. Hancock, R. W. Fuller, Michael D. Sohon and J. E. Whitsit. Allyn & Bacon. $1.25.

A College Text-Book of Chemistry. By Ira Remsen. Holt.

Exercises in Elementary Quantitative Chemical Analysis. By A. T. Lincoln and J. H. Walton. Macmillan. $1.25.

The separation of this paragraph from the last is simply for convenience, for, as we have just seen, works on pure mathematics are making extensive use of physical formulæ and works in physics are as nearly mathematical as they can be. Both among the elementary and advanced books on either side this imaginary line pages could be matched which would scarcely be distinguishable in content. The most important book in the field of physics of the year—or of many a year—Jeans's *Electricity and Magnetism,* is the most purely mathematical. It is a worthy successor of Clark Maxwell's treatise, and is more

WIND RIPPLES ON THE SURFACE OF A SAND DUNE.
From Salisbury's "Physiography."

useful, because it is in closer touch with recent conceptions of electricity and because it is more comprehensible and connected. The mind of Maxwell worked at such a high potential that it leapt across spark gaps quite impossible to the ordinary individual. Princeton has done America a service by the capture of Professor Jeans, and we hope he can be kept contented on this side the water. Another book of a similar character, also from the Cambridge University Press, is devoted to the exposition and discussions of the modern theory of the electron, and in this Mr. Campbell calls attention to the synthesis of the sciences in the following words:

"The barriers which have been erected between the various branches of science by the writers of text-books have been broken down: optics, heat and mechanics seem likely to become in the near future special departments of the all-embracing science of electricity; the gulf which separated the two halves of the study of matter, physics and chemistry, has been bridged."

Professor Franklin, of Lehigh, is as good at managing a laboratory as he is at writing text-books, and the methods he has worked out in the course of his twenty years of experience in the handling of advanced students in experimental work he has given in the three volumes on *Practical Physics,* the first dealing with Mechanics and Heat, the second with Electricity and Magnetism, and the third with Light and Sound. Carhart and Chute's *Physics* has one great advantage over all new competitors; everybody knows that "it will work," for it has been tried in over 4,000 schools. The revised edition, fortunately, is not materially changed. Mumper's new *Text-Book in Physics for Secondary Schools* is similar in style and scope, but does not devote so much space to experiments. It reads well and has made a special effort to be up to date. We see no advantages in Crew's *General Physics* over other well-known works in the market, either in arrangement or new material. It is doubtless preferable that a text-book should err on the side of conservatism, still it seems to us that a volume of this size could have found space for the new theories of the constitution of electricity and of matter, and that college students ought not to be left in ignorance of such things as wireless telegraphy, Röntgen rays and radium. *First Principles of Chemistry* is a cooperative work originating in the appointment of a committee of New York high-school teachers to prepare a syllabus for an elementary course. The result is a well balanced, clearly written and eminently practicable book. The most striking novelty is the skilful employment of photographs of apparatus and processes. The new edition of Remsen's *College Text-Book of Chemistry* shows no marked changes. Lincoln and Walton's *Quantitative Analysis* is intended especially for students in agriculture, and includes the official methods for foods, fertilizers, soils, etc.

Nature Study and Biology

Nature Study Made Easy. By Edward B. Shallow and Winifred T. Cullen. 40 cents. Macmillan.
Nature-Study. By Frederick L. Holtz. Scribner's. $1.50.
The Study of Nature. By Samuel C. Schmucker. Lippincott. $1.25.
Plant Physiology and Ecology. By Frederic Edward Clements. Holt. $2.00.
A Laboratory Manual of Zoology. By Margaretta Burnet. 50 cents. *A Text-Book of General Physiology and Anatomy.* By Walter Hollis Eddy. $1.20. *Elements of Biology.* By George William Hunter. $1.25. American Book Co.
Alpine Flora of the Canadian Rocky Mountains. By Stewardson Brown. New York: Putnam's. 352 pages, 79 plates from photographs and water colors. $3.00.
Sport of Bird Study. By Herbert K. Job. New York: Outing Pub. Co. 288 pages and 130 pages from photographs. $2.00.
Our Bird Friends. By G. F. Burba. New York: Outing Pub. Co. 152 pages, 10 colored plates. $1.00.

Shallow and Cullen's new book is a series of lessons for fourth grade of New York City schools. It is essentially a reading book. It is true that the last part has notes for practical work, but the form of the book will lead many teachers to encourage reading more than observing. While it may for a time be useful for unprepared teachers, it is certainly not going to help much in solving the most pressing problems of nature study for city schools and in convincing the skeptical ones that nature study deserves to be an integral part of elementary education. Holtz's *Nature Study* is the most important nature study book of the year. It is a manual for teachers and for students in training schools. Part I discusses principles and methods. Part II is devoted to subject matter of a biological nature, placing emphasis on life histories and habits and relations to environment and practical bearing on human life. Part III outlines a good

course for eight grades. The book is a valuable contribution to the nature study movement, and deserves to be read by every teacher interested in such work. Schmucker's *Study of Nature* is a very comprehensive and practical volume for teachers, and satisfactorily meets the criterion laid down by the author, that a good nature study book sends us out into the open to see for ourselves instead of making us content to study nature in the library. Special attention is given to the arrangement of the course to correspond with the material available at the different seasons of the year, and to the question, often still more difficult, of how to get the subject into a crowded curriculum. The author ranges from toads to stars, and includes plants, fishes, insects and domestic animals. The volume is illustrated with many text sketches and adorned with four color plates. Clements's *Ecology* is for second courses of botany in colleges. As a clear presentation of the relations of plants to the various aspects of environment the book is excellent and will undoubtedly long remain a standard work for students of this phase of advanced botanical study. There is nothing strikingly new in Burnet's *Manual,* and it is really another addition to the long list of high school manuals copied from college courses in zoology. Like many of its rivals, there is too much attention to the details of technical morphology, including its still more useless (in secondary education) technical terms. This is probably in response to the formulated demands of the times, but the high school world is now looking for the author and publisher who dare cut loose from the traditional presentation of the subject and give the pupils more zoology which is worth the time of the average pupil. Eddy's *Physiology* is a radical departure from the usual high school book in this subject in that it treats human physiology as part of biologic science and not as an isolated subject. The book will be best used as a supplement to courses in botany and zoology. Hunter's *Biology* attempts to correlate botany, zoology and human physiology, especially in harmony with the requirements of the syllabus of the New York State Education Department. The author has undertaken an exceedingly difficult task, and high school teachers of biology will certainly be grateful for the help which the book will give in relating the three phases of biology in high school teaching. The *Flora,* by Dr. Brown, of the Philadelphia Academy, is a valuable and attractively illustrated guide to the plants of general interest found in the Canadian Rockies and Selkirks. It will prove a *vade mecum* for the botanically inclined visitor to the resorts along the Canadian Pacific Railway, between Banff and Glacier. A survey of the book brings out the interesting fact that the plants of the Rockies in this region are adapted to cold and drouth, while those of the Selkirks are fitted to more humid atmospheric conditions. Also, it is remarkable that there are so many close family and generic resemblances to plants in the European Alps, but with a few exceptions the species are quite different. Of making many bird books there seems to be no end, and authors more numerous than ever are taking advantage of the unlimited possibilities afforded by the marvelously variable "personalities" and adaptability of birds. Among the latest books the *Sport of Bird Study* deserves most commendation because it shows boys in story form how much pleasure and sport may be found in studying birds in any ordinary country place. The book is attractive in style and illustrations, and its effect ought to be tested on many real, live American boys. *Our Bird Friends* is a plain compilation of well-known facts about twenty-three common birds. The illustrations are merely ten cents' worth of the colored pictures used in hundreds of schools. As a condensed account of interesting facts the book is well worth one dollar and the time required to read it.

Philosophy, Psychology and Education

Pioneers in Education. Horace Mann and the Public School in the United States. Pestalozzi and Elementary Education. Herbart and Education by Instruction. Herbert Spencer and Scientific Education. Rousseau and Education from Nature. Montaigne and Education of the Judgment. By Gabriel Compayre. Crowell. 90 cents each.

Departmental Teaching in Elementary Schools. By Van Evrie Kilpatrick. 60 cents. *The Management of a City School.* By Arthur C. Perry. $1.25. *School Reports and School Efficiency.* By David S. Snedden and William H. Allen. $1.50. *The Kindergarten in American Education.* By Nina C. Vandewalker. $1.25. *Principles of Secondary Education.* By Charles De Garmo. $1.00. *The Psychology and Pedagogy of Reading.* By

Edmund Burke Huey. $1.40. *A Student's History of Philosophy.* By Arthur K. Rogers. $2.00. *A Brief Course in the History of Education.* By Paul Monroe. $1.25. Macmillan.

Conditions and Tendencies of Technical Education in Germany. By A. H. Chamberlain. 50 cents. *Our Children, Our Schools and Our Industries.* By A. S. Draper. 50 cents. *Cornell Study Bulletins for Teachers.* 1. Art Appreciation. By Charles De Garmo. 2. High School Observation. By G. M. Whipple. 40 cents. Bardeen.

Modern Classical Philosophers. By Benjamin Rand. $2.50. *Home Schools and Vacation.* By Annie Winsor Allen. $1.25. *A Theory of Motives, Ideals and Values in Education.* By William E. Chancellor. $1.75. Houghton, Mifflin.

The Life and Works of Christopher Dock. By Martin G. Brumbaugh. $5.00. *The Educational Process.* By Arthur Cary Fleshman. $1.25. Lippincott.

Psychology. By James Rowland Angell. $1.60. *Elementary Experiments in Psychology.* By Carl E. Seashore. $1.00. Holt.

Moral Training in the Public Schools. California Prize Essays. By C. E. Rugh, T. P. Stevenson, E. D. Starbuck, Frank Cramer and G. E. Myers. $1.25. *Social Education.* By Colin A. Scott. $1.25. Ginn.

The School Master. By Arthur Christopher Benson. Putnam. $1.25.

Mind in the Making. By E. J. Swift. Scribner. $1.50.

Administration and Educational Work of American Juvenile Reform Schools. By David S. Snedden. Teachers' College. $2.00.

books of the past year belong in some measure to the old *régime,* but many of them show most hopeful signs of being inspired by the new light. To the latter class belongs the second volume of De-Garmo's *Principles of Secondary Education,* a book which is written in the light of modern psychology by one of the most clear-sighted of American educators. The first volume of the series, which we reviewed last year, was devoted to a discussion of the principles of secondary education; the present volume is devoted to a study of the methods and processes of instruction in secondary schools. It is designed primarily as a textbook for university classes, but will be of service to all teachers interested in secondary instruction and doubtless will do much toward making high school teaching rational and scientific. Chancellor's *Motives, Ideals and Values in Education* is a genuine discussion of the basic principles of education. The author, after pointing out what he considers the causes of the failure of our education in the past, names the sciences which should contribute the principles for educational philosophy to guide us in the future. Altho there is much in the book that is the mere *ipse dixit* of the author, it is rich in suggestion and on the whole is a broad and philosophic treatment of the

YOUNG ORCHARD ORIOLES.
From Job's "The Sport of Bird Study."

Educational doctrine in the past has been largely a chaos of personal opinion, and educational method has been of that empirical, rule-of-thumb nature that was characteristic of primitive medical practice. Conditions are slowly changing: the day is dawning when the fundamental principles of education will be established facts of the biological and sociological sciences, and educationad method will be prescribed by genetic and experimental psychology. The educational

subject. Swift's *Mind in the Making* treats of neither general principles nor method, but is a plea for a careful study of the individual child by the teacher and shows what this study should be and how conducted. Altho general laws may be established to serve as a basis for method, each child is to some extent a special case and demands special consideration and treatment. The book is full of examples of boys who were considered weak-minded and worthless by their teachers but who later as men became leaders in thought and action. The tendency in education has been toward formal, routine system; the individual has been sacrificed to a course of study. Professor Swift makes it clear that teachers should have a good training in genetic psychology to be able to understand the children under their charge and deal wisely with them. In the *Psychology and Pedagogy of Reading,* which was discussed editorially in THE INDEPENDENT of April 30th, Huey has collected the results of all the experimental work on the mechanical and mental processes involved in reading; he gives a history of reading and reading methods and an exhaustive treatment of the pedagogy of reading, including a criticism of present-day methods. The author has done for reading what ought to be done for every branch of study. Not only those interested in technical education, but all who are interested in fundamental questions of education should read Chamberlain's little book on *Technical Education in Germany* and Draper's address on *Our Children, Our Schools and Our Industries.* The former explains what it is that makes Germany the leading industrial nation of the world and the latter is a broad and sensible treatment of the whole question of industrial training. Draper rightly thinks that *work* must be the salvation of our people, and that it is just as much the duty of the schools to train the masses for skillful work with their hands as it is to train for the professions. *The Management of a City School,* by Perry, is of special interest only to principals and supervisors in the larger cities, but it is a thoro treatment of their particular problems. The book not only ought to be a help to the young principal, saving him from many mistakes, but should prove of interest to the older principals as well. *School Reports and School Efficiency* is also concerned with the educational problems of a large city. The book is an outgrowth of the New York committee on the physical welfare of children; it will, however, prove helpful to all who are interested in determining the scope, outlay and results of American education. Another book growing out of the work in New York City is Kilpatrick's *Departmental Teaching in Elementary Schools.* Few books on school organization are more timely than this one, for departmental teaching is being tried or considered in all of the larger cities. Mr. Kilpatrick, having had a wide and varied experience in teaching, is well prepared to explain the merits of the departmental system of teaching. *Moral Training in the Public Schools* contains five essays selected from more than 300 submitted to the prize committee. Evidently the offer of $800 in prizes will not lead to the solution of the question of moral training. True, the essays contain much that is suggestive, but little that is fundamental. What we are looking for is the organization of moral training on a scientific basis, and this chapter in educational philosophy is yet to be written. Scott's *Social Education* is full of original and stimulating ideas on the development of the social activities in the school, especially thru self-organized group work. The most interesting chapters are those giving the results of his own experience and of his study of three famous schools of the new order, the Abbotsholme monarchical type, the George Junior Republic and the Dewey experiment in pragmatic education. The latest addition to Lippincott's Educational Series, *The Educational Process,* is one of the many efforts now being made to apply philosophic principles to educational practice, but is neither original in method nor brilliant in style.

Probably the educational historian will find interest in the *Life of Christopher Dock,* but the general reader will wonder at the attempt to rescue Dock from the sleep of oblivion. The case is quite different, however, with the *Pioneers in Education.* The names of these pioneers are familiar to everybody, and Compayré shows pretty well what each of the six

pioneers stands for in the history of modern education. Some readers, no doubt, would rather have had a strictly historical account unmixt with criticism and opinion. The volumes on Herbart and Spencer are most valuable for American readers. Monroe's large "Textbook" in the history of education is universally conceded to be the best published; the *Brief Course* is a condensation of the larger work and is designed for use in normal schools and small colleges; it is as well suited for that field as the larger text for the university. Miss Vandewalker has traced the history of the kindergarten in America. She gives a good account of the kindergarten movement and her book is valuable for this reason, but she overestimates the importance of the movement and fails to see the future decline, or at least great modification, of the kindergarten. David S. Snedden gives the history, explains the purpose and describes the working of the American Juvenile Reform Schools. These schools will soon be of such a high character that the normal boy will wish he were weak-minded or criminal. *Cornell Study Bulletin No. 1* will help teachers to train their pupils in the appreciation of the beautiful. Besides general principles and suggestions, the bulletin contains several studies in art which demonstrate the possibility of developing art appreciation. *Bulletin No. 2* was planned to aid candidates for the New York State Teacher's Certificate in the intelligent visitation of schools, but it contains much that would help the experienced supervisor and principal.

Rand's *Modern Classical Philosophers,* containing selections illustrating modern philosophy from Bruno to Herbert Spencer, will be useful to the teacher and general reader who does not have at hand the complete works of the philosophers. and can be very well used in connection with such a book as Rogers's *Student's History of Philosophy.* Seashore's *Elementary Experiments in Psychology* is different from all the other manuals in that it undertakes to get along without laboratory or apparatus other than pins, paper and scissors. This it does very well for the experiments selected, but the list could have been greatly extended Angell's *Psychology,* one of the leading texts written from the functional standpoint, is much improved in the new edition.

History

Bury's A Student's History of Greece. Ed. by Everett Kimball. Macmillan. $1.10.
A Short History of Rome. By Frank Frost Abbott. $1.00. *A Handbook for the Study of Roman History.* 25 cents. Scott, Foresman.
Outlines for Review. Greek History, English History, American History and Roman History. By Charles B. Newton and Edwin Bryant Treat. American Book Company. 25 cents each.
Tabular Views of Universal History. By George Palmer Putnam. Putnam. $2.50.
Atlas of European History. By Earle W. Dow. Holt. $1.50.
A Source Book of Mediæval History. Ed. by Frederic Austin Ogg. American Book Co. $1.50.
Seignobos's History of Mediæval and of Modern Civilization. Ed. by James A. James. Scribner's. $1.25.
An Introduction to the History of Modern Europe. By Archibald Weir. Houghton, Mifflin. $2.00.
The Roman Empire, B. C. 29-A.D. 476. Story of the Nations Series. By H. Stuart Jones. New York: G. P. Putnam's Sons. $1.35.

Dr. Everett Kimball has worked over Bury's excellent *History of Greece,* mainly with the idea of making it smaller by excisions and rearrangement. There are a few additions, especially "a large number of new maps." One of its excellencies is its cheapness. Abbott's *Short History of Rome* is especially timely, in view of the great interest elicited by the excavation of the Roman Forum. It is accompanied by a small handbook of 48 pages, serving as a synopsis of dates and facts. Newton and Treat, of Lawrenceville School, supply in the shortest compass outlines of Greek, Roman, English and American histories which cannot fail to help beginners, especially in preparing for examination. It is worth while to note that one of these diminutive books, that on American history, has a index of 17 pages. *Tabular Views of Universal History,* compiled by George Palmer Putnam, is continued to date by Lynds E. Jones and Simon Strunsky. The older edition has well served many a scholar. "In the edition now presented, while the scheme and arrangement of the original editor have been left unchanged, the entries have been carefully revised and in part rewritten, and the record has been brought down to date. The changes are so considerable as to necessitate the resetting of the entire volume." It is quite true, as the revisers remark, "that the proper way to study history is to trace the relations with each other of the peo-

ples scattered over the face of the globe." The arrangement adopted is generally, but not always, in six parallel columns, e. g.:

Progress of Society|The Jews|Asia|Africa|Greece|Rome

For the layman studying universal history some such arrangement is a godsend wellnigh indispensable. And now comes an *Atlas of European History* containing thirty-two colored maps and eighteen sketch maps, illustrating various historical phases, by Earle W. Dow. With the *Atlas* and the *Tabular Views* one can carry in his hands universal history and geography. It is not improbable that the conjunction was designed. Two books on medieval history, one a *Source Book* of rare merit, and another a translation from the French of Seignobos, bring us to Weir's *History of Modern Europe,* of which but for lack of space much might be said in praise.

Probably no more competent writer could be found to tell the story of the Roman Empire than Stuart Jones, who, like Eugenie Strong, has turned from Greek to Latin. It is frankly stated that Julius Cæsar was head and shoulders above all the Emperors, a man of commanding genius. Augustus was a different type, a plodder who followed the leadings of circumstances. "He possest the infinite tact and patience which succeed where genius fails." From the outset his court, made up of his relatives, was full of debauchery, in which the women took a conspicuous part. Trajan was somewhat better, but he suffered an eclipse. "Hadrian was the only man of genius amongst the Emperors of Rome." Marcus Aurelius was a bright light, but was very introspective. His son, Commodus, was vicious in the extreme. Half of the Emperors seemed insane.

Music

The Art of Singing and Vocal Declamation. By Sir Charles Stanley. $1.25. *The High School Song Book.* Compiled by Edward J. A. Zenier. 85 cents. Macmillan.

Outlines of Music History. By Clarence G. Hamilton. $1.50. *Counterpoint Simplified.* By Francis L. York. $1.25. *Half-Hour Lessons in Music.* By Mrs. Hermann Kotzschmar. $1.00. *Music Club Programs from All Nations.* By Arthur Elson. $1.25. *The Art of Vocalization.* Ed. by Eduardo Marzo. 18 parts, 75 cents each. Ditson.

Harmony and Ear-Training. By Wiliam Alfred White. $1.50. Silver, Burdett.

Hymns and Tunes for Schools. Ed. by the Rev. Herbert B. Turner. 50 cents. *Folk Dances and Games.* By Caroline Crawford. $1.50. *Graded Games and Rhythmic Exercises for Primary Schools.* By Marion Bromley Newton and Ada Van Stone Harris. $1.25. *The Song Series, Book I.* By Alys E. Bentley. 35 cents. Barnes.

The beginner in vocal study, for whom it is intended, will find Sir Charles Santley's book interesting, first of all, but also helpful. It recounts in pleasant fashion the experiences and lessons of a long career as a public singer, and contains a deal of sensible advice. Its topics range from the choice of a teacher to the use of tobacco. There are practical hints on acting, rehearsal and performance. Sir Charles is above all rational in his writing. He is a follower of Garcia, but he thinks the average pupil nowadays gets too much talk about anatomy—he would not mix much "surgery" with "singing." A post scriptum of several pages is devoted to a warning against flowers, either growing or cut, when "confined in the space of an ordinary room." To singers particularly, the eminent baritone contends, they are injurious. Strong-scented flowers, which he says "generally have a very bad effect on most people's digestive organs," always make his voice "husky even to hoarseness," and he cites Sir Morell Mackenzie as authority for the assertion that they paralyze the nerves of the throat. Of the four new volumes recently issued in Messrs. Ditson's Music Students' Library, Professor Hamilton's *Outlines of Music History* is a concise survey of the whole field of musical development presented in the light of recent research and comprest into a serviceable textbook for class use; Mr. York's treatise is a textbook in simple strict counterpoint for the average student of music; Mrs. Kotzschmar's book bears the explanatory sub-title, "Class Book for Beginners at the Piano," and Mr. Elson's *Music Club Programs* gives an historic outline of each national school of music, with questions for study, and a series of programs for the use of clubs and other organizations. All are good. Mr. Elson's book is the most novel in conception and undoubtedly meets a genuine need. His programs are judiciously made and his choice of pieces is almost always excellent. Decidedly novel is the successful combination of two branches

of musical study in Professor White's *Harmony and Ear-Training*, and as efficient and comprehensive as it is novel; a most serviceable and valuable textbook. In *The Art of Vocalization* Eduardo Marzo has compiled and edited a series of graded vocal studies for all voices, selected from the works of celebrated masters. Dr. Turner's Sunday-school hymnal contains a good collection of strictly orthodox pieces; and Mr. Zeiner's *High School Song Book* is especially adapted for use in boys' schools. The folk dance is an ideal natural form of exercise, and an authoritative handbook of such games for the use of schools has long been a desideratum. That is now admirably supplied by Miss Crawford's book. *Graded Games and Rhythmic Exercises* would be found a valuable help by every teacher of primary schools, and Miss Bentley's song book is filled with pleasant ditties for very little singers.

Miscellaneous

An Introduction to Geology. By William B. Scott. Macmillan. $2.60.

Physiography for High Schools. By Rollin D. Salisbury. Holt. $1.50.

Mathematical Geography. By Willis E. Johnson. $1.00. *Physical Geography.* By M. F. Maury and Frederic W. Simonds. $1.20. *Laboratory Lessons in Physical Geography.* By Lu Lester Everly, Ralph E. Blount and Calvin L. Walton. 56 cents. American Book Company.

The World's Peoples. By A. H. Keane. Putnam. $2.00.

The Scope and Content of the Science of Anthropology. By Juul Dieserud. Open Court Publishing Co. $2.00.

Economics for High Schools and Academies. By Frank W. Blackmar. Macmillan. $1.20.

Introduction to the Study of Economics. By Charles J. Bullock. Silver, Burdett. $1.28.

Colonization. By Albert G. Keller. Ginn & Co. $3.00.

Educational Wood Working for School and Home. By Joseph C. Park. Macmillan. $1.00.

Harper's Indoor Book for Boys. By Joseph H. Adams. Harper's. $1.75.

Swedish Grammar and Reader. By J. S. Carlson. H. W. Wilson Company.

Practical Bookkeeping. By Carlos B. Ellis. Allyn & Bacon. $1.35.

Scott's *Introduction to Geology*, revised at the end of ten years of active service, is now extended to over 800 pages, largely by the new pictures. Maury's *Physical Geography* will no longer serve as a covert for the mischievous pupil, for it has been brought to a handy size in the new edition. Salisbury's *Physiography for High Schools* is a condensation of his larger work and has the same merits of fresh material and thoro illustration. It contains no directions for laboratory work, so may well be supplemented by Everly, Blount and Walton's exercise book, which is interleaved with blank pages, maps and cross-section paper for the pupil's notes and answers to questions. Is the teacher in geography prepared to answer all the questions that her inquisitive pupils may happen to ask about different systems of map projection, the use of the analemma, the calculation of ecclesiastical calendars, etc.? If not, she should have a copy of Johnson's *Mathematical Geography* handy as an insurance of reputation. Keane's *World's Peoples* is also a convenient school reference book, because it contains more information about the characteristics of different races, their beliefs and customs, than any other book of its size, as interestingly written as such condensed matter can be, and abundantly illustrated. Dieserud's bibliography of anthropology will guide the student to the sources of further information. The two textbooks on economics that we have at hand are much alike in style, extent and point of view, altho one comes from Harvard and the other from Kansas. Both are rather conservative, but moderate and fair-minded in the discussion of critical questions. Professor Bullock's book has been in use for over ten years and this is its third revision. A new educational field is covered by Professor Keller's college textbook on the history of *Colonization*. Our universities are beginning to train men specifically for colonial work, and those of us who remain at home are interested in the effect of the colonial relation upon the subjected race and the home country. This comprehensive work will thus satisfy a double need. *Educational Wood Work* gives a classification of woods, description of tools and directions for exercises. In this connection we must mention Harper's *Indoor Book for Boys*, which ought to be in every school library and wherever else there are boys who like to make things. It includes not only woodwork of all kinds, from gymnasium apparatus to furniture, but metal work, bookbinding, plaster casting and the like.

The Movement Against Co-Education at the University of Wisconsin

BY WARDON A. CURTIS

Author of "The Strange Adventures of Mr. Middleton."

A MOVEMENT for the segregation of the sexes has been in progress at the University of Wisconsin, for that matter is officially still in progress, since "progress" is the form of the report rendered by the faculty committee appointed to consider the desirability and feasibility of partial or complete segregation, and since the committee is still nominally in existence. It is difficult to see how the committee ever could have had other than a nominal existence, since an act of legislature makes unrestricted co-education mandatory. The portion of the public interested in such matters has been surprised that at the University of Wisconsin, hitherto supposed to be entirely satisfied with co-education, an anti-woman movement should arise enlisting an influential part of the faculty, including the president. What does it mean? Is co-education still on trial? Here we have it compelled to defend itself in one of the institutions where it was regarded as unassailable, in the very heart of that Central West where it has been strongest, in the eleventh institution to establish it and which has known it for thirty-four years.

In the middle of March it leaked out that President Van Hise had appointed a committee as noted above. This committee might have reported to the Board of Regents and segregation have been well under way before the supporters of the old order had time to do anything. This is the opinion of both sides of the controversy, tho in view of the mandatory act of legislature establishing co-education, the manner in which option could be exercised or the law evaded does not suggest itself. But both sides thought the law could be evaded. Learning of the movement, which they stigmatized as secretly engineered, the friends of co-education rushed into the fray. The press of the State has taken the side of co-education, not merely warmly, but violently, saying things not necessary to quote in a dispassionate attempt to consider this matter. The alumni who have put their opinions in print are likewise supporters of co-education. To allay the storm in the public mind the committee which was to report April 21st reported on the 13th. April 21st a bulletin was issued, bearing the official imprint of the university, repeating the report with amplifications and explanations. The report is principally to the purport that the subject under investigation being so important, the collection of convincing data so difficult, the committee is forced to postpone indefinitely the presentation of a report. The bulletin denies hostility to co-education, says that the aim of the committee was to strengthen "the co-education to which the university stands committed." The bulletin repeats the substance of the interview given out for the State press by President Van Hise when he found himself so bitterly arraigned. The president says that some time ago he noted that some courses being particularly attractive to women, such as literature, were frequented by them and apparently for that reason avoided by the men, while such courses as political economy, chosen largely by men, were avoided by the women. His idea was that men did not like to be in classes where women predominated and vice versa. Therefore he mooted whether separate classes ought not to be established in these courses in order that a large number of men might take literature and a large number of women take political economy. Then, too, professors had complained of a difficulty in presenting subjects before mixt classes. Ethics and literature, rather strangely, most persons would think, are

the subjects said to be under the greatest disability, ethics especially. So he had appointed a committee to formulate plans to remedy these evils by the introduction, if advisable, of a partial segregation.

Mrs. Helen R. Olin, a graduate of the university and wife of a professor in the law school, leads the defense of co-education, embodying her views in a pamphlet. With her are the press, alumni and citizens. Anti-co-education is so unpopular that few care to publicly espouse it. Altho a considerable body of the male students are known to be in favor of segregation, they are comparatively silent. It is significant that ex-President John Bascom, a professor at Williams before and since his fourteen years as president of the University of Wisconsin, graduate and professor at a monastic college, has come out warmly in defense of co-education in general and as it exists at Wisconsin. Mrs. Olin cannot understand President Van Hise's distinction that tho he may favor segregation, he is not opposed to co-education. She asks how segregation, the giving of instruction in separate classes, can possibly be called co-education. She believes the partial introduction of segregation is the beginning of a complete segregation, and that before that time the humiliation and social depreciation of women involved in this ejectment from the classes with the men will reduce the enrollment of women to those financially unable to go to other institutions—that is, practically a local attendance. In the matter of teaching ethics *et al.* she says: "There is not a department of human knowledge that may not be made offensive if offensively treated. Not what is said in the classroom, but the manner of its saying, determines whether or not it shall give offense to the mature mind, and nothing could be more indelicate than the advertisement in university matters that certain classroom exercises were for 'men only,' or 'women only.'" She quotes Dr. Thomas, president of Bryn Mawr, to the effect that women for economic reasons incline to certain courses. Men have confest that as women do better class work than they, they avoid these courses to escape the humiliation of being surpast by the women. Men, preparing for law, or in any event having the right to participate in public affairs, incline to political economy and allied subjects. Women, expecting to read more than they act, incline to literature courses.

April 21st the matter came before the Board of Regents, which first voted to direct that all consideration of segregation by the faculty be dropt. But the president, *ex-officio* a member of the board, pleaded that the committee be allowed to continue until its report is finished. Many believe the committee never will report, that the question will quietly lapse into dissidence without the acknowledgment of defeat of those who propounded it, with consequent mortification. But to make sure of victory, the co-educational forces do not intend immediately to abate their activities.

You have had some of the causes of this movement, as given by those back of it. Are there others? Shall we attempt to tell these professors that perhaps back of it all is one of those subconscious influences which they, men of learning, have not recognized? Shall we tell the alumni that their premises are partially false, and tell the students that their premises are nearly all false? How far is it a question, not of pedagogy, but sociology? How plainly is it mob mania, a mob of bearded savants, of spectacles and clean collars, responding to and mingling with another mob of fresh-faced boys in exaggerated trousers, walking defiantly and as if their feet hurt them?

I said the alumni favored co-education and that a considerable body of undergraduates opposed it. With the latter are a considerable body of younger alumni, not yet prominent enough in State affairs to command a hearing, and, merely stating, without prejudice, what, according to my lights, is a fact, seldom possest of enough commanding ability to command a hearing. The "old boys," fully a fourth of whom have "old girls" for wives, the men who count in Wisconsin, are in favor of co-education. But it must be admitted that in this as well as other matters they and the later university men speak different languages, argue from very different conditions. It is the same in all the other State uni-

versities which in a few years have undergone as radical a change as it would be to transform Amherst into Harvard and Williams into Yale. It was but yesterday that the University of Wisconsin was a small, transplanted New England college of four hundred, and today it enrolls four thousand, its freshmen alone numbering over nine hundred. In one respect it remains unchanged. The proportion of girls in the college of liberal arts continuing one-third, or between one-fourth and one-fifth for the whole university, a much smaller per cent. than at most co-educational institutions. In the mind of the alumnus the institution is still the small, friendly college he knew and the student of today can't realize that it was ever other than the big institution of the present. In another respect the alumnus belongs more completely to the past, and in this respect fails to penetrate with the eye of sympathy and understand what is really the matter with the student; naturally, too, since the student doesn't understand himself.

In the old days, the girls received a chivalrous respect which was at once that of America and the West, and more than that of Wisconsin and the University of Wisconsin. The girls were a moral police force. You would hear boys say: "I don't want to do that. It would kill me with the girls." This fear of feminine disapproval was a great deterrent of vice and coarseness. It was thruout the nation in a smaller, but decided degree. In those days, so far from smoking in the presence of a woman, no University of Wisconsin man would think of smoking on the campus. The girls past there. It was an arcadian life and will never come again. Some girls had their heads turned by too much attention, but that was the only detriment that the women suffered from co-education, unless too much party-going hurt their health. As years have gone on, women have lost their influence at the University of Wisconsin, even as in the nation. No great time ago men did not smoke in city restaurants. Now New York women demand that they—the women—be allowed to smoke in restaurants. One of the most famous woman's colleges has a rule forbidding cigaret smoking. We have not yet got to such a necessity in the co-educational colleges of the West. The loss of feminine influence at the University of Wisconsin has moved faster than in the nation. Previous to 1892, the average social standing of the women was superior to that of the men. The prominent families of the State sent their daughters there, as they have never entirely ceased to do. As girls have no opportunity to work their way thru college, only girls from families in good circumstances were present. While the class of '94 was in college, several of the faster youths decided that their sisters must go East. "We don't want 'em here knowing what we are up to and spoiling our fun." Other youths added to this the expressed disinclination to have their sisters there beholding what these fast youths did. While the sons of wealthy families continued to come and increased in numbers, the daughters went out of the State. The day of the girls as a moral police ended. The average social standing of the girls declined. The fraternity men who 'squired girls were more used to society than the girls, and the influence of one sex upon another was adjusted by the merits of tailors and dressmakers. The men, having more *savoir faire,* glittering before the eyes of the girls, formed the women. The old order has never returned, tho in recent years the prominent families have resumed sending their daughters in considerable numbers, and well-millinered girls resent, from the ground of assured social standing, slighting references to "co-eds."

There has been a demand for segregation and limitation of the number of women at the University of Wisconsin. This has been partly due to the presence in the faculty of young instructors from New England colleges who have told the male students of the superior attractiveness of the monastic college. It is partly a reflection of the hostility at Michigan and Chicago, and like the hostility there is partly due to a belief that the girls hurt athletics. And it is due to universal world causes, a consideration of which, in their bearing upon the college situation, I will postpone to the conclusion of my article. This demand has influenced faculties. Colleges afford the

most convenient examples of mob mania that we can produce. Of the same age and pursuits, in intimate contact, a college body is more quickly swept by a mental wave than any other body of human beings. That physical mobism is so prevalent in colleges has long been wondered at and deplored. That mental mobism is equally pronounced seems to have escaped notice. The faculty are at times affected. They hear and feel demands and at times are carried away by them, not realizing a possibly ephemeral and ill-advised sentiment. Particularly is this true in the West, where there is another factor at work. The executive of the Western State university, like the executive of the Western State, tends to hold his ear to the ground. Some executives of Western States, shrewdly divining in advance of actual formation a coming wave of popular opinion, have anticipated demands, and the more successful Governors have something of this Delphic power. The populace likes to be amused. The Roman rulers gave the people games. In place of gladiators and wild beasts eating unbelievers, we have reforms, *exposés* and breakfast foods. Our Western Governors give the people novelties in government, novelties in laws, which are sometimes merely novelties, sometimes novelties in that wrong race-old privileges of wealth and caste have to yield to common everyday rights of common everyday people. The State university president and faculty also give their subjects novelties, but what pleases the turbulent little educational principality may cause war with the general citizenship of the commonwealth back of the university. There was a demand for restriction of co-education at the University of Wisconsin. But it was inarticulate, proposing nothing, merely a yawp against the presence of women.

It would be natural for some one to inquire how we can say that the students don't know why they do these things and that the segregationists of the faculty do not know why they do these things. An unqualified statement to this effect is too strong, of course. But after hearing the reasons they give, you feel forced to look around to see if there isn't something else. The reasons seem inadequate. Co-education *per se* has not changed, and this same faculty a decade ago thought no ill of it. No one cared then whether political economy classes were one-fifth women and literature classes two-fifths men. I believe that the whole anti-co-education movement rests upon the present-day competition of women with men. It has gone so far that men are driven out even of machine shops by women. There are even automobile factories, as there were bicycle factories before them, where almost the whole force is composed of women. Think of that. Man is being pushed in all but the coarsest kind of labor—dangerous occupations. Agriculture and transportation are almost all that remain unquestionably his. The one important, transcendently important, the great crucial fact of today, for the future of the race lies in it, is that woman deprives man not merely of his former opportunities for employment, but of herself. I do not believe it is necessary to enlarge upon and dilate this thought. The college girl is visibly preparing herself to compete with the college boy and live without him. The income which his predecessors could confidently expect to have and share with a woman, he sees cut in half by the women. That they, too, are helpless in this grave condition that has insidiously grown up, does not alter things. Misogyny is no mere college phenomenon. It is world wide and woman is hated solely because more and more man is prevented from loving her. We observe the thing in the mobile college community, because everything is easily discernible in the college community. The "old boy" of the University of Wisconsin, whose wife, the "old girl," had marriage in view as her ultimate destiny, is out of patience with the present-day student with his unchivalrous woman hostility. Co-education will not go. As an educational system it is no more under trial than before. But the social system of the white race is undergoing a profound change. There is the enemy. When in some way the competition of woman with man ceases, when the alliance of woman with man is resumed, you will hear no more of wars and rumors of wars with co-education.

MADISON, WIS.

The Teaching of the Classics

BY PAUL E. MORE

Author of "Shelburne Essays," Etc.

A GOOD deal has been written of recent years about the failure of our classical teachers to maintain their place in the educational field, and to any one familiar with the situation from within it is clear that these gentlemen have not only been brought down from their high pretensions but have been thrown into a state of sullen self-defense or apology, not to say panic bewilderment. Some of this criticism, we will admit, has been unjust. The college teacher of Greek or Latin can plead that his pupils come to him so ill-furnished that most of his strength must go to doing the work properly belonging to the preparatory school. And he can fairly boast that the classics, even as they are taught, still remain the best discipline offered by our colleges, training men to think clearly and to express themselves in orderly fashion as no other study has succeeded in doing. But it is also true that they are slowly losing this distinction, while they have failed to reach out into the higher sphere of ideas. It is a fact, I believe, that in all these years no one book of serious human interest has been produced by a classical scholar of this country. When you stop to think of it, and when you count the number of piddling text-books turned out annually, this is an utterly ruinous accusation. And the young men are not unaware of this disgraceful failure. I observe that at Harvard this year only a single student has come up for the doctor's degree in classics, and that his work is purely linguistic. *Quousque tandem?*

In this murky state of the educational atmosphere Prof. Irving Babbitt's "Literature and the American College" (Houghton, Mifflin & Co.) comes like a stroke of clear lightning. If our classical instructors have been in any doubt as to the growing sense of rebellion among thoughtful men against their ostrich-like attitude, they may get the needed enlightenment from these pages. For cutting satire nothing equal to this arraignment has been produced since Lowell's day. The book was not written by a member of the classical faculty and its survey is by no means confined to the classics, but it deals with them as the *fons et origo*. And it not only sets forth the evil of the present system of instruction, but points the way constructively to a wholesome reform. Starting with a definition of humanism as a disciplined balance of all the faculties and a state of equipoise between religious absorption in the one and naturalistic surrender to the many, Professor Babbitt then contrasts with that ideal Bacon's scientific humanitarianism and Rousseau's sentimental humanitarianism, and shows how these between them have gradually taken possession of the field of education.

Now the value of the classics lies first of all in the fact that more than any other study they are able to create that desired equipoise of mind between the one and the many. But to attain that result they need for our present life to be presented in a new manner, and to this exigency the keepers of the classical tradition have hitherto shown themselves blind. The purely linguistic and archæological ransacking of antiquity should always, of course, in any rational system of education, be kept in the background, necessary as a preparation but dangerous as a goal. As Quintilian said long ago: "These studies do no harm to those who pass thru them, but to those who stick to

them." Formerly there was less danger in such pedantry than now because always there was present the feeling that the wisdom of the world was bound up in these ancient books, and in a thousand different ways there was a continual and unconscious application of ideas to the criticism of life. Izaak Walton, in his account of Sir Henry Wotton as Provost of Eton, gives a beautiful example of this influence:

"He was a constant cherisher of all those youths in that school, in whom he found either a constant diligence or a genius that prompted them to learning; for whose encouragement he was (besides many other things of necessity and beauty) at the charge of setting up in it two rows of pillars, on which he caused to be choicely drawn the pictures of divers of the most famous Greek and Latin historians, poets, and orators; persuading them not to neglect rhetoric because Almighty God has left mankind affections to be wrought upon. And he would often say that none despised eloquence but such dull souls as were not capable of it. He would also often make choice of some observations out of those historians and poets; and would never leave the school without dropping some choice Greek or Latin apothegm or sentence, that might be worthy of room in the memory of a growing scholar."

That is not the manner of the present-day college president, nor is it primarily the fault of our teachers that this power of the classics as the unique repository of human wisdom has past away. A hundred years ago Freneau, our first poet, saw the change that was coming:

"This age may decay, and another may rise,
Before it is fully revealed to our eyes,
That Latin and Hebrew, Chaldaic and Greek,
To the shades of oblivion must certainly sneak;
Too much of our time is employed on such trash
When we ought to be taught to accumulate cash."

That other age has arrived, and some may think we are drilled even too strenuously in practical wisdom—whether we succeed or not in accumulating cash. But apart from any such common lowering of ideals, which may well be disputed, it has grown increasingly clear with time that wisdom and virtue did not cease with the writing of Greek and Latin, that the world moves from stage to stage, always with its new problems and its fresh solutions, and that by too much reverence for the past we may become blind to the present. Great literatures of our own age press upon us with their various interpretations of man's destiny, and in a certain sense we have all become students of history, not out of docile respect for what has been done and said, but as concerned with the unending process of change and development in which we are ourselves involved.

For such a shifting in the educational center of gravity our classical faculties are in no wise, or to a small degree, responsible. But they are censurable for their failure to adapt themselves to the change. They have been thrust from their pre-eminence as wardens of the sacred and stationary truth; instead of laying hold upon the new aspect of truth, they have clung desperately and almost despicably to their linguistic gerund-grinding and their archeological pot-hunting—infinitely skilled

". . . To chase
A panting syllable thru time and space."

And how magnificent is the field neglected! For if it was true in the old days that every road led to Rome, it is still the fact today that almost every path of history leads to Rome, and from Rome to Athens. There began our literature and our arts; in those two cities grew up that body of religious and philosophic ideas that were transmuted into Christianity and molded the new world; jurisprudence and the science of government are rooted in the same soil. It was but the other day I was talking with a distinguished sociologist who has no training in the classical languages and certainly no reason to be prejudiced in their favor. He had been expounding various advanced notions of sociology and predicting what was to be, when he stopped and remarked, with an odd lowering of the voice, "But do you know, all these ideas were discussed by Aristotle long ago!" There lie the sources. We have combined and added and recombined, but the beginnings are all there, and their influence in unobserved ways is still working upon us with incalculable force. On the men of our classical departments more than on any others it is incumbent to be familiar with the development of the centuries and to impart it in their instruction, not wholly or chiefly, perhaps, by direct historical teaching, but by inference and allusion and unpremeditated comparison, and the inevitable outflow-

ing of a mind stored with the learning of many ages. And such instruction might be not only attractive to large groups of students who are now repelled from their classes, but highly formative. Much of the flightiness of modern minds, much of the waste of our powers, is due to the fact that we look on too small a segment of the great circle of history; we misjudge human nature thereby and we lose sight of forces lying too deep for our hasty ken. To have the beginnings firmly fixed in memory, to have followed these forces thru the long unfolding of human history, gives a gravity to judgment, an ability to discriminate between ephemeral change and organic growth, a steadiness of purpose against the shifting winds of opinion, a total wisdom, that are not likely to come to a man from any other source.

It is thus, by the breadth of our view, that while engaged in the changing phenomenal world of the present, which Plato called the many, we may preserve the due humanistic balance. Nor would our inborn craving for the unchangeable pass unsatisfied. If much of Greek thought is valuable for what has grown out of it, there are achievements also in which they remain unsurpassed, seemingly unsurpassable, and to have trained the mind to an appreciation of these achievements is to hold forever after a touchstone to distinguish between the higher and the lower pleasures. No later writer of narrative verse has equaled Homer; no dramatist has ever surpassed Sophocles; no lyric poet ever sang more entrancingly than Sappho; no sculptor rivaled Phidias; no philosopher looked so deeply into the human soul as Plato. The work of these men is still a norm of taste, and the full and sane measure of artistic joy can be known only by those whose emotions have been trained to respond to these models. And who would ever guess this truth while sitting in the classical room of an American college?

If you ask why our classical teachers have failed to grasp their opportunities, many answers could be given. Perhaps the chief cause is their enormous ignorance. There are, no doubt, honorable exceptions, but as a body it is simply the truth that they have no solid reading outside of their prescribed field, and are hence incapacitated for the larger historical survey of their subject and for conveying ideas of life thru their instruction. In some cases this is due to laziness and intellectual ineptitude. More generally it is the result of a system of study which consumes all their strength over vicious or worthless philological monographs out of Germany; no man of ordinary capacity, for instance, can master the whole literature of the so-called Homeric question—most of it foolish or dishonest—and have time to follow the track of Homer in modern times. The classical men in our larger universities, who give the tone of these studies for the country, have been brought up under the philological system, and they perpetuate their kind, not only by their influence, but by the selection of their successors. The gist of the whole matter is briefly this: We want men in our universities to continue the great work of linguistic and archeologic investigation—against these in themselves there can be no proper complaint; they are indeed the basis of all the rest—but we must also have, if the classics are to remain alive, men not strictly philologians, who have a large philosophic and literary training, and by their wider view of the growth of ideas, can teach the classics so as to relate them to the great currents of history.

New York City.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Mr. Taft's Acceptance

MR. TAFT'S speech of acceptance is temperate and judicial in tone. But if readers are reminded by the manner of it that for several years he was on the bench, they must also acknowledge that his career has demonstrated his ability as an executive. A candidate for the greatest of executive offices, in this speech he virtually promises that his action in that office shall be determined by the principles of law, as to which no other presidential candidate has had more complete and exact information. These principles are also those of fairness in the treatment of contending men and issues, and in Mr. Taft's arguments and opinions there is repeated evidence of his desire to be fair and just.

His tribute to Mr. Roosevelt we believe to be entirely sincere. At the same time it is good politics, for it is true, as he says, that "the Republican party's chief hope of success in the present controversy must rest on the confidence which the people have in the party's declaration that it intends to continue his [Mr. Roosevelt's] policies." The enforcement of those policies is demanded by a great majority of the American people. If Mr. Taft had not emphatically commended Mr. Roosevelt's work and purposes, undertaking to carry that work forward, he would have invited defeat. But his course with respect to this matter, we are confident, was not determined by a desire to win the election. The policies have his sincere support.

Those who know the man and have read the speech must feel that the needed progress, if made under his direction, will be made safely and surely. This is indicated by what he says about the new machinery required for the maintenance of standards already set up, by the passages relating to railroads, and also by those concerning the supervision of trade combinations. With the present machinery, "only typical instances of prosecution are possible." The Interstate Commerce Commission must be relieved by the creation of an executive body charged with the business of railway supervision. This points to the regulation which is needed, but it is clearly shown by Mr. Taft's elaborate discussion of the proposed physical valuation of tangible railway property and of the several elements which, in his judgment, go to make up the value upon which a fair profit should be allowed, that his treatment of the great common carriers would be characterized by the strictest regard for justice.

His suggestions for the Federal supervision of industrial combinations are not sufficiently clear. In criticism of the Democratic plan he is effective, but his own views are somewhat nebulous. It is a very difficult question. Some time ago he expressed disapproval of the licensing system proposed by Mr. Roosevelt. Now he seems to be approaching an acceptance of it, but with misgivings. We predict that he will never find it wholly satisfactory. His explanation of the conditions and practices which make a combination an unlawful one is characteristically judicial. His denunciation of projects for the extirpation or destruction of combinations is evidence of his good common sense. It will be noticed, however, that he insists upon the sharp restraint of all unlawful Trusts and says that all persons engaged in maintaining them should be punished "with all the severity of criminal prosecution." By

such restraint and by official supervision (in ways not yet defined) he would preserve the wealth and power of the combinations for the public good. This is to be desired, and it may be that good methods for compelling it will be devised. To discover them will be a part of the next Administration's constructive work. We are unable to accept with complete approval all that he says about the relation of aggregations to competition.

It is quite probable that the removal of tariff duties on imported goods coming into competition with the products of Trusts would destroy not only the Trusts but also their smaller competitors, and that all would go down, as the late Speaker Reed once remarked, "in one red burial blent," but the question of tariff protection for Trusts, associated as it is with the question of sales of our Trust products at low prices abroad, cannot be dismissed in that way. There is an evil in this kind of protection, and the general public cannot be convinced that it does not exist. When a great combination, either by its own power or by agreement with smaller competitors, suppresses competition in prices at home under the shelter of the high tariff wall, and exacts all the duty will permit, one of the purposes of protection is defeated. We do not say free-listing would be a remedy. But there should be thoro official investigation, with frequent and full publicity, the effect of which might be very beneficial. Such inquiry and publicity would be timely now, when tariff revision appears to be at hand.

To our mind, the least satisfactory part of the speech is the tariff paragraphs. Like the tariff plank in the platform, these will doubtless be approved by all who have strenuously opposed revision. We regret that Mr. Taft did not name the duties that are too low, together with those that are too high.

The platform utterance about injunctions was of no account. Mr. Taft's two thousand words concerning labor are the most forcible part of his speech. Recognizing the right of workmen to form unions and to strike, he points out that non-union men's rights before the law are the same and are to be protected. In a judicial way he shows what has been settled by the courts as to what workmen may lawfully do in labor controversies, and what they may not lawfully do, marking plainly the permissible extent of boycotting. A clear explanation of the use of an injunction as a remedy is followed by criticism of the Democratic position and by an expression of Mr. Taft's own views as to giving notice. He would be willing to return to the original practice, which required notice in all cases. He suggests that in accordance with his party's platform a statute can be framed that shall specify exceptional cases in which notice may be withheld, provided that the duration of the injunction be limited. Asserting that the Democratic platform is disingenuous because it permits an inference that in the issuance of injunctions there has been discrimination against workmen, he says:

> "Our position is clear and unequivocal. We are anxious to prevent even an appearance of any injustice to labor in the issuance of injunctions, not in a spirit of favoritism for one set of our fellow citizens, but of justice to all of our fellow citizens. The reason for exercising or refusing to exercise the power of injunction must be found in the character of the unlawful injury and not in the character or class of the persons who inflict this injury. The man who has a business which is being unlawfully injured is entitled to the remedies which the law has always given him, no matter who has inflicted the injuries. Otherwise, we shall have class legislation unjust in principle and likely to sap the foundations of a free government."

No one can reasonably object to this doctrine. The demand for jury trials in cases of indirect contempt he condemns with more vigorous emphasis than is shown in any other part of his speech. In view of his explanation we do not see how the conclusion can be avoided that such a change would greatly impair the power and authority of the courts.

His perfunctory reference to the negro might well have been more specific. Evidently he was not seeking to conciliate hostile negro voters. There is nothing new in his remarks about the Philippines except his conviction that a limitation of free exports of sugar and tobacco will serve the interests of the islanders as well as those of our own producers. He insists upon a constant improvement in (not enlargement of) our navy, would rely upon diplomatic negotiation for the exclusion of undesirable Asiatic immi-

grants, and is inclined to favor the direct election of Senators. In his remarks about campaign funds he could have spiked a large Democratic gun by promising publicity before election, but on this point he is silent. Because of his judicial experience, his opinion that an income tax can be levied without amending the Constitution deserves consideration. But he would have no such tax until the tariff and internal taxes prove to be insufficient.

While the speech, because of Mr. Taft's loyalty to the President and his policies, will probably be acceptable to a large majority of the radical element of the party, it will at the same time be fairly satisfactory to conservatives. Anti-Bryan Democrats in the East criticise parts of it but commend the candidate. Average business men thruout the country will probably regard it with favorable opinions. It will not draw union workingmen or offended negroes to the support of the Republican ticket.

Justice Quick and Cheap

If Mr. William H. Taft has the habit, or shall acquire the habit, of hitting the bullseye as precisely in the center as he did in his remark the other day about "the greatest question now before the American public," he will make a President to be grateful for.

That greatest question, according to Mr. Taft, is the improvement of the administration of justice, civil and criminal, both in the matter of its prompt dispatch and the cheapening of its use. This statement the American people, the rich and the poor, the strong and the weak, the learned and the ignorant, the exploiters and the exploited, all know is true, and most of them have been looking for the man in high political station with sense and courage enough to say it.

But the problem, as Mr. Taft further says, is "very difficult." By what specific changes of law and procedure can we hope to accomplish so great and so difficult a reform? The specific way in which the rich man beats out the poor opponent in the courts is thru the tortuous and costly process of appeal. The powerful corporation, in particular, with its organized staff of legal advisers, can wait indefinitely for the outcome of any particular case. It is only one among hundreds, some of which may be terminated next month, some next year, some twenty-five years in the future. It makes no great difference which one is longest delayed, for the corporation enjoys perpetual life. But to the individual, whose days are numbered, promptness may be vital.

Yet, whenever it is proposed to cut off the right of appeal in cases involving less than $500, the cry goes up that the poor man must not be deprived of his right to get the decision of the Supreme Court of the United States, if he wants it. Mr. Taft rightly says that this argument is altogether specious, and that it defeats the real ends of justice. Actually, the poor man does not carry his case to the Supreme Court. He has nothing to gain and everything to lose by appeals, which his powerful opponent will take advantage of while he cannot.

This argument applies especially to civil law cases involving property considerations. The criminal law cases are somewhat different, but repeated appeals work mischief here also to the poor man and to the community, rather than to the powerful malefactor. It is not the poor and friendless man, charged with a serious crime, whose punishment is held up for years by exceptions, reviews and new trials. It is the man who, like Harry Thaw, can draw upon family millions for counsel fees and process expenses, who can thus put the community to endless cost and make the great mass of the citizens feel that "justice" is a travesty upon elementary principles of right.

So far as the civil cases are concerned, a real reform should, as a matter of scientific principle, be based upon that phenomenon of averages which is the foundation of the vast business of insurance. Without putting it in so many words, Mr. Taft hints at this when he says that the poor man could better afford to lose any case involving less than $500 than have it kept in court five or six years on appeals, even if he then wins.

It may sound brutal, but in fact it is not, as any intelligent man can easily satisfy himself upon reflection, to apply the same principle to criminal cases punish-

able by fines and imprisonment. In the first place, the vast majority of all men indicted for crime are professional and habitual offenders, who themselves make the risk and insurance idea the basis of their careers. They balance so many years "in" against a certain amount of plunder. Even in cases of innocence imprisonment is not escaped during appeal, and it would be sounder business policy for all accused innocent persons collectively to take the chance of a term on sentence after a single trial than to take the certainty of imprisonment during review and retrial, plus the chance of a term after that.

Only the cases involving the death penalty call for a different policy. The State should not take a man's life until he has had every reasonable chance to prove his innocence. At present we do not always give the poor and friendless man every reasonable chance, and we too often give the millionaire malefactor chances from which every element of reasonableness has been eliminated.

Governor Hughes

GOVERNOR HUGHES said on the 25th ult. that he would accept a renomination for the office he now holds. This was unexpected, for some time earlier he had privately exprest a desire to resume the practice of law. His change of mind was due mainly to the earnest requests of many good men in the State of New York who mourned over the approaching retirement of a Governor who has served the people so well and who has been uniformly loyal to an exceptionally high conception of the duties of his office. It was not due to the arguments of party leaders and bosses. They do not like the Governor, because they have never been able to use him, and because the reform legislation which he has so earnestly and successfully promoted has annoyed them by thwarting their schemes and reducing their profits.

And so these bosses whose political "business" has been so unprofitable during the Governor's first term have set out to prevent that richly deserved renomination which would give him an opportunity to carry forward reform projects which thus far they have successfully opposed. It may not be understood outside of New York, but it is well known in the State, that in substantially all of his reform legislation Governor Hughes has been at war with organization leaders of his party, with whose secret alliances and schemes he has necessarily interfered. Among the measures obnoxious to them which he earnestly supports and which, if he serves another term, the Legislature will undoubtedly be constrained to pass, are a direct primary bill and a ballot reform bill, aimed at the methods by which their power has been obtained and held. There is also a bill placing telephone and telegraph companies under the supervision of the Governor's new Public Utilities Commission. Moreover, Otto Kelsey, the Superintendent of Insurance, whom the Governor sought unsuccessfully to remove from office, will soon reach the end of his term, and the Governor, if re-elected, will at last be able to appoint in his place a man whose qualifications for the satisfactory performance of the important duties of the Insurance Department will be equal to those so clearly shown in the Banking Department by the new Superintendent there, Mr. Williams.

It is not difficult to perceive the motives which lead the party bosses to oppose the renomination of Governor Hughes. They give no weight to the fact that his renomination would unquestionably promote the success of the Republican national ticket, or to the indications that a failure to renominate him would invite defeat for both the national and the State tickets in New York. As some of them have said privately, their interests would be served as well at the State capital by a Democratic Governor as by Governor Hughes. This is one reason why the rank and file of the party should bestir themselves and insist upon the Governor's renomination.

There should be no question about it. In the interest of clean politics and good government he should be chosen by acclamation. Thruout his term his service has been an admirable example of devotion to the interests of the people. When menaced by defeat he has always called upon the people for their support and they have given it to him. If he cannot now urge them to work for his renom-

ination, in their own interest and without a word from him they should take up this work and carry it forward to success in the convention.

Diet and Efficiency

THE daily papers during the past fortnight brought the announcement that Sir James Crichton-Browne, a distinguished English authority on dietetics, had protested emphatically against the limitation in diet which certain physicians have been advising in recent years, and which has particularly attracted attention here in America. He declared that the abstemiousness advised by some, or rather the abstinence from certain kinds of food to the degree which those who are leading the new fad advised, is not only inadvisable, but is absolutely dangerous. There is no doubt at all many people overeat. There is, on the other hand, however, no doubt at all that the majority of people, led by instinct, eat only what is necessary to provide them with the nutritional material that will make up for the losses they suffer because of activity of mind and body. It is beyond all doubt that a certain number of people, because of oversolicitude about themselves and their health, actually undereat, and so run into the dangers of ill health which they are so intent on avoiding. In a word, Sir James thinks that the majority of people who bother their heads not at all about what they eat as to quantity, but satisfy their appetites according to their tastes, are more nearly right than the scientists who would reform certain features of modern dietetics, especially as regards the quantity of proteid foods eaten.

The reason given by this English authority in dietetics for his present emphatic protest is that the decrease of nutriment will undoubtedly impair the efficiency, physical and mental, of the individual. He does not hesitate to say that the energy and vitality of the successful races may almost be measured in a direct ratio to the animal food which enters into their diet. It is well known that the English peasantry, which has always had a much larger proportion of meat than the peasants of any other country of Europe, has in the past made better soldiers, and there was no hesitation in attributing the stamina of the English armies to English beef. Long ago Napoleon insisted that an army advanced on its stomach, and that the most serious failure was inadequacy in the Commissariat department. In recent years European armies have come to realize this, and the men in the actual service of the large standing armies are, as a rule, much better nourished than the class of people from whom they come, and this is considered not only advisable but necessary in order to keep the army up to the standard of efficiency.

It is now about five years since the question of the reduction of diet so as to enable people to continue their work on a much less quantity of nutriment than before came permanently under discussion among the physicians of the English-speaking world. While many took up the subject very seriously and were for a time enthusiastic in the belief that in this way a number of the chronic ills to which men are liable might be rendered less frequent and less bothersome, there has been in the last year or two a decided reaction toward the thought that the instinct of the race is, after all, the most important consideration and the best possible guide as to the quantity and quality of food to be equaled. Physicians have come to realize more and more that both the quantity and quality of the food required for the body are largely an individual matter. Two people of exactly the same weight and build will have very different tastes not infrequently, and often require quite different amounts of food even for the same work. The same thing is true of sleep. Some men cannot get along with less than eight hours, while some men maintain good health and strength and live long lives in spite of the habit of taking not more than four or five hours of sleep every night. We are very different heat engines in our necessities for fuel and repair, in spite of the fact that there may seem to be such similarity of structure as would indicate identical needs.

There is a constant tendency to declare that men eat overmuch, and there is no doubt that there are a number of people for whom this is true. As life has be-

come more luxurious in recent years the number of people who must take the warning in this matter to heart is constantly increasing. Men and women who are living so that they are frequently exposed to the temptation of eating things mainly because they are presented to them in very savory fashion and in great abundance must remember the dangers of instinct being overturned, or at least overruled, by fictitious appetites. Those who have nine-course breakfasts and twelve or fourteen course luncheons (of course, never thirteen courses), and fifteen-course dinners, frequently repeated, are almost sure to overeat. When the meal is preceded by a cocktail deliberately compounded with the idea of producing a congestion of the stomach, with consequent increase of appetite, when various salty foods and manifold condiments are employed to stimulate taste and secretions, when the meal is deliberately interrupted about the middle by an ice that for the moment drives the blood away from the stomach, but only in order to have it come back with renewed force, so as to make the gastric mucous membrane glow as does the skin after being subjected to ice or very cold water, with consequent artificial appetite, then, of course, there is extreme liability to overeating. People who are doing this sort of thing right along can scarcely fail to overeat. They would be almost more than human if they did not. Fortunately for them, Nature usually asserts herself and produces a passing indigestion that saves them from organic deterioration of the stomach, or we would have many more serious gastric diseases.

On the other hand, it must not be forgotten that by far the largest part of the population in this country take a cereal, perhaps some fruit and some eggs for breakfast, with a piece of toast or a roll. For luncheon they take some simple cold or warm meat, with a single vegetable and some bread and butter, preceded perhaps by a little soup and followed by some simple dessert. For dinner they have some soup, perhaps some fish, and usually one kind of meat with a couple of vegetables, and then a simple dessert. People who live in this way are not likely to overeat. There are no temptations for them seriously to transgress the bounds of instinct and of healthy appetites. There is much more danger that they may listen to all that is said about people overeating, digging their graves with their teeth, and the like, and bring themselves to limit their diet more than would be good for them. As a matter of fact, physicians often find that patients, and especially nervous patients who live indoors, devoted to the intellectual life and thinking much about themselves, are more likely to undereat than to overeat. Many a physician judges it necessary, as the first step in the rational treatment of certain patients, to bring about a gain in the weight, and this is not infrequently followed by relief of symptoms that have been bothersome for a good while. Many symptoms for which medicines are usually taken are relieved by an enlargement of the diet.

As for habits of eating, nearly the same thing can be said. As a nation, owing to the strenuous life that occupies our attention, we are likely to eat too fast, and yet it is a question whether overattention to this phase of the eating process may not do as much harm as underattention. Those people live happiest and with least complaints of their health who do not think at all about either the quantity that they eat or their manner of eating it. Attention seems to detract from the nerve force required for digestive purposes. This sounds reactionary and old-fashioned, and yet the older the physician and the more experience he has had with patients suffering with digestive troubles, the more likely is he to think of one ingredient at least for all prescriptions in these cases to be taken with every meal, as "forget it." If the diet is simple and nutritious, each individual taking what he particularly cares for, for taste is still the best guide, and if the mind is occupied, not with the process of eating itself, but with pleasant thoughts, different as far as possible from those which occupy the individual during most of the day, or with such diversion of mind as is best obtained in pleasant intercourse with friends or those one cares for, then good digestion will follow appetite and appetite will prove the best guide to health.

The New Normal

THE selection of Prof. L. D. Harvey as president of the National Educational Association, at its recent meeting at Cleveland, is more significant than at first appears. He is not only an able educator, with a national reputation, but he stands for a very deep and vital change in American ways of training youth; that is, along the line of a more practical normal training of teachers. He was Superintendent of the schools of Wisconsin, and very successful; but is better known for his masterly management of the Stout Training Schools, located at Menominee in the same State. These schools have become so strong a factor in what may be called the New Education that educational experts from all parts of the country visit them constantly.

The central thought of the Stout schools is to invigorate ordinary normal training with manual and art training. It is a natural evolution in educational affairs. At the outset the founder aimed only at an enlargement of the traditional curriculum of common schools, to take in domestic sciences and training of the hands and the senses. The movement was not at that time much unlike the one at Port Deposit, in Maryland, where Jacob Tome founded a school, and endowed it with four millions, for all the children of Maryland to be taught how to live and how to live well. Mr. Stout wanted, as he said, that the "whole child" should be educated, and all of his faculties be brought into action; not only the brain, but the senses and the affections and the physical forces. Gradually, however, the schools saw that the first need of American education was inspired and perfectly educated teachers. The work that grew from the inspiration of Horace Mann had crystallized into a supply of teachers qualified for a narrower curriculum; to broaden this out became the problem. The work at Menominee became more and more what it is today, that of preparing teachers who should go out with a full conception of the human being, to be trained and developed. Biology to them must be the living child rather than a few facts in botany, entomology and other biological sciences. These incipient teachers are the pupils who are trained to use their hands and their senses until the world around them is opened into a huge schoolhouse; who are taught to see and to hear the world in its bearings upon the human being; "to feel the religion of breathing and thinking." Here they receive instruction and training in all forms of indoor and outdoor athletics —"except football." This exception is due to the fact simply that football does not at present lend itself to adequate supervision of school authorities. It is everywhere an independent appendix. It educates, but refuses obedience to constituted system. The Stout schools found this out. They had undertaken to create teachers who could comprehend and work out a perfect correlation between physical and mental education.

The Stout schools stood at last as a sort of interstate normal of the new sort and up to date, without vacating in any way its initial purpose of illustrating the most completely developed ideas of school progress. The crowd of work that followed this evolution led to summer schools, and a flocking of pupils from all over the United States. Advanced work is offered teachers and specialists in many lines of physical training, and there is, besides the two years' course, a year of advanced graduate study. The technical content in manual training covers molding, wood carving, metal work, cabinet work, pottery, forging, drawing and design, while the domestic science school proposes not only cooking and economic house management, but practical biology applied in the domestic arts. There is, supplementary, a school devoted to instruction in simple home duties; a study of foods, textiles and cottage furnishings —that is, the study of methods and types of simplifying and beautifying home life. The school of trades offers blacksmithing, machine work, carpentry and drafting.

Dr. Harvey insists that the essential essence of all training is action, being able to do something, and to do it in the very best manner. In other words, there is an exact correlation to be established between mind and hand. Our schools must not only fill the mind, but set the whole organism of the child in operation, and direct its doing as well as its thinking. The solution of a problem in arith-

metic is not found until it is applied in measuring a cord of wood or the hight of a tree, nor then until it reacts on a useful and noble manhood. This sort of training does not lay aside the book, but welcomes all the aid of other investigators, while it sends the child directly into the field to investigate for himself. The new teacher will not have performed his duty by hearing a recitation from a standard author, however valuable the volume may be; his main work will be to see that his pupils apprehend the bearing of the facts committed to memory, and their practical utility. As Dr. Harvey himself expresses it, "The duty which the public school holds to the State is to train American citizens," and the fundamental basis of all good citizenship is a trained intelligence which will enable the individual to earn a living and become a self-supporting member of society.

There should be direct relation between school life and after-school life; yet the International Committee of the Y. M. C. A. reports that from careful statistics they find that only five out of a hundred of the thirteen million young men in the United States have had any special preparation for the occupations by which they live. Of every one hundred graduates of our grammar schools only eight obtained livelihood by the professions for which they are educated, while the remaining ninety-two support their families with their hands. This shows a startling lack of correlation between school work and home life. Another authority tells us that by far the larger part of practical education, that which can be applied to earning a living, is that which the child obtains at home.

We do not mean to imply that the Stout system stands alone, for there are already half a dozen States that have begun to readjust their normal training. The Stout schools are memorable for having come to the front on private beneficence. They have emphasized the fact that the new teacher will not find that his normal training disqualifies him for the simple life of his father. It will not be his business to turn his pupils into professionals and face them away from their homes to something supposed to be higher; but so to enlighten their homes and home work with swift science that they shall go back Briarean-armed for work. From this standpoint we can better comprehend Commissioner Draper when he says that the future school will not be constituted for the purpose of lifting youth out of one class into another, or to set all the people climbing, but to enable them to fulfill admirably the duties laid at their door. If a certain amount of instruction in these practical lines, which we have thought could be easily learned at home, can be taught to young children in the public schools, without diminishing in the least the thoro instruction in the three R's, this is to be desired. Whether it can be done, we shall find out by trying. What succeeds we call progress. What fails we condemn as a fad.

Farthest North

When many of us studied chemistry gases were divided into two classes, those that could be liquefied by cooling and pressure like ammonia and carbon dioxid, and the so-called "permanent gases" like oxygen and nitrogen that no obtainable amount of cold and pressure could bring into the liquid state. But in recent years the invention of regenerative apparatus by which the gas is made to cool itself progressively by its own expansion has enabled us to conquer the permanent gases, so that we now have liquid air sold by the gallon and have seen even solid hydrogen. But helium, the gas that is given off from radium, has a still lower boiling point than hydrogen, altho it is heavier, and for the last seven years three rival physicists, Dewar, Olscevski and Onnes, have been working in vain to liquefy it. The glory of the achievement now goes to Prof. Kamerlingh Onnes, of Leiden, who on July 10th obtained 60 cubic centimeters of the new liquid. It lasted for two hours and was not solid when exhausted to a pressure of one centimeter of mercury. The boiling point of helium he found to be 268.7 degrees Centigrade or 483.6 degrees Fahrenheit below zero. But it is easier when we are dealing with such low temperatures to count up from the bottom and say it boils at 4.3 degrees

above absolute zero. Professor Onnes must therefore have come within three degrees of the lower limit of temperature, the "farthest north" of the physicist. This result was obtained by cooling hydrogen in liquid air, then cooling helium in the liquid hydrogen, but we have now no more volatile gas to cool in the liquid helium, so we can see no chance of getting nearer to absolute zero than this.

The Era of Good Feeling in Turkey

The news from Turkey, if not too good to be true, is too good to last. The new régime opens like a twentieth century millennium. The first week of the revolution is distinguished from all the weeks that have preceded it by the absence of murder, riot and revolt. At the sound of the magic word "constitution" turmoil dissolves into quietness. The Greek, Bulgarian and Servian bands have disbanded. Christendom no longer hears the Macedonian cry. The soldiers fraternize with the people and even with their officers. The Sultan, accompanied by a single attendant, mingles incognito with the people of his capital as in the good old days of Haroun Al Rashid. Moslem and Christian, Jew and Armenian, fall on each other's necks. The jails are empty. The censorship has fallen into innocuous desuetude. Jerusalem is to be opened to the Zionists. The schism that has divided Mohammedanism since the death of the Prophet is to be closed and the Sultan, as Emperor of All the Moslems, is to rule over Shiite and Sunnite. A regenerated Turkey is to take her place among the great Powers, with, however, the most peaceable of intentions toward all the world. To find anything comparable to this lion-and-lamblike scene we must go back to the Feast of Federation, which was celebrated in France July 14th, 1790. But that is an ill-omened and ungenerous reference. Let us give the leaders of Young Turkey credit with having so far manifested not only courage and zeal, which are common enough under such circumstances, but also moderation and discretion, which are very uncommon. Their task seems impossible, because they have so little on which they can unite the people. They cannot make it a religious movement or they lose half their power. They cannot appeal to race pride, or to loyalty for a dynasty, or to a glorious past, or to a common language and literature, or even to the hatred of a single foreign foe. There is left only the bond of patriotism and that is vague and weak, for Turkey, as was formerly said of Italy, is not a country but merely a geographical expression. The letter which the leader of the revolt, Niazi Bey, sent from Resna to the Inspector General, Hilma Pasha, is the nearest we have to an official pronunciamento of the party of Young Turkey, and this, tho it has a noble ring, sounds somewhat vague and unsatisfactory:

"In the name of God and the truth I raise the flag of revolt against the present governmental régime. I want a constitutional régime in order to give my country the security and tranquillity without which it cannot become rich and powerful. I swear to make no distinction of race or of religion. Upon my flag are written the words 'Liberty and Truth.' I hope that it will be received with all the sympathy it merits and that it will be defended till death."

"Dixie" and "The Battle Hymn of the Republic"

"Dixie" is now the most popular song in the United States, including the North, and President Roosevelt is right when he says it is the "best military tune" we have. It must be played by a band, however, to have its best effect. It is utterly unsuited to part singing because of its quick tempo and extreme range, and on that account alone, even if the triviality of the words did not prevent, it could never become a national hymn. The President thinks that Mrs. Howe's "Battle Hymn of the Republic" is "the very finest and noblest battle hymn possest by any nation of the world," and he wonders why the Southerners should not forget the partisan genesis of the "Battle Hymn of the Republic" as completely as the Northerners have forgotten that of "Dixie." The conditions ripe to produce our much-needed national hymn will scarcely come, however, until the nation as a whole passes thru some great crisis that focuses the national spirit into a center of light and heat that will illumine and inspire every poet and musician in the land. In the meantime we must be content with "My Country" and

"The Star Spangled Banner," and encourage the use of "Dixie" in the North and "The Battle Hymn of the Republic" in the South, since no one has yet succeeded in singing the words of the one to the music of the other.

The Closed Pulpit

Under the rules which some of the bishops lay down in interpreting the late amendment of the nineteenth canon by the Episcopal General Convention there will be no "open pulpit" and no occasion for a further exodus to Rome. Bishop Burgess, of Long Island, directs that those who speak under the amended rule, "not ministers of this Church," must speak as laymen, and must not wear the official dress of a clergyman, must not officiate as ministers or read prayers or benedictions. They must not speak on topics doctrinal or controversial; and they can speak only on special occasions, and never at the regular services of the church. Of course the rector must always ask the bishop's permission, and he must not put the bishop in an embarrassing position in refusing permission. Such a strict construction of the rule is very nearly tantamount to its reversal, and we can imagine it will not be agreeable to not a few clergymen, who will think their liberty of fellowship to be autocratically taken from them.

"Uncle Sam can well afford to pay for peace and safety so cheap an insurance policy as is implied in the maintenance of the United States Navy."—*President Roosevelt.*

Uncle Sam can doubtless "afford" it, but when the proposed appropriations for the military and naval branch of the Government submitted to the last Congress came to two-thirds of the entire national appropriations, we should hardly have used the word "cheap." And furthermore, since the risks of war are admittedly going down all over the world, why should the rates of "insurance" go up?

They will have to get a new professor of Greek at Wilberforce University, for Prof. W. S. Scarborough has been elected its president. This is the leading institution in the country owned and taught wholly by colored men, and President Scarborough is one of the ablest and best known scholars of the race. It will be his task to put the university on a firm financial basis. It is at Wilberforce, Ohio, and embraces departments of law and theology as well as the usual college, preparatory and industrial classes.

The President has intervened in behalf of the West Point cadets expelled for hazing, as he did in the case of the Harvard students who sneaked a book out of the library. Unfortunately, the head of the Military Academy does not occupy a sufficiently independent position to follow the example of President Eliot by administering a courteous rebuke for Mr. Roosevelt's failure to recognize that the cultivation of a high sense of honor and obedience to rules is the best part of education.

In the current issue of *Charities,* Emily G. Balch suggests that on hot days city children be given free shower baths from the public hydrant. Children properly dressed, says she, should have a good sprinkling "at certain corners at certain hours, say morning and evening. The bath line might rival the bread line." This suggestion, we fear, is too sensible to be generally adopted.

Messrs. Taft and Bryan have thus far neglected to declare themselves on the issues of race suicide and the strenuous life. Neither have they exprest any opinions as to mollycoddles, nature fakirs and undesirable citizens. A word to the wise is unnecessary.

Will the first class in American Politics please stand and recite the names of the seven candidates for the Vice-Presidency?

John Mitchell's refusal "to discuss matters about which I know nothing" effectually disposes of him as a candidate for public office.

Mr. Taft knows now, but Mr. Bryan is still in suspense.

Financial

A Chicago Banker's Views

An interesting and forcible address upon our banking system was made at the recent convention of the American Institute of Banking, in Providence, by E. D. Hulbert, vice-president of the Merchants' Loan and Trust Company, of Chicago, and a full report of it has been printed. Mr. Hulbert has a style which enlivens the discussion of financial topics, and he uses his large stores of information with exceptional skill. At the beginning he argues at length against branch banking, first stating what is claimed in behalf of the Canadian system, and then setting forth his reasons for regarding our own system as very much to be preferred. We regret that the limits of our space do not permit a full summary of his comparisons and facts, especially those showing how our system of small, independent banks is adapted to the needs of the communities which they serve. His statement of the case against branch banking is the best we have seen.

From his remarks about panics we take the following sentences:

"Panics come because confidence is suddenly shaken by the exposure of diseased financial conditions. What finally led to the breakdown in this country was the discovery that a number of important banks in New York had fallen into the hands of financial pirates and were insolvent."

He opposes both the guaranteeing of deposits and the use of asset currency as devices for averting panic conditions, saying that it would be impossible to get together a guarantee fund large enough to insure the prompt payment of the deposits of insolvent banks, and that the issue by a bank, in an emergency, of notes secured by a first lien on assets, involves a preference for a few depositors in every insolvent bank, to the injury of all others:

"I believe the remedy lies simply in the keeping of adequate cash reserve in both city and country, and in both State and national banks. Laws have been enacted at Albany requiring State banks in New York to carry reasonable cash reserves, and I believe those laws will do more to insure financial stability in the future than any laws so far proposed at Washington. If all banks, both State and national, were required by law to limit their deposit liabilities to a reasonable multiple of the lawful money in their vaults, I do not believe this would necessarily curtail legitimate growth of business. It would mean that more business would have to be carried on with fixed capital, and less with borrowed credit, or that a larger stock of gold would have to be accumulated in the country to serve as a foundation for our credit structure. In either case the strength and stability of our financial system would be vastly increased, and such a crisis as we had last fall would not be likely to occur again."

Some legal method by which the banks can use their credit in an emergency is needed, he adds, but no Government plan will succeed that leaves out the State banks, which hold more than 60 per cent. of the country's deposits. In time of stress, national and State banks should work together and be free so to stand shoulder to shoulder. He asserts that the new currency act will tend to prevent such association in time of peril, and is therefore objectionable.

The Oklahoma Guarantee

When the Oklahoma law for guaranteeing bank deposits went into effect, the 309 national banks in that State sought permission to participate in the guarantee. Permission was not granted by the Comptroller of the Currency, at whose suggestion Secretary Cortelyou asked Attorney-General Bonaparte for an opinion as to the legality of such participation. He now decides that the laws forbid it. The guarantee fund is made by a tax of 1 per cent. of a bank's daily average deposits. In the course of a long opinion the Attorney-General says:

"The entire contract is *ultra vires* for a national bank and prohibited by the necessary intendment of the statute. I hold that it is illegal for the officers of any national bank to enter into such an agreement as is contemplated by section 4 of the Oklahoma statute, and that persistent and willful action to this effect on the part of any such bank would be just cause for the forfeiture of its charter."

The national banks in Oklahoma have resources of $70,517,850, and $38,342,852 of deposits. It is expected that some of them will surrender their Federal charters and be incorporated under State laws.

VOL. LXV NEW YORK, THURSDAY, AUGUST 13, 1908 No. 3115

Survey of the World

Mr. Roosevelt's Commission on Farm Life

Desiring to improve social, sanitary and economic conditions on American farms, President Roosevelt has asked Prof. L. H. Bailey, of the New York College of Agriculture, at Ithaca; Henry Wallace, of *Wallace's Farmer,* Des Moines, Ia.; Kenyon L. Butterfield, president of the Massachusetts Agricultural College, at Amherst; Gifford Pinchot, of the United States Forest Service, and Walter H. Page, editor of *The World's Work,* New York, to assist him by acting as a committee of investigation, or "commission on country life." "I should be glad," he says, "to have you report before the end of next December." He intends to use it in making recommendations to Congress. In a long letter to Professor Bailey he sets forth his purpose. "No nation," he says at the beginning, "has ever achieved permanent greatness unless this greatness was based on the well being of the great farmer class, the men who live on the soil; for it is upon their welfare, material and moral, that the welfare of the rest of the nation ultimately rests." He believes that our farmers are better off than they ever were before, but he asserts that "the social and economic institutions of the open country are not keeping pace with the development of the nation as a whole." In portions of the South there is much unnecessary suffering and loss of efficiency on the farms, their unsanitary condition causing great mortality among children:

"I doubt if any other nation can bear comparison with our own in the amount of attention given by the Government, both Federal and State, to agricultural matters. But practically the whole of this effort has hitherto been directed toward increasing the production of crops. Our attention has been concentrated almost exclusively on getting better farming. In the beginning this was unquestionably the right thing to do. The farmer must first of all grow good crops in order to support himself and his family. But when this has been secured the effort for better farming should cease to stand alone, and should be accompanied by the effort for better business and better living on the farm. It is at least as important that the farmer should get the largest possible return in money, comfort and social advantages from the crops he grows as that he should get the largest possible return in crops from the land he farms. Agriculture is not the whole of country life. The great rural interests are human interests, and good crops are of little value to the farmer unless they open the door to a good kind of life on the farm."

The President quotes passages from an address made by him in May, 1907, in which he pointed out the importance of keeping life on the farms at the highest attainable level by so improving, dignifying and brightening it as to awaken and keep alive the pride and loyalty of the farmer's boys and girls, the farmer's wife and the farmer himself. He then says:

"It is especially important that whatever will serve to prepare country children for life on the farm, and whatever will brighten home life in the country and make it richer and more attractive for the mothers, wives and daughters of farmers, should be done promptly, thoroly and gladly. There is no more important person, measured in influence upon the life of the nation, than the farmer's wife, no more important home than the country home, and it is of national importance to do the best we can for both.

"The farmers have hitherto had less than their full share of public attention along the lines of business and social life. There is too much belief among all our people that the prizes of life lie away from the farm. I am therefore anxious to bring before the people of the United States the question of securing better business and better living on the farm,

whether by co-operation between farmers for buying, selling and borrowing, by promoting social advantages and opportunities in the country, or by any other legitimate means that will help to make country life more gainful, more attractive, and fuller of opportunities, pleasures and rewards for the men, women and children of the farms."

He asks the commission to report upon the present condition of country life, upon what means are now available for supplying the deficiencies that exist, and upon the best method of organized permanent effort in investigation and actual work along the lines he has indicated:

"You will doubtless also find it necessary to suggest means for bringing about the redirection or better adaptation of rural schools to the training of children for life on the farm. The National and State Agricultural Departments must ultimately join with the various farmers' and agricultural organizations in the effort to secure greater efficiency and attractiveness in country life. . . . With the single exception of the conservation of our natural resources, which underlies the problem of rural life, there is no other material question of greater importance now before the American people."

Professor Bailey has contributed several articles to THE INDEPENDENT. Mr. Pinchot and Mr. Page are also in the list of our contributors. We publish in this issue an article from President Butterfield.

The Discharged Negro Soldiers

A statement concerning the order for the discharge of the negro soldiers on account of the Brownsville affair was published in Washington on the 7th by Lieutenant-General Henry C. Corbin, retired, whose purpose was to show that Mr. Taft should not be held responsible for the action taken. He says, in part:

"Of course, the Brownsville affair is going to be paraded in the campaign. Any credit or blame in that matter cannot be laid to Mr. Taft. As a matter of fact, Mr. Taft was not in Washington at the time. He left Washington on October 27th, 1906, for an inspection of the Western military posts and was absent until November 17th. The Brownsville order was issued on November 9th, or eight days before his return, and while General Oliver was acting as Secretary of War. Upon his return it was brought to his attention. He suspended it in order that the President might reconsider the matter. He cabled to the President, who was then in the West Indies, and four days after Mr. Taft's return to the department he received from the President a cable dispatch directing that the order be executed. As a loyal subordinate of the President he did his duty regardless of any views of his own. With these facts known, no man, white or black, can place any responsibility in the premises on Mr. Taft."

General Corbin says he has no copy of Mr. Taft's cablegram to the President, but he publishes, as follows, the latter's reply, dated at Ponce, on November 21st:

"Cablegram received. Discharge is not to be suspended unless there are new facts of such importance as to warrant your cabling me. I care nothing whatever for the yelling either of the politicians or the sentimentalists. The offense was heinous, and the punishment I inflicted I imposed after due deliberation. All I shall pay heed to is the presentation of facts showing the official report to be in whole or in part untrue, exculpating some individual man. If any such facts shall later appear I can act as may be deemed desirable, but nothing has been brought before me to warrant the suspension of the order. I direct that it be executed. "THEODORE ROOSEVELT."

Immediately after the publication of this statement it was approved by the President, who gave to the press the following confirmation of it:

"General Corbin's statement is absolutely correct and it was entirely proper that he should make it. The substance of the message from the President, which he quotes, was made public long ago. In the Brownsville matter the entire responsibility for issuing the original order and for declining to allow its suspension was the President's."

The West Point Hazing Case

It was announced by authority on the 1st that the eight West Point cadets found guilty of hazing had been reinstated and sent back to the Academy for discipline. Since that date, however, other announcements have been made which suggest various complications. On the 3d the President gave to the public the following statement:

"No action whatever has been taken by the President in the cases of the cadets, the statements that they were originally ordered dismissed and that they had been ordered kept being equally erroneous. An appeal was originally made to the President to interfere. He declined to take any action or to interfere in any way until the Secretary of War had exprest his opinion, the view of the department then being, seemingly, that the cadets should be turned out, but the Secretary not having come to any final decision.

"The Secretary notified the President that instead of making any report he would like to discuss the matter with the President in person. He accordingly came on and the discus-

sion was held, but no final decision was reached, the Secretary stating that he was not able to make a final and definite recommendation as to all the cases and preferred to make none as regards any until he could do it as regards all. The President has not yet heard finally from the Secretary, and therefore, of course, has come to no final decision.

"This is the first announcement that the President has made in the matter at all and he has never at any time come to any decision one way or the other, excepting to state that he would probably follow the views of the department.'

It has been pointed out by the press that this statement is not in accord with those previously made by Mr. Loeb (the President's secretary) and the Secretary of War. The record shows that public announcement was made by Secretary Loeb, on the 25th ult., that the recommendation for dismissal had been approved by the President; that on the 28th he repeated this assertion; that on the 1st, Secretary Wright, after a long conference with the President, said that the cadets had been reinstated, the President and himself having agreed that dismissal would be too severe punishment. With this record the President's statement of the 3d is at variance. Secretary Wright now asserts that this statement is correct. On the 7th Colonel Scott, superintendent of the Military Academy, and Secretary Wright discussed the matter with Mr. Roosevelt at Oyster Bay. Colonel Scott argued that the cadets should be dismissed. It is understood that Secretary Wright was still of the opinion that such punishment would be too harsh.

Labor Controversies

Miners on strike fired upon a passenger train near Blocton, Ala., at 2 a. m. on the 9th, killing three men and wounding eleven, two of whom have mortal injuries. Those killed were Conductor Joseph T. Collins, Deputy Sheriff O. Z. Dent, and Willard Howell, a non-union miner. Among the injured are three deputies, two soldiers, Major F. H. Dodge, the Tennessee Coal Company's Superintendent of Safety, and E. E. Cox, the same company's Superintendent of Mines. The train was a special on the Birmingham Mineral Road, carrying non-union men to the Blocton mines under a guard of deputies and militia. Nearly all the windows were broken by bullets. The Governor has sent to Blocton an additional force of militia.——On the 5th, all the mechanics or shopmen employed on the lines of the Canadian Pacific Railroad Company, about 11,000 in number, quit work, going on strike in protest against the decision of a board of arbitration appointed at their own request. The controversy between the company and these employees related to hours, apprentices, a classification that would affect wages, and certain other matters. The men asked for the appointment of arbitrators under the provisions of the new Lemieux law. After the three arbitrators had been named, the company withdrew its representative, believing that the other two members were unduly friendly to the mechanics' union. Still, it accepted the decision of the board (under protest), and prepared to carry it into effect. The union promptly rejected the decision and went on strike. It appears that the decision was a compromise. For example, the company asked for one apprentice to every three mechanics, the union insisted upon one to every five, and the board ruled that there should be one to every four. At the present writing there has been no disorder. The company has employed a considerable number of new mechanics, is preparing to employ more, and is getting ready for a long siege. It is predicted that the telegraphers will soon go on strike. There were reports that the trainmen would strike in sympathy with the mechanics, but on the 9th there were indications that they would not do this. It is said that their agreement with the company requires them to give thirty days' notice of such action.

Cuba's Orderly Election

Returns from the recent provincial and municipal elections in Cuba have come in slowly. There was no disorder, and evidence of fraud has been found in only one town, where the number of votes cast exceeded by 30 the number of voters registered. In Havana only a little more than half the registered voters

went to the polls. The Conservative party showed unexpected strength, and now there is a movement for a union of the two Liberal factions, the Miguelistas, followers of José Miguel Gomez, and the Zayistas, who support ex-Senator Zayas. As the latter made a poor showing, some think that Zayas will retire to accept a Senatorship, and that in the coming national campaign Gomez will be the only opponent of the Conservative candidate for the Presidency. General Mario Menocal, a wealthy planter, will probably be nominated by the Conservatives. Votes were cast for six provincial governors, 48 provincial councilmen, 82 mayors, and 1,248 municipal councilmen. The Conservatives elected 3 governors, the Miguelistas 2, and the Zayistas 1. At last accounts the list of elected mayors was as follows: Miguelistas, 33; Conservatives, 28; Zayistas, 17. Only the civil authorities were employed in preserving peace. The Conservative party is not exactly the old Moderate party under another name, altho it includes many of the Moderates. Its strength at the polls is said to indicate a protest against the course of the leading politicians of the two Liberal factions. These factions have been favored by the Government since the intervention. Mr. Roosevelt, in a message to Governor Magoon, congratulated the people on the orderly election and the "indication of their capacity for self-government," expressing his great satisfaction "at the serious and responsible way in which they were preparing for the assumption of their full duties as an independent republic." In a similar message, Mr. Taft spoke of the successful operation of the new election law, and continued as follows:

"It indicates a successful outcome of the Presidential election to follow, and a desire on the part of the people to have lawful and just elections. It insures the turning over of the Government as directed by President Roosevelt, and is evidence that the people are determined to make permanent their government, dependent, as it must be, on peaceful and fair elections."

Governor Magoon said in reply that the thanks of the Cuban people were due to Mr. Taft for laying out the course and for suggesting the creation of electoral boards, "non-partisan in their majority, but with partisan representation thereon."

Lynchings in the South

In several Southern States negroes have been lynched during the last two or three weeks. In Pensacola, Fla., Leander Shaw had been placed in jail for assault upon Mrs. Lillian Davis. The fury of the mob that took him from the jail, on July 29th, was excited because he had sought to silence her by cutting her throat and had attempted to kill her infant child. She is still living, but her wounds are mortal. A notable defense of the prisoner was made by Sheriff Van Pelt and his deputies, who killed two of the rioters with their rifles and wounded several others. Three of these and the jailer, B. H. Eaton, have mortal injuries. The sheriff was shot in the arm, and his brother was struck by three bullets. It was only by repeated attacks that the mob at last got possession of Shaw. He was then hanged in the public square. ——On the same day, in Greenville, Tex., a negro named Smith, in custody for assault upon a young white girl, was taken from the officers by a mob and burned at the stake in the public square. Two judges in public addresses had promised a speedy trial, but in vain. Photographs of the dreadful scene were taken and it is said that thousands of these, upon postal cards, have been sold. ——In Lyons, Ga., also on the 29th, a negro named Alonzo Williams, who had been imprisoned for assault upon a young white girl, was taken from jail and shot in the public square. Williams was reached only by cutting a hole in the wall of the jail.——On the night of the 31st, in Russellville, Ky., a large mob took from the jail four negroes and hanged them to a tree in the outskirts of the town. It is alleged that the four men had exprest approval of the recent murder of James Cunningham, a white farmer, who was killed by Rufus Browder, one of his negro tenants. On the 5th, Governor Willson sent a company of militia to protect Browder, who is in custody. He offers a reward of $1,000 for the detection of the lynchers, saying they were guilty of "one of the basest and most shameful crimes in the history of Kentucky."——On the 5th, William Miller, a negro union miner accused of destroying a non-union miner's house by dynamite, was taken from jail at Brighton, Ala., by a mob and hanged.

Aeronautics

The flight of Count Zeppelin's giant airship surpast all records for distance but failed to achieve its object and ended in a disheartening disaster. The German Government had agreed to purchase Zeppelin's dirigible No. 4 on condition that it could maintain its flight for twenty-four hours and alight on and rise from land as well as water. At 6:45 on the morning of August 4th the airship left its floating shed at Friedrichshafen, on Lake Constance, with eleven persons on board. After circling around the lake it past over Constance and Shaffhausen, reaching Basle at 9:30. The Count then steered down the Rhine Valley, making a speed of about 35 miles an hour against a light wind at hights varying from 300 to 3,000 feet. Everywhere the appearance of the airship aroused wild enthusiasm. The tourists cheered from steamers and hotels, artillery saluted as the vast machine past over the forts, bands played, bells rang and whistles blew in every town. At Strassburg Count Zeppelin circled twice around the tower of the cathedral. On the way to Mayence a motor got overheated, necessitating a brief descent on the river eight miles from that city, at the end of a twelve hour run, therefore not exceeding the length of the flight made by the Count on July 1st. Notwithstanding the loss of gas he determined to attempt the return over the land, and after reaching Mayence he turned the prow of the ship southward, passing over Karlsruhe and Stuttgart. But the loss of gas had been too great to continue much longer and a fusion of the white metal in the grooves of the piston rod disabled the single motor on which he had depended since leaving Mannheim. So he alighted in an open field at Echterdingen, south of Stuttgart, early in the morning, having covered a distance of about 400 miles in the twenty-four hours. Here, for the first time, the machine rested on the ground, and while it awaited the 500 cylinders of hydrogen necessary to replenish its balloons, a crowd of 40,000 people gathered to see it. While the Count was gone to lunch a sudden thunder shower came up and the airship, anchored only at the bow, beat against the ground, bursting one of its balloons. The gas took fire, the machine rose in the air, the gasoline in the tank burned with clouds of black smoke, and in a moment nothing was left but a confused mass of metal. Four of the mechanics at work on the repairs were seriously injured by burning or falling. The Zeppelin airships have an aluminum covering which keeps its shape and capacity regardless of the changes in the sixteen independent gas bags within. The machine that is destroyed was 435 feet long and 43 feet in diameter at its widest part. Guiding planes and rudders were attached to its sides and underneath were hung two aluminum boats for passengers and crew. There were six propellers driven by three 140 horse power engines. The cause of the fire is not known, as the motors were cold and there was no lightning. It is surmised that the friction of the silk gas bags inside the aluminum shell produced an electric spark.—— Henry Farman, the holder of the world's record for aeroplane flight by staying in the air 20⅓ minutes and covering twelve miles on July 6th at Issy-les-Moulineaux, has been giving exhibitions of his skill on the Brighton Beach racetrack during the past week. He confined himself to flights of a few hundred yards without turns at hights of ten to twenty feet. His machine consists of two parallel aerosurfaces, slightly arched and covered with rubber cloth, 33 feet by 6½ feet, and 5 feet apart. It weighs 1,168 pounds and is propelled and supported by a 50 horse power gasoline engine. —— Wilbur Wright, of Dayton, Ohio, in a preliminary trial of his aeroplane for the French Government at Le Mans, circled twice around the grounds, about one and four-fifth miles, in 1 minute and 45 seconds, handling his machine with great skill. The Wright brothers are pioneers in this field, but have hitherto refused to give any public exhibitions. The secret of their aeroplane, as appears from the French patents now published, is that the planes instead of remaining stiff are curved at will, like the wings of birds, by drawing the stay wires connected to the corners. ——Captain Thomas S. Baldwin is experimenting near Washington with his dirigible balloon for the army. On August 8th he made a trip of 3½ miles and return. He will have to make 18 miles an hour to sell it to the Government.

Labor Troubles in France and Germany

The General Federation of Labor in Paris called a universal strike as a protest against the action of the troops in firing upon the strikers at Vigneux, but comparatively few of the unions obeyed the order to go out. Instead of 100,000 men, only 25,000 left work. Many of the printers obeyed the order, and in consequence some of the dailies failed to appear. The city was thoroly guarded by police and troops, and only one minor case of disorder occurred in the Place de la Républlique, where a crowd singing revolutionary songs came into conflict with the police. Warrants were issued for the arrest of some of the leaders of the Federation, but they have not been found, and the Government hesitates to dissolve the organization. The employees in the electric light plants, in order to demonstrate their power and as a protest against the action of the Government, shut off the lights of the city at nine o'clock on August 6th. The restaurants were compelled to resort to candles and theaters dismissed their audiences. After an hour of darkness the electricians permitted the light to be turned on again. A singer in one of the concert halls has brought suit against the electrician's union for the amount of salary lost thru the closing of the hall. Premier Clemenceau has ordered the electrical corps of the army to remain in barracks to take the place of the union men if they should again strike. The contractors for city works have declared a lockout affecting 5,000 men.——A lockout has been ordered in the Vulcan shipyard at Stettin, which may involve the whole shipbuilding industry of Germany. The lockout was the consequence of the refusal of 8,000 riveters to work extra hours for the completion of contracts at the rate offered by the employers for overtime. The men have been getting from $9.80 to $12.40 per week during the past year. The local Ironmasters' Association has decided to discharge sixty per cent. of their employees in order to coerce the riveters, and if the men are not brought to terms by August 12th the National Federation of Metal Workers will be asked to close their works thruout the German Empire.

The Opening of the Finnish Diet

The Czar is not likely to find the new Diet any more tractable than the one he recently dismissed. On assembling the Young Finns were found to be in the majority, and elected their candidate for President, Judge Svinhufvud. The First Vice-Presidency went to the Socialists and the second to the Old Finn party. The Diet was opened August 5th in the palace at Helsingfors by Governor-General Boechman with the usual ceremonials. In the Speech from the Throne, which was read three times, in the Russian, Finnish and Swedish languages, the Emperor said:

"Almost a century has past since Finland became a part of the Russian Empire. Under the protection of this mighty power the Grand Duchy has attained great material and intellectual progress. To our great regret, however, the sense of solidarity between the Finnish population and the Russian nation and a realization of Finland's just obligations toward the Russian Empire have not developed simultaneously. In the debates of the preceding Diet views frequently were exprest showing the existence of an utterly false understanding of the position of this district in our empire and the duties incumbent upon the population of Finland by virtue of this relationship."

The President of the Diet, in response to the address of the Governor-General, spoke in opposition to the position taken by the Russian Government and maintained the necessity of direct relations between the Finns and their Grand Duke, Emperor Nicholas, without the interference of the Russian ministers. He concluded by calling for three cheers for the Emperor. On account of the delicate nature of the discussion of the reply to the Speech from the Throne, the Diet will sit with closed doors.——A striking evidence that discussion in the Duma is not without its effect, is given by the retirement of the Grand Duke Nicholas Nicholaievitch from the Presidency of the Council for National Defense. This is probably the result of the attack made upon the Grand Dukes in a speech before the Duma by Mr. Guchkoff on June 9th. He declared that Grand Duke Nicholas was the principal obstacle in the way of military reform, and named three other Grand Dukes who fill the offices of Inspector-General of Artillery, of Inspector of Engineers and of the head of the De-

partment of Military Schools as also exercising a pernicious and reactionary influence. Of these the first, Grand Duke Serge Michaelovitch, has handed in his resignation, tho it has not yet been accepted. It is expected that the other two will shortly withdraw.——During the first six months of the present year 870 persons have been condemned to death in Russia, an average of five a day.

The New Régime in Turkey

The Young Turks are in full power and are showing remarkable moderation of spirit and efficiency of action. So far the revolution has been nearly bloodless, and the plans of the secret organization have been carried out successfully. The Sultan, in re-establishing the Constitution of 1876 and organizing a ministry with Said Pasha as Grand Vizier, reserved to himself the right to appoint the Ministers of War and of Marine and the Sheik-ul-Islam, the chief dignitary of the Mohammedan faith. The Young Turks did not regard this as satisfactory, altho Said Pasha has always been thought somewhat liberal. They therefore insisted that the Sultan follow strictly the old constitution, which gives him the right to choose only the Grand Vizier and the Sheik-ul-Islam. The revolutionary committee demanded the appointment of a cabinet of more progressive men, and the arrest of all the palace officials who are blamed for the tyranny of the old régime. The Sultan complied, dismissed the Cabinet that he had just formed and appointed Kiamil Pasha as Grand Vizier to form a new Cabinet with the assistance of the Sheik-ul-Islam. Kiamul Pasha has all his life been a constitutionalist, has twice been Grand Vizier and three times exiled for his political views. The membership of the new ministry had previously been decided upon by the Young Turk Committee, and in accordance with their principles is not restricted to members of the dominant race and religion. Two of the new minsters are Christians; Gabriel Effendi, Minister of Public Works, an Armenian, and Prince Mavrogordato, Minister of Agriculture, a Greek. All of the palace camarilla of the old régime have either been imprisoned or have fled the country. Among those who were arrested were the former Ministers of War, of the Interior and of Marine, the Perfect of Constantinople, the First Secretary to the Sultan and the Court Astrologer. The arrest of Raghib Pasha, one of the Court Chamberlains, was effected with some difficulty as he had barricaded himself in his house and fired upon the police from an upstairs window. Fehmi Pasha, the former head of the hated secret police system, tried to escape from the capital, but was caught in the vilayet of Brusa, Asia Minor, and lynched. The Young Turk Committee has issued a proclamation calling upon the people to maintain order and to refrain from all manifestations of revenge or private vengeance on the ground that indulgence in personalities is opposed to their sublime ideal. The Russian and British Governments have agreed to send to the Powers a notice of the withdrawal of their joint plan for Macedonian reforms.

Civil War in Persia

The city of Tabriz is still divided between the loyalist troops and the revolutionary or parliamentary parties. The two forces are intrenched in different quarters of the city, and fighting has been going on between them in the streets of Tabriz for forty days. The property destroyed is valued at more than one million dollars and 800 people are said to have been killed or wounded. None of the American missionaries in the city have so far been injured. Sata Khan, leader of the revolutionists, cut all the telegraph lines leading from Tabriz to Teheran and Russia, in order to prevent communication between the Shah and his forces under Rakhim Khan, but at the protest of the British Consul, Sata Khan consented to the restoration of the lines, provided that all despatches be submitted to him for censorship. The Shah has borrowed $250,000 from the Russian Bank at Teheran by depositing as security the crown jewels of Persia, for the purpose of sending more reinforcements to the aid of his beleaguered troops in Tabriz. But the money has been dissipated in appeasing the demands of the wild tribesmen whom he has called to his assistance against the parliamentarians. The success of the revolution in Persia has strengthened the constitutional movement, and added to the alarm of the Shah.

The Origin and Use of Injunctions

BY FREDERICK DWIGHT

[The practice of the courts with respect to the use of injunctions is a prominent topic in the platforms of all the political parties. As the subject is one not thoroly understood by many persons outside of the legal profession, we have obtained the following explanatory articles, one from Judge Jacob Trieber, of the United States District Court for the Eastern District of Arkansas, and the other from Mr. Frederick Dwight, an attorney practicing in New York. We are confident that they will assist many in reaching sound conclusions upon this important question.—EDITOR.]

THE newly adopted platforms of the two great political parties contain declarations upon the subject of "injunctions," the Republican asserting that the rules relating to their issuance in Federal courts should be more accurately defined, the Democratic demanding first that they be not permitted in "industrial disputes" when they would not be granted otherwise, and second that violations, unless committed in the presence of the court, should be triable by jury.*

Of course, the matter is primarily a legal one. But being brought into prominence at this time, it becomes of interest to all voters to ascertain what the question means.

Our system of law is divided into two parts, "law" and "equity," injunctions being among the remedies belonging to the second branch. The origin of equity as a system is lost in obscurity, but it can be said that centuries ago in England a case would arise occasionally in which one man would have a distinct grievance against another, but for some reason no existing court could afford him relief. In this extremity he would resort to the King, who would then turn the matter over to a semi-religious officer known as the Chancellor, the "Keeper of the King's Conscience." The Chancellor would then investigate, and, if the facts seemed to warrant, would order the person complained against to do justice to the petitioner.

In the course of time this occasional and ill-defined power crystallized into the Court of Chancery, and its powers became known as equity. The object was and is to supplement the law courts, affording relief which they are unable to give. The primary tribunal is the law court, and a person must seek a remedy there if there is one; so to this day it is an essential allegation in an action in equity that there is no adequate remedy at law.

A very simple illustration will serve to show the difference between the scope of law and equity as far as we are concerned with it now. If there is a fine

*The following are the provisions of the two platforms:

Republican Platform. "We believe, however, that the rules of procedure in the Federal courts with respect to the issuance of the writ of injunction should be more accurately defined by statute, and that no injunction or temporary restraining order should be issued without notice except where irreparable injury would result from delay, in which case a speedy hearing thereafter should be granted."

Democratic Platform. "Experience has proved the necessity of a modification of the present law relating to injunctions and we reiterate the pledge of our National platforms of 1896 and 1904 in favor of the measure which passed the United States Senate in 1896, but which a Republican Congress has ever since refused to enact: relating to contempts in Federal courts and providing for trial by jury in cases of indirect contempt.

"Questions of judicial practice have arisen, especially in connection with industrial disputes. We deem that the parties to all judicial proceedings should be treated with rigid impartiality and that injunctions should not be issued in any cases in which injunctions would not issue if no industrial dispute were involved."

tree in front of A's place, and B, his neighbor, declares he intends to cut it down because it interferes with his view, A can stand under the tree with a shotgun or threaten to sue B for damages at law if he touches it. That is all he can do. And the first is in general unlawful. If B thinks the threat means nothing or believes that the court will say he had a right to destroy the tree, he may proceed to cut it down. A sues him in a law court, it is decided that he has been damaged to the extent of $100, and the court directs a public officer, the sheriff, to get $100 of B's and hand it to A. If the sheriff is unable to find any money or other property of B, the court is helpless. It has done all that it could. Besides, even if he did find enough, A does not want his neighbor's money. He wants the tree, which had stood for more than a generation before his house.

In other words, in such a case the remedy offered by law is wholly inadequate. A preventive is needed. Such a procedure as a private armed guard is usually not countenanced in civilized communities. What is the next best thing? It is a resort to a court of equity which will issue an order, called an injunction, commanding B to keep his hands off the tree, under pain of punishment. In other words, it substitutes the threat of a powerful court for A's personal warning. That is all it does. A court of equity has no way of compelling B to obey the injunction. If he chooses to disregard the warning he is at liberty to do so. But in that event he is subjecting himself to a double liability. A may still sue him for damages at law and the court of equity may arrest him and fine or imprison him for his "contempt" in disobeying its order. This it can do swiftly and sharply and thoroly. And the very definite prospect of such a punishment is naturally far more of a deterrent than the threats of A to bring suit at law.

Thus a very striking advantage of an injunction may be seen at once. It puts down "in black and white" just what B must or must not do with reference to the matter covered by the injunction. In the illustration, until B has actually cut down the tree and has been sued by A and has had judgment entered against him, no one knows whether the court will hold him liable or say he acted within his rights. But if a court of equity has previously ordered him not to destroy the tree, all doubt is removed and his duties are clear.

Injunctions from time immemorial have been asked for and obtained in an infinite variety of matters. They have forbidden chemical or paper works from polluting streams, one man from infringing another's patent, and even, in Texas, one has directed a man not to alienate the affections of his neighbor's wife!

In 1868, during a strike in England, the members of the labor union involved were ordered by an injunction of the equity court not to issue certain placards, requesting "all well-wishers of the union" to keep away from the employer's offices. This established a precedent for the issuance of injunctions in labor disputes—a practice which was soon adopted in this country, where it spread more rapidly than in England, especially as employed by the Federal courts.

The reason is evident enough. Strikes as a rule display as prominent characteristics, first, a tendency on the part of the strikers to resort to violence, and secondly, a development of local sympathy with the strikers. Under such circumstances it is difficult for those against whom the strike is directed to prevent great and unlawful interference with their business and property.

Twenty-five years ago the only way for American operators to deal with such matters was to hire private detectives, a device similar to that of A in the illustration standing guard at the tree with a shotgun. But since that time the more peaceable and orderly procedure of an appeal to the court of equity has become the rule. That tribunal issues its order or injunction, directed to the strikers and their leaders, forbidding them to interfere with the property or operations of their former employers. Sometimes these orders have gone too far and judges have exceeded their powers in the issuance. Thus, in a well-known case* a court forbade employees of a railroad to leave in a body, or, in other words, to strike. But this decision was promptly reversed by the higher court.

*F. L. and J. Co. vs. N. P. R. R. Co., 60 Fed. 803.

which said that men have a perfect right to strike and leave employment individually or in a body whenever they wish to do so. And this is now settled—that men cannot be ordered by a court of equity not to strike. To illustrate what the court *may* do, we may refer briefly to an injunction which, to the ordinary person, will probably not seem unreasonable, but which has, nevertheless, been attacked bitterly by those who now desire to curtail the courts' power. It was the order granted in 1897 by Judge Jackson, of the United States Court, to the Monongah Coal and Coke Company, of West Virginia, against Debs and his followers (striking employees). It was designed, so it read, to prohibit the defendants from "in any wise interfering with the management, operation or conducting of said mines by their owners or those operating them, either by menaces, threats or any character of intimidation used to prevent the employees of said mines from going to or from said mines." Accordingly, the defendants were ordered not to (a) go on the coal company's property for the purpose of interfering with or intimidating employees or holding meetings on said property; (b) nor to assemble on roads from the mines to the miners' houses along which the miners had to pass, and interfere with them by threats, menaces or intimidation. It is difficult to see in what respect such an order deprived the strikers of any rights they should have enjoyed.

In 1895 the celebrated Debs case was decided by the Supreme Court of the United States.* An injunction had been issued commanding the leaders and members of labor unions not to interfere in any way with trains running out of Chicago and bearing United States mail. This order had been provoked by the frightful confusion caused by the unions' attempts to prevent the operation of all roads using Pullman Company cars, with which company the unions were quarreling. Debs and other labor leaders were afterward arrested for "contempt of court" in disregarding this injunction and sentenced to brief terms in jail. Before the Supreme Court the counsel for the accused men employed, as one argument for canceling the injunction, the curious suggestion that the United States Government had power to order out troops to prevent any disorder and that was enough. The equity court, they said, should not be permitted in addition to issue orders. The prompt reply to this was that while the Government might, indeed, have met violence with bullets and bloodshed, it was certainly far more civilized and humane to bring about the same results, if possible, merely by the issuance of a paper signed by a court of equity. As to the effectiveness of the procedure as compared with a resort to force, the following evidence may be given without further comment. It is quoted by the court in the Debs case, from the testimony of one of the strike leaders before the United States Strike Commission in 1894: "As soon as the employees found that we were arrested and taken from the scene of action," he said, "they became demoralized and that ended the strike. It was not the soldiers that ended the strike. It was not the old brotherhoods that ended the strike. It was simply the United States courts that ended the strike."

Generally speaking, then, at the present time United States courts in "industrial disputes" or strikes will, under proper circumstances, issue injunctions forbidding (a) acts of violence by the strikers which injure or threaten to injure property belonging to those against whom the strike is directed; and (b) assemblages of the strikers when they are held, not for the purpose of helping one another, but to injure their former employers or intimidate the workmen.

We may now consider briefly the changes proposed by the two parties in the scope of this power.

The Republican platform advocates a more accurate definition of the circumstances under which courts of equity may grant injunctions. At present there are practically only two rules for the guidance of the court. A person who asks for an injunction against some one else must show that the other is threatening to injure his property, and also, as was said in the beginning, that even if he recovered damages at law after the injuries, he would not be fairly compensated. Beyond these the court may use its discretion. The platform's suggestion is that Congress point out to the courts more clearly just when they should and

*158 U. S. 564.

when they should not act, altho many will think that a judge of a United States court is as capable as the legislators of determining such questions.

The other Republican suggestion is that no "temporary" injunction should issue without previously letting the persons enjoined know about it and giving them a chance to urge the court not to make the order, unless "irreparable injury" would result from the delay, and that a speedy hearing thereafter should be granted. A Federal statute already provides for all of this except the last clause. That, however, may require a word of explanation, as follows: If a man wants to obtain an injunction against some one else, he notifies the other and both appear before the court on a certain day to argue for and against the proposition. Of course, this takes time, and if, as in the illustration of the tree, the threatened act would require only a few minutes, it might be all over before A could get B before the court. In such extreme cases the court, on A's application alone, can issue a "temporary restraining order," ordering B not to touch the tree until the day when both are to appear in court. At that later hearing the order is either made "permanent," as A wants, or is canceled if B manages to show that he was justified in preparing to cut down the tree. It seems only fair that this day for hearing the other side should follow as soon as possible, as the Republican suggestion is. There have been instances where courts have allowed several months to elapse between signing "temporary orders" and hearing what those who were restrained had to say. Whether this provision should take the form of legislation or merely be recommended to the judges is a matter on which men may differ.

The Democratic platform is more radical. It makes two demands. First, that if a man is arrested for disobeying an injunction, the question whether he really *did* violate it shall be determined by a jury and not by the judge who granted the order, unless the judge himself actually saw the violation. This is like saying that if a man forbade his son to go in swimming, and the boy arrived home with wet hair, the father should not be allowed to ask him if he had been in the water, but a committee of neighbors would have to determine the fact. *Then,* perhaps, parental discipline might be invoked. Such a suggestion implies that courts would be prejudiced and is a reflection upon them. It would abolish the admirably swift and simple procedure now possible, and substitute the tedium of a jury trial. Moreover, it would be the destruction of a right which has existed in the courts unquestioned since the time of Magna Carta. It is wholly improper and would practically destroy the efficiency of the injunctive power.

The second Democratic demand is that an injunction should not be granted in the case of a strike when it would not be if no strike were in progress. The answer to this is that no distinction exists now. The only point is that strikes give rise to conditions which seldom or never arise under other circumstances. For example, a court would not usually issue an injunction forbidding one man to loiter on the street. His act is harmless. But when an organized body of strikers occupy a thorofare for the purpose of waylaying and intimidating workmen on their way to or from their places of employment, a very different case is presented. If similar assemblages took place, altho no strike were in progress, the court would doubtless enjoin them in the same manner. But, generally speaking, they always occur as accompaniments of industrial disturbances. That is all there is to the matter.

There is no better way of concluding this brief summary of the scope of a venerable and salutary power and the present political attitude toward it than to quote a few words of one of our most experienced and distinguished jurists. Mr. Justice Brewer, of the Supreme Court, is reported to have said, very recently: "There never was a time in the history of the nation when the full restraining power of the equity court was of so much importance to the nation. To restrict the restraining power of the court is a step backward toward barbarism instead of a step forward to higher civilization. Courts make mistakes in the granting of injunctions; so do they in other judicial action. . . . The restraining power of the court of equity should be enlarged and not diminished."

New York City.

Injunctions and the Judiciary

BY JACOB TRIEBER

United States Judge for the Eastern District of Arkansas.

THERE has been so much said of late about government by injunction that a brief explanation of the subject may not be out of place.

Ever since courts of equity have been established for the purpose of granting relief which the common law courts were unable to grant, owing to the rigid forms governing them, injunctions have been favorite methods to prevent an irreparable injury. As courts of equity will never assume jurisdiction of a cause if there can be complete and adequate relief granted by a law court, unless it is to prevent a multiplicity of suits, which in a court of equity can be determined in one action, it follows as of course that no injunction is ever granted unless it is clearly shown that not only will the party applying for the writ suffer great injury, but that it is of such a nature that an action for damages or any other suit in a law court cannot afford complete or adequate relief. The writ of injunction is a command from a court of equity to the persons named therein to abstain from doing certain acts therein described. Injunctions are temporary or permanent, and there are also temporary restraining orders. A permanent injunction is when it is granted at the final hearing of the cause and is a final decree. A temporary injunction is one granted before the final hearing, but after a hearing before the court or a judge thereof, with full opportunity to all parties to the suit to introduce evidence and be heard. The object of the temporary injunction is to retain the *status quo* and prevent acts which could probably not be undone thereafter, and is to remain only in force until there is a final trial, when it is either dissolved, if improperly granted, or made permanent if the law and the evidence require it. If dissolved, the parties enjoined are entitled to recover from the plaintiffs all damages sustained by reason of the granting of the temporary injunction. In order to insure the payment of these damages, the plaintiff is required, before the temporary injunction, after it has been granted, becomes effective, to execute a bond in such sum as the court or judge granting it directs.

The temporary restraining order, the effect of which is practically the same as that of a temporary injunction, is usually issued without notice to the defendant, upon the allegations of the petition and *ex parte* proofs, and is to remain only in effect until a hearing after notice and opportunity to offer proofs can be had on the application for the temporary injunction. Such temporary restraining orders are only granted in extreme cases, when it is clearly shown that unless immediate action is had great and irreparable injury is likely to be suffered. They are usually granted when it is shown that property rights are about to be destroyed, and the losses are of a nature that an award of damages would not be an adequate compensation for the threatened injury, or if the defendants are hopelessly insolvent, and for this reason a judgment for the damages sustained would be valueless. The former cases most frequently arise where the property threatened has a special value over and above its intrinsic value; the latter in cases of strikes and threatened destruction of property by men of no means, so that a judgment against them for the value of the business or property

destroyed would be uncollectible. As most of the attacks on injunctions are directed against those granted by the national courts, I shall confine this article to them. As judges are no more infallible than other men, some, no doubt, at times erroneously grant temporary or permanent injunctions not warranted by law, just as errors are commited in the trials of all other causes, including those involving life or liberty. Such errors can only be corrected by appeal to an appellate tribunal, which ordinarily can only be taken after the final hearing in the trial court. As the granting of a temporary injunction is interlocutory, and not final, an erroneous grant of the writ may cause great mischief if a dissolution thereof cannot be had within a reasonable time. To remedy this Congress has, by special act, provided that an order granting a temporary injunction or a refusal to dissolve such an injunction shall not only be appealable at once, without awaiting the final decree, but that such an appeal shall have precedence over other appeals in the appellate court, provided the appeal is taken within thirty days. Thus, by the exercise of proper diligence, a final decision can be obtained from the appellate tribunal within a short time, not exceeding six months, and perhaps sooner. This privilege is only granted to the party enjoined, as the refusal to grant a temporary injunction is not appealable until there has been a final disposition of the cause in the trial court.

As the injunction acts only on the person, its effectiveness depends solely upon obedience to the mandate of the court. For this reason disobedience is treated as in all other cases as a contempt of court, subject to such punishment as, in the opinion of the court, will secure obedience. The usual procedure is for the court, upon being advised by a petition under oath that the injunction has been violated, to issue a rule on the party, informing him of the charge and requiring him to show cause at a time specified why he should not be punished for the contempt. There is then a hearing before the court, with full opportunity to all parties to introduce evidence, and if the court finds from the evidence that there has been a wilful violation of the injunction, such punishment is inflicted as the court deems proper under the circumstances and will secure compliance with its judgment.

The order in such contempt proceedings is subject to review by an appellate court, or a discharge from imprisonment may be sought by means of a writ of *habeas corpus*, and if found that the evidence did not warrant a finding of guilty of contempt, or that the injunction was improperly granted, the defendant is discharged. Such punishments for contempt are resorted to in many proceedings other than those for injunctions. A refusal to convey property, or pay over moneys, when directed by a decree of the court, are treated as contempts, nor is this process limited to courts of equity. All courts possess that power. Thus, disobedience to the commands of a writ of mandamus issued by a law court, to a subpena for a witness, to a summons to one selected as a juror, resistance to process of a court, are all treated in the same manner. The fact that the acts of the party may also be punishable by a criminal proceeding does not deprive the civil court, whether a common law or equity court, of its power to enforce compliance with its order by the summary process of contempt proceedings. This power is inherent in every court and has existed and been exercised ever since courts have existed in Anglo-Saxon countries.

As the main object of proceedings for injunctions is to obtain speedy relief, instant compliance alone will secure it. For this reason, proceedings for contempt must necessarily be had at once, else the object of the suit will be defeated. If a railway company is about to build its road over the private property of a citizen without his consent or without having acquired the right to do so by condemnation proceedings, as prescribed by law, only an injunction or restraining order, granted immediately, will protect him in the enjoyment of the right guaranteed to him by our constitutions, that no person shall be deprived of his property without due process of law, and unless the courts possess the power to enforce obedience, its orders will be valueless. The same rule applies to all other proceedings. The refusal of a witness to appear in court in obedience to a sub-

pena may result in defeating the ends of justice. A refusal to convey property, the title to which, it is decreed by the court, is held by the defendant fraudulently, it having been purchased with plaintiff's money and for him, can defeat the decree of the court unless he can be coerced by the court to comply with its order, and the most effective way of securing compliance is by directing him to be imprisoned until he complies. A refusal to produce books at a trial, in obedience to an order of the court, is punished in that manner, and so are hundreds of other cases, which it is unnecessary to mention. This punishment is not only for the protection of litigants, but to maintain the dignity of the courts. How can respect for the judgments of the courts be obtained if the means of enforcing them are taken from them?

Should this power be taken from them and submitted to trial by jury? To do so would not only defeat in many instances the ends of justice, but would in effect make the jury the appellate tribunal of the acts of the court. To submit the question to a trial by jury would cause delays, which, as has been shown, would defeat the main object of the suit, especially as jury verdicts must be unanimous. One obstinate or corrupt juror can prevent a verdict, and until there is a final verdict, the parties could continue violating or disregarding the injunction. Jurors may decline to accept as the law the charge of the court, as is frequently done in trials of criminals, and thus practically vacate injunctions lawfully granted, for a verdict of not guilty would be final and not subject to review by any court.

That some judges have erred in granting temporary injunctions is no more reason to do away with the writ than to deprive them of trying men charged with the crime of murder, as there are thousands of instances in which judgments of conviction for murder have been set aside by appellate tribunals for errors committed by the trial judge. If a judge is corrupt or not sufficiently learned in the law the Constitution provides a remedy for his removal, but a careful examination of the reports of the courts of last resort will show that fewer cases in which injunctions had been granted have been reversed for error than judgments in any other branch of jurisprudence. In my opinion, the safety of the citizen in injunction proceedings under existing laws is not endangered as long as there is an intelligent, learned, honest and fearless judiciary. Such a judiciary is the safety of the republic and all its citizens, the highest as well as the humblest.

LITTLE ROCK, ARK.

Why Discuss It?

BY ELLIS O. JONES

"THE country is morally sound," remarked the preacher.

"And fundamentally all right," added the politician.

"And its resources are unlimited," put in the captain of industry.

"And its methods of doing business are correct," said the political economist.

"And you cannot down the American spirit," said the jingo.

"Hurrah for the flag," shouted the schoolboy.

"Everything is in good shape, then?" inquired the Man from Missouri.

"Yes," was the unanimous response.

"Then why are you talking so much about it?" asked the M. F. M.

The Bunch of Violets

BY W. G. BOWDOIN

The violet's charms I prize indeed,
So modest 'tis and fair,
And smells so sweet.

—*Goethe.*

THERE is something very appealing to the feminine mind about flowers. A violet, an orchid, a pink, a rose, a lily of the valley, a narcissus or other flower, single or in mass, when neatly pinned on, nestles at the corsage or on the bosom as a harmonious adornment of the feminine wearer, to whom the flower's exquisite shape or delicate perfume is offered as a deserved tribute. Flowers and the woman go hand in hand.

Oliver Stone knew this, as he walked along the street one Sunday afternoon. He recognized, vaguely perhaps, but nevertheless recognized, the affinity that always has and always will exist between flowers and femininity. It was because of this recognition that he stepped into a florist's shop, by which, with less discrimination, he might easily have passed, and bought a bunch of violets. Mr. Stone, it may be said, in passing, had an engagement to dine at his club with his soul's idol, and he had an idea that violets would look well upon her as he sat at table and looked across at her. So he bought the bunch of violets and paid their winter price. The florist wrapped them up, but the bundle looked suspiciously like the flowers that they were. Mr. Stone did not seem to care anything about this circumstance, however, and after leaving the florist's, continued his walk with a jaunty air. He even hummed a few lyrical bars from one of the light operas.

There was nothing very remarkable about the appearance of Mr. Stone to differentiate him from any other man. He was neatly but unobtrusively drest. His shoes were well polished and a careful observer might have noticed that his four-in-hand tie was a new one. The January air was brisk, and, as he breathed it, he realized something of the joy of living, even when a man lacks riches. He saw things tinted with *couleur de rose* and naturally felt jovial. The shop windows were for the most part uncurtained as he past, and their diversified contents were cunningly arranged so as to be as alluring as possible. Every now and then Mr. Stone would pause and look at one of the show windows. He was particularly interested in the art shops, and he gazed long and earnestly at certain pictures that were hung on the line in their windows.

He was conscious of the hum that precedes the passing of a metropolitan trolley car, but he paid no attention to the frequent dashing by of these cars. He was thinking about a certain personality that had great charm for him, and the people that he met and past, the shop windows, the traction cars and everything else that tended to distract, were, after all, only backgrounds, against which, conjured up by a vivid mentality, stood out in bold relief, the girl and the delightful red coat that she was wearing this season.

Mr. Stone was not particularly hurried, but he walked on. His fleece-lined gloves kept his hands warm in the chill air. The city trees along the traversed streets were bare of the foliage that makes them so attractive in summer time, but the trolley wires seemed to sing merrily to him of her in a manner which entirely offset the melancholy suggested by the denuded trees. It is singular what a mighty influence is often exerted by one who is far away. Possibly there is more to the absent treatment practised by the Christian Scientists than the skeptics are willing to admit. However this may be, Mr. Stone walked on and on and on. At a certain cross street he met his friend James Osborne walking toward him. Osborne advanced with extended hand.

"How are you, Stone?" said he. "Pleasant day after the rain."

The two shook hands cordially. Osborne continued, uncrushed by the iron look of Stone, inspired perhaps by premonition.

"I see you are about to call upon her and that you are going to pay the usual tribute in the way of flowers. Is it not so?"

It is difficult to say why, but under the influence of psychology, the analysis of which need not here concern us, the manner of Stone changed quickly but almost imperceptibly from gay to grave. He liked Osborne, but to be questioned thus by him was a jarring note. In another moment Talleyrand's famous dictum, that language was given to us for the purpose of concealing our thoughts, came over him in a flash of happy inspiration, unconsciously shaping his reply.

"My dear Osborne," said Stone, "your conclusions do you credit, but alas, they are based upon false premises. It is true that I carry flowers. In point of fact I may say that they are violets, but their destination is, unfortunately, not such as you have outlined. I weep bitter, scalding tears when I think of the joy that might come to me if your suggestions could only be realized, but my errand today is concerned rather with an attempt to moderate the sufferings of one of the members of our lodge, Freeman, you know, who now languishes in St. Luke's Hospital, and these violets will, I trust, lend themselves to comforting him when I leave after I have visited with him for a brief hour or so."

"You will," said Stone, gaining confidence in the realization of a good lie, well told, "again see how easy it is to be mistaken, in this sad world of ours, and that more than one disposition may easily be made of violets, sweet violets."

He paused for reply. "Yes," said Osborne, "I see, I see. By the way," he remarked, somewhat irrelevantly, "give my regards to your mother and let us hope that your hospital friend will soon recover. It is a joyous thing to have a friend, such as you, to bring violets to his cotside. My dear Stone, let me not detain you longer lest your languishing friend should over-languish. Farewell, Stone, you ministering angel, farewell," and Osborne past on.

So did Stone, who could not help wondering meanwhile if Osborne suspected insincerity. Mr. Stone continued his walk toward the trysting place already agreed upon. Suddenly a fire engine, with frenzied horses and clanging bell, dashed past him, followed by the usual throng of idlers who are always attracted by a fire engine. The Sunday calm was rudely broken. So also was the train of thought on the part of Mr. Stone, which had easily drifted back to the red coat, the girl in it, and the flowers he meant that she should wear at dinner that night. Fire engines at such a time are very distracting.

Mr. Stone reached the Brooklyn Bridge and began to walk over it. He looked toward New York City and saw its skyline. He had seen it many times before, but upon this particular Sunday afternoon it seemed to stand out stronger perhaps than ever. When he vaguely realized what it meant to so many people he was tremendously imprest.

"Dear old New York. There is no other city like it." So he mused as he looked toward Governor's Island. Now he had past over the bridge and essayed to cross Broadway. A street car got persistently in front of him and barred his progress for fully ten minutes. When the way was finally cleared of this obstruction he saw another friend, one William Lathrop, approaching. He greeted him pleasantly, but not with over-enthusiasm, as he now wished to avoid detention.

Mr. Lathrop was, however, uninfluenced by similar considerations. He was in no hurry whatever. The two exchanged greetings and past the time of day.

Suddenly Lathrop noticed the flowers, and suspicion entered into him as did the evil spirits into the herd of swine, who thereupon dashed violently down a steep place into the sea, to their universal undoing.

"Where away with the flowers, friend Stone?" said Lathrop. Stone again dissembled. "These violets, you mean? Oh, I am taking them to the club to be distributed to the heathen," said he, without pausing to think. But suddenly realizing his careless utterance, he murmured *sotto voce:* "Heaven save the mark. May I be forgiven these vain words."

"Are these heathen foreign or domestic?" inquired Lathrop.

"Yes. No. I guess so. I don't know," confusedly said Stone. "Why do you ask?"

"Oh, nothing, only such people have interested me for years," said Lathrop. 'I have always wondered why the heathen rage and why they imagine vain things the way they are said to do. Can it be that the heathen are feminine? But no, of course they can't be. And yet, and yet, and yet——" He did not finish. Into the eyes of Lathrop there came a faraway look that strikingly resembled the so-called "hunted look" that finds mention in folk lore tales. He was thinking hard and ere he was aware he had mechanically moved on, just before a blue-coated policeman, wearing his new military cap, could formulate his intended order for him to do so. Stone gazed meditatively after the retreating form of Lathrop and mentally wished him a pleasant journey and a safe return, in the manner of the landlord of the fashionable seaside hotel, whose business it is to welcome the coming and speed the parting guest. Stone felt that he could with a clear conscience speed Lathrop, in spite of his mythical story of the heathen destination of the violets that he still held firmly clasped in his right hand.

Breathing easily, at this last escape, Stone had but just turned the corner when who should reappear but the ubiquitous Osborne, and, woeful to relate, with him was Miss Freeman, the sister of his only real creation, the sick fellow lodge member.

"Well met," cried Osborne gleefully. 'Miss Freeman is just on her way to St. Luke's. You can take her there and make your visit at the same time."

With a wrathful glare, barely smothered as Miss Freeman looked in amazement at him, Stone muttered an excuse about a previous engagement before he would be ready to go to the hospital and fled precipitately down a side street.

Reaching at last the place of meeting, worn out with his fabrications of the afternoon, exasperated by the open incredulity of his friends, and the final narrow escape, he threw the flowers into the girl's hands, saying somewhat impatiently, "Take them!" All unconscious of their previous history, the girl drew herself up indignant at the manner of the gift. Dire consequences threatened to overtake Stone, but truth, tho late in the day and almost crushed to earth, triumphed at last. As he faithfully delineated the agonizing experiences of the afternoon her anger faded, and she wore the violets for him just as he had intended she should do in the first place, and all the time. When he looked over the teacups at her, he forgot all about the hypothetical visit to St. Luke's Hospital and the mythical distribution of his flowers to the heathen by his club about which he had so wickedly romanced. And the only thing about which he could possibly think was how becoming the delicately perfumed violets looked on the girl who in dining sat immediately facing him at the table.

BROOKLYN, NEW YORK.

"He Knoweth Them"

BY LOUISE DUNHAM GOLDSBERRY

WAS ever the green so green before,
These delicate grasses, God's grasses and mine?
This wonderful sun-flickered, sun-laced floor
Where the clovers shine?

And this wide fair field where the wild bees range
I walk with The King in the great earth-song;
Piper and fifer and minstrel strange
Our foot-path throng.

Never the name to a one I know,
Tho The King, He knoweth them, name by name;
But the singing it tangles my heart-strings so
In the day's white flame.

Fifer and piper and wood-note wing
Where the green is so green, God's green and mine;
Every grass-blade a stall where a singer can sing
And a sun-mote shine.

WASHINGTON, D. C.

The Nature of Love

BY H. G. WELLS

Author of "The War of the Worlds," "A Modern Utopia," "The Future of America," Etc.

LOVE does not seem to me to be a simple, elemental thing. It is one of the vicious tendencies of the human mind to think that whatever can be given a simple name can be abstracted as a single something in a state of quintessential purity. This is not true of harmony or beauty, and these are synthetic things. You bring together this which is not beautiful and that which is not beautiful, and behold! beauty! So also love is, I think, a synthetic thing. One observes this and that, one is interested and stirred; suddenly the metal fuses, the dry bones live! One loves.

Almost every interest in one's being may be a factor in the love synthesis. But apart from the overflowing of the parental instinct that makes all that is fine and delicate and young dear to us and to be cherished, there are two main factors that bring us into love with our fellows. There is first the emotional elements in our nature that arise out of the tribal necessity, out of a fellowship in battle and hunting, drinking and feasting, out of the needs and excitements and delights of those occupations; and there is next the intenser, narrower desirings and gratitudes, satisfactions and expectations that come from sexual intercourse. Now, both these factors originate in physical needs and consummate in material acts, and it is well to remember that this great growth of love in life roots there, and, it may be, dies when its roots are altogether cut away.

At its lowest, love is the mere sharing of—or, rather, the desire to share—pleasure and excitement, the excitements of conflict, or lust, or what not. I think that the desire to partake, the desire to merge one's individual identity with another's, remains a necessary element in all personal loves. It is a way out of ourselves, a breaking down of our individual separation, just as hate is an intensification of that. Personal love is the narrow and intense form of that breaking down, just as what I call salvation is its widest, most extensive form. We cast aside our reserves, our secrecies, our defenses; we open ourselves; touches that would be intolerable from common people become a mystery of delight; acts of self-abasement and self-sacrifice are charged with symbolical pleasure. We cannot tell which of us is me, which you. Our imprisoned egoism looks out thru this window, forgets its walls, and is for those brief moments released and universal.

For most of us the strain of primordial sexual emotion in our loves is very strong. Many men can love only women, many women only men, and some can scarcely love at all without bodily desire. But the love of fellowship is a strong one also, and for many love is most possible and easy when the thought of physical lovemaking has been banished. Then the lovers will pursue other interests together, will work together or journey together. So we have the warm fellowships of men for men and women for women. But even then it may happen that men friends together will talk of women, and women friends of men. Nevertheless we have also the strong and altogether sexless glow of those who have fought well together, or drunk or jested together, or hunted a common quarry.

Now, it seems to me that the believer must also be a lover, that he will love as much as he can and as many people as he can, and in many moods and ways. As I have said already, many of those who have taught religion and morality in the past have been neglectful or unduly jealous of the intenser personal loves. They have been, to put it by a figure, urgent upon the road to the ocean. To that they would lead us, tho we come to it shivering, fearful and unprepared, and they grudge it that we should strip and plunge into the wayside stream. But all streams, all rivers, come from this

ocean in the beginning, lead back to it in the end.

It is the essential fact of love, as I conceive it, that it breaks down the boundaries of self. That love is most perfect which does most completely merge its lovers. But no love is altogether perfect, and for most men and women love is no more than a partial and temporary lowering of the barriers that keep them apart. With many, the attraction of love seems always to fall short of what I hold to be its end; it draws people together in the most momentary of self-forgetfulness, and for the rest seems rather to enhance their egotisms and their difference. They are secret from one another even in their embraces. There is a sort of love that is egotistical lust almost regardless of its partner, a sort of love that is mere fleshless pride and vanity at a white heat. There is the lovemaking that springs from a sheer boredom, like a man reading a story-book to fill an hour. These inferior loves seek to accomplish an agreeable act, or they seek the pursuit or glory of a living possession; they aim at gratification, or excitement, or conquest. True love seeks to be mutual and easy-minded, free of doubts, but these egotistical mockeries of love have always resentment in them, and hatred in them, and a watchful distrust. Jealousy is the measure of self-love in love.

True love is a synthetic thing, an outcome of life; it is not a universal thing. It is, I hold, the individualized correlative of salvation; like that, it is a synthetic consequence of conflicts and confusions. Many people do not desire or need salvation; they cannot understand it, much less can they achieve it; for them chaotic life suffices. So, too, many never, save for some rare moment of illumination, desire or feel love. Its happy abandonment, its careless self-giving, these things are mere foolishness to them. But much has been said and sung of faith and love alike, and in their confused greed these things also they desire and parody. They act worship, they make a fine fuss of their devotions. They must have a few half-furtive, half-flaunting, fallen love-triumphs prowling the secret back streets of their lives, they know not why.

(In setting this down be it remembered I am doing my best to tell what is in me because I am trying to put my whole view of life before the reader without any vital omissions. These are difficult matters to explain; one lets in a hard light suddenly upon things that have lurked in warm intimate shadows, dim inner things engendering motives. I am not only telling quasi-secret things but exploring them for myself. They are none the less real and important because they are elusive.)

True love, I think, is not simply felt, but known. Just as salvation as I conceive it demands a fine intelligence and mental activity, so love calls to brain and body alike and all one's powers. There is always elaborate thinking and dreaming in love. Love will stir imaginations that have never stirred before.

Love may be and is for the most part one-sided. It is the going out from oneself that is love and not the accident of its return. It is the expedition, whether it fail or succeed.

But an expedition starves that comes to no port. Love seeks mutuality and grows by the sense and hope of responses, or we should love beautiful inanimate things more than we do. Failing a full return, it makes the most of an inadequate return. Failing a sustained return, it welcomes a temporary coincidence. But it seeks a full return always, and the fullness of life has come only to those who, loving, have met the lover.

I am trying to be as explicit as possible in thus writing about love. But the substance in which one works here is emotion that evades definition; poetic flashes and figures of speech are truer than prosaic statements. Body and the most sublimated ecstasy pass into one another, exchange themselves, and elude every net of words we cast.

I have put out two ideas of unification and self-devotion, extremes upon a scale one from another; one of these ideas is that devotion to the purpose in things I have called salvation, the other that devotion to some other most fitting and satisfying individual which is passionate love, the former extensive as the universe, the latter the intensest thing in life. These, it seems to me, are the boundary and the living capital of the empire of life we rule.

All empires need a comprehending

boundary, but many have not one capital but many chief cities, and all have cities and towns and villages beyond the capital. It is an impoverished capital that has no dependent towns, and it is a poor love that will not overflow in affection and eager, kindly curiosity and sympathy and the search for fresh mutuality. To love is to go loving radiantly thru the world. To love and be loved is to be fearless of experience and rich in the power to give.

For he who has faith, death, so far as it is his own death, ceases to possess any quality of terror. The experiment will be over, the rinsed beaker return to its shelf, the crystals gone dissolving down the wastepipe; the duster sweeps the bench. But the deaths of those we love are harder to understand or bear.

It happens that of those very intimate with me I have lost only one, and that came slowly and elaborately, a long, gradual separation wrought by the accumulation of years and mental decay, but many close friends and many whom I have counted upon for sympathy and fellowship have past out of my world. I miss such a one as Bob Stevenson, that luminous, extravagant talker, that eager, fantastic mind. I miss him whenever I write. It is less pleasure now to write a story, since he will never read it, much less give me a word of praise for it. And I miss York Powell's friendly laughter and Henley's jolly and generous welcome. They made a warmth that has gone, those men. I can understand why I, with my fumbling lucidities and explanations, have to finish up presently and go, expressing as I do the mood of a type and of a time, but not those radiant presences.

And the gap these men have left, these men with whom after all I only sat now and again, or wrote to in a cheerful mood or got a letter from at times, gives me some measure of the thing that happens, that may happen, when the mind that is always near one's thoughts, the person who moves to one's movement and lights nearly all the common flow of events about one with the reminder of fellowship and meaning—ceases.

Faith which feeds on personal love must at last prevail over it. If faith has any virtue it must have it here when we find ourselves bereft and isolated, facing a world from which the light has fled, leaving it bleak and strange. We live for experience and the race; these individual interludes are just helps to that; the warm inn in which we lovers met and refreshed was but a halt on a journey. When we have loved to the intensest point we have done our best with each other. To keep to that image of the inn, we must not sit overlong at our wine beside the fire. We must go on to new experiences and new adventures. Death comes to part us and turn us out and set us on the road again.

But the dead stay where we leave them.

I suppose that is the real good in death that they do stay; that it makes them immortal for us. Living they were mortal, but now they can never spoil themselves or be spoilt by change again. They have finished—for us, indeed, just as much as themselves. There they sit forever, rounded off and bright and done. Beside these clear and certain memories I have of my dead, my impressions of the living are vague, provisional things.

And since they are gone out of the world and become immortal memories in me, I feel no need to think of them as in some disembodied and incomprehensible elsewhere, changed and yet not done. I want actual immortality for those I love as little as I desire it for myself.

Indeed, I dislike the idea that those I have loved are immortal in any real sense; it conjures up dim, uncomfortable, drifting phantoms that have no kindred with the flesh and blood I knew. I would as soon think of them trailing after the tides up and down the Channel outside my window. Bob Stevenson for me is a presence utterly concrete, slouching, eager, quick-eyed, intimate and profound, carelessly drest (at Sandgate he commonly wore a little felt hat that belonged to his son) and himself; himself, indissoluble matter and spirit, down to the heels of his boots. I cannot conceive of his as any but a concrete immortality. If he lives, he lives as I knew him, and clothed as I knew him, and with his unalterable voice, in a heaven of dædal flowers or a hell of ineffectual flame; he lives, dreaming and talking and explain-

ing, explaining it all very earnestly, so I picture him, into the ear of the principal person of the place—wherever his lot has fallen.

I have a real hatred for those dreary fools and knaves who would have me suppose that Henley, that crippled Titan, may conceivably be tapping at the underside of a mahogany table or scratching stifled incoherence into a locked slate! Henley tapping!—for the professional purposes of Sludge! If he found himself among the circumstances of a spiritualist seance he would, I know, instantly smash the table with that big fist of his. And as the splinters flew, surely York Powell, out of the dead past from which he shines on me, would laugh that hearty laugh of his back into the world again.

Henley is nowhere now except that, red-faced and jolly, like an October sunset, he leans over a gate at Worthing after a long day of picnicking at Clanktonbury Ring, or sits at his Woking table praising and quoting "The Admirable Bashville," or, blue-shirted and wearing the hat that Nicholson has painted, is thrust and lugged, laughing and talking aside in his bath-chair, along the Worthing esplanade. . . .

And Bob Stevenson walks forever about a garden in Chiswick, talking in the dusk.

SANDGATE, KENT, ENGLAND.

The New Constitution in Turkey

BY MUNDJI BEY

TURKISH CONSUL GENERAL.

I AM indebted to the editor of THE INDEPENDENT for the opportunity he offered me to speak about my country, Turkey, which is so often misrepresented by foes and so-called friends. Her foes have failed to see the rise of the young Ottoman, his struggle, his energetic work and aspirations to attain the highest civilization. Her so-called friends have stood with the old *régime* and its representatives, the Yildiz Kiosk clique, injuring the cause of Ottoman freedom.

The history of the Young Turkish party is to be traced back to the times of Sultan Abdul Aziz, the uncle of the present ruler of the Ottoman Empire. The reader of THE INDEPENDENT may be reminded that Sultan Abdul Aziz committed suicide, but some of the Palace officials, to avoid further revolution, changed the whole form of Abdul Aziz's tragedy, and fabricated the story of the murder, attributing it to the reformers. These pioneers of Ottoman freedom were persecuted, some were beheaded, imprisoned, exiled and some met with the fate of midnight murder at Yildiz. None of them today is in the active revolutionary field.

During the reign of Abdul Aziz, Prince Mustaffa Fazil Pasha, who occupied many important positions in Turkey, took with him to Paris a few bright young Turks for their education. Among these students were Kemal Bey and Ali Suavi Effendi. Soon they acquired a mastery of the French language and felt the influence of the Western civilization; they realized that their *Vatan* (Fatherland) needed reforms. A Turkish weekly was started at once to propagate Western ideas among their compatriots in Constantinople. This was about a half century ago.

It is, perhaps, interesting to know how the term "Young Turk" came into existence. While these young men were students at the Paris University they attracted much attention on account of their intelligence, cleverness and diligence. One day one of the professors remarked before his class, "How different and how funny the young Turks are," and since then the Ottoman reformers were identified as Young Turks.

The periodical newspaper, *Medjmouaa*, which was edited and published in Paris by Ali Suavi, a clergyman, highly edu-

cated, brave, energetic and intelligent, was taken and widely read in Turkey. At that era Turkey had liberty of the press. Many daily, weekly and satiric papers were published in Constantinople. It was at that time that Kemal Bey, that grand old Ottoman patriot, wrote many dramas: "Patrie," "Silistre," "Poor Boy" and many others, which were played by Armenian actors like Gully Agop, who had a great theater at Gedik Pasha, at Stamboul. Sultan Abdul Aziz went there once a week and occupied the imperial box with his foreign diplomatic guests.

These were promising days for the Ottoman Empire. Prominent, able and world-renowned diplomats like Aali Pasha and Fouad Pasha managed the ship of state and managed it well. At that time Turkey was the third naval Power in the world, coming next to Great Britain and France. Unfortunately, Sultan Abdul Aziz was a man of pomp and show, and thru his imprudent extravagance the Ottoman debt increased, and the treasury was almost bankrupt and the country ruined. Altho we were considered a great Power, financially we were embarrassed. The Cabinet finally decided to dethrone Sultan Abdul Aziz, and the famous *coup d'etat* followed. Murad V, the unfortunate prince, was proclaimed Sultan, only to rule for three months, as a consequence of a palace intrigue, which I cannot explain here for the lack of space.

Sultan Abdul Hamid became Emperor of the Ottomans, with a solemn promise to grant a constitution, which was elaborated by Midhat Pasha and other Liberals, men like Sheikh-ul-Islam Hair-Ullah, Hussein Avni Pasha, Minister of War, Rashid Pasha, and some highly educated Armenians, like Odian, who were co-workers and advisers of Midhat Pasha.

Did Abdul Hamid perform his promises? Yes, he did—on December 18th, 1876, four months after his accession to the throne. The first Ottoman Parliament met on March 19th, 1876, at Dar-ul-Funoum, which place was designated for the Chamber of Deputies. The first Parliament, in harmony with the Senate, set out at once to carry out reforms in the empire. This alarmed Sultan Hamid, and on the eve of the declaration of war with Russia the Parliament met for the last time on February 18th, 1877.

What was the state of affairs in Turkey from the closing of the first Parliament till the granting of the new constitution on July 24th last? In short, it was a period of the decay of Turkey, the loss of many Ottoman territories, the humiliation of the independence and the dignity of the nation; the destruction of our commerce, industry and agriculture; the suppression of the public instruction; the ruin of the finance; a period of espionage, tyranny, massacres and intervention of the foreign Powers in internal affairs. During this time Turkey lost her navy and became very small and weak, and always exposed to external attacks, even by Balkan states, which are controlled by the great Muscovite Power.

Consequently, during these thirty-two years of the reign of Abdul Hamid, the Young Turkish party became very active, and, as the Kurdish tribes in various parts of Asia Minor became aggressive against the peaceful and industrious Armenians, revolutionary parties sprang up among them—Armenists, Hunchakists and Drochakists. This was followed by terrible, inhuman, cruel and obnoxious massacres and outrages, which were ordered by Palace officials, but of which no true Mahommedan or Ottoman could be accused. The nation is not represented by the Yildiz Kiosk. To me, the words "Palace officials" mean assassins, mean monsters, mean thieves and public enemies.

That the Armenian massacres were ordered by the Palace clique I can prove by documents. That these Palace officials robbed the public of its rights and neglected the needs of the country requires no further proof; it is too well known. Under this state of affairs, on account of the poverty of the people and the neglect of the payment of the public officials and soldiers, the number of sympathizers of the Young Turkish movement grew larger day by day. Turkish and Armenian revolutionary publications were smuggled into the country and read in every hamlet. The people became enlightened to see the unbearable existing conditions and the revolution became inevitable. This tyrannical rule and des-

potism, worse than Nero's and Attila's, forced the great conflagration. The first alarm call was heard in Paris.

In December, 1907, the representatives of the revolutionary and progressive parties of the Turks, Armenians, Greeks, Bulgarians, Jews, Kurds and all other subject races of the Ottoman Empire, assembled in congress in Paris, decided to make a common cause of the overthrowing of the rule of the Sultan, and the establishment of a constitutional government in Turkey. They, in a consolidated agreement, pledged themselves to lay aside all the mutual feuds and racial strife and to unite in action against the public enemy, against the tyranny of the absolute monarchy.

The resolutions adopted by the congress were:

1. The abdication of Sultan Abdul Hamid.
2. A radical change of the present *régime*.
3. Establishment of a representative *régime* (Parliament).

To accomplish these, the following measures were adopted unanimously:

1. Armed resistance.
2. Unarmed resistance by political and economic arbitration; that is, the officials and police will be persuaded to resign under the present *régime*.
3. Refusal to pay the taxes.
4. Propaganda in the army; the soldiers will be appealed to not to open fire on the people or on the revolutionists.
5. A general insurrection.
6. Other measures according to the circumstances.

The president of the congress was Prince Sebaheddin Bey, who in a brilliant address propounded the principles of the French Revolution, the ideas of liberty, equality and fraternity. Speaking of the Armenian massacres, he condemned his uncle, the Sultan, and said: "We live at the dawn of a new era. Our relations with the Armenians are changed. The grand movement for freedom has made them our brothers, our old and our new friends."

And they were Turks and Armenians who carried this resolution of the opposition party into the active field. Were these resolutions effective? Was the promulgation of the constitution the result of this alliance? My answer is affirmative. I know, and can assure the readers of THE INDEPENDENT, that all the Ottomans are sympathetic with this revolutionary union of races.

Secret workers, who went from the Paris congress into the country, found many prominent and military officials were ready to welcome the new call. They were waiting for the opportune moment to destroy the Sultan's despotic government.

The dissatisfied and liberal leaders in the army in European Turkey were Enver Bey and Niazi Bey, whose names will go down for generations to come in Ottoman history. The day was set for a *coup d'etat* and general insurrection on 1st of September, the day of the anniversary of the ascension of the Sultan to the throne.

The success of this plot was doubtful, indeed, but when recently King Edward visited the Czar and the Macedonian question was to be decided, our revolutionists grasped the situation. They knew well that the loss of Macedonia meant the end of European Turkey and the beginning of the end of the Ottoman Empire. The Sultan, thru his stubborn persistence in denying the reforms and constitution, was leading the nation to the abyss of destruction. So our army in Macedonia, advised by Young Turks and led by Enver Bey and Niazi Bey, revolted. An envoy was dispatched to Constantinople to demand of the Sultan that he proclaim the constitution. Otherwise, three hundred thousand insurgent soldiers would march on the capital, put an end to Abdul Hamid's rule and establish a free government.

What could the Sultan have done? Albania had already revolted, Anatolia was in disturbance, the Kurds in Dersim aggressive and general discontent growing, so he was compelled to yield. Saïd Pasha and Kamil Pasha, the liberals of olden times, were called from their seclusion to the Yildiz Kiosk, and upon their advice the constitution was proclaimed on July 24th, the day which we will celebrate as the day of Ottoman independence. Now, since the constitution is a fact, it is not possible that the Sultan will

go back on his word, no matter how reluctant he may be. His life is in danger the moment he turns his back on the Young Ottomans.

This constitution means a great deal to all Ottomans, without discrimination on account of race or religion. It means the freedom of the press, safety of life and property, freedom of commerce, equality of all before the law. It means union, brotherhood and progress; in fine, it is the peace so long cherished which will open the path of civilization.

Of course, the constitution of 1876 needs revising, and I assure the readers of THE INDEPENDENT it has already been decided what the changes will be. First of all, the absolutism of the Sultan will be abolished, and secondly, the thirty senators will be elected by public vote instead of by being appointed by the Sultan. Another change will be that every 25,000 voters will elect one deputy, instead of 50,000, as is provided in the old constitution.

What attitude the European Powers will take for the present is not clear. England is a friend of the Ottomans; we can count on the friendship of France and know that Russia will remain neutral. But there is Germany, the friend of the Sultan. For the present her interests, commercial and economic, her contracts and railroads, are endangered. The Young Ottomans mean business, and the friend of Abdul Hamid will see no more favors. Our commerce and industry will be entrusted again to the Turks, Armenians and Greeks, who for centuries have wisely managed the country's finance and worked for the economic well-being of the nation.

Since the granting of the Ottoman constitution I have carefully observed the sympathy of the American press and public in general. I sincerely hope that the public opinion of this liberty-loving land of Washington, Jefferson and Lincoln will be with the Young Ottomans. For my part, I trust that in the future the Young Ottoman Empire will have more friendly and economic relations with the United States, and I do not see why we should not.

In closing this article I cannot neglect a tribute to our martyrs and heroes who died on the gallows for freedom. The Turkish and Armenian heroes, their great sacrifices and suffering, will be remembered always in Ottoman history with reverence. Shrines will be built for Turkish martyrs, who bravely stood against tyranny and suffered the horrible tortures of the old *régime*. The story of their heroism may never be told to the civilized world, but their memory lives in our hearts. They are the founders and the fathers of the Ottoman Empire.

Let there be no more Turkey on the map, but a strong Ottoman Empire, young, energetic, progressive, a guardian of peace for Europe and a forerunner of civilization for Asia.

NEW YORK CITY.

The Gift Possessed

(To a Caged Bird)

BY WILSON JEFFERSON

THY home, gay songster, is the free
Far leagues of space's immensity—
  Dim woods and quiet, leafy bowers;
Yet from thy prison small and bare
Thy soul, forgetting bounds, doth fare
  In strains that shame man's cruel powers.

Wings hast thou, and the instinctive sense
That, free, thou couldst pierce the immense
  Far stretches of a luring sky;
And yet, forbidden, thou thy wings
Foldest, while from thy heart upsprings
  Sweet strains thy lot to glorify.

O bird! would that my heart, like thine
Earth-bound, could still feel the divine
  Sweet issues of the gift of life—
And should to me heaven aught deny,
Would that I still might glorify
  The gift possessed—come calm or strife.

AUGUSTA, GA.

Pets and Children

BY CHARLOTTE PERKINS GILMAN

Author of "Women and Economics," "The Home."

WE have no proud pre-eminence in keeping slaves—the ant does that. Neither are we alone in maintaining parasites; bird, beast and fish, reptile and insect are thus imposed upon, sometimes beneficially, sometimes to their deadly injury. But the pet is a human invention. Only the human creature voluntarily assumes a parasite and loves it; still further, not only selects but *creates* it; makes, for its delectation, living things which have no other purpose or excuse than to be pets.

What is a pet?

"A fondling," says the dictionary, "any little animal fondled and indulged."

It is difficult to make a pet of a large animal, tho we may "fondle and indulge" a favorite horse; or even—to some degree—an elephant. The difficulty is partly mechanical; a lap-horse, for instance, or even a lap-pony, being quite out of the question; but it is also due to the suggestive fact that if the big animal did not wish to be a pet we could scarcely compel it. The elephant, for instance, not wishing to be petted, might pet us—and we might not like it.

A little animal, then, or the young of larger ones, pettable while little, must be taken. Having selected our pet we then proceed to fondle and indulge, to work our will upon it as far as we may, and let it have its will as far as pleases us.

The fondling process is not always agreeable to the pet. Some creatures will not stand it—that is why we have been at such pains to breed beasts that will.

Those which do not manifest the full characteristics of a contented pet we must perforce restrain in some manner. The pet bird is caged. We cannot, to any great extent, fondle him—birds do not like it. As to indulgence—we give him what we see fit of food and drink, lime and chickweed, but any vagrant whim for flying which he might manifest we do not indulge.

The pet rabbit also, the pet guinea pig, the pet squirrel, the pet mouse—all these must be carefully caged and not indulged in any desire to run away.

Larger beasts we confine in parks and paddocks, or bind with collar and chain. A rambling fancy suggests the time when slaves wore collars. Gurth the swineherd, for instance, and Wamba the witless; also that prisoners—typical prisoners—are bound with chains.

But we are speaking of pets. Why do we keep them? If we waive the dubious pleasure of our fondling and the limited range of our indulgence, what good does it do them? What advantage is it to any animal to be a pet? They get food and shelter, and they are protected from quick destruction by enemies; but they lose freedom—the first prerogative of happiness—they lose all natural exercise of function in securing food, and so necessarily deteriorate in efficiency; and they lose also, in most cases, the satisfaction of nature's strongest impulse—the mating instinct.

Do we really believe that our "fondling" and our "indulgence" make up to them for losing these? If they did, if any creature voluntarily preferred to be our pet to being his own master, then we should not need cage or chain.

Some, thinking shallowly, will advance the cage-born bird, or the artificially bred lap-dog, as creatures that must be pets or die—we save their lives by keeping them prisoners.

Think deeper, friend! We made these sorry beasts, these poor, harmless, little Frankensteins, and therefore must maintain them; and we *keep on making them* because we like to!

If we had bred a tribe of brainless, pigmy, human cripples, unable to feed themselves, would that justify our keeping up the breed from age to age?

If we cease to breed these specially modified animals, they cease to exist. The lap-dog is as much a piece of human manufacture as a Burbank berry, and not as good a one. We did not start the life

stream in his long man-handled ancestry, but we have steadily diverted and perverted it to our own pleasure until the wretched little organism could not maintain itself a week in any natural environment.

It would be an interesting experiment to try, the cost and labor being some penance for our long interference with their lives. Suppose we should so labor, prepare a safe and favorable environment and turn loose therein a number of enfranchised pets. How they would run about, helpless as expatriated tapeworms, seeking vainly for their amiable "hosts." Most of them would die, of course. They have no reason for existence. They *do not exist*—save as we artificially maintain them. No, the question of whether the pet likes his position is not to be answered by the exhibition of our hand-made varieties who know nothing else. Ask the wild squirrel, the wild rabbit, the wild bird; their opinion would be worth something. Even for tame creatures, which have any normal life, the pasture is preferable to the "lap."

If keeping pets does the animals no good, what good does it do us?

That we like it there is no denying—why else should we so persist?

But—there are some things people "like" that are not therefore proven good. Enjoyment is no more justification than it is proof of wrong.

Of what nature is the pleasure that we receive from pets? First, there is the menagerie pleasure, mere primitive curiosity and childish interest in watching the alien creature.

This is no particular harm—unless it harms the creature—then our pleasure becomes cruelty. But it is no good either. To watch wild creatures acting naturally is instructive; but to watch pets——!

Then there is the pleasure of benefiting them. This may be waived, on the grounds previously given.

Then there is mere sensuous gratification in stroking a silky fur—this is a pleasure, but not great enough to warrant keeping live fur for the purpose. A muff—with a heater inside—would do us as well. And the muff wouldn't mind it. What else ——?

Then arises the enraged reader, the reader beginning gently enough but becoming more and more displeased; the reader whose tender sensibilities are deeply outraged, and replies: "We keep pets because we love them!"

Ah! yes! We love them. Love them. Love is a large word. There are four distinct kinds apart from the domain of Eros. There is the love based on likeness or sympathy. It is not with this surely that we love our pets!

There is the love resting on gratitude —that doesn't apply. There is the love born of admiration, leading to hero-worship—it can't be that.

Then there is the giving-love, the foundation of mother-love, the love which pours forth endlessly, to serve and benefit—can it be that?

Is there any connection between mother-love and keeping pets? Let us examine the facts.

Who keep pets most? Children and women. With children the pet is mainly an object of curiosity, arbitrary restraint and interference. They like the feebler creature dependent upon them—like to freely exercise their wills upon it—and do so.

No pen can ever do justice to the world-wide, age-long story of the cruelty, conscious and unconscious, inflicted by little children on their pets. I call to mind at once a loving little girl squeezing small chickens to death—"because she loved it so!" and another burying her kitten alive —reason not stated.

Who ever else keeps pets, the child should not. This is not only because of the suffering of the pet, but because of the influence upon the child.

"It teaches the child to be kind to animals," we say. Does it? Ask the pet.

Young, unwise, irresponsible, without self-control, the child is no fit person to have power over helpless living things.

Let them study natural life, respectfully, admiringly, but not possess it.

The little child can enjoy the companionship and profit by the protection of a big dog, and be friends with the old cat, but we should not put into baby hands the helpless baby animal.

After childhood it is mainly women who keep pets, and of these not so much the wholesome house-mother as the

lonely maiden lady or the idle married woman who does no work and bears no children.

Here we find a poor, perverted, groping form of mother love, wasting itself on little prisoners in fur and feathers, trying to fill empty hearts with these unhappy substitutes for the babies that should satisfy them.

It is not a noble love. It does not consider "the best good" of the beloved object, as does the wise mother in restraining and training the child.

The pet is a "spoiled child" almost always, made capricious and exacting by the fondling and indulgence which it so lavishly receives.

If there were no other resources for unsatisfied mother love, this poor resource should not be denied them, but there are two.

One is work. Given a satisfying field of exertion, large social service, and the overcharged heart finds rest.

The other is—children. There are plenty of children on earth, motherless and worse than motherless.

What should we think to see an ant affectionately nursing some flea or worm's egg, while the little ants went untended? Women who have love to spare can find plenty of use for it. While one child goes hungry, dirty, cold, untrained, there is no need of keeping a lapdog to love.

Then arise the pet defenders and say, "But children are a care, a responsibility, an uncertainty, a possible pain and disappointment. The lap-dog is none of these." No. And therefore we "love him." It is an easier job.

Whatever we give him he is thankful for. He does not criticise us. For what we do to him no one can criticise us—is he not our own? If he is sick, if he dies, it is no great matter. If we tire of him we can sell him, kill him, give him away. He is property. And we are sure of his love. Yes, such as it is, it is practically certain. The affectionate eyes, the wagging tail, the eagerly lapping red tongue —we prefer these to the eyes and the mouth and the arms of a child. But children are expensive and dogs are cheap. Yes. That does make some difference in some cases. Yet pet dogs are not confined to poor people, nor children to rich ones.

Some pets cost enough to feed a baby a year, and more. A mutually respecting friendship with interchange of service is possible between man and animal. The Arab, for instance, with his splendid stallion, his priceless mare; he loves his horses and they love him, and they serve one another.

The shepherd and his pair of collies—here is a natural relation; respect, service and love.

Any wise man or woman, using animals, may love them and command their love. One may, with patience and care strike up a friendship with wild creatures and "love" them all one is able.

One may quite justifiably "fondle and indulge" the "motherless lamb," that must be reared by hand if reared at all, or any orphan cub or kitten, calf, colt or puppy.

Yet none of these cases are precisely those of pets. The human child cannot be trusted to take care of the animal child; a substitute mother is needed.

And our women who keep pugs and poodles do not do it from any necessity, but buy their special brand of manufactured beastie at considerable expense.

The pathos of the stray dog, the orphan kitten, does not appeal to the same sense. One further word as to these pets we "fondle" and "indulge." Under which head comes mutilation? We slice off the soft ears of frisking puppies, we amputate and crush their helpless, wagging, little tails; is this done out of affection for them? Or is it done to give us pleasure? It can hardly be the former. If the latter, will any "lover of dogs" explain what kind of pleasure she gets from contemplating a creature maimed, deformed, mutilated?

NEW YORK CITY.

The Leadership of the Agricultural College

BY KENYON L. BUTTERFIELD

President of the Massachusetts Agricultural College

THE agricultural college, viewed in the largest way, has three distinct missions. It is an organ of research, an instructor of students, a disseminator of knowledge.

As an organ of research it works largely thru the agricultural experiment station, in an endeavor to discover how nature acts with respect to the growth of plants and animals. The foundation of the new agriculture is a knowledge of the laws of the physical universe. A well-appointed institution, however, will by no means neglect investigations into the fields of economics and sociology, for therein lie important truths for rural people.

The conventional college offers opportunity to men and women who pursue a more or less protracted course of study within its walls. So the agricultural college will find work here. Its function in this field may be stated as the training of leaders—of men and women who will find their work in the rural schools, in the agricultural schools and colleges, in the country parishes, and, best of all, as working farmers and housewives who delight in the opportunities for social service which country life affords.

Every college in a democratic society must lead democracy. Peculiarly is it the work of an agricultural college, maintained at public cost, standing for an industry that not only contains a third of the toilers in our land, but which is universally regarded as our fundamental industry, ministering directly to the welfare of at least twenty-five millions of our people. I say it is peculiarly the mission of such a college to attempt to give the widest possible publicity to all forms of information that may be helpful in country work and life. "Extension work," then, is the third and not the least significant function of the agricultural college.

Running thru all these phases of the work of the agricultural college is one distinctive note—that of leadership. And it is that note that I want to attempt to strike in this brief paper. It is the keynote of successful educational endeavor in the agricultural field.

With respect to leadership itself the agricultural college has a twofold mission. It has to train leaders in rural affairs. It has itself, as an institution, to exercise leadership in rural betterment.

In the training of leaders it has a variety of tasks. As already suggested, the fundamental basis for the advancement of agriculture is scientific research. Therefore the agricultural college, thru its experiment station, will pursue high-grade scientific research. But it will also train men who can carry on this work of research as the years come and go. These men must be very thoroly trained. Superficial preparation will no longer answer. The ideal worker in scientific agriculture will have a thoroness and breadth of preparation possessed only by the elect. So complex are the problems that only the man with a wide range of thought and with a genuine scientific spirit can succeed. The agricultural college should train these workers.

The agricultural college must train leaders in agricultural education. Thus far the agricultural colleges have absorbed all those who wish to become teachers of agriculture. However, we are now entering upon an era in education when the secondary schools of agriculture are to play a relatively larger part than will the colleges. The agricultural colleges must train teachers of agriculture for these schools. To the agricultural colleges also must be left in very large part the training of the teachers who are to teach agriculture in the elementary schools. Of course, the nor-

mal schools, as a rule, are better prepared than are the agricultural colleges to give the pedagogical foundation for this work, but the agricultural colleges, simply because they have the agricultural atmosphere, are better prepared than the normal schools ever can be to give the technical agricultural education.

The agricultural colleges should assist in training religious leaders of rural communities. I believe that the country clergyman of the future will be a man who has had part of his training at least in an agricultural college. The country clergyman ought to know the farm problem. He ought to know that while it is in large part a technical problem, it is also a great economic question, and a great social question that concerns American civilization. He ought to know what the problem is and the part the Church has to play in solving it. The agricultural colleges must see to it that he has the opportunity to get this training within their halls. If the effort of the Young Men's Christian Association to develop the rural work succeeds in any large way there ought to come a time in the near future when its paid workers in the rural field will be men who have had at least part of their training in an agricultural college.

But beyond all this lies the need of leaders among the farmers themselves. One of the most serious difficulties in our rural communities is the lack of leaders on the farm. The agricultural colleges must train men to go back to the farm with the idea not only of making a fair living from the soil, but with the idea of there exercising their best powers in bringing others up to a higher standard, industrially, politically, socially, morally. So far our agricultural colleges have done all too little in developing this sense of leadership. The time has come when it can no longer neglect the task.

Not only is the mission of the agricultural college thus to train men for individual leadership in those various activities and for those different interests which are to be the regenerators of rural life, but the college, as an institution, must exercise leadership among social agencies for rural betterment. It must be recognized that the farm problem is, in the last analysis, a social problem. The agency of education and the method of co-operation must be invoked for its solution. The agricultural college should stand as a fountain of knowledge in regard to rural conditions with respect to methods of progress, in the dissemination of information with respect to the whole range of rural affairs. This function of leadership the college can best exercise thru an organized department of extension teaching for carrying out to the people who cannot come to the college something of the teaching which prevails within its halls. The college should be the nucleus about which may gather assemblages for the discussion of the various phases of rural betterment.

I also wish to emphasize that field of endeavor in which the agricultural college has a peculiar mission of leadership. It is not enough to discover the truth about the scientific basis of agricultural improvement, fundamental as that work of discovery may be. It is not enough even to work over into teaching form the material thus discovered, and, by its presentation to college students, to train leaders in rural betterment. The agricultural college must stand eternally for democratizing education. It must be a city set on a hill. It must not hide its light under a bushel, but it must carry to the great mass of rural people, and to all those interested in country life, the knowledge and inspiration that gather about the work of the institution. We call this "extension teaching," and thru it we mean to reach the young and old, the rich and the poor, the educated and the illiterate, by some means or another, and in such a way as to stimulate and educate them for better country living. This extension teaching may take the form of farmers' institutes, and may not be at all under the control of the college, the college assisting only indirectly. It may, thru correspondence courses, reading courses, itinerant lectures, traveling schools, demonstrations of methods, in whatever way, reach all the farm people thru the instrumentality of the college. The college has just as distinct a mission to the body of agricultural people in this direct hand to hand way as it has to the students who seek its halls.

Thus we find the agricultural college standing for the highest grade of scien-

tific research in those fields that are likely to yield results on behalf of better agriculture; seeking deliberately, thru its courses of study and influence thrown about its students, to train leaders for all fields of rural betterment; and finally, going out with the gospel of a better agriculture and a saner, sweeter rural life, and carrying this message to all who can be brought to listen. This is the mission of leadership of the agricultural college. It is not doing its work until it has developed these various phases of its task. It has no adequate policy unless it purposes to fulfil just such a mission. If true to its mission the agricultural college will assist in developing the industry of agriculture to a degree that has hardly been dreamed of by the American farmer. But more than that, it will assist in developing a higher quality of rural life, and in establishing the significance of the rural population in such a manner that all people interested in the welfare of our American civilization will recognize that such a college is assisting in a campaign the successful end of which is to be a prime factor in the ongoing development of American life.

AMHERST, MASS.

Impressions of America

BY FREDERICK VAN EEDEN

[Our readers will remember an article, entitled "Some Experiences with the People," by Dr. Van Eeden, which appeared in our issue of February 27th, when Dr. Van Eeden arrived in America for the first time. The following article gives the impressions of Holland's foremost poet, novelist and social reformer of the United States as a result of his month's sojourn here. Dr. Van Eeden expects to visit us again in the fall and deliver some lectures.—EDITOR.]

VERY kind of you, indeed, Mr. Editor, and very willingly I comply this time with your wish to publish my impressions of America.

I suppose you will provide me with an unlimited number of separate copies, in order that I may, at my next visit, mutely reply to every questioner at tea or dinner party with a neat, well-printed, little pamphlet. This seems to me a very satisfactory arrangement, advantageous to you, to my inquisitive American friends, and to myself.

Do you think I will offend American sentiment by calling America an ugly young duckling?

Of course this is meant metaphorically, but what I want to know is whether Americans will understand the metaphor and savor the delicate flattery. So very few people understand metaphors nowadays, and take them at their true value.

Tell your wife, for instance, that life is a desert, and she the camel in it, and mark how little she will enjoy the sublimity of the compliment.

Excuse me, therefore, for doubting American perspicacity, and explaining my simile.

At the present time all the European ducks are chattering and cackling and wagging their tails in virtuous indignation at their American relation, who is so very young, and yet so preposterously big, so unwieldy and so frightfully ugly, not at all like an ordinary duck, with white, clean feathers and moderate size, but ruffled, unkempt, dirty, and of decidedly abnormal proportions.

And every duck—every goose, even—that has been three weeks in New York, comes home all in a flutter about the ungainly aspect and shocking greediness of the young member of the family, who grows so fast and has no manners at all.

You are begining to see my point, are you not? Even without having read Andersen, who was a tale-teller and not an American, and consequently not very well known among you.

You may take it as a poet's fancy or as a well-deserved judgment, but in fact I believe in the swan that is to grow out of the ugly young duckling, and that belief gives me all sorts of toleration for the less prepossessing qualities which have unfavorably imprest many of your most distinguished visitors.

But these qualities are there, all the same. There is no swan yet, but a disproportioned, uncouth, preliminary animal. I deny old Europe's right to scoff at it, because in this comparison Europe never attained the full swan development. It is not and will never be more than ducky, or at the most, goosy.

But America can yet become the swan among nations, and so long as the possibility is there, I claim my right to expect it. And I beg you, Americans, to remember that all valuations are comparative, and when some of my remarks seem offensive to your pride, that it is because I have the swan in my mind, and not the duck.

I have, in the great United States, seen only New York and its environs, and Washington. And this is characteristic of your young duckling state, that you are not ugly where you suppose yourself most to be, and just where you will direct the foreign visitor with some pride as toward the hopeful growth of American splendor, you are thoroly and hopelessly ugly indeed.

New York is a far more beautiful place than Washington, and you never achieved anything so beautiful on purpose in the latter town as you did quite unconsciously in the first.

New York is naïvely, unintentionally and magnificently beautiful, with its broad, yellowish-gray river sparkling in the sun, its curious conglomerate of square brick piles, delicately red and creamy white, its white panaches of steam, wafted out and dissolving into the clear, blue, transparent sky. It is all splendid because it has strong, vigorous life and character. It has the healthy style of straight necessity.

Whereas Washington has only the pitiful show of tasteless affectation. It wanted decidedly to be beautiful, to represent the American Athens, not because it had the strong sense of beauty in it, which it had to make plastic and enduring, but simply out of ambition. The result is, of course, ridiculous—soulless and sordid imitation of classic art.

Dear young duckling, don't try to paint your feathers white before you are a grown-up swan. Have patience and wait till your fine plumage grows naturally, out of necessity, by inward vital force. Then it will have character and lasting beauty. Don't make yourself an involuntary object of mirth by decorating your lean and undeveloped body with foreign feathers. It is absurd. Your Capitol is a horror on the face of the earth. Boys used to build such sorts of penny palaces from pasteboard or wooden blocks, after a printed example, all domes and pillars, all Greek and Roman and Renaissance. Don't you see that a wigwam is a finer thing? The wigwam and the skyscraper—that's sound American art. The rest is banality.

Look at that monument to your national hero, Washington. In order to make something *very* original you went to the Egyptians and copied an obelisk. And how did you copy it? You constructed what was essentially and most characteristically a monolith from thousands of square blocks, in order to make it very big, and thereby spoiled its grandeur and its character.

With pride I was shown in New York the great building of the Knickerbocker Trust Company as the work of a murdered genius-architect. Was there ever a more stupid, shameless and inappropriate imitation? And that marble library near Forty-second street, which is said to be costing between twenty and thirty millions, was there ever a more wicked waste of labor, time and money in abject and slavish limping after European classics?

This is an impression which not only refers to the visible outward part of things American. How can you, with all your pride and all your self-consciousness, with all your strife for independence, be so terribly unoriginal? In the whole realm of art, and in a very large measure of thought, too, you are always looking to Europe, imitating, following, aping and mimicking. Even the lettering on your houses, the style of your advertisements, is all borrowed. You could not even develop an original American lettertype; you are still an English colony, not yet an independent race.

When will you ever outgrow this juvenile weakness, little duckling? When will you try to stand alone and let your own feet grow steady and your own wings spread? Oh, if I could cut you off for some years from the rest of the

world, what a blessing it would be for you and also for the Old World peoples, whose hopes are on you, tho they may deny it.

Yet there is one thing which you might learn from the Old World before you drop connections with it. It is respect for nature. The most painful remembrance I took with me from America is the way in which nature is disgraced there thru contact with mankind. I used to fume and fret against this plague in my own country. But Holland might serve as a model in this matter for America. I believe that the great charm and attractiveness of Holland which so many Americans tell me they have felt lies in this better contact of man and nature. We know how, more or less, to unite human life and wild nature into something like a harmonious compromise; our cottages, country-houses, farms and gardens belong to the landscape as a whole. And tho we are still far from perfection and have very bad sore spots in our country, we begin to feel the obligation of keeping wild nature, now we have once conquered it, free from the disgrace of rubbish heaps, dilapidated houses, and all the dirt and refuse of human society. We try to spare the harmless animals and the varieties of plants.

But the environs of New York are in this respect fearful. Wild nature is treated with the same regard as a common back yard in an overpopulated slum. Trees cut down and left to rot, glaring advertisements in horrible succession, an infinity of empty tins, broken earthenware, old iron wire, houses in ruins, next door to others in process of construction, the poverty of the fauna clearly indicating a wholesale destruction without any check, the underwood burned everywhere, and the whole economy of the land showing reckless indifference, waste and lack of a sense of beauty.

Compare this to the charming Old World place where I am writing now—the Channel isle of Guernsey. I could hardly find a rubbish heap on the whole thickly populated island. Roads all clean and hard, fields and gardens all well kept, birds in great quantity and not shy, sure sign that they are not persecuted. The green empire of trees and plants, clearly showing its treaty of peace with man, and his admiration and care; the gray cottages all surrounded by bright little gardens and tightly embraced by gaily flowering creepers, and on the rugged cliffs nature left to its own sweet will, without disgusting offals of human society.

And still it could be much better, if the English craving for privacy had not put ugly stone walls around each park, and modern soulless, speculative architecture had not spread its infection.

The American neglect is not hopeless; it is a juvenile defect, a remnant of the boy and the barbarian. They spoil nature out of sheer thoughtlessness, but they can learn to respect it. The ugly young duckling has not yet learned to keep his nest clean. He may plead that the nest is too vast. But that is no excuse, as he has only to take care of the part of it he invades. Wild nature takes care of itself.

As to my impressions of American life, character and society, I feel the need of speaking very cautiously.

Demonstrative and symbolic I found the sight of a poor little church, with a little churchyard full of white stones, which I saw every day from the Sixth avenue elevated railway as it stood, pitifully walled in by the huge skyscrapers, and could not succeed in bringing its Gothic spire, intended to rise above the worldly turmoil of the city into God's sky, higher than about the twelfth or fourteenth floor of its tremendous twenty-storied neighbors.

Christianity walled in by business; clerks in their offices overlooking the highest aspirations of the Church; this is a representative image of America today. Yet I don't see any reason for blame. I think these skyscrapers are quite right, if we only look at them as preliminary. The whole of that big city is preliminary, and has a preliminary aspect, and so have the shed-like wooden houses all over the country. When the duckling has lost its nest-feathers, then I expect some other structure, not quite a church, but a religious structure in the best sense, a work of art, expressive of mankind's highest aspirations, in beauty made plastic and thought made visible, to overreach all these square, grim and graceless blocks, with as yet unconceivable charm and imposing majesty.

Perhaps my cards have fallen in exceptionally favorable places, but it seemed to me as if the right mood and spirit for reaching this higher stage of human social development are not wanting in America. To such an end the first and last commandment ought to be: *Keep alive!* — and that is what Americans seem to do, very heartily indeed. The mental atmosphere is a stirring, bracing, exhilarating one. People work and talk and quarrel, lively and so strenuous that one would really think they all fully understood the high importance of the end in view. A superficial onlooker could imagine that Americans were all deeply religious and philosophical people, to give themselves so much trouble for such unselfish ends as the future glory of the human race and the salvation of posterity.

This is, of course, an optical delusion. They all live and work and quarrel and die in the extremely naïve conviction that their aim is personal benefit. And the continual sight of the white gravestones in the little churchyard is apparently not sufficient to undo this conviction.

The quiet and unceasing action of human instinct is indeed something wonderful. All these Americans work for accumulation because humanity wants accumulation for subsistence and expansion. But as each individual lives for a very limited space of time, he refuses to work except under the strange illusion that this accumulation is extremely important to himself. That this is not the case, and that accumulation is generally harmful and burdensome to the individual, especially when it outgrows moderate bounds, is a thing that any man with a little perspicacity and sound judgment might see. Yet the accumulative instinct works so powerfully that it deceives and deludes the immense majority, and makes any opposite view of the matter seem utterly childish and ridiculous. And this is necessary, because if all these people realized that they were working for posterity and the human race, instead of for their individual satisfaction, they would soon relax and stop, to the detriment of the race.

And yet, and yet, dear Ugly Duckling! if you will grow to be a swan, you must begin by and by to realize that the more you direct your efforts beyond your little personal self, the better you will obey your human instinct and the more you will feel not only what individual satisfaction is, but also what real happiness means. Thrift, business, moneymaking, accumulation, is all very good and laudable, a sound and healthy activity. But only when it tends toward the benefit of all, of Society, of the Nation, of the Race. As an individual aim it is absurd and ruinous.

Surely you will see this in a short time, if you only keep alive. Keep alive, in the widest sense, meaning also to keep free from all sorts of deadening and petrifying conventions, systems, dogmas, churches and beliefs, be they religious, scientific or philosophical. A living thing breaks every day thru bonds and fetters, exactly because it is alive. Life is never the same, and Wisdom is, as the psalmist says, like running water.

This is for me the controlling attraction of America, that it is the land of Life, of Movement and of Hope. It is not yet a beautiful civilization; there are many scoundrels, bigger than in Europe, because they had bigger opportunities; the social order is still far from perfect; yet there is Life, there are improvements every day; when there is dirt there are also always numerous hands ready to clear it away; there is an eager spirit of willingness to do something, to be of use, to achieve something worth while, and also to learn something worth knowing. And there is very little of that most dreadful of all curses, as I have learned in a difficult life in my own poor country to consider it—that deadliest of all sins, named alternatively: Despondency, sloth, laxity, indifference, pessimism. I confess that I feel more sympathy with Cesare Borgia who positively and energetically enjoyed himself, not without splendor, in his crude, ignorant way, than with the dull modern skeptic who takes his own life because he cannot make it beautiful.

As far as I could judge from my first short visit, the defects of the American nation are all juvenile. Its eagerness for money reminds of the boyish greed for jam tarts. The boy sees in satisfaction of the nutritive instinct the final end and

happiness of life. So does the American in the satisfaction of the accumulative instinct. The venality in politics, the great rôle of personal eloquence, even the insatiable thirst for funny "stories," which goes so far as to elevate story-telling to an art and to reduce social entertainers to the necessity of keeping a written supply of them—all this has always been among the characteristics of a young, vigorous nation. The Afrikander people show some of the same features.

But the nations of antiquity had a stronger sense of the beautiful and the sublime even in their youth. Even the prehistoric man, sketching a reindeer on a reindeer bone, was more of an artist than the average American, and so were the ancient Ægyptians, Assyrians, Greeks, Romans, and the Chinese, Japanese, Hindoos, Arabs; all these nations had a keener and purer sentiment of the beautiful and of the sublime than the present American people.

I confess that, tho I am a stanch believer in the Swan, this is the hardest nut to crack for my optimism. I see the offsprings of the most artistic and romantic nations of the world assimilated by the Americans and brought down all to the same level of tasteless and graceless triviality, having for principal sources of beauty and elevation the circus and the music hall. This is a sorrowful sight, the hopeless degradation of millions of souls.

It would not do to call the Anglo-Saxon race an unartistic race. We owe to it some of the world's sublimest poetry. And yet I feel as if the Anglo-Saxon predominance in America is more or less responsible for this lack of beauty, of romanticism, of elevation. There is a sort of religious mixture of the trivial and the sublime which is essentially Anglo-Saxon, and a proof of blunted sensibility in these matters. I refer to the disgraceful ways of the Salvation Army, the "jump-to-glory-Jane" attitude, and to that well-known jovial mode of religious preaching of which J. A. Dowie was the most prominent representative, and which is so popular and so powerful in America.

It cannot be denied that the Anglo-Saxon type, as it was formed out of a mixture of Britons, Romans, Germans and Scandinavians, lost an original and natural artisticity. This artisticity is not wholly lost, but it develops it only under the stimulus of other nations. It appreciates French and Italian art and German music, but it has to borrow freely, for want of originality. And it is not without good reason that so many great English poets had their second home in Italy. They felt what was wanted at Home. And this feeling of want it is, as far as I can see, that drives so many thousands of Americans every year to the Old World. It is to them as a pilgrimage to holy places. Places where the charm of poetry, of art and of romance indicate a nearer vicinity of the Divine Presence than can be found anywhere in their own country.

Still, there are glimmerings of hopeful light and there is reason for better expectation. On my short stay I came across an American painter, not one of those of the European-art-shipping sort who annually invade my native country to paint windmills and fisher people, but a genuine American, entirely and exquisitely American in his subjects, who will rank in not many years among the foremost painters of the world. And I am sure he does not stand single. This painter is of French extraction. His name is Leon Dabo, and he is clearly of the stock of Corot and Daubigny.

The American race, or rather the American type, is not yet established. The invasion of Old World people is still going on, and the Latin races are in the majority lately. There is the optimist's justification, when he expects in the final type a still more harmonious blending than in one of the constituents, when the ugly young duckling will astonish the world by the sight of a strong-winged, full-grown, graceful, spotless white and stately S-W-A-N.

GUERNSEY, ENGLAND.

Literature

Lowell's Government of England

Mr. Lowell's two volumes* must attract wide attention on both sides of the Atlantic, and must at once fall into a place of permanent usefulness by reason of the remarkable comprehensiveness of his plan, and from the fact that he has successfully mastered a task which no other student of political science, English or American, has attempted. Mr. Lowell first concerns himself with the machinery of central government—with the Crown, Parliament, Cabinet, the various state departments, and the civil service in London, and with the headquarter organizations of the two great political parties, which are housed conveniently near to St. Stephen's. Then, having made the history and working of these institutions admirably clear, he turns to provincial England—to the England that, for local government purposes, is divided into areas governed by county councils, borough councils, urban district councils, and, coming down to the smallest of these local government areas, to parishes in which an annual meeting of the inhabitants, after the fashion of the New England town meeting, discharges the duties of local administration.

Every phase of government in England, central and municipal, is carefully studied. So is the administration of justice, the working of the education system, the administration of the poor laws, and the position of the Established and free churches. About the only institutions which Mr. Lowell has left untouched are the land system and the press.

Some explanation of the land system is necessary to an adequate understanding of the working of the English political system, and especially to an appreciation of the forces that are behind county government and also behind the Conservative party. As regards the press Mr. Lowell's otherwise adequate and illuminating chapters on the two historic parties and party organization seem incomplete without some understanding of the extraordinary position in which the press stands today toward the Conservative party. There was a time when the Liberal and progressive party had far the best of it as concerns newspaper support. This was certainly so until as late as the middle seventies of last century. But today the daily press, especially in London, Manchester, Birmingham, Glasgow and Edinburgh, is preponderatingly on the side of the Conservative party. How this change has come about, and what it means, was certainly worth some attention in a book which so ambitiously aims at comprehensiveness.

These remarks are not offered in any spirit of criticism. They are written rather in the "asking for more" spirit, and almost with apologies for asking more from an author who in these two volumes has given the Anglo-Saxon world so much. Mr. Lowell has mastered a task which no other student of political science has attempted. This statement may be made without reservation or qualification, for there is not in existence another book in which the working of all the governing institutions of England, central and local, is described and analyzed in so scholarly and authoritative a style and with such comprehensiveness. Unusual care has been taken to attain to a uniformly high level of accuracy, and in this effort Mr. Lowell has had the help of Mr. Bryce and many other scholars. It is rare, indeed, that Mr. Lowell makes a misstatement of fact, altho occasionally some of his inferences and generalizations cannot be accepted as wholly correct, and there are places where a supplementary paragraph would have enabled Mr. Lowell to be fairer to the contemporary political movements in England that he is describing and estimating. This is especially true as regards municipal ownership of public utilities, and the long contest in England over the connection of the Established

*The Government of England. *By A. Lawrence Lowell.* Two volumes. New York: The Macmillan Company. Pp. xv, 570; viii, 563. $4.00.

Church with elementary education. Free churchmen in England are fighting for religious equality and against the exclusion of thousands of men and women from the headship of schools that are wholly supported out of public funds because they are not of the Established Church. This is not made clear in Mr. Lowell's chapter on "Public Elementary Education." Of municipal ownership Mr. Lowell says that the subject is more controversial than any other English question not strictly a matter of party politics. Municipal ownership has never been a party question in England; certainly it is not so outside London, and what controversy there is about the question centers in London. Where it has been carried furthest, as, for instance, in Manchester, Liverpool, Leeds and Glasgow, there is not the least controversy about municipal ownership. In these places it is an accepted fact, not only because it has been attended by financial success, but also because these English cities intend to have full and absolute control of their own streets, and will not admit street car and gas and electric lighting companies to any partnership with them in this control. This attitude is unfortunate for company promoters and other exploiters of public utilities. But the smooth working of English municipal government today is largely due to this freedom from friction between the municipalities and private companies possessing rights over the streets. To this aspect of the question Mr. Lowell gives little attention when he is weighing the case for and against municipal ownership as it is now established in most English cities.

The chapters on the labor movement in and out of Parliament have the smallest permanent value of any section of the book, not because Mr. Lowell was not conscientious and painstaking in writing them, but because since they were written developments in the labor movement have followed each other in such quick succession that the chapters for the most part are out of date.

Mr. Lowell makes no attempt to conceal his admiration of English institutions and the spirit in which they are worked, nor his appreciation of the intellectual interest which continually attaches to political discussion in England. His style is clear and readable. Where detail is necessary it never becomes unmanageable, so that, while *The Government of England* is of the greatest value as a work of reference, it is a book that can be read from beginning to end, and there are sections which will amply repay rereading.

Heredity

THERE is at the present time a distinct and growing recognition of the great importance of the purely biological factors involved in some of the most fundamental problems of sociology. This, we are inclined to think, is to be regarded as one of the indications of a change of viewpoint respecting the science of sociology as a whole. So long as "society" is the unit of sociological discussion it is a "mass" or statistical subject, and, as has rightly been contended, the relation of sociology to biology is formal and not close. But when attention is turned to the individual units which together compose "society," it appears with great distinctness that, inasmuch as these units are living organisms, it is to be expected that the broad principles which have been found by the biologist to underlie the activities and evolutionary progress of living organisms in general will be of significance with reference to the particular organism, man. Hence it is that we are hearing much at this time about the relation of such factors as "heredity," "variation," "natural selection," and the like to sociological problems. Now, it is a sad but none the less true fact that a goodly proportion of those glibly discussing the sociological bearing of these factors are not "beyond the pottering, platitudinarian stage, which deals in heredity with a capital H," to quote from the preface of the book under review. To such persons this work of Thomson's* should prove a real treasure. In it they will find set forth with sufficient detail and entire accuracy the broad features of what is actually known about heredity, together with the outlines of the history of the achievement of this knowledge by a long line of investigators,

*HEREDITY. *By J. Arthur Thomson.* New York: G. P. Putnam's Sons. $3.50.

including some of the most brilliant which biology has furnished. Furthermore, completeness and accuracy are not the only points which commend this book. Like all of Professor Thomson's work, it is "easy" reading; the clearness and force of the style hold the reader's attention so that he forgets for the moment that it is an abstruse scientific matter which is under discussion. The author's view is broad and his knowledge of the special literature of the subject is thoro; he achieves the difficult task in regard to points under controversy of being critical without being unfairly partisan.

It must not be supposed from what has been said that this book is of value only to the sociologist. It admirably fills a need which has been keenly felt for some time by the teaching biologist, the special student of evolution and the "general reader" interested in the progress of biological science for a comprehensive, unbiased, up-to-date treatise on heredity. A useful feature which will particularly appeal to the teacher is that, in addition to an extensive and well-chosen bibliography of the important literature on heredity, there is a subject index to this bibliography arranged as a guide to further reading.

As has been indicated, this book is essentially a compilation, and contributes practically no original material to the subject. The nearest approach to an original contribution is found in the discussion of the broader problems of heredity which touch on human welfare, and here the originality is rather of manner than matter. That "the future of our race depends on *Eugenics* (in some form or other), combined with the simultaneous evolution of *Eutechnics* and *Eutopias*," is a conclusion which has been differently expressed by more than one thoughtful student of social evolution in recent times. Altho Thomson fully realizes the importance of eugenics in racial progress, he justly emphasizes a point often overlooked in the zeal for the newest in sociology, namely, that other factors than the simpler and more fundamental biological ones must be taken into account in dealing with sociological problems. "After we analyze out what is due to natural inheritance, we see more clearly what social heredity really is." In connection with the sociological phases of the book mention should be made of the excellent chapter on "Heredity and Disease." It is by far the most sound and illuminating brief discussion of the subject (so generally misunderstood even by medical men) which we have seen.

The chief particular in which the book is open to criticism is in the matter of construction. The arrangement of matter is far from being the most logical attainable. Thus to take but a single instance: An excellent discussion of "The Physical Basis of Inheritance" forms Chapter II of the book. Chapters XI and XII (the last but two in the book) deal respectively with the "History of Theories of Heredity and Inheritance" and "Heredity and Development." The wide separation of these closely related topics necessitates much unnecessary repetition. Other similar instances might be cited. One notes with some amusement that, in the American edition, the binder was of the opinion that Professor Thomson's name should be *Thompson*. Is this meant for a covert dig at reformed spelling?

Reich's Histories

A SUPERB confidence in his own high and peculiar qualities and an unquestioned capacity for lightly tossing off infinitely varied allusions make Dr. Emil Reich an interesting figure in the world of history writing. He is always doing startling things, and now almost at one fell blow he gives to the public two volumes on *General History*[1] and a volume on *The Foundations of Modern Europe*.[2] With characteristic assurance he informs his readers that his general history is the result of twenty-seven years' study of the literary and monumental sources of history and of the close observation and analysis *in loco* of twenty different types of contemporary civilization — which warrants his attempting to do for history what Savigny did for Roman law—that is, write the general part of it. In two

[1] GENERAL HISTORY OF WESTERN NATIONS. *By Emil Reich.* 2 vols. New York: The Macmillan Company. $4 net.

[2] THE FOUNDATIONS OF MODERN EUROPE. *By Emil Reich.* New York: The Macmillan Company. $1.50.

considerable volumes this Sancho in Savigny's armor brings his history only down to the Roman Principate, but this extensive treatment of antiquity is justified by the author on the ground that "the institutions, or the major part, of classical history have so far been inquired into by a method utterly inadequate and dilletantic" (I, xi-xii). Every page bristles with what appears to be historical learning, and the footnotes apparently lead to every point in the universe of literature between Hesser's *Histor.-patholog. Untersuchungen der Volkskrankheiten* to the case of Acton *vs.* Blundell (12 Mason and Welsby, 324). It would be false to say that amid so many printed pages there are no wise and suggestive sentences, but it is all spoiled by the pompous dogma, vague assertion, high-sounding futility and arrogant assumption of omniscience on the part of the author. Lest the reader suspect our impartial judgment we give by way of illustration only one characteristic extract:

"In the United States of America, where extreme democracy has, as in ancient Judea, largely disintegrated the State (in the European sense of the word), the old Jewish makeshift for State organization has come to the fore very markedly. As among the Jews, there are in the States beverages *kosher* and beverages *trephe;* cider or tea being the former, brandy the latter. As among the Jews, theaters and similar spectacles are taboo to the pure, and dancing and merry-making a horror. . . . And unless the disintegration of the State be stopped, America . . . will amuse us with the spectacle of an historic atavism of the most uncouth character." (II, 329-330.)

Dr. Reich's second work, bearing the ponderous title of *The Foundations of Modern Europe,* is really an attenuated political history of Europe from the eve of the French Revolution to the close of the Franco-German War—salted occasionally with a pungent phrase and a striking, tho not illuminating, epigram. It embraces two chapters on the French Revolution, four on Napoleon, one on the Reaction, another on the Revolutions, two on the unity of Italy and Germany respectively, and a final chapter on the Franco-German War. It is by no means so bad as his *General History,* but it is pervaded by the same atmosphere of omniscience, and lest the gentle reader should not discover it for himself, he is warned in the preface of its existence. His fine power of generalization from penetrating analyses is revealed in the following passage selected at random: "As a matter of fact, no close observer and student of American history (*i. e.,* Dr. Reich) can fail to notice that all so-called changes in America are formal, external, and do not really touch the vitals of the nation. It is quite different in Europe" (p. 119). Now test Dr. Reich's acquaintance with American history. On page 2 he complains "Of Vergennes or Beaumarchais . . . few, if any, Americans have ever heard a word of praise or appreciation. Even Captain Mahan speaks of 'a Frenchman named Beaumarchais.'" If Dr. Reich will consult even so unpretentious a volume as Professor Hart's "Formation of the American Union," designed for high schools and colleges, p. 86, he will find a fair recognition of the services of Beaumarchais, and if he knew one-tenth as much about the literature of American history as he pretends he would not have made such an unfounded statement concerning our ignorance of Vergennes and Beaumarchais.

Rose McLeod. By Alice Brown. Boston: Houghton, Mifflin & Co. $1.50.

As an interpreter of New England Alice Brown ranks with Mrs. Freeman. The touch of the grotesque which mars much of the latter's work and impairs its verity is lacking in *Rose McLeod,* Miss Brown's latest novel. We find some of the characters unique, but quite possible. The grandmother of Electra, who writes her "Reminiscences" of Brook Farm and hosts of the idols of old New England out of her active imagination instead of her memory, "if things had not happened just as she said they ought to," with her zest for living and her coquetry, is as vivid and vital as some French lady of the old *régime* and yet perfectly fitted to the frame of New England hills and elms. Rose herself is less interesting, altho in the flush of youth and beauty, than is this ancient lady, whose ashes cover very fervent fires. Her baiting of Electra, her stately New England granddaughter, is delightful. She is a bad and conscienceless old lady, but thoroly likable. There is a saintly grandmother, too,

and her grandsons, one an artist, one a hermit, Burbank McLeod, a social leader, reformer and spellbinder, the father of Rose, and of many dangerous theories, one of which the daughter had put into practice and made a sorry mess of her life. She learns by bitter experience that some ideas are made to play with, not to work out in practice; that an unreasonable disrespect for the opinions of people in general is a disastrous edge tool for a girl's young hands. Fortunately for Rose, she has to deal, at the last, with people who are tenderly wise of heart and who see the essential purity of the girl's nature, in spite of the poisonous lies upon which her father had fed her growing spirit. *Rose McLeod* is better than merely entertaining.

Purple and Homespun. By Samuel M. Gardenshire. New York and London: Harper & Brothers. $1.50.

Here again we have the old-fashioned romance of a girl of the nobility and a man of the people, only this time the romance is dressed up in modern clothes. A young Westerner wearing the Senatorial homespun falls in love with an English girl—"the daughter of a hundred earls"—and sets about winning her with a characteristic Western determination, but does it with an ease and a manner that would draw the envy of a veteran diplomat. However, Mr. Gardenshire has somewhat disorganized his story by hypodermically injecting an East Side romance, together with a touch of socialism, which in this case is no more than the average classroom economics dramatized in the usual dark-haired, intense-eyed characters of everyday socialistic fiction.

The Twentieth Century American: Being a Comparative Study of the Peoples of the Two Great Anglo-Saxon Nations. By H. Perry Robinson. New York: G. P. Putnam's Sons. $1.75.

This book is in an entirely different class from the volume of snapshots—in glaring contrasts of black and white, because underexposed—which the average foreign tourist takes back to Europe with him. Mr. Robinson by his residence of twenty years in this country and particularly by his acquaintance with Western life and thought, is unusually well qualified for a comprehension of the American character, and he has made an earnest effort to give a fair interpretation of it for British readers, constantly sacrificing brilliancy of phrasing thru fear of exaggeration. The American reader will, of course, be reminded of exceptions to almost every one of his generalizations, but only in rare cases will he feel inclined to challenge the essential truth of his statements. He has been conspicuously successful in making plain two or three causes of misunderstanding between the two peoples that are usually ignored. One is that the American looks on the Englishman as a foreigner, even as *the* foreigner, as the traditional foe of his country; while the Englishman regards the American as a brother, a younger and somewhat discreditable brother, to be sure, but rather in the class of the Australian or Canadian than of the Frenchman or German. Mr. Robinson's interpretation of the Venezuelan episode is excellent, altho we do not agree with him in thinking that Americans generally ascribed the good-humored tolerance with which England met the Cleveland message to cowardice. In his chapter on comparative commercial morality he shows that many of the practices, such as railroad pooling, which have aroused such an outcry in America and caused the English to hold up their hands in horror, are common and uncondemned in England. "It is not the trust power, but the hatred of it, which is peculiar to America." The avowed object of the book is to promote an Anglo-American alliance for the peace of the world, threatened, he believes, by the ambition of Germany.

The Inquisition. By the Abbé Vacandard. Translated from the French by Rev. B. L. Conway. New York: Longmans, Green Co. $1.50.

The Abbé Vacandard's history of the Inquisition, now put into English by a Paulist priest, is a book worthy of special notice. For in our judgment any book is worthy of special notice the author of which steadily pursues the ideal of scientific truth regardless of the proclivities and prejudices of his religious affiliations. And Vacandard's work is precisely of

this sort. *The Inquisition* is not a matter of which intelligent Catholics are inclined to be proud, and when a Catholic author discusses the subject we are far more likely to get an elaborate and ingenious apology than an outspoken and impartial history. Vacandard is a historian first, an apologist afterward. The fine scientific temper displayed in his history of St. Bernard and in his "Etudes d'histoire" is maintained substantially in this far more difficult and thorny treatise. He proves that the primitive Church had a horror of persecution for conscience sake, and declares that the Church's departure from her early tradition is not only revolting in itself, but has had far-reaching and lamentable consequences. He acknowledges that Popes incorporated laws of brutality and butchery into the canon law, and that the introduction of torture into the inquisitorial procedure was due directly to a sovereign pontiff of the Roman See. In his concluding chapter M. Vacandard endeavors to explain the atrocities of the Inquisition from the standpoint of a loyal Catholic. It is not his fault if this is the least satisfactory portion of his book. The brevity of the work is responsible for the scant treatment which some important features of the subject receive. Witchcraft, for example, is too summarily discussed. Too brief, also, is the chapter dealing with the efforts made by medieval theologians and canonists to justify the Inquisition. But for this treatise, short as it is, we should be sincerely thankful. Neither does it at all detract from its value that its chief authority is the American historian of the Inquisition, Henry C. Lea.

Studies in New England Transcendentalism. By Harold Clarke Goddard, assistant professor of English literature, Northwestern University. New York University Press. $1.00.

A little wearied of the orthodox fold, many of the flighty young sheep that pastured around the old Massachusetts Bay broke out of the fold about the year 1818, and capered somewhat wildly for thirty or forty years in fields since called Transcendental. Mr. Goddard makes a brave attack on the problem: How did they escape? Did Immanuel Kant, of Königsberg, let them out; or was it youth and the eternal springiness of youth, which demands a brief caper now and then? After a close examination of the fold, wherein he makes the complete circuit of the orthodox enclosure and follows every gladsome freak of Margaret Fuller, Bronson Alcott, Emerson and a hundred others, the critic arrives sanely at the conclusion that there was much poetic frenzy combined with some shrewd human nature let loose around the Bay. Dreaming and castle-building were at first dubbed "Mystic Philosophy." Any man who had not wit enough to explain himself started a school of the mysterious and the inexplicable. It was often a school of one; but the inexplicability was sufficient evidence of a high order of spiritual sanity, and the man was at once a Transcendental philosopher. Professor Goddard's study deservedly won him his degree, but his next book will win another and higher step, if he will spend more time in clearing a draughty passage thru the wilderness of his material. He has the true scholarly spirit and a certain aptness for getting the ear of his audience.

The Life and Public Services of George Luther Stearns. By Frank Preston Stearns. Philadelphia: J. B. Lippincott & Co. $2.00.

The subject of this memoir died April 9th, 1867, forty-one years ago. The work deals with the preceding sixty years of American history as partly made by one who lived in the center of the anti-slavery agitation—one who, tho a merchant of lead, sometimes a speculator in lead, and at one time so heavily loaded with lead, in the speculative sense, as to be prepared to forego all subsequent history —yet lived, and supplied lead for John Brown's bullets in Kansas, and was not unprepared to admit that he supplied pikes for John Brown's momentous Harper's Ferry experiment in remodeling institutions. Few have turned lead into gold and used that gold in private with more generous self-sacrifice. Few in their public aims have more conscientiously gilded with it the beautiful pages of their country's history. The story of this capable, strenuous, impulsive, enthusiastic, somewhat eccentric merchant of lead is told by a son who remembers some of

the deeds of his father, and has had access to his letterbooks and journals, but has relied, one would judge, somewhat too much on family traditions, and occasionally mingles facts, not always judiciously, with that semi-imaginative product which family tradition can hardly escape in forty years of reflection on the ancestral tree. This will perhaps be the feeling with which many now living will read of their own youth and the remembered deeds of their fathers as reflected in this idealized report and the offhand judgments of the author.

The Queen of Letter Writers. By Janet Aldis. New York: G. P. Putnam's Sons. $3.50.

The life of Madame de Sevigné depends for its interest wholly upon her personality, and her biographer meets the same difficulty that confronted the biographer of Lewis Carroll. There are ready to his hand anecdotes, descriptions of fair scenes, bon mots, fancies, incidents, but no events, no culmination of action, no plan. Such characters may have vitality, but they are not the stuff of which serious biography is easily constructed. Hardly has the fame of any woman of less eventful life come down to later generations. Yet Mrs. Aldis has gathered much of interest; and, wisely quoting little from the letters, which may be served by an introduction, but not by a running comment, she tells her story entertainingly, if somewhat in detail. The Marquise de Sevigné passed a long life of kindliness and ease in a circle whose pleasures were sufficiently intellectual to hold their interest, but whose duties seem never to have been so grave as to interfere with the main business of life, the making of social intercourse a fine art. Mrs. Aldis shows her what one would expect the owner of so vivid a power of enjoyment must be—a courageous spirit, the vivacity of whose intellect yields neither to grief at her husband's desertion, nor her son's unworthiness, nor the loneliness of her later years. Indeed, even the one frailty which Sainte-Beuve admits in his favorite, an absurd pride of family, an amiable weakness, after all, her present biographer leaves aside.

The Philosophy of Loyalty. By Josiah Royce, Professor of the History of Philosophy in Harvard University. New York: The Macmillan Co. $1.50.

For half a generation Professor Royce has been at the fountain of wisdom teaching the young men who come up to fill their pitchers with the waters of life. Modern metaphysics interests itself chiefly in the taste and uses of this water in the present world, and, of course, attempts the analysis of it for our present purposes. This is, therefore, the aim of the eight lectures delivered last year by our author before the Lowell Institute, in Boston. With a full knowledge of what philosophy has said in the past, with a clear thought and an admirable style of elucidation, he brings his mind to present-day problems with a view, as he puts it, "to simplify men's moral issues, to clear their minds for a sight of the eternal, to win hearts for loyalty." This "loyalty" he defines as "the willing and thorogoing devotion of a person to a cause," the "cause" being "something that unifies many human lives in one." The cause may be essentially evil. It may prove in the near or remote end a "lost cause." True loyalty to the "cause" then becomes a "loyalty to loyalty," which is never a "lost cause." This higher form of loyalty, considered at first in its practical bearings in the human world, gets a glimpse at last into a world superhuman—such a glimpse being indeed its ultimate aim, its hope. The "practical" expands to cover the "ideal"; the "ideal" reaches out after the "religious." "Loyalty then appears, after all, in the individual life in a deeply mysterious form. It says to men: Your true good can never be won and verified by you in terms to which the present form and scope of our human experience is adequate." And now we are in the confines of metaphysics, in "a region which is more than merely a realm of moral activities. This region is either one of delusion or else one of spiritual realities of a level higher than is that of our present individual human experience." Borrowing a phrase of William James, our author reaches his final definition: "Loyalty is the will to believe in something eternal, and to express that belief in the

practical life of a human being." Incidentally, Professor Royce finds himself in opposition to some conclusions of the new "Pragmatism" as recently expounded by Professor James; but, more directly, he concludes that we have a right, and, indeed, a duty to seek roads into the unknown spiritual realms by practical lining out and hewing. For, he insists:

> "The loyal are truth-seekers, and the truth-seekers are loyal. . . . All of them live for the sake of the unity of all life. And this unity includes us all, but is superhuman."

We state the author's steps merely, and in the simplest possible way. They deserve a careful study in all the process of clear reasoning by which each advance is made, for they represent one of the foremost attempts of our day to bring philosophy into useful connection with the work of harmonizing modern science and religion, of preserving for us some sort of ideals, some kind of spiritual "leading" by which our young men may advance upon the enemy in the new form of battle brought upon us by the late nineteenth century.

Corpus Schwenckfeldianorum. Published under the auspices of the Schwenckfelder Church, Pennsylvania, and Hartford Theological Seminary, Connecticut. Volume I, *A Study of the Earliest Letters of Caspar Schwenckfeld von Ossig.* Editor, Chester David Hartranft; associate editors, Otto Bernhard Schlutter, Elmer Ellsworth Schultz Johnson. The Board of Publication of the Schwenckfelder Church, Norristown, Pa.; Leipzig: Breitkopf & Härtel. New York: Lemcke & Büchner. Pp. lxxii, 661. $7.50.

One of the most courageous enterprises ever undertaken by any American religious body is certainly that of the publication of the *Corpus Schwenckfeldianorum,* of which the thick and portly first volume lies before us. Incited by the enthusiasm of Rev. Dr. Chester D. Hartranft, formerly president and now honorary president of Hartford Theological Seminary, this little Pennsylvanian communion of two hundred and fifty families undertook, in 1885, the collection and publication of a critical and complete edition of the writings of its German founder, Caspar Schwenckfeld von Ossig, under the editorial supervision of Dr. Hartranft himself. Since 1888, at great expense of labor and money, aided somewhat financially by friends outside the Schwenckfelder Church, the collection of material for this pious monument to one of the least understood leaders of the German Reformation has steadily gone forward. The work is planned on a gigantic scale. Not to speak of those writings of Schwenckfeld which exist in manuscripts, some 112 of his treatises were published between 1523 and 1562. Of this mass of material the volume under review discusses only seven documents. The bibliography of each document is presented, its text given with full critical apparatus, followed by a careful English translation. Then succeed elaborate discussions of its linguistic peculiarities, the historical situation out of which it grew, its theological teachings and implications, and, in some instances, a vocabulary designed to show its relation to the development of the German language. Schwenckfeld is, indeed, deserving of such commemoration, and it must result in a much truer estimate of his aims and value. In an age of bitter contention, he insisted on the primacy of the fruits of religion in the personal life of the believer. He put the spirit above the letter. He saw good in the supporters of opposing types of theology. He taught Christian liberty, and the essential need of spirituality. Between the rivals of that day he would find a "middle way" in which practical piety, itself the fruit of the working of the Spirit of God, should be the test of Christian fellowship. If criticisms are to be past on a work involving such labor and exhibiting such painstaking scholarship, they would be that the editor has been unable to view his subject impartially. He writes with the present always in mind. He is tempted to constant preaching against the evils of parties, sects and establishments. He has no patience either with the form which the Reformation actually took, or with those historians who regard that form, with all its admitted eviis, as inevitable in the then existing stage of intellectual, spiritual and political development. His comments on Schwenckfeld's theological positions are, therefore, exceedingly diffuse, and often polemic. In brief, while the materials for an unbiased

judgment of Schwenckfeld's real work are here given as never before, the editor's interpretation of its significance is that of a champion and a spiritual disciple rather than that of an objective historian.

Literary Notes

....The Amana Community of Iowa has attracted a good deal of attention both as the home of a peculiar religion and as an exception to the rule that communistic societies are not lasting, but the first thoro study of the Community of True Inspiration is that by Bertha McH. Shambaugh and published by the State Historical Society of Iowa.

....It is very annoying to stand on some historic or romantic spot and begin to recite the appropriate poetry, only to break down on the second line. The wise tourist prepares for all emergencies, including this, by carrying about with him, or stocking up his memory beforehand by means of, one of those handy volumes of topical verse which the publishers nowadays provide for him. Then he can give at a moment's notice Scott at Melrose, Wordsworth in Tintern Abbey, Schiller at Küssnacht and Byron everywhere. Two such volumes, both published by Henry Holt & Co. at $1.50 each, are in our hands now; *Poems for Travelers,* compiled by Mary R. J. Du Bois, and *The Poetic Old World,* compiled by Lucy H. Humphrey. The latter will for some people have the advantage in that it gives the original Greek, Latin, Spanish or German, as well as the translation of several of the poems.

....Among the numerous and varied explanations that have been given of the strategic skill shown by the Japanese in the war with the Russians, one was the devotion of the Japanese to their national game of Go, which is claimed to be as superior to chess as chess is to checkers. The board has 361 positions for the men instead of sixty-four, and it requires twenty-seven years at the rate of one game a day for a player of ordinary aptitude to attain professional rank of the lowest degree. So says Mr. Arthur Smith in his new volume on *The Game of Go* (Moffat, Yard & Co., $2.50), and from our own brief experience with the game in a Japanese restaurant we should say that this time allowance is not excessive. Go is, however, interesting from the very beginning, and now that it has been for the first time explained in English print it may become popular here. It would make a good substitute for some of the favorite pastimes of our West Point cadets.

Pebbles

A WIDOWER who was married recently for the third time, and whose bride had been married once before herself, wrote across the bottom of the wedding invitations: "Be sure and come; this is no amateur performance."—*Atchison Globe.*

COOK—My dog took first prize at the cat show.

HOOK—How was that?

COOK—He took the cat.—*The Journal of Zoöphily.*

HEY!

HER merry-widow straw awry,
Maud Muller took the judge's eye
And raked his heart in, long ago.
Small wonder, too, that it was so.
For Maud just then, to speak the truth,
Was in the hay-day of her youth.
—*Knoxville Sentinel.*

Two men were discussing the trouble in India, and each had a deal to say about his notion of Hindu character.

"They're such a bellicose set of people," said one.

"Indeed!" exclaimed the other, in surprise. "I was always under the impression that they were very spare men."—*Harper's Weekly.*

"ALL that you are, my friend," said the lecturer, singling out an elderly man sitting in a front seat, who appeared to be deeply interested—"all that you are, I repeat, you owe to heredity and environment." "What!" exclaimed the elderly man, turning red with indignation, "I never had no dealin's with that firm in my life, and I don't owe them or nobody else a cent!"—*Chicago Tribune.*

IT was during a very tedious ride on a Western railway, and the passengers, tired, dirty and thirsty, all berated the company with the exception of one single man. His fellow passengers commented on this, and asked him why he did not denounce the company too.

"It would be hardly fair," he replied, "as I am traveling on a free pass; but, if they don't do better pretty soon, blamed if I don't go out and buy a ticket and join you."—*Harper's Magazine.*

FORMER Representative Henry U. Johnson, of Indiana, was engaged in a debate with an Illinois Congressman and called him an ass. This was unparliamentary, of course, and had to be withdrawn. Pursuant to the order of the Speaker, Mr. Johnson said: "I withdraw the language I used, Mr. Speaker, but I insist that the gentleman from Illinois is out of order." "How am I out of order?" demanded the Illinois man, with considerable heat. "Probably a veterinary surgeon can tell you," retorted Johnson. This was parliamentary and went into the *Record.—Indianapolis News.*

A GENTLEMAN met his medical adviser on Forty-second street the other day and passed a friendly greeting.

"Well, and how are you?" asked the doctor.

"Quite passable, thanks," said the other, "but I notice that when I bend my body forward, stretch out my arms horizontally, and impart to them a circular motion, I always feel such a pain in my left shoulder."

"But what need is there for you to perform such ridiculous antics?" inquired the physician.

"Do you know any other way, doctor, of getting on your top coat?" replied his patient. —*Harper's Weekly.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Conquest of the Air

WHEN the history of it comes to be written the year 1908 will occupy large space. Perhaps more of the essential steps in the development of aeronautics have been taken in other years, but now for the first time the public finds its long anticipations realized and its skepticism dissipated. Farther back than the human race can remember earth and water had been conquered, and man was already dreaming of the time when the third element should also some into his possession. When he carved on stone his idea of a god it was a man who could fly. All that man needed to be an angel, in his own opinion, was wings. In his visions of a hereafter, heavenly or earthly, the power of flight was an important feature. Whenever the poet dipt into the future he saw the heavens fill with commerce and the nations' airy navies grappling in the central blue. Over every Utopia there floated a long cigar-shaped vessel or some winged thing.

But man was slow to accomplish what he had so readily conceived. Prophesies of flight dated the next year or the next generation or the next century had to be repeatedly postponed. If it had not been for the birds man would have given it up long ago. But he could get over the land faster than some animals, he could swim in passable imitation of the fish, why could he not soar like a bird with the help of wings of wax or silk or paper or aluminum or something?

And now he can. Not very far or high or long, but he makes timid little flights, like a fledgling just pushed from the nest, a few hundred yards, ten or twenty feet from the ground, and fifteen minutes at a time, or with the aid of a gas bag can stay up half a day and go as high as he can breathe. The main thing in the mind of the people is that it has been accomplished and they have seen it with their own eyes. Balloon ascensions have long been common features at county fairs. Racetracks, deprived of their former function thru the interference of the law, are devoted to the improvement of the breed of aeroplanes. And finally four hundred miles of people from Lake Constance around to Stuttgart have been witnesses of Count Zeppelin's day of triumph and disaster.

Few scenes even in this eventful history have been so dramatic as this of the aged Count with the tears streaming down his face standing in the midst of the crowd of 40,000 people on the plain of Echterdingen before the blackened and twisted mass of aluminum plates and bars on which he had spent his fortune. The demonstration of his dream was almost accomplished. The messenger of the Government had already left Berlin with the draft for $125,000 in his pocket to purchase what was now destroyed. Forty-five years before, while he was engaged in our Civil War, he had conceived the idea that balloons might be useful in warfare, and he stuck to it, in spite of the indifference and ridicule of the world. On that all day's voyage in the air down the Rhine Valley he must have felt a thrill at the thought that he possessed a power greater than any of the generals who had fought over that territory in the past two thousand years, the power to destroy single-handed its fortresses, castles and public buildings, to devastate at will any of the cities he sailed over.

That is, unfortunately, the first thought that comes to men when a new

force is put into their hands, the thought of the increased power of destruction it gives to the individual. The smokeless rifle, the Gatling gun, the torpedo and the dynamite bomb were so received by the world. The Hague Conference declared against the use of explosives from balloons, but the eagerness shown by every government to get the best military airships does not encourage the belief that they will be restricted to reconnoitering when the fighting begins. The Kaiser and his people are aflame with the desire to make Germany mistress of the air as England is of the sea. The German Aerial Navy League, with a membership fee of only fifty cents, enrolls all classes, and within twenty-four hours of the burning of Count Zeppelin's machine half a million dollars was raised by popular subscription to build new ones. Forty airships can be constructed for the cost of one battleship, and it remains to be seen which is the more powerful weapon. Then there is the new aerial torpedo to be manufactured by the Krupps; nobody knows what will come out of that. Altogether it looks as tho man endowed with wings might turn out to be something other than an angel.

But peace has a way of wresting to her own purposes the weapons invented by war; and the recent peace congress in London was probably right in concluding that the invention of airships was not to be regarded purely as an enemy to the peace of the world. Sport, the mimic of war, comes next to it as a promoter of aerial navigation. A balloon can be purchased at the price of an automobile, and a gliding aeroplane costs less than a bicycle. In the new sports there is the same pleasure of swift motion, the same delight in the control of it, and the zest of danger to the driver and others in the neighborhood, is not absent. Now is the time when the enthusiastic amateur is needed in working out the best form for the machines and developing the ability to manage them. A few years later the types will be standardized and in the hands of professionals. The period of scoffing is past, and trophies, prizes and other rewards are being offered everywhere by governments and individuals. M. Henri Deutsch de la Meurthe, whose prize of $10,000 was won by Farman January 13th, by flying a kilometer in a circle, has offered another prize, $5,000, for an aeroplane or motor balloon crossing the Channel to England with Commandant Renard, one of the French pioneers in aeronautic research, as a passenger. M. René Quinton will give $2,000 to any aeroplanist who will fly for five minutes without using his motor, that is, who can imitate the birds in soaring by taking advantage of the changing air currents. This prize is likely to be taken soon, for the Wright brothers claim to have remained 72 seconds flying against the wind with their motor stopped. The Russian military engineers offer $25,000 to the winner in an aeroplane competition. The French Government has bought for the army the dirigible balloon "La République," the chief rival of Zeppelin's. Russia is constructing four of this type. Our Signal Corps, if satisfied with the record made by Captain Baldwin's dirigible this week, will recommend its purchase by the Government and ask Congress for an appropriation of a million dollars for aeronautical experimentation. Yet it is only about five years since Professor Langley, of the Smithsonian Institution, after having demonstrated for the first time the practicability of flying machines heavier than air, failed to get even $25,000 to continue his work. His aerodrome, "The Buzzard," then an object of derision to the newspapers, is now brought out and exhibited with pride.

The rivalry between the aeroplane and the motor balloon is closer than ever this year. The advocates of the former, the heavier-than-air machine, have been telling us for some time that there was no future for the old "gasbag with paddles," but, curiously enough, at the very time when the former is successfully trying its wings, the latter scores its greatest triumph in distance, duration of voyage and carrying capacity. To be sure, the wreck of the Zeppelin airship in a thunder shower and the carrying away of "La Patrie" by the wind show that these immense vessels cannot stand a storm in the open, but, on the other hand, Mr. Farman refuses to take out his aeroplane for a low flight on the Brighton Beach racetrack in even a moderate breeze. On the whole, it looks as tho the

two types, the airship which, like the fish and the submarine boat, is of the same gravity as the medium in which it floats, and the aeroplane, which, like the bird and kite, is heavier than the medium, are to remain permanent rivals, or rather will each occupy an independent field of its own in the aeronautics of the future.

Getting About

REAL progress began, we suppose, when living matter began to get about, instead of staying put. With incipient motion dawned elementary consciousness, and with locomotion the animal was well differentiated from the vegetable. Improvements in locomotion, and the extension and increasing celerity of travel have been prime antecedents of civilization, thruout its various improving stages.

Getting about has at various times been revolutionized, and each time with startling consequences. When the fish learned how to crawl, it became a snake (we are speaking in very general terms and do not care to be held to strict zoölogical accuracy). When the snake learned how to fly it became a bird. When the quadruped learned how to climb trees and travel thru their tops, he became a monkey, and when the monkey climbed down again and called himself "Mr.," he became a man. (We are still speaking in general terms.)

After a while Mr. Man got "wheels in his head" and invented carts and chariots. This caused him to make roads. He also dug out canoes and presently rigged a sail. Perhaps he made the canoes before he experimented with chariots. We are willing to be corrected on this point. At any rate his canoes and boats caused him to dig canals. With roads and canals he got on very well for a few milleniums.

However, the wheels in his head kept troubling him, until, one day, he mixt them up with pistons and cranks and hot water and things, and made a steam engine. He put his steam engine on wheels, just to see if it would go, and when it did, he remembered that he had sometimes made railroads to draw heavy things on, and so he built railroads for his steam engine to run on. He also put his steam engine into a boat and went on making his steamboats bigger and bigger until he had to build piers a thousand feet long into the Hudson River for them to tie up to.

We can remember when this inventive human creature vainly imagined that his steam railroad and his steamships would enable him to do all the getting about he would want to do for as many thousands of years as he got along with his cart and his wind-blown ships. But he had forgotten that wheels in the head multiply, like the human race itself, in a geometrical progression. It is less than a hundred years since he began building steam locomotives, and now he is spending a lot of time and money in trying to substitute for them all kinds of other motors, electric, gasoline and such.

As for his steam navigation of the water, he is already trying to repeat the successful experiment of the fishes that learned how to crawl and then how to fly. He sees no reason why a thing that can swim before the wind on the water shouldn't jump and skim a few hundred yards at a time for a while on land, and then, some day, take flight. So he is making aeroplanes in the expectation of establishing express and local air lines at no distant date.

Every revolution in the art of getting about thus far has, we suppose, been attended by much loss and disasters, and the croakers have advised their uneasy kindred to stick to their element and not risk their lives unnecessarily. Like all good advice, this admonition has been wasted, and the croakers have been abandoned by the wayside or elsewhere.

It will come a little hard, perhaps, on fat old gentlemen and timid ladies to have to take to the air, or be filed away as back numbers, but progress is a merciless thing, and people that won't or can't get about must be left to their unheroic fate.

The other night the electrified end of the New York and New Haven Railroad system was put out of business by a thunderstorm, and some of the newspapers say that Count Zeppelin's big airship came to an untimely end in the midst of its glorious career because it was "up against" a similar ill-regulated electrical demonstration. But such things are trifles.

Just as the wheels in the human head compelled man to level the hills and pierce the mountains for his railroads, they will compel him to manage the thunder and lightning business on an improved and economical basis.

Just what new developments of civilization will follow upon these latest achievements in getting about, when they shall have been perfected, we cannot venture to predict. We suspect, however, that the principal consequence will be a further multiplication of "wheels in the head."

Changes in the Senate

WILLIAM B. ALLISON, who died last week in his eightieth year, had for a long time been one of the most influential members of the Senate. For twenty-five years he had been chairman of its Committee on Appropriations. He was also a member of the Committee on Finance, and thruout his long term of service he had been a prominent figure in the discussion and shaping of all legislation concerning revenue and the currency. Sagacious, careful, industrious, wholly devoted to the duties of his office, wise in counsel, he excited no personal enmity and accomplished much by conciliation. Some have called him a master of the art of compromising. This is not strictly just. Compromise was not his aim when he caused the adoption of his memorable amendments to the Bland free silver bill. He then sought, successfully, to break the harmful force of a measure that, as he knew, was sure to be enacted in some form.

It is true that at times he harmonized warring factions by propositions which suggested compromise, but careful examination of them shows, we think, that as a rule they involved betterment. To his mind, assistance that enabled him to improve action which could not be prevented was preferable to unbending opposition which could accomplish nothing. The greater part of his work, and there was much of it, was hidden from the world because it was done in committee. Those who differed with him must admit, if they were familiar with his daily life, that he was the type of an unselfish, painstaking and loyal public servant.

His death points to interesting changes in the legislative body of which he was a member for thirty-five years. We do not refer to a rearrangement of committee offices. Mr. Hale will probably succeed him at the head of the important Committee on Appropriations, but neither that succession nor the promotion of Mr. Perkins to the Naval Committee chairmanship (probably to be vacated by Mr. Hale) will involve a change in the policy or methods of these organizations. Mr. Hale was in harmony with the late Mr. Allison as to appropriations, and it will be recalled that Mr. Perkins stood with both of these Senators in opposing the demand for four battleships.

The changes we have in mind are those to be caused by the election to the Senate of men representing the radical element of the Republican party. It seems to be admitted that Mr. Allison's successor will be Governor Cummins. Probably his election can be prevented only by such opposition from the conservative faction in Iowa as would give the Legislature to the Democrats. The transition from Mr. Allison, the associate of Mr. Aldrich and other members of the ruling group in the Senate, to Governor Cummins, the friend of Mr. La Follette and a persistent advocate of tariff reduction and reform, is a sharp one. In Kansas, Senator Long has been defeated at the primaries by Joseph L. Bristow, whose courage and honesty were indicated by his memorable report upon graft of various kinds and other shortcomings in the Post Office Department and in the relations between that department and certain legislators.

Mr. Bristow represents the radical, and the progressive, element of his party in Kansas. Senator La Follette made forcible speeches there for him and against Senator Long. Some say they turned the scale in Bristow's favor. Mr. Long had given at least formal support to the President's policies, but a majority of the Kansas Republicans were convinced that when compared with Mr. Bristow he was a reactionary. And there are other radicals on the way, from the Dakotas and elsewhere. This is not a good year for the Republican conservative, especially if he be hidebound or of the boss type.

Governor Cummins will not gain a place in the Senate easily. The recent

factional contest at the primaries in Iowa was marked by extraordinary bitterness. It was at those primaries that Mr. Allison was chosen, by a narrow margin, for another term, and Governor Cummins was his competitor. It will be recalled that the nomination of Senator Dolliver for Vice-President was prevented only by the vigorous protests of the opponents of Governor Cummins, who knew the latter would win the Senate seat to be vacated by Mr. Dolliver's acceptance of a place on the national ticket. They convinced Republicans from other States that the nomination would cause a resumption of the factional contest and thus be unfortunate for the party. But it was more unfortunate that Mr. Dolliver was not placed on the ticket with Mr. Taft. That would have prevented the Sherman blunder. It would also have made the ticket good and strong at both ends. Those who kept Mr. Dolliver in the Senate will continue to oppose Governor Cummins. But they will be overcome. No one but Senator Allison could have beaten him at the primaries.

This approaching infusion of active and intelligent radicalism will be beneficial. Mr. Bristow has had experience in public affairs. His record is clean. He is intelligent, honest and fearless. So far as we can learn, his radicalism is not of an unreasonable and sensational kind, but merely that which is born of a desire for justice. Governor Cummins is not an untried man. In the record of his public service there is abundant evidence that he is well qualified for the office he now seeks. He is radical because he would go a little beyond the lines of the national platform in the execution of certain policies, and is not in full agreement with that platform with respect to the tariff. In their radicalism these two men represent, in our opinion, a large majority of the Republicans in the Middle West. If this radicalism and those who stand for it are openly disapproved by the Republicans of the East, they may have reason to regret their attitude when they read the election returns in November.

Reports now current may lead some to expect that Governor Cummins and Mr. Bristow, if elected to the Senate, will be lieutenants of Mr. La Follette there. Not so. They will stand for themselves, and probably they will avoid certain errors into which the Senator from Wisconsin has fallen. In some published comments upon the situation it is assumed that these three gentlemen will constitute the entire radical element on the Republican side. This is incorrect with respect to the Senate of today, and especially so with respect to the Senate as it will be; for the election of Cummins and Bristow, indicating the temper of Western constituencies, will tend appreciably to modify the conservatism of certain Senators who must soon seek re-election.

We see no reason why good citizens should regard this coming infusion of Republican radicalism in the Senate with apprehension. We expect that the people will gain something by it, that it will tend to bring the Senate nearer to them and make its action more nearly in accord with the needs of the public. The attitude of the Senate majority toward great domestic questions of the day has at times left much to be desired. Those who have recently controlled that majority should be subjected to the restraint imposed by the acts and utterances of such men as Mr. Bristow and Governor Cummins, and by evidence that the Republican masses desire to place in the Senate more men of their kind.

Supply and Demand in Literature

THE adage that the demand creates the supply does not hold true of genius. The supply is never adequate and not altogether of the right kind. Great men do not always appear in the crises of their country's need. Sometimes the country has to get along the best it can with very mediocre men in its direst straits or fail for lack of better. Necessity is too often childless. We could give a list of a hundred inventions which are all much needed now and probably quite practicable, but which may be delayed for many years. So it is not fair to assume, as is generally done, that the tone of the literature of the day represents popular taste. It is only as near to popular taste as the public is able to get. The public has more reason to complain of the service it gets from its servants, the authors, than the housewives of their maids.

If one year the historical romance is all the rage, and the next everybody is reading novels of the future, if stories of domestic scandal go out of fashion suddenly and stories of financial scandal come in, this does not mean that the taste of the people has undergone a spontaneous and simultaneous change. It indicates that some literary genius has arisen who was personally inclined to write on the new subject. The supply of stories of Indian life was fully equal to the demand at the time when Kipling wrote the first of his "Plain Tales from the Hills." Religious questions were not being discussed with any special avidity when "Robert Elsmere" appeared. The most observant critic would not have detected any signs a year ago of such a general yearning for more metaphysics as to cause James's "Pragmatism" to sell like a novel.

The literature of a nation is controlled by the initiative and referendum. But in this case they are in separate hands. The authors have the initiative and the people the referendum. The people have the power to veto, but not to amend. They have to take whatever an author chooses to offer them or reject it altogether. That is the reason why in discussing this subject two weeks ago we urged that the indifference and contempt which authors and artists in general manifested toward their great silent partner, the people, were unwarranted and inadvisable.

The evils of our literature are not due to the stringency of social control, but rather to the lack of it. We rarely hear of a writer being forced to violate his conscience by writing indecent plays or poems or stories to satisfy an imperious popular demand for such. On the contrary, we have to listen to the continuous complaint by authors that the public is too prudish and will not permit them to write on the salacious or abnormal themes toward which their taste inclines them. Artists are not compelled to paint scenes of carnage, disease, cruelty and licentiousness by the hard-hearted academicians of the hanging committee or by the desire of any large number of their fellow-citizens to buy them for their homes. The patrons of grand opera are not the strictest sect of moralists, yet there is no reason to think that they have a decided preference for incestuous adultery and necrophilism. But they do want great music, and since they are dependent on Wagner and Strauss for this, they tolerate, with more or less pronounced aversion, Siegmund and Salome. The scenes of *Die lustige Witwe* are better suited to a Viennese than to an American public, but its tunes are irresistible—and unescapable. In short, any morbid, abnormal, decadent, or immoral tendency manifested in literature or art may generally be traced to some individual who has taken advantage of his genius to force his personal perversities upon the world; and in so far as the literature and art of a people remain pure and sane it is due to the restraining influence of popular taste. In violations of good morals and good taste the genius is the tempter and the public the more or less willing victim. There is, of course, a public for any eccentricity, but it is not the best nor the largest of the publics to which the man of genius may cater.

Because our food is adulterated and there is filth in our milk and ice, it does not follow that we prefer it so. That our poetry is pessimistic and our novels come to bad ends does not prove that we would not read cheerful books if we could get them.

"If you buy land, you buy stones;
If you buy fish, you buy bones;"
If you buy books, you buy moans,

What to Do With State Fairs

TWENTY-FIVE years ago our State fairs were migratory, and it was held to be a duty to hold the sessions in different sections of a State, in order to accommodate all the people. To make them pay, the State has allowed them to be pinned down to single centers, in a few cases alternating between two points. This having been accomplished, the nature of the crowd has been considerably altered, a larger part coming from the cities, while fewer of the old-fashioned farmers are found examining the inventions and the fat cattle. The new crowd has to have a new set of attractions. They cannot be drawn together without a disproportionate display of horseracing, with its accompanying betting. Some of the States have even

sanctioned this sort of work, while forbidding it elsewhere. It is probably true that to suppress gambling at our State fairs would have a serious effect on the financial showing. Yet we need at the present time, more than ever before, an opportunity to trace the progress of agriculture. Burbankism is leading the world, and it is an absolute necessity that our farmers shall become intimately acquainted with what is going on at our agricultural colleges, and what applications of science are being made in the orchards, gardens and fields of their neighbors. The State fair is the time for taking notes, and if wisely conducted, the State can count its value in improved crops, in time-saving application of machinery, and in other horticultural lines of progress, at a very high figure.

Unfortunately, we do not go any longer to our State fairs to follow the achievements of Munson, and Hansen, and Barry, and Burbank; or to find out what we can as farmers do along the same lines of work. What we do learn of these things we get from the bulletins of our experiment stations, while the average farmer is left to his annual display of fast horses, with big pumpkins and fat swine as side shows. We do not mean that many of our State fairs are not attractive and showy, or that they are lacking in the eloquence of agricultural knowledge and achievement. We have seen a few that fulfilled the purpose of such an exhibition, but when we desire to find what the farmers are really doing we go somewhere else—sometimes to county fairs, but more often to specialist expositions. No one can really find out what the country is trying to do and what the farmer demands without attending good roads meetings, farmers' institutes and grange fairs.

What are we going to do about it? Shall we set our State fairs once more on wheels and send them rotating about the country? Shall we, on the contrary, leave them to their fate (which is largely to dissociate them from real agriculture), and distribute the appropriations to our counties, and so revive and enlarge the county fairs? There is a good deal to be said in favor of this latter plan. Our county fairs have seldom been failures, unless for such reasons as contiguity to State fairs. They can very easily be visited by all the people. Our counties are politically arranged for convenience of co-operation. They are equally well adapted to that sort of gathering which we are discussing. The county fair still brings out that sort of competition for which all agricultural fairs were intended. It is just big enough to accommodate the people whom it represents. A new variety of potato, or bean, or apple, or pear is pretty sure to find its place at such a show, and it is very likely to have its merits well understood by visitors. New methods of land culture and fertilization are brought into comparison, and the advantages which accrue from improved machinery. We have heard inventors say that the county fair was of more value to them than the State fair, not only because it gives time for study, but because there is not so overwhelming a crowd.

We see no reason why the State fairs should not be given over to a competition between associations and societies and sections. Indeed, this is just about what has been done. A careful examination of the prizes awarded will show that there has been a keen competition between the fruit of Western and Eastern New York or Northern and Southern Illinois. In this way the State fair has its place and its power for good, but its influence is of a general sort. Our agricultural problems are much more local in these days of intensive farming. Taking the Empire State, for instance, we find that one section is devoted to dairy interests, another to fruit growing, while near New York City truck gardening naturally predominates. Maine has its apple districts, its potato districts, and its tourist domain, where the interests of fishermen and hunters dominate. Connecticut has her river valley interests, quite distinct from those of her mountain slopes. This is true elsewhere, especially in the larger States. With the State fair permanently located one industry becomes dominant, and thousands of farmers become indifferent, if not actually forgetting the annual recurrence.

However this may be decided, it is certain that our State fairs must be brought down to the times. They should express the new lines of agricultural re-

search and thought. They should constitute a sort of annual farmers' congress, to debate questions that are concerned in modern land culture. The creation of new fruits and vegetables, not the mere exhibition of numerous sorts of old stock, should dominate. The old-fashioned political stump speech, with allusions to agriculture, is out of place. The men at the front should be the leaders who are doing things. When this is brought about the question of gambling will have less force, and obtrusion of side shows will take care of itself.

New York's Surface Railways

Owing to the disintegration of the surface street railway system of New York, and the action of receivers who hold important parts of the property, many transfer privileges have been cut off, to the great disadvantage of the poor. This is the cause of much complaint and indignation. There seems to be no remedy available at present. The people, and those who can least afford any increase of their daily expenditures, are being compelled to pay for the corruption and robberies of as scoundrelly a pack of thieves as ever had possession of a public utility corporation. Unfortunately, a majority of those who suffer do not place the blame where it belongs. They attack the receivers and the Public Service Commission. If the rascals who are really the responsible and guilty parties had been punished, if two or three of them were now in jail, the force of denunciatory public opinion would not now be misdirected, and officers who are striving to do their duty would not be so unjustly attacked. If the thieves were in prison, the evidence that they were undergoing punishment would enable the poor workman who pays double or triple fare to bear his burden more easily. Have not the facts drawn out by official investigations been sufficient to prove that those who looted this railway system should be prosecuted for violation of law? Then why have they not been prosecuted and punished? This is a question which the people of New York should address to District-Attorney Jerome.

Bronson Howard

Bronson Howard has always been regarded as the Dean of the American Drama. With his recent death another link has been removed from the chain which binds the present to the past, for altho he has always been active in the interests of the American stage, as a playwright Mr. Howard belonged to an older generation. In the years to come it is an unfortunate circumstance that the estimate of Mr. Howard, based upon his numerous popular successes, will not be a very high one, for the reason that he wrote at a time when our American stage was being flooded with French imitations, and when, if a manager could not get an adaptation, he would not accept a native product unless it had something of the French tang. But Mr. Howard's right to the title of Dean of the American Drama can never be disputed, for whatever is done in the future to enrich our American dramaturgic literature it will be thru the efforts of Mr. Howard that the first impetus toward that efflorescence was given. At a time when Augustin Daly and A. M. Palmer and Lester Wallack—the three managerial dictators of their period—were either spending all their efforts in producing foreign adaptations and translations or reviving the classic drama, Mr. Howard demanded a hearing for the American drama. It has been emphasized more than once, that in the early seventies he stood single-handed and forced the public gaze upon current American thoughts and manners. For that reason Mr. Howard may be regarded as a pioneer. It makes little difference whether his "Aristocracy," his "Saratoga," or his "Kate" is dominated by a flippant French style which is far from American, or that even his more solid successes like "Young Mrs. Winthrop" and "The Henrietta" contain certain artificialities characterizing the French stage of that day. What is important is that Mr. Howard established the *fact* of the American drama's existence, apart from what George Boker and the Philadelphia coterie might have done. It is an unfortunate truth, however, that unless our dramatic literature emphasizes the essential elements from which our native drama has sprung, outside of the dra-

matic profession Mr. Howard's name in the years to come will be little more than a name. For his plays are hardly literary in the sense that they possess reading style and grace. That is to be deplored, inasmuch as intellectually Mr. Howard, the man, represented a high type of mind, and Mr. Howard, the dean, always stood for what was best in his profession.

Marking Pronunciation

We wish that publishers did not have a morbid aversion to footnotes and that authors, especially novelists, would indicate the pronunciation of unusual proper names. We do not have so much trouble with the German, French and Italian words because in these languages there is generally some discoverable relation between spelling and pronunciation, but the British family and place names make us nervous when we read aloud. We remember the Yankee tourist who, in commenting on these anomalies on his return to America, said that the English spelled a word C-h-o-l-m-o-n-d-e-l-e-y and then pronounced it "Beechum." Of late authors have taken to inventing names for their characters because the former custom of getting them from the directory or street signs led to libel suits. Such fabrications are impossible to guess at, so also are the proper names of the fictitious Balkan principalities and South American republics which supply many of our popular heroes. It would be agony to an author to hear what names the reader in the family circles calls his heroine. A hint from him on the first page where she appears would save much embarrassment. For example, we see her name is Beatrice and start in calling it *Be*-a-tris. Some fifty pages further on we find that she had an Italian mother, so we slide into Bay-a-*tree*-chay, hoping the listeners will not notice the change. Later we learn that she was named from her birthplace in Nebraska and therefore should be called Be-*at*-ris. The author loses by all the difficulties that he leaves in the way of an assured pronunciation of the names of his characters. However enthusiastic one may have been about "With Fire and Sword" one always felt a certain timidity about discussing the character of Skshetuski with strangers. The patent medicine and breakfast food men, practical psychologists all, appreciate this difficulty and are careful to accent and syllabize their new coined words.

Sleeping in Church

We can remember the time when it was thought improper to go to sleep in church. It was regarded as a reflection upon the sermon. The witty preacher used to instruct his chief usher that, if he saw anybody asleep in church, he was to come and wake him up, "him" referring to the preacher. Nowadays a different view of the church and its functions in society prevails. Sleep is regarded as more valuable in certain cases than sermons, and the stock joke has come to be taken in earnest. We hear of certain churches specially recommended for their power of putting people to sleep, and they come from thousands of miles for that purpose. There is no disease that the psychopathic wards of our institutional churches profess with greater confidence to cure than insomnia. We have no fault to find with the new view. This restless and overworried age needs a gospel of peace and cheerfulness. Preachers are wanted who can give a man the faith which will relieve him from feeling that the whole world is on his shoulders and that everything is going wrong.

Charge to the Smoker

We call the attention of smokers to the fact that the terrible fire in British Columbia, sweeping out whole towns, making thousands homeless, besides causing the death of a large number, is reported to have been caused by a "a careless traveler, who threw down a lighted match, and it fell into some dry waste." Almost identical with this terrible disaster, a three million fire in Chicago, that burned six blocks, besides causing several deaths, was the result of a similar recklessness. "A railroad employee tossed away the stub of a lighted cigaret, and it happened to light on some rubbish that was surrounded by a number of barrels of chemicals—an explosion following threw lighted combustibles far and wide." The fact is that a man who carries a

torch everywhere is a public nuisance, and the habit of lighting matches anywhere should be abated. We have recently witnessed an evergreen hedge burning from a cigar stub that had been carelessly thrown upon it. Thousands of dollars are constantly imperiled, and as we have seen in British Columbia lives may be lost owing to this pernicious habit.

The Technique of Criticism

How would you like to be a dramatic critic and be expected to write the following, which appears in one of the leading magazines for August:

"In Frank Wedekind, actor, poet and playwright, the modern movement in Germany seems to have reached its climax. In that grotesque and impossible genius, *l'extremes se touchent,* decadence melts in naiveté and higher culture borders on barbarism."

But perhaps you would prefer to be the baseball reporter. Last Wednesday, when the New York nine "forged" into second place in their race for the pennant, this is what was accepted by the New York daily that prints only the news that is fit:

"A few repeat performances of yesterday's Polo pleasantry and we'll have to call every one of them Mister. No more of that 'Good eye, Mike,' or 'Lovely billiards, Cy.' Got to cut that out and speak up timid and respectful-like. 'Will you let us say, Mister Donlin, that you are playing the grandest little game in the barrio,' or 'Felicitations, Mr. Seymour, upon your noteworthy achievements.'

"Got to be a bit careful about addressing these celebrities. And that's their name all right. Made the Cincinnatis slink into their cyclone cellar in the first game, didn't we? And kept 'em there thruout the second? With Pittsburgh and Chi both taking the little end of their respective arguments. Bad time for the Giants to put over a double-header, yes? Just makes us second in the big race, and a lot of possibilities left over for the rest of the week."

A Just Plea

The rising tide of sentiment against the indiscriminate sale of intoxicating liquors has crossed the Pacific. A race, admittedly the finest specimens of humanity native to the Pacific islands, has for a hundred years past been slowly declining until now the end is in sight. Chief among the causes for this decline, in the judgment of many observers, is the liquor of the white man. The following resolution was past by the Hawaiian Evangelical Association during the recent convention held at Hilo:

"Whereas, It was the consistent policy of the Kamehameha sovereigns of Hawaii to prohibit the liquor traffic among their people; and

"Whereas, The annexation of these islands to the United States brought to them multiplied saloons,, which not only have debauched the people but have effected a steady diminution of their number; and

"Whereas, We believe that the people of the United States neither desire to curse Hawaii and destroy its native people with drink, nor will suffer this to be done when once they understand our conditions; therefore,

"Resolved, That the 103 churches of the Hawaiian Evangelical Association hereby appeal to the temperance people of the United States to outlaw the liquor traffic in Hawaii."

If, as is usually assumed, our relations with the primitive peoples whose territories we have acquired are of a paternal nature, it would seem that there can be no more opportune moment for the exercise of a paternal authority than in the strict regulation or absolute prohibition of the liquor traffic.

Libel Laws in Europe

The Paris *Matin* has got into trouble for saying that M. Chaumie, former Minister of Justice, took advantage of his position to provide sinecures for his relatives and friends. The Assize Court of Agen has found the paper guilty of libel and imposed a fine of $100 and $10,000 damages. The *Matin* is further required to publish the judgment of the court 200 times. The French law provides that any person who is unjustly criticized in a newspaper shall have the right to have a reply in his own words occupying the same space and position on the paper published free of charge. In England the freedom of the press to say things that are not so is similarly restricted. The London *Times* was heavily mulcted not long ago for accusing a publisher of charging too much for a book and the Harmsworth journals for calling the soap combine a "trust." How could the yellow press get thru the next three months if our laws were as strict and as strictly enforced as the European?

A Free Church in a Free State

A curious and from an American point of view an amusing case before the Court of Arches of the Province of Canterbury has, after a month of argu-

ment and deliberation, settled the right of a member of the Church of England to marry his deceased wife's sister without losing his ecclesiastical standing. The suit was brought by a man who went with his deceased wife's sister to Canada a year ago to be married. Since then Parliament has made such marriages legal in England and the couple applied to their parish church for communion and were refused by the curate on the ground that they were "open and notorious evil livers" and as such he had a right, according to a rubric dating from the times of Edward VI, to keep them from the Lord's table. It was ingeniously argued by the counsel for the defense that notwithstanding the recent act of Parliament a clergyman who married his deceased wife's sister would be guilty of incest according to canon law and that what was immoral for a clergyman cannot be proper for a layman. It was also contended that the words "open and notorious evil liver" were used in a purely ecclesiastical sense. But the learned Dean of the Arches, Sir Lewis Dibdin, D. C. L., chose to consider them in the light of common sense, and called attention to the fact that it would follow from the arguments of the defendant that in a marriage between a churchman and a nonconformist one party would be an open and notorious evil liver and the other not, and also that a clergyman could assist a man who had married his deceased wife's sister to contract a bigamous marriage with another woman. Therefore, since the persons bringing the suit were admittedly of established reputation and of unblemished character, except so far as their marriage might be deemed to affect the matter, the Dean decided that:

"The defendant has failed to justify his repulsion of the promoters from Holy Communion, and he must be admonished for having so repelled them; and, further, he must be admonished to refrain from similar acts in the future."

Would any of our American churches be willing to surrender their freedom and independence to secure all the prestige and material advantages of the establishment? And how would they like to have their rites and regulations determined by Congress and the requirements for admission to their communion tables settled by a court under the jurisdiction of the President?

The Hydra of Modernism

From time immemorial the Cardinal Secretary of State presents to the Pope a medal, known as that of St. Peter, every recurring festival of Saints Peter and Paul, June 29th. A few are struck off in gold for royalties; the rest in bronze for cardinals and lesser dignitaries. This medal is never sold. The artist, Bianci, has chosen the condemnation of modernism as the subject. Before the chair of Peter stands Pius X promulgating the Encyclical. At his side are five figures, representing Europe, Asia, Africa, America, Australasia. Before him lies prostrate the seven-headed monster of mythology, striving to destroy three books, entitled Bible, Tradition, Scholasticism. The combination of the three books, as on equal terms, reminds one of the Scripture, which says: "Every fool will be medaling," or something that sounds like it.

Society Note: Messrs. Luke E. Wright, Secretary of War, and William Loeb, Jr., presidential secretary, were last week simultaneously elected to that renowned club whose membership up to the time of going to press consisted of Judge Alton B. Parker, H. W. Bowen, Senator Tillman, Senator Chandler, John F. Wallace, Henry M. Whitney, Bellamy Storer, "Dear Maria," George O. Shields, Judson Harmon, Thomas C. Platt, W. J. Long, E. H. Harriman and Richmond P. Hobson.

The tsetse fly is believed by scientists to be the cause of the sleeping sickness which is devastating Uganda. But a man of Roosevelt's temperament would be immune to that disease even there.

You gain less by stinginess than you lose by getting the reputation of being stingy.

We have our faults, but at least we do not ride a motor bicycle.

Insurance

The Canadian Forest Fires, Etc.

THE present year does not seem to be a propitious one in fire insurance circles. To losses already far beyond the average must now be added those due to the Canadian forest fire, the origin of which has been credited to the Black Hand. Nearly 200 lives have been lost thus far, 6,000 persons have been rendered homeless and there has been a property loss variously estimated at from $5,000,000 to $10,000,000. This fire and the tremendous advance in the price of lumber during recent years makes the general interest in the subject of forest fires much greater than was formerly the case. Official estimates of the annual losses accruing because of forest fires exceed $50,000,000. The burned area, according to these same estimates, reaches the appalling total of 15,000,000 acres. Many of the forest fires are due to accidents such as sparks from locomotives or other engines, or begin thru fires started by hunting or camping parties or from burning brush piles. A writer in *Country Life in America* has suggested, however, that at least two-thirds of the forest fires that occur are of intentional origin and that in the majority of such cases the object aimed at in starting the fires is the improvement of the pasturage. In certain cases the result of the burning may be a temporary improvement in that direction, but these fires destroy much of the grass, as well as both annual and perennial herbs and shrubs. The burning of both the seeds and the plants necessarily signifies injury, and repeated fires must tend to injure rather than improve even the pasture. In one year—1903—the Forest, Fish and Game Commission of New York, some account of the work of which appeared in THE INDEPENDENT of December 8th, 1904, reported the occurrence of forest fires to a greater extent than usual because of the climatic and weather conditions which then prevailed.

Large amounts are constantly being spent by private owners for fire fighting in Adirondack and Catskill counties, New York State. Last year $185,000 was paid out on an area of about 3,500,000 acres, and even then 500,000 acres were burned. The difficulties of controlling forest fires—their absolute prevention, does not seem to be possible—was touched upon and illustrated in our issue of August 15th, 1907. The destruction of such a vast proportion of our forests during recent years, not only by fire but by reckless lumbering as well, has compelled some thought on the part of those interested in the subject of forestry, looking toward the preservation of the remaining trees of the country, all of which is emphasized by the fires of last week in British Columbia.

JOHN M. TAYLOR, president of the Connecticut Mutual Life Insurance Company, of Hartford, Conn., writing under the title of "The Corporate Responsibilities of the Medical Examiner in Life Insurance," touches a vital point. The responsibility of the medical examiner is indeed great if his work is skillfully done without fear or favor. He merits the name "a sentinel at the gate," so happily given him by Mr. Taylor. The legal citations made are from the decisions of the court as summarized and reported in the *Insurance Law Journal* and *Insurance Digest*. Insurance executives will be interested in this subject.

A WASHINGTON dispatch says that William H. Taft has not been denied insurance, but has policies to the amount of $50,000, and is considered a "good risk." Life insurance companies do not rank him as a fat man, for his three hundred pounds are well "distributed," and he has more than the usual "expectancy of life." Dispatches from London recently received in this city state that Lloyds have fixed a premium of 2 per cent. on Mr. Taft's life from now until the day after election. The same dispatch states that demands for policies against the election of Mr. Bryan have fallen off considerably, and the rate, which was recently 20 guineas per cent., has now been reduced one-half. Theodore Roosevelt was insured by Lloyds four years ago at a fraction under the Taft rate.

Financial

Banking Recovery in New York

Speaking of the improvement which has taken place in banking conditions in the city of New York, Mr. Williams, the State Superintendent of Banks, said last week that of the thirteen institutions under State control that were in trouble a few months ago, eleven had been able to resume business. "Remarkable progress," he added, "has been made by the several banks and trust companies that were embarrassed, and the position today is a striking commentary upon the recuperative powers of American banking institutions." To this recovery the rise in market values of securities has, of course, effectively contributed. Of the two institutions that have not resumed, one is a small and new concern which had very small deposits, and the other has paid all its depositors in full and can reopen if it desires to do so. It may be pointed out, as indicating the changed conditions, that the Trust Company of America, which survived an extraordinary run, has paid off $24,000,000 of the $28,000,000 advanced for its accommodation and is said to have on hand enough to pay the remainder; also, that the Knickerbocker Trust Company has anticipated two of its instalment payments to depositors and will probably anticipate the third payment. This company's receipts for deposit since resumption of business have exceeded withdrawals.

The latest of the embarrassed institutions to reopen is the Mechanics' and Traders' Bank, which, it is expected, will resume business this week under the name of the Union Bank of Brooklyn. This is one of the banks that came under the control of the Thomases. Their influence, of course, has been eliminated. There will be new officers, an ample supply of cash and strong financial support. Edward M. Grout, formerly Comptroller of the city, will be president, and the vice-president will be Edwin J. Stalker, for many years cashier of the Chase National Bank. The capital is to be $1,000,000, the surplus will exceed $900,000, and the cash resources on hand at the outset will be nearly equal to 50 per cent. of the deposits, which are to be released in instalments within sixteen months. More than a majority of the stock has been lodged with ex-Justice Morgan J. O'Brien, Mr. Grout and William H. English, as voting trustees, under an agreement securing to them the voting power for five years. The rehabilitation of this old bank under strong and conservative management is an example of that sure progress toward complete recovery upon which Superintendent Williams has commented.

August Crop Report

The Government's crop report for August 1st, issued on the 7th, shows a slight decline in the condition of corn (reducing the estimate by 10,000,000 bushels), and a large decline of condition with respect to spring wheat and oats, which suffered in July. This cuts down the estimate for spring wheat (since July 1st) by 26,500,000 bushels, and leaves no hope for the promised billion bushels of oats. The indicated crops, together with those harvested last year, are shown below:

	August, 1908.	Harvest of 1907.
Corn	2,716,000,000	2,592,320,000
Winter wheat	425,940,000	409,442,000
Spring wheat	249,711,000	224,645,000
Total wheat	675,651,000	634,087,000
Oats	911,347,000	754,443,000
Rye	32,442,000	31,566,000
Barley	173,452,000	153,597,000

During July the condition of spring wheat fell from 89.4 to 80.7, and that of oats from 85.7 to 76.8. There has been a slight increase of hay acreage, and the condition of the grass is much above the ten years' average.

....Following a decline in June to 1,092,131 tons (against 2,231,575 in June a year ago), the pig iron output rose in July to 1,217,897 tons, and at the beginning of August the weekly capacity of active furnaces showed a considerable increase. Output for the first half of 1908 was only a few tons more than half of the output for the first half of 1907.

The Independent

VOL. LXV NEW YORK, THURSDAY, AUGUST 20, 1908 No. 3116

Survey of the World

Mr. Bryan's Speech of Acceptance

Mr. Bryan formally accepted his nomination on the 12th, at Lincoln, Neb., speaking to a large audience assembled in the grounds adjoining the State Capitol. At the beginning he said that this third nomination could be explained only by "a substantial and undisputed growth in the principles and policies" for which he had contended. The convention's action renewed his faith in them and confirmed his attachment to them. Endorsing the entire platform, he remarked that "a platform is binding as to what it omits as well as to what it contains." "An official," he added, "is not at liberty to use the authority vested in him to urge personal views which have not been submitted to the voters for their approval." The platform adopted at Denver specifically outlined "all the remedial legislation which we can hope to secure during the next four years." He charged that the Republican party was "responsible for all the abuses which now exist in the Federal Government" and was "impotent to accomplish the reforms imperatively needed." The Republican platform had "openly and notoriously disappointed the hopes and expectations of reformers, whether those reformers be Republicans or Democrats," and Mr. Taft had found it necessary to rebuke the leaders of his party by adding to that platform in several important particulars. As he intended to discuss the leading questions in separate speeches, Mr. Bryan said he would at present confine himself to the paramount and overshadowing issue, which was "Shall the people rule?"

"No matter which way we turn; no matter to what subject we address ourselves, the same question confronts us: Shall the people control their own government, and use that government for the protection of their rights and for the promotion of their welfare? or shall the representatives of predatory wealth prey upon a defenseless public, while the offenders secure immunity from subservient officials whom they raise to power by unscrupulous methods? This is the issue raised by the 'known abuses' to which Mr. Taft refers."

He then quoted from President Roosevelt's message of January last concerning predatory wealth, and asked if this indictment was true. If it was, it was not directed against the Democratic party. Quoting also from Mr. Taft's speech of acceptance as to the growth of abuses during the last ten years, he remarked that during all this time Republicans had controlled the executive and legislative departments and occupied most of the Federal judgeships. "Let the Republican party," said he, "accept the responsibility":

"Why were these 'known abuses' permitted to develop? Why have they not been corrected? If existing laws are sufficient, why have they not been enforced? All of the executive machinery of the Federal Government is in the hands of the Republican party. Are new laws necessary? Why have they not been enacted? With a Republican President to recommend, with a Republican Senate and House to carry out his recommendations, why does the Republican candidate plead for further time in which to do what should have been done long ago? Can Mr. Taft promise to be more strenuous in the prosecution of wrongdoers than the present executive? Can he ask for a larger majority in the Senate than his party now has? Does he need more Republicans in the House of Representatives or a Speaker with more unlimited authority?"

The influence of manufacturers, who had for twenty-five years contributed to the Republican campaign fund, and in return had framed the tariff schedules, had been sufficient to prevent tariff reform. Re-

vision was now promised, but revision after election. If the past could be taken as a guide, the Republican party would be so obligated by campaign contributions that it would be powerless to bring to the country any material relief from tariff burdens. A few years ago the Senate had refused even to consider "an anti-Trust law which had the endorsement of the President," and since that time the dominant party had made "no effort to secure remedial legislation on this subject." For ten years the Interstate Commence Commission had been asking for an enlargement of its powers, "that it might prevent rebates and discriminations, but a Republican Senate and a Republican House were unmoved by its entreaties." When the President asked for legislation, he drew his inspiration from three Democratic national platforms. Mr. Bryan did not mention the enactment of the Hepburn Railroad Rate law, but spoke of the defeat of "several amendments offered by Senator La Follette and supported by the Democrats." One of these, authorizing a physical valuation of railroad property, had recently been overwhelmingly rejected by the Republican convention, but Mr. Taft had since favored it in a qualified way. Why had nothing been done to protect the public against overissues of railroad stocks and bonds? A large majority of the Republiacn voters realized that the masses had had but little influence upon legislation, and they were beginning to understand the cause:

"For a generation the Republican party has drawn its campaign funds from the beneficiaries of special legislation. Privileges have been pledged and granted in return for money contributed to debauch elections. What can be expected when official authority is turned over to the representatives of those who first furnish the sinews of war and then reimburse themselves out of the pockets of the taxpayers? So long as the Republican party remains in power it is powerless to regenerate itself. It cannot attack wrongdoing in high places without disgracing many of its prominent members, and it, therefore, uses opiates instead of the surgeon's knife. Its malefactors construe each Republican victory as an endorsement of their conduct and threaten the party with defeat if they are interfered with. Not until that party passes thru a period of fasting in the wilderness will the Republican leaders learn to study public questions from the standpoint of the masses."

Campaign Funds and Senatorial Elections

The Republican leaders had refused to consent, Mr. Bryan said, to a law requiring publicity for campaign contributions and expenditures, and their national convention had repudiated a publicity plank by a vote of 880 to 94. For the convention Mr. Taft had apologized, but his promise to urge (if elected) the enactment of a publicity law fell far short of the requirements of the situation. Mr. Taft had not said that he favored the publication of contributions before the election:

"If a man, pecuniarily interested in 'concentrating the control of the railroads in one management,' subscribes a large sum to aid in carrying the election, why should his part in the campaign be concealed until he has put the officials under obligation to him? If a Trust magnate contributes $10,000 to elect political friends to office, with a view to preventing hostile legislation, why should that fact be concealed until his friends are securely seated in their official positions? . . . How can the people hope to rule if they are not able to learn until after the election what the predatory interests are doing?"

Next to the corrupt use of money, Mr. Bryan continued, the present method of electing United States Senators was most responsible for the obstruction of reforms. Referring to the action of Democratic Houses in the Fifty-second and Fifty-third Congresses, in support of a constitutional amendment authorizing the popular election of Senators, he remarked that public sentiment forced a Republican Congress to follow this example, "and then another and another Republican Congress acted favorably." But the Senate had impudently and arrogantly obstructed the passage of the resolution, altho an overwhelming majority of the voters demanded it. Successive Democratic platforms had called for the change; Republican platforms had not called for it, and at the recent Republican convention a plank endorsing the popular election of Senators had been rejected by a vote of 866 to 114. He attacked Mr. Taft's assertion that this was hardly a party question. He also asked what Mr. Taft had ever done to bring the question before the public, and what enthusiasm for Senate reform he had ever shown. As the Democratic platform

said, the popular election of Senators was "the gateway to other national reforms":

"Every remedial measure of a national character must run the gauntlet of the Senate. The President may personally incline toward a reform; the House may consent to it; but as long as the Senate obstructs the reform the people must wait. The President may heed a popular demand; the House may yield to public opinion, but as long as the Senate is defiant the rule of the people is defeated. Thru a Democratic victory and thru a Democratic victory only, can the people secure the popular election of Senators. If I am elected to the Presidency, those who are elected upon the ticket with me will be, like myself, pledged to this reform, and I shall convene Congress in extraordinary session immediately after inauguration, and ask, among other things, for the fulfilment of this platform pledge."

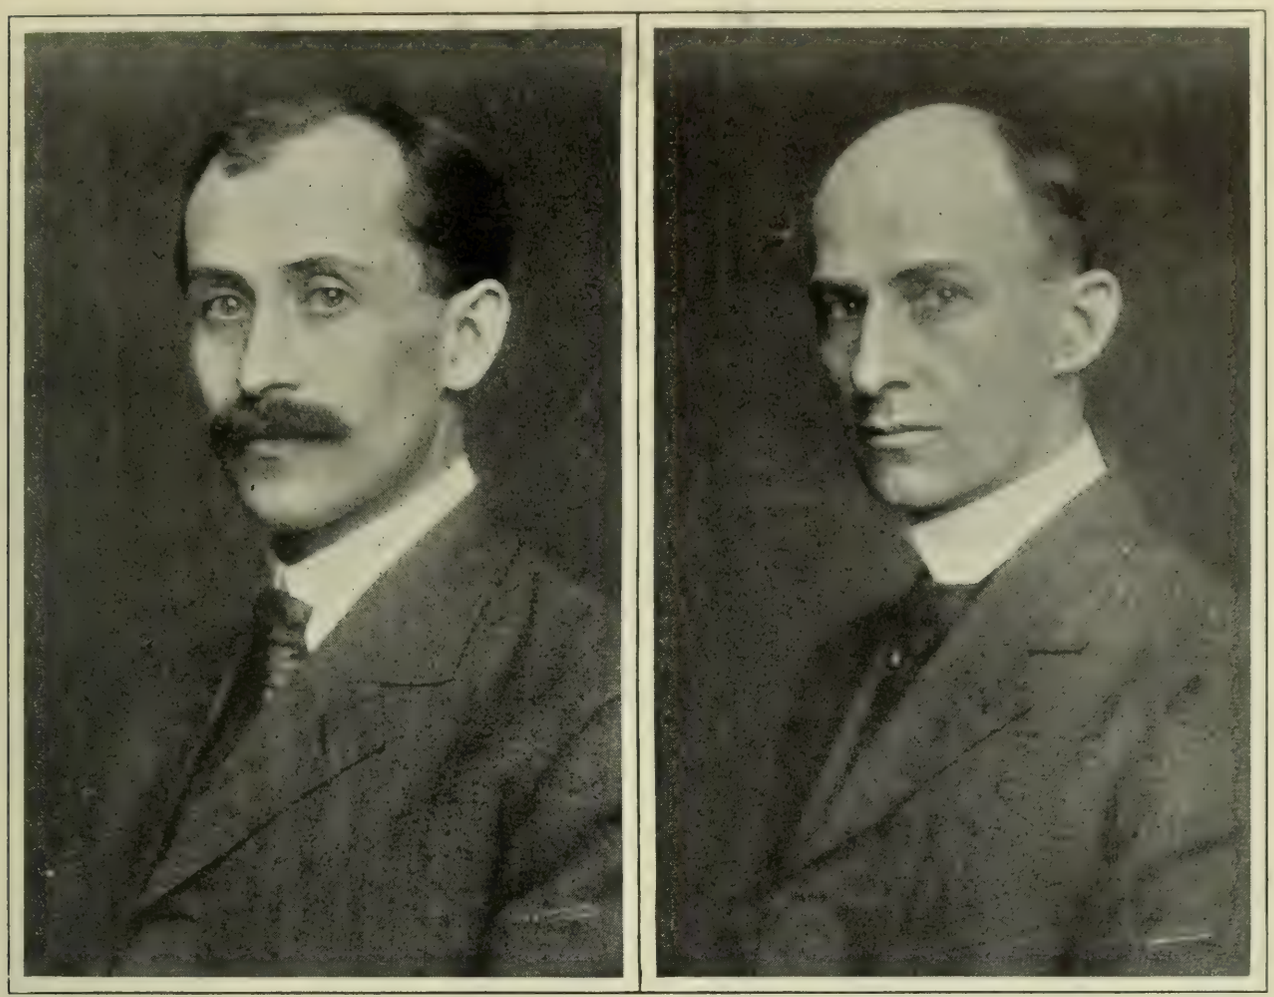
He found in the rules of the House of Representatives another "instrumentality employed to defeat the will of the people." At the recent session "a considerable element in the Republican party, favorable to remedial legislation," had been despotically suppressed by a few leaders who controlled the organization. Instead of rebuking this attack upon popular government, the party convention had eulogized Congress and nominated for Vice-President "one of the men who shared in the responsibility for the coercion of the House." The Democratic party, he said, was pledged to revise the House rules. That party had risked defeat and suffered defeat in its effort to arouse the conscience of the public and to bring about that very awakening to which Mr. Taft had referred. It had proved its worthiness by "its refusal to purchase victory by delivering the people into the hands of those who had despoiled them." In this contest between democracy on the one side and plutocracy on the other, it had taken its position on the side of equal rights, and it invited the opposition of those who used politics to secure special privileges and governmental favoritism. Democrats might expect that false issues would be raised by those who had committed larceny by law and purchased immunity with their political influence; but the Democratic party was not the enemy of any legitimate industry or of honest accumulations:

"It is, on the contrary, a friend of industry and the steadfast protector of that wealth which represents a service to society. The Democratic party does not seek to annihilate all corporations; it simply asserts that as the Government creates corporations, it must retain the power to regulate and to control them, and that it should not permit any corporation to convert itself into a monopoly."

He had such confidence in the intelligence and patriotism of the people that he could not doubt their readiness to accept the reasonable reforms which his party proposed, rather than to permit the continued growth of existing abuses to hurry the country on to remedies more radical and more drastic. There was a divine law of rewards. God's proclamation had been, when He gave the earth to man, "Go work, and according to your industry and your intelligence, so shall be your reward." Only where might had overthrown, cunning undermined, or government suspended this law, had a different law prevailed. To conform the government to this law ought to be the ambition of the statesman; no party could have a higher mission (and it was the proclaimed mission of the Democratic party) than to make this law a reality wherever governments could legitimately operate. He promised to consecrate his ability, if elected, to the one purpose of making our Government one which "will do justice to all."

Race Riots in Illinois

It has been necessary to station the entire militia force of Illinois, two negro regiments excepted, at Springfield, the capital, owing to race riots which began on the 14th and were not checked until the 16th, when 4,200 soldiers were on guard. Six persons have been killed (two of them lynched) and more than fifty wounded. The disturbance began with an attempt by a mob to take two negroes from the jail. One of these, Joseph James, had been indicted for murdering Clergy A. Ballard, a white man. About a month ago, James attempted to assault Ballard's daughter at her home. Her father sought to protect her and was stabbed to death. The other negro, George Richardson, had been arrested for assault upon Mrs. Hallam, the wife of a street-car conductor. She had been dragged from her house to her garden by a negro on the night of the 13th. Her identification of Richardson was not complete, and he may be innocent. By a ruse



the sheriff took the two negroes from the jail in an automobile, and they were carried on the railroad to Peoria. The automobile had been loaned to the sheriff by its owner, H. T. Loper, whose restaurant was the largest in the city. When his part in the affair became known, the mob wrecked his restaurant and burned the automobile. This was the beginning of great disorders. On the night of the 14th thirty-five houses occupied by negroes were burned, and the firemen were not permitted to do their appointed work. Two men, one an innocent bystander, were killed. Mayor Reese was roughly handled when he sought to restrain the rioters. Mr. Chafin, Prohibitionist candidate for the Presidency, while making a public address, defended a hunted negro who ran to him for protection. The candidate was struck on the head by a brick and his meeting was broken up. On the 15th the rioting continued, in defiance of 2,500 soldiers. Assistant County Treasurer Bowe was robbed and killed by negroes in the morning. Later in the day, Charles Hunter, a negro, was lynched by the mob, and in the evening George Donegan, an aged and respected negro, was taken from his house, brutally beaten and hanged. The charge against him was that he had a white wife. Many of the injured were wounded by the militia, some by the mob, others by negroes defending their homes. More than 2,000 negroes have fled from the city; hundreds are sheltered and protected by the soldiers in their camps. Fifty rioters have been arrested, and Governor Deneen has ordered a special grand jury for the consideration of the charges against them. The entire power of the State shall be used, if necessary, he says, to preserve order in Springfield. The chief of police asserts that alien anarchists were leaders of the mob.

Our Battleships at Auckland

The battleship fleet arrived at Auckland on the 9th inst. Elaborate preparations had been made for the reception and entertainment of officers and men. The city was crowded with visitors from all parts of New Zealand. On the 10th, Admiral Sperry and his officers landed and were received on the new quay at the foot of Queen street, the city's principal thorofare, by Sir Joseph Ward (the Prime Minister) and members of the Cabinet. In his address Sir Joseph eulogized President Roosevelt as representing the best traditions of the common blood of civilization. For the President he gave to Admiral Sperry a decorated gold and silver album as a souvenir of the visit of the fleet. The Admiral himself received an illuminated address of welcome inclosed in an inlaid casket. Lord Plunkitt (the Governor) said King Edward and the President were honored on account of their noble work for humanity. Replying, the Admiral assured his hosts that no greeting would appeal more forcibly to the President than this, from a people small in numbers, but great in achievements. Speaking of "the great work of Great Britain and the United States for the furtherance of peace," and of the common interests of the two nations in the Pacific, he said that the meeting of the British and American fleets at Auckland made for the maintenance of the principles of The Hague Peace Conference. Then there was a procession to a large hall, where the guests were received by the Mayor. The Government and the people united in providing a long series of entertainments. The tone of the New Zealand press is friendly in the highest degree. Some of the papers are denouncing the alliance of Great Britain with Japan. Admiral Sperry says the cruise from San Francisco has greatly improved the service of his men. Such economy in the use of coal has been attained that he can now steam from Honolulu to Sydney without coaling. The fleet sailed for Sydney on the 15th, and is due at that port on the 20th. Our sailors won much praise from officials and others by their exemplary behavior while on shore.

Balloons and Aeroplanes

Popular interest in aeronautics has continued everywhere during the past week. The Wright brothers have been most conspicuous, because in both France and America they are now making their first public and decisive tests. At Le Mans, France, Wilbur Wright has been making flights almost every day for the purpose of trying his apparatus and

Photograph by Hollinger.

ORVILLE WRIGHT. WILBUR WRIGHT.

The Wright Brothers are now experimenting with their aeroplanes in France and America.

learning how to manage it. He has not attempted to break any records, but his control over his machine has excited the greatest enthusiasm among the French experts. They frankly admit that he has shown himself more skillful than their own aviators, Farman, Berliot and Delagrange. They claim, however, some advantages for the French machines, especially that they are better constructed than Wright's home-made aeroplane, that they are mounted on wheels and can start from the ground without a gliding rail, and that they require less skill on account of their stability and rigidity than the Wright machine, which curves its planes like a bird's wings at the will of the operator. Wright's longest flight was made on August 13th, when he circled around the field and over the tops of the trees seven times, remaining in the air nine minutes. Later, on attempting to land by a long glide from a hight of 75 feet with the power shut off, the left wing struck the earth first and was broken. He has now repaired it, and will resume his experiments. He has been greatly annoyed by the large crowds that come to Le Mans, and by the persistent attempts of photographers to take his machine while at rest.——Orville Wright is finishing a similar aeroplane in his shop at Dayton, O., for the Government tests at Fort Myer. According to the contract the machine must be on the ground this month, but the tests may be made any time before the end of September. In order to be purchased by the Government at the contract price of $25,000 he must make a flight of five miles straight and return at a speed of forty miles an hour, allowance being made for the velocity of the wind. Two persons, with a combined weight of 350 pounds, must be carried, with fuel enough for a flight of 125 miles. The aeroplane must also be capable of remaining in the air for an hour at a time. The longest flight the Wrights have hitherto made was that of September, 1905, when they covered 24 miles in 38 minutes.——A. M. Herring, of New York, will attempt to meet the

same conditions within a month with his aeroplane.——Henri Farman, the French champion, who has been giving experiments at Brighton Beach, New York, hurriedly departed from this country last Tuesday with his machine. The syndicate which contracted for his exhibitions in this country failed to meet its engagements, and owes Farman over $16,000. ——The military balloon of Captain Thomas S. Baldwin has completed the tests prescribed by the Government, and will now be turned over to the Signal Corps of the United States Army. It remained in the air two hours, during which time it made seven trips back and forth over the course of four and one-eighth miles from the parade grounds at the fort to Cherrydale, Va. The average speed is estimated at 20 miles an hour, which will entitle Captain Baldwin to the full contract price of $6,750.—— The Aero Club of North Adams, Mass., held the first point to point race in this country on August 14th. The contestant was required to name in advance the town, not less than 30 miles distant, at which he intended to alight. Four balloons took part, the race being won by the North Adams No. 1, with A. D. Potter, of Greenfield, as pilot and A. Holland Forbes and his twelve-year-old daughter, Natalie Forbes, as passengers. Mr. Potter selected Haydenville, Mass., as his objective point, and landed within five miles of that place.——The balloon of Captain Lovelace, of the New York Aero Club, took fire and exploded while it was being repaired on the grounds of the Franco-British Exhibition at London. Captain Lovelace's secretary, Miss Hill, was killed and several others were severely injured by the explosion.——The dirigible balloon of the British army has been making some very successful flights during the summer at Aldershot under the direction of Colonel J. E. Capper. It was badly damaged on August 15th by being caught by the wind soon after it landed.——The German dirigible balloon, "Parseval," circled over Berlin for two hours and forty-five minutes on August 14th, returning to its starting point.——Captain Ferber, in his aeroplane, made a successful flight of half a mile at Issy, France, on August 16th.

The Policy of the Young Turks

The new ministry under Kiamil Pasha, appointed in accordance with the demands of the Young Turk party, has published an announcement of its intended policy. It announces that the army, the navy and all the Government departments will be reorganized to secure greater economy and efficiency, and that military service hereafter will not be confined to Mohammedans. All laws and regulations incompatible with the new régime will be amended. The commercial treaties will be renewed and the Government will endeavor to cultivate the best relations with all the Powers. Efforts will be made to abrogate the capitulations which grant extra-territorial rights and immunities to foreigners residing in Turkey, by demonstrating that there is no further necessity for such privileges. Employees are being discharged by the wholesale. At the Custom House twenty out of thirty employees have been dismissed. Of the employees of the Council of State only sixty will be retained, and besides there will be extensive reductions in salaries. It has been decided that all Government officials receiving salaries above $50 a month shall have them curtailed by one-half Tobacco smuggling, which has been hitherto carried on by means of the bribery of palace officials, has been suppressed. One of the symptoms of the dominance of modern ideas in Turkey was the outbreak of labor strikes. The dock laborers, street-car men and employees in the Government tobacco factories went out on strikes, but the difficulty was settled by the committee of the Young Turks, and in a few days the loading and unloading at the docks were resumed and the street cars were running as usual. The Sultan has declared his intention to fit up the building for the Parliament at his own expense. So far any open manifestations of antagonism to the Sultan have been suppressed by the leaders of the Young Turks, altho the extremists in their party are desirous of his deposition. The Minister of War in the new Cabinet, Redjib Pasha, died suddenly August 16th. Apoplexy was reported as the cause of his death, but some of the Young Turks suspect poisoning, and an investi-

gation will be made. Mehmed Ali Bey, Turkish Minister to the United States, is the son of Izzet Pasha, the most hated of the Sultan's former advisers, on account of his supposed responsibility for the Armenian massacres. He escaped from Constantinople in a British vessel at the outbreak of the revolution, and it was rumored that he had taken refuge in England or this country. The new Ministry last week cabled Mehmed Ali Bey his dismissal from the Turkish Diplomatic Service and appointed as Chargé d'Affaires Mundji Bey, the Turkish Consul-General in New York. The latter at once went to Washington and took possession of the Legation, and visited the State Department alone, Mehmed Ali Bey refusing to meet him on the ground of illness. Mundji Bey is a member of the Young Turk party and last week gave in THE INDEPENDENT an account of the revolution and its causes. It is announced from Constantinople that the Government will raise the Turkish Legation at Washington to an Embassy and appoint Hussien Kiazim Bey, now the Turkish Minister at Bucharest, as the first Ambassador. A society has been formed in New York of the Syrians in the United States to promote the interests of the Arabic-speaking population of Turkey under the new régime.

China and Japan

Certain papers in the United States have engaged in an anti-Japanese campaign and their most sensational remarks are extensively copied in the European papers. In Japan considerable surprise and alarm have been manifested, as these utterances are supposed to represent the sentiment of the American people and to indicate a recrudescence of the agitation against the Japanese. There appears to be no immediate occasion for these attacks upon Japan in the American papers. The Chinese Minister, Wu Ting-fang, denied the interview published in a New York newspaper in which he is reported to have exprest his sympathy with the idea of a Chinese-American alliance against Japan, and to have threatened Japan with "an early evidence of the real power of the American navy." The other statement which serves as ground for the agitation is a comment made by Count Okuma in the *Hochi*, of Tokyo, in which he said: "It is not difficult to infer that the augmentation of the United States Navy in the Pacific is directed to Japan," and exprest a doubt that the views of President Roosevelt would long continue to govern public opinion in America. The observation was based upon Hobson's statement before the Democratic National Convention, since denied by the President, that war with Japan was to be expected in the near future. Count Okuma has a tendency toward sensationalism, and his utterances are in no sense to be regarded as authoritative.——That part of the Boxer indemnity for which no valid damage claims were made was returned by the American Government to China, and the Chinese Government will use the income of it for the education of Chinese students in America; 100 students being sent to the United States next year.——A new complication has been given to the case of the Korean *Daily News*. Its editor, E. T. Bethell, an Englishman, was recently arrested and sentenced to prison for publishing incendiary and seditious matter in the *Dai Han Mai Il Shump*, the Korean edition of his paper. Mr. Bethell had promoted in this paper a subscription of patriotic Koreans for the purpose of repaying Japan for her expenditures for Korean purposes and so securing the independence of their country. Of this redemption fund $30,000, which had been collected and placed in the bank in Bethell's name, was withdrawn, and Mr. Yang, assistant editor of the vernacular paper, was arrested on a charge of embezzlement. He escaped from his guards and took refuge in the printing office, where Bethell raised the British flag for extra-territorial protection, a question which raises some embarrassing questions of diplomatic relations. It was believed by the patriotic Koreans that Yang is innocent and that his arrest is due to his having testified in behalf of Bethell.——Another incident similar to the "Tatsu Maru" has occurred at Chin-Chow, where the Chinese authorities have seized a Japanese steamer having on board 10,000 rifles and 2,000,000 cartridges, presumably for the use of the Chinese insurgents.

Marriage in Socialistic Society

BY JEAN JAURES

[The author of the following article is leader of the Socialistic party in the French Chamber of Deputies, and, with the possible exception of Bebel, of Germany, the leading Socialist of the world. What he says, therefore, about the vext question of marriage in a Socialist society should be of interest to both the adherents and opponents of Socialism.—EDITOR.]

THE question of the family, and especially the question of marriage, has, during the past few months, given rise in France to the most varied and lively controversies. Parliament has completed our divorce legislation, or, rather, has rendered it more liberal. Thus, we have decided that where partial divorce, *a mensa et thoro,* has existed three years, the separation can be transformed into complete divorce, *a vinculo matrimonii,* on the demand of one of the parties. But the French Parliament has not said its final word on this divorce problem. The moment marriage is no longer considered an indissoluble social institution, forced on the individuals as an indestructible social bond, there is no good reason why its duration should not be left wholly to the will of the contracting parties. They were free to make the marriage, and should in the same way be free to unmake it. In fact, just as the will of one of the parties could have prevented the marriage, so the will of one should be able to end it. This power to annul should, of course, be all the stronger when both parties desire it. As the French mind is very logical, it may be surmised, therefore, that in due time divorce in France will become very free. The first step will be divorce by mutual consent. In this case, both parties will make known their wish that the bond be severed, and the law will recognize this right without going into an inquiry of any kind. The final step will be separation at the demand of one of the parties. This is the reform now very ably and vigorously prest by the well-known French novelists, the Margueritte brothers.

But while some of us, both in France and elsewhere, are trying to enlarge the scope of divorce, others are as warmly combatting to restrict its field. These last point out—and the argument is a strong one—what an unfortunate position children are put in by the divorce of their parents, especially if the divorce is followed by a fresh marriage. These advocates of non-divorce hold that France, at least, is losing its old force by abandoning its ancient traditions, by permitting the coming to the fore of revolutionary individualism, and they urge a return to the domination of the old families, to the ancient monarchy and even to Catholicism, which they regard as a source of sound organization and social continuity. M. Paul Bourget, whom my American readers will remember for his book on their country, after having devoted his talents to the painting, in his novels, of modern social life and the disorders and complications of love, has finally set himself up as the theorist of traditionalism, and has even made his views the basis of one of his best known romances. "Divorce" has not only gone thru many editions as a book, but has been put on the stage, where it has had a great success. But the very vastness of the undertaking which M. Bourget has assumed proves how impossible it is to carry out "the reform" which he has in view. If, as he holds, it is possible to restore in France the traditional family only by the re-establishment of monarchy and the State Catholic Church, then the law on divorce will not be abolished, but will, rather, go on developing along logical lines. This is certain even to the most careless observer of our present national life.

It was an interesting study of the human mind to watch the public listening to Bourget's play. When the heroes of the stage showed that divorce leads to "free love," which phrase is used in the best sense of the words, the greater part of the audience applauded. But this did not mean that they condemned divorce. On the contrary; it signified that they

approved of the perfectly logical consequence of divorce. Thus, M. Bourget's play, which was written in support of the traditional family life and to combat divorce, paradoxically came to the aid of the widest freedom in marriage.

A more subtle and delicate study of the same complex problem has been brought on the French stage by Henry Bataille, whose social plays seem to point to the conclusion that no cut and dried formula for the marriage problem can exist. He holds that the vibrating, hidden sensibility of the human heart cannot be controlled by a fixt rule; that the relations between man and woman are too delicate and complex to be subjected to any social law. Passion breaks all bonds and forms its own boundaries. In his "Maman Colibri" we are introduced to a woman, who, in the autumn of life, finally finds in a love adventure the happiness and the disappointments which she had not known till then. In the end, she returns to her married son's roof, and seeks, as a grandmother, to finish her existence in peace and in the quiet pleasures of the home circle. And what conclusion is to be drawn from this play? None; for M. Bataille appears to approve both of the escapade and the return to the paths of domestic virtue. This means, as I have already said, that the author holds that no rules can be laid down in the matter of the affections. So we socialists can be excused if we find this marriage problem one of the most difficult that we are called upon to solve. These difficulties and obscurities are again well brought out by this same M. Bataille in another play.

M. JEAN JAURES.

In the "Nuptial March," a young woman wishes to choose her own husband, American and English fashion. But the French parents say No. Thereupon, the daughter becomes the illegal wife of the man whom she loves. She so acts, not in order to flaunt the marriage laws, but to remain faithful to her mystic ideal of true and eternal love. If she had been able to realize her ideal in accordance with the requirements of the common law and social convention, she would have willingly conformed to this convention. But she will not sacrifice to this man-made law her inborn and superhuman desire for honest affection. But her desire for eternal love has a sad awakening; she soon finds that the man of her choice is not all that she had expected, and is terrified when she discovers that her affections are being drawn in another direction. Her only escape is death. Again, what does the author conclude from this situation? Nothing. He once more recognizes the fact that we of ourselves cannot say what is right and what is wrong in such matters.

The young women of Bataille are a little more sensuous than those of Ibsen, but have the same problems to meet as those of the Norwegian writer. These French heroines are more voluptuous and more perverse than those of Ibsenism. Both dramatists show that it is as dangerous for these loving souls to overstep social limits as to remain within these boundaries. They are like restless birds that find as little peace in the inconstancy of the changing winds, as in the deep snugness of the sheltered nest.

I have dwelt thus briefly on some of the examples of French study of this grave subject of marriage, in order to excuse socialism, at the present moment, from having to pronounce exactly what will be the family in the new social order. The topic is complex and obscure, as I have already said. But, nevertheless, I believe certain tendencies can be indicated even at this early hour.

If I am not mistaken, socialism will produce two immediate results in the sphere of marriage. It will unquestionably eliminate from the relations between man and woman all legal restraints; but, at the same time, it will fortify the moral obligations of fidelity, which is the ideal of sincere and true monogamy. When I speak of the removal of restraints, I do not at all mean that it will introduce into society what we call today "free love," which is generally only a reprehensible privilege of the stronger, man, who takes advantage of the weakness of woman, who marries an "inferior being" and then throws her off when he is done with her. Such is generally the history of these free love unions.

In the relations of the sexes, as in economic relations, real individual liberty exists only when each party enjoys certain guarantees against the encroachments or abuses of the other. Upper class individualism is as evil in its exploitation of woman as woman, as it is in its exploitation of the workman as a workman. When the new socialism gives the young girl and the young woman a real and thoro education and enables them to support themselves by labor proportionate to their strength and talents, then will the "weaker sex" be guarded against surprises and traps, then will the married woman cease to be a dependent being held in servitude thru the fear of want and wretchedness, then will she be safe from the worst effects of cowardly desertion. The education and the laws of socialism will not allow a father to escape his duties toward his children by simply turning out into the street their unmarried mother, as can be done today in this beautiful land of France.

But when socialism shall have taken all these precautions in the interest of the individual of both sexes, when it shall have guaranteed the rights of all human beings, and especially the rights of the so called weaker sex, it will not, at the same time, be guilty of rendering marriage a restraining contract of any kind. Each one of the contracting parties will be free to continue to lead the joint life or will be free to break a bond which may have become galling; for it will be held by society and the laws that where there is no longer any accord or affections or a desire to prolong the common existence, this existence becomes but a lie and should end. At the same time the socialist code will teach that no idle fancy must play a part in this decision. This would degrade the party guilty thereof. It will never cease to teach that the noblest act of two beings is to give an eternal impulse to their love, and, at the same time, to declare that, when those who have sworn everlasting affection become involved in fatal misunderstandings and are animated only by deadly hate, it would be a crime to try and curb two such souls by any legal chain. Socialist society will hold that it would be hypocrisy or hardness of heart to show any sign of reproval if two such beings sought happiness in another union. However, they will be expected to confess to one another that they have failed and missed the highest ideal of human life, which is to mingle the heart and the senses in a single and unchangeable affection. When the young woman weds under the socialistic régime, as under the present one, she will believe that she is taking a lasting step. But in the new world, as in the old, she will surely sometimes make a terrible mistake, and will find that the human affections cannot be really bound by laws. The ideal dream of eternal love will be dissipated. But our socialistic code, which will strive to bring man to the highest point of perfection and happiness, will combat a too easy admission of failure in this soul life. It will make man ashamed of all the lies and commonplace adventures which render monogamy a most cynical falsehood.

The only way of removing a part of the deception which enters into every human affection is to surround this affection with all the charm that long duration can give to it. By this means the ideal enters into the most commonplace existence. Real monogamy, a single and un-

changing affection, alone enables the human heart to attain its ideal. As soon as it wanders from this straight path it loses its way in uncertain windings, for who can put a limit to the whims of the senses or even to the more noble feelings of sensibility?

The more socialism develops along economic lines, the more will the collectivist form of life develop in the hearts of man, by the inevitable law of moral equilibrium, the need of broad intimacy. The individual will be a free workman in an immense social factory, and his joy will be all the deeper because he will be able to bring back to this exclusive center of affection the vast life of this new social order. Social community and domestic intimacy will complete one another in the coming state. Family life will be intimate without being narrow and selfish; social life will be broad without being wholly dispersed. The more the world grows thru the increased facility of intercommunications, the more need we feel, in the midst of this excessive dispersion and confusion, to strengthen our own conscience and anchor more firmly our own individuality. And how can this be more easily accomplished than by the close union of two souls, as just described above? They will form a small world in the greater world. The journey thru life with the one we love brings fresh pleasures and new knowledge, for one sees all the universe thru two sets of eyes. Victor Hugo has well exprest this idea in his splendid dream entitled "Full Heaven," where man is given the power to visit the stars and escapes being overpowered by the wonders of all because he has ever with him, to give him strength and courage, a single faithful love companion. So the future social régime will make monogamy the unique and unchangeable companion of man for the fresh hights to be scaled in the grander world of the coming ages. It will act as the equilibrium of the vital life of the race, the center of gravity of the human heart.

CHAMBER OF DEPUTIES, PARIS.

Betrayed

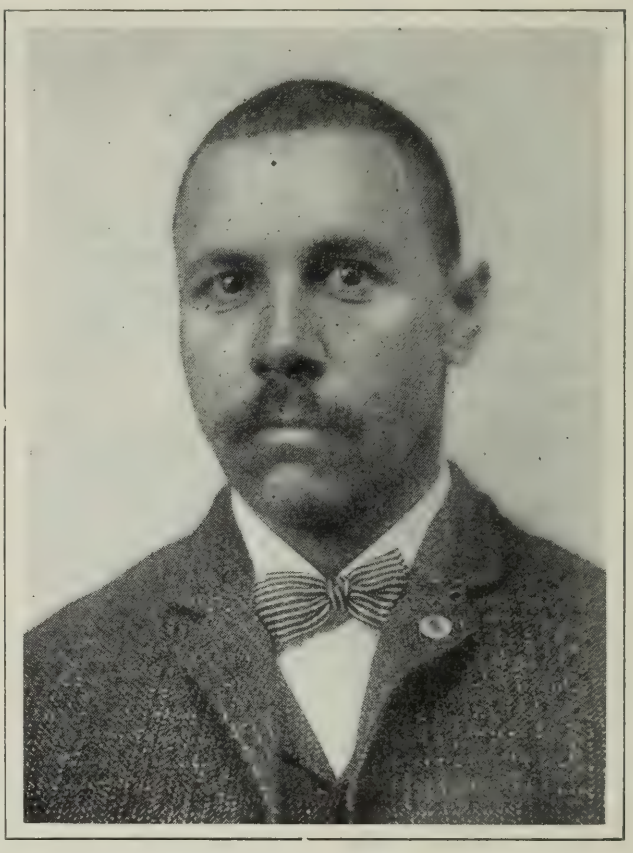
BY JAMES H. WILLIAMS

[Mr. Williams, with whom our readers are so well acquainted, at first wanted this true "yarn" to appear anonymously, but reflecting that the statute of limitations has long since outlawed his crime he decided to sign his name. Whether the murder was not justified we leave to our readers to determine.—EDITOR.]

I APPROACH the narration of the following events—for my story is merely a plain, unvarnished statement of facts—with a degree of personal diffidence which few men can appreciate, because few, I think, would care to proclaim themselves self-confest murderers and boast of their crimes in public print.

Yet, for my own part, I feel not the slightest remorse, nor have I ever suffered any qualms of conscience in consequence.

As a truthful chronicler of past events in the old merchant marine, however, I feel it incumbent on me to tell the tale, which can be easily verified and vouched for even now, for public enlightenment as to a subject which is little known and less believed, because of the desperate and successful efforts of the shipowners and their trusty allies to suppress or belie the facts and discredit the testimony of the injured seamen; and further because of the utter inability of the courts to accommodate the ancient and obsolete piratical laws of the sixteenth and seventeenth centuries to modern requirements. I refer to *brutality at sea.*



While I naturally shrink from the recital, therefore, I approach it as a duty to be performed on behalf of the long suffering but humble class of men for whom I am entitled to speak in part. *the seamen,* and to confound some of the oft-quoted misstatements of their persecutors and detractors.

I shall make the recital as brief and direct as possible, avoiding the infusion of all extraneous matter, for such a yarn

requires no embellishment to make it *real.*

In the year 188— I was discharged from a New Bedford whaler at Honolulu, H. I. We had just come down from the Arctic, and the ship was so old and decrepit, as the result of sixty years' constant service, battling with ice and storms, that she was no longer considered seaworthy. So, after an extensive survey, she was officially condemned and placed permanently out of commission.

But we had been quite successful in our quest for sperm, and had on board a hold-full and a deckload of oil, 4,000 pounds of bone and a quantity of other by-products, the accumulated results of a two years' cruise.

JAMES H. WILLIAMS.

So we were paid off and legally discharged, a performance which none of us regretted. My share was the "90th" lay, and I received $180 in gold. Of course, I was entitled to more, but that doesn't matter. A sailor's wages are always what he gets, not what he earns.

According to maritime usage under the circumstances, we were entitled to a passage home at the ship's expense. But what's the use of going home when you can go anywhere else? I was less than twenty years old and anxious to see more of the world.

So I carefully sewed up my money in a canvas belt, strapped it securely around my waist next to my skin, and went in search of a ship. I finally secured a berth in a Nova Scotia bark, the "Redwood," which was "cleared for Guam," that is to say, she was free to go to any part of the world in ballast where she might secure a charter.

After a rather tiresome and aimless quest we brought up at Kobe, where I paid myself off with the jib downhaul and went to board with Mrs. Otome, at Kita Nagasi Dori Chicome, No. 18.

A day or two later the bark sailed and I was left a free agent again in consequence. So I crawled out of my erstwhile place of concealment behind the "big rock" and boldly surveyed the town.

There were a number of sailing ships lying in Kobe Bay at the time and I elected to ship in one of them, the "Inquisition." I preferred her to the others because she had just been chartered to trade on the Asiatic coast for three years, and I thought it would afford me a fine opportunity to visit all the various ports in China, Japan, etc., and broaden my sphere of experience; and so it did, greatly to my ultimate sorrow and regret.

From Kobe we went to Nagasaki and loaded coal for Ilo-Ilo, in the Philippine Islands, and from thence we went to Hong-Kong in ballast for orders. That short voyage was a drill to be remembered. I had already been to sea about eight years, but it opened my eyes to the real character of the "bucko" mates and tyrannical skippers and Yankee "hell ships" of which I heard so often and so much. I have no language strong enough to adequately depict the outrageous abuses which I witnessed on that short voyage, nor should I make the attempt if I had, for no one would dare print it if I did. Anyway, it is not a part of this story. I will only say in passing that, thruout the passage, we were hazed and hounded like wild beasts driven like dumb cattle, beaten like mules

and worked like galley slaves. We were never allowed even to speak, to pass even the most casual remark to each other, while at work. We were deprived of our watch below, kept on our bare whack of food, on a coast where everything was both cheap and abundant, reviled and curst from morning to night, and constantly and closely watched over by a half dozen burly, brutal, unprincipled, irresponsible, lynx-eyed bull-drivers who called themselves *officers!* The slightest inadvertence on the part of any member of the crew—to drop a spot of paint or tar on deck or ask a neighbor for a chew of tobacco—was considered an infraction of the rules, and the unfortunate offender would be promptly attacked with a perfect shower of kicks or blows delivered with any article of hardware which might come to hand, accompanied by the vilest of epithets and the most blasphemous of curses.

Why did we meekly submit to such inhuman treatment? Because even passive resentment—the least word of protest or sign of self-defense—was *insubordination,* punishable by "tricing up," chaining down or imprisonment in the lazarette on hard bread and water, as the master might direct.

Open self-defense was *mutiny,* punishable by years of imprisonment in the penitentiary. Combined self-defense was *piracy,* and, if successful, was punishable by *death!*

To beat, or wound, or starve, or overwork a seaman was not cruelty, nor even a crime in the eye of the then existing medieval maritime law; *it was only discipline!*

Such was the substance of the law; resistance was out of the question without incurring the above penalties.

From Hong-Kong we were ordered to Saigon, in French Cochin China, to load teakwood timber. This valuable timber was brought down to Hong-Kong in large quantities by coasting vessels and afterward trans-shipped by other vessels to Europe.

The "Inquisition" was a large, stately clipper; a perfect specimen of that most graceful, elegant and beautiful of all sailing craft, the American merchant ship.

In every detail of her construction she showed, in its highest development, the subtle cunning and wondrous skill of the shipbuilder's art. Light, lofty, tapering, elegant masts and spars, towering majestically on high above her snow-white decks, erect in stays, symmetrical in design, correct in rake and alignment, perfect in general proportion and complete in artistic finish; beautiful yielding sheer, high, graceful bows, with gilded scroll-work on her classically carved "fiddle head," broad and beautiful overhanging stern, and neatly molded run! What a pity that such an inspiring marvel of elegant perfection, delicate grace, strength and usefulness should be made a floating slaughter-house, a "blood packet," a beautiful, innocent shelter for human suffering, grief and despair, and inhuman, fiendish cruelty, and wanton, unrestrained atrocity.

Our skipper's name was Gammon, and no man in the American merchant marine was ever more widely known, more sincerely hated or more thoroly detested by honest seamen the world over than he. He was a spare, wiry, little man, about fifty years of age, with thin iron-gray hair, cold, cunning, heartless ferret-like eyes, a flaming brandy knob on the end of his nose, and a face so sharp you could have split kindling wood with it.

He had a shrill, squeaking, dissatisfied voice, entirely in keeping with his features, a most irascible, peevish temper, a strong liking for "three star" brandy and the word *honor* was not in his vocabulary. His proud and frequent boast was that he had "never paid off a son of a —— of a sailor yet, and he'd be damned if he ever would."

The chief mate, Mr. Roarer, was a big, raw-boned, iron-faced giant, with a voice like a young lion; arms like capstan bars, and fingers like belaying pins. He was a Canadian, quite as unprincipled as the captain in his way, and could always be depended upon to do the latter's dirty work without question.

His chief claim to distinction was that he had "never yet seen a —— —— sailor he couldn't lick."

The second mate, whose name was Prettyman, was a tall, squint-eyed, brockey-faced, loose-jointed Nova Scotiaman, nearly as large as his superior, but not so well and strongly set up. His features were not in his favor, for besides

the squint eyes just alluded to he had a low, beetling forehead, surmounted by a crop of bristling red hair, a broken nose and a badly scarred face, as tho he'd had the smallpox once in a while.

This incomparable gentleman was noted for his truculent, overbearing disposition, his incessant flow of naval profanity, the dexterity and accuracy with which he could hurl iron belaying pins about, and his wonderful ability to kick with both feet. All these useful and highly professional accomplishments endeared him to the heart of the hatchet-faced little skipper, so that he really was considered *somebody* on board, in spite of his repulsive features and ungainly build. There was also a third mate, a bo'sun and carpenter, and some other inferior petty officers, but they are not worth mentioning at length. Suffice to say that none of them were any good, in our estimation. All were would-be bullies, bull-drivers and brutes, selected by the old man for their willingness to fight rather than for their ability to work.

Our crew was composed of the usual mixt and motley crowd of vagrant unfortunates, among which nearly every human race, nationality and tribe outside of an Esquimau was represented.

Only two among us were Americans—a young Gloucester fisherman, named Staples, who had been enticed into a crimping den while on a spree in Boston and shanghaied for one year's service, leaving $40 advance behind him, and myself. All the crew which came out in the ship except Staples had deserted to a man as soon as she reached the coast, and our present crew had been recruited, as I had been, at the different ports she had touched at since.

While lying at Saigon we were never allowed a moment's respite from hard, bone-racking labor. It was long days in midsummer and the weather was terribly hot, yet we were turned to every morning with lamps in the hold and knocked off by lamplight at night. The only distinction made in favor of the Sabbath was that we were not turned to until 8 a. m. and knocked off at 6 p. m. We were usually allowed half an hour for meals and ten minutes for our early coffee.

After the coal dirt had been cleaned from our hold we had to set to work and wash it out as clean as a housewife's kitchen. Then came the painful job of dry holystoning the 'tween decks, a job as unnecessary and useless as it was difficult and excruciating. For two solid weeks we were kept constantly at work with those damnable "holystones" and "prayerbooks" from 4 a. m. to 9 p. m., until the flesh on our knees was worn clean to the bones and all of us were practically cripples.

Then came the timber—great, heavy, square sticks of teak. After that four men were told off every day to stow cargo below, and the rest of us were kept at work on deck or aloft or elsewhere about the ship.

The hold gang was changed every morning, so that by turns we all got a hack at the delicate operation of stowing timber under the gentle objurgations and persuasive caresses of Mr. Prettyman, who was highcockalorum of the lower hold.

We lay in the stream and, of course, the timber had to be lightered off to us. When the hold began to fill up so as to make it necessary to jamb the top tiers under the deck beams we found it impossible for four men to stow the timber as fast as a horde of howling coolies could heave it thru the side ports. Therefore it was decided one morning at breakfast time to ask for more help in the hold. The hold gang for that day consisted of an old Irishman, more than sixty years old, named Dent, a young Swede named Lars, a Dane whom we had nicknamed "Dutchy," and my special chum, Dutton Adams, an Englishman.

No sooner had we bolted our frugal breakfast of lobscouse and hardtack, washed it down with patent marine coffee, sweetened with "long lick," and got a hasty five minutes' session with our pipes, than we heard our ever alert bo'sun, Jack Bender, roaring at the top of his stentorian voice, "Turn to, there, for'rard; look alive there, now!" And then, before the echo of the bo'sun's voice had ceased to reverberate among the yards, the second mate thrust his hideous features thru the forecastle door and bellowed out: "Come on here, now you —— —— —— —— ——s; comin' out like men, er yer want ter be dragged

out like dogs? Come, shake her up, now, er I'll come in thar 'n' help some o' yer over the —— —— stopwater!"

In response to these gentle summonses we all scrambled hastily on deck and resumed our appointed tasks. Mr. Prettyman went down the hatch, as usual, to superintend the hold gang. It had been previously agreed by the rest of the hold gang, and acceded to by Dent himself that he, being the oldest man, should act as spokesman in asking for more help. Accordingly, as soon as the second mate arrived, old Dent, addressing him with all possible civility, said: "Mr. Prettyman, she's gittin' that full beneath the bames now we can't stow the logs as fasht as the nagurs be's stevin' 'em in, and we nades more help down here to kape up wid 'em."

"More help yer want, is it, yer —— —— lazy old stiff; I'll give ye more help plenty of it!" And he struck poor old Dent a terrific blow between the eyes, knocking him prostrate. But the old man, tho hurt and dazed, was still game, and as soon as he could regain his feet he immediately tried to retaliate on the second mate. 'Twas then the brute's real, cowardly instinct became apparent, for, instead of trying to repel the old man's attack in the natural way, which he could easily have done, he whipped out a huge, murderous-looking knife from his belt and tried to stab him. But the instant the second mate drew the knife and before he had time to use it, Dutton Adams, who stood directly behind him, struck him a powerful blow on top of the head with a slice bar and knocked him senseless. Then the four men, maddened by months of constant hazing and unmerited abuse, all leapt upon the body of the prostrate mate and kicked and beat him unmercifully. They left him for dead, and Adams told me afterward it was their *bona fide* determination to kill him, and that, had they suspected that there still remained a single vestige of the spark of life in his carcass, they would never have desisted until it had been stamped out and extinguished.

The noise of the fracas had attracted the ever-vigilant attention of the second mate's fellow bull-drivers on deck, and they soon came swarming into the hold, closely followed by our wizened-faced skipper, all armed to the teeth with shooting-irons and various kinds of cutlery. The four men were soon secured and brought up on deck. There they were triced up to the forward boat skids with spun yarn sized tightly around their thumbs. We had a Chinese cook named Me-Chow, the only good Chinaman I ever knew. Shortly after the men had been strung up, Me-Chow, unable to bear their screams of anguish, ran out of the galley with a carving knife, with the evident intention of cutting them down. But he was quickly detected by the alert third mate and bo'sun, who were mounted on guard for the express purpose of preventing just such a move being made by any members of the crew. Divining his purpose, the two ruffians promptly pounced upon the poor Chinaman, and in a jiffy the unfortunate Mongolian was hanging by his pigtail beside the four seamen. So the five unfortunate men were allowed to hang in the broiling sun, with the tips of their toes just touching the deck, from 9 o'clock in the morning until 2 in the afternoon. Their shrieks could be heard all over the harbor, but there was none to succor them. At frequent intervals they became unconscious; then they would be lowered down for a time until they revived, on the principle that an unconscious man is insensible to pain, and then, the moment they came to they would be strung up again. Their prayers for mercy were as unheeded as their supplications for water.

While in a paroxysm of delirious anguish Adams began to call down all manner of insane curses upon the captain and all the officers in the ship. Whereupon the bo'sun seized an oaken heaver from a gypsy winch and struck the suspended man a terrible blow in the mouth knocking out all his front teeth. Such was one phase of disciplinary punishment as practised on some of our stately clippers in the palmy days of our glorious merchant marine. I would rather see men crucified; they would die easier!

But let us draw the curtain on this horrible scene. Why prolong the mental anguish of gentle-hearted, sensitive-minded readers by describing the details of such a hellish orgy?

After this frightful incident every pre-

caution was taken by the after guards to prevent any tidings of it getting ashore.

No one was allowed to leave the ship under any pretext whatsoever. No sampans were allowed alongside except the one regularly employed by the skipper on his daily trips to and from the town. Every evening Captain Gammon and his group of officers would sit for hours on the poop, shooting at the "jolly boat" sampans to keep them at a distance from the vessel; and every night, as soon as we had quit work, we were all locked in the stifling forecastle for the night, lest any of us should try to escape.

It was the most horrible experience I ever endured. When we returned to Hong-Kong a few weeks later the tortured men were still unable to work. Their hands and arms were still black and horribly swollen, and the cook's scalp had been nearly torn from his pate by the long spell of suspension.

Yet none of them received any medical attention or any other attention from aft. At Hong-Kong, as at Saigon, no one was allowed ashore. The only difference in our treatment was that we were not locked in at night, for Hong-Kong is a British port, and the laws governing ships and protecting seamen are more strict and better observed there than in other parts of China.

While we lay in Hong-Kong young Staples's time expired and he demanded to be paid off and discharged. This demand the captain wrathfully refused, telling Staples that he *might* get paid off when the ship returned to the United States, if she ever did and he lived to see it.

That night Staples slacked himself quietly over the side and swam ashore.

He hung around the waterfront until morning and then went to the American consul's office, reported his own situation, prest his demand for his discharge, and told him of the *crucifixion* at Saigon.

The consul at Hong-Kong at that time was a Southerner, an ex-Confederate officer, and notoriously unfavorable toward seamen, however meritorious their cause, but doubly so if they were *Northerners*.

He could not very well overlook Staples's claim for wages, but he *could* shirk his duty toward the injured seamen on the technical plea of *lack of jurisdiction*. And that was precisely what he did.

Later in the day the captain arrived at the consulate and was closeted with that dignitary for some time.

When they came out they suavely persuaded young Staples to take a sampan and go off to the ship for his pay, as, it was explained to him, this arrangement would be much more convenient for him, as the captain had all his money and papers locked up in his cabin. Young sailor-like, young Staples foolishly agreed to this plan, went off to the ship, packed up his bag and waited for the captain's return.

As soon as the old man came on board Staples was called aft to receive his pay. He found the captain seated at the table, with the ship's papers and a bag of money before him.

The young fellow had $90 in gold coming to him, which the old man counted out on the table with rare good humor, Staples thought. He turned the articles and a prepared receipt for $90 and pointed out to Staples where to sign "clear" and sign "off." The moment Staples had affixed his signature to both papers the old man sprang up, covered the little pile of gold pieces with one hand, prest a loaded revolver against his head with the other, and yelled:

"Now, you —— —— —— —— ——, git out of my cabin and git over the side quicker 'n greased lightning! I'll teach you, you —— skunk, to sneak up to the consul's and make complaints agin *me* and *my* ship!"

So the poor boy was chased up the companion way at the point of the captain's gun without a cent, and hurried over the side into the waiting sampan by two of the mates, where he found his clothes bag had already preceded him.

"There ye are," sneered the captain, leaning over the rail as the sampan left the side and waving the articles derisively at the poor, hoodwinked lad. "There ye are; you've got yer pay, fer makin' complaints, an' I've got yer receipt fer ther money! Now yer kin go ashore an' complain an' be damned: that's how I pay all my men! *Me*, old Cap'n Gammon! Ter hell with yer!"

The next day the *crucified* men were taken ashore and granted a mock hear-

ing. But, as I have already intimated, the case was set aside on the convenient point of maritime *jurisdiction*. All the afterguards, including the steward and excluding the third mate, who was left in charge of the ship, were taken ashore as witnesses for the captain, but not one of the crew was taken to testify for the injured men.

What occurred at that hearing I only know, of course, from hearsay, but I have every reason to believe that my information is correct.

As soon as the captain had made his statement, to the effect that these four men had mutinied, made an *unprovoked* attack on the second mate, with intent to murder him, and that they had afterward *run amuck* in an effort to induce all the crew to mutiny and take charge of the ship, until they had finally, and at a *great hazard* to their captors, been overpowered and *restrained,* etc., etc., etc., the consul formally dismissed the complaint against the captain and officers, and ordered the four men to return on board, without even hearing a word of their testimony. When the poor fellows held up their still helpless and distorted hands, and Dutton Adams pointed to his battered mouth and broken teeth and mumbled an almost unintelligible plea for justice, the only reply he got from the "dignified" United States representative was: "Tut! tut! say another word and I'll give you six months! Go back to your ship and do your duty like men, and the captain *may* feel disposed to forgive you. I've no jurisdiction in this matter. If I had I'd send you all to jail for mutiny and attempted piracy. Go on board and do your duty."

As a matter of fact and of justice, and in accordance with the established and accepted principles of admiralty law the world over, he DID have jurisdiction, for the men were arbitrarily denied the right of recourse to the local consul or port authorities at Saigon.

[*Concluded next week.*]

NEW YORK CITY.

The Education of Children

BY THE BACHELOR MAID

A TEACHER of long experience and exceptional success recently said to me:

"I wish that I had words to express the contempt I feel for this talk about the injury done to children by hard study."

Similar emotions are aroused in my own breast whenever the same subject is discussed in my hearing or forced upon my attention in the magazines to which I subscribe, and this happens frequently, for one may hear it on every side, from fond mammas who, if they ever suffered from premature mental development, retain even fewer scars from it than from their infantile chickenpox, to would-be authorities on child-psychology, but I shall confine my attention mainly to two articles which have recently appeared in THE INDEPENDENT.

The earlier and more important of the two, entitled "Child Labor in the Schools," by Charlotte Perkins Gilman, in the issue of May 21, leaves upon the professional pedagogical mind—or, at least, upon *my* pedagogical mind—a curious sort of checkerboard effect of dissent from and approval of its several contentions. No one who has the courage to lay aside a fond national delusion, and estimate fairly certain very conspicuous facts, can dispute Mrs. Gilman's assertion that our educational system possesses some grave defects; whether one can go farther in agreement with her, and add that in continually altering we are also continually bettering it, is very much open to question. We are adding to it constantly many new things, frills and "purple patches" of nature study, domestic science, manual training and what not, to "shine afar" and catch the eye which sees no achievement in a blackboard filled with sums in long division, but the unprejudiced teacher can

hardly discover any increase of mental vigor resultant from their introduction. And even one so unfriendly to mathematical calculation as Mrs. L. H. Harris ["The Mind of the Child," June 18] must see that the multiplication of subjects in our school curriculum gives constantly increasing ground for Mrs. Gilman's charge of overwork. Yet, in spite of the multiplicity of "modern improvements" which every mortal with a fad can find some enterprising school board ready to adopt, I have yet to meet any child in the lower grades of our schools who is being overworked. The most of their *teachers* are, but that (tho I have often vowed never to use this threadbare quotation) is another story. And yet not wholly. So far as the senseless machinery and red tape of our schools exhausts them body and soul it is so, but it is quite to the point in that much of our most "advanced" theory in education seems to involve nothing but the uninterrupted pouring in of information by the teacher to the passive receptacle of the child mind. If Mrs. Gilman considers it an "advance in methods of education" when "the teacher teaches (!) instead of the pupils doing all the work," we are assuredly covering the road of progress with as rapid strides as the most enthusiastic could desire. But the truth is, no teacher deserves the name whose pupils do *not* do the most of the work, for to train young people to work effectively and willingly is practically the only real service which the teacher has the power to perform. And it is one of the great weaknesses of our present school system that, for every child injured by overstudy, one may see hundreds being irreparably injured thru atrophy of their mental powers by no study at all.

I have never had occasion to give close attention to the results of kindergarten methods, but have, in a vague sort of way, accepted the general commendatory spirit of the public toward it, assuming that in this case at least there might be an approximation to divinity in the *vox populi*. But recently a chance expression of mild approval of the kindergarten brought forth a spirited protest from the very gifted piano teacher to whom I uttered it.

"Oh, do you *really* believe in the kindergarten work?" she said. "It's true, I've never studied it myself, but this I do know: without exception my most unsatisfactory pupils are kindergarten children. They don't know how to work, and they don't *want* to work. Their only idea of studying anything is to be *amused*."

I repeat that my knowledge of the kindergarten system is far too insufficient to justify me in ascribing to it and its influence upon the school grades next above it the present state of things educational; but it is certainly true that children learn next to nothing in the grades of our schools below the high school, and they spend from six to eight years in the process. It must require incredibly hard work on the part of the *teacher* to spread out so little instruction, thin enough to cover such a space of years, but it is inconceivable that any *pupil* should be overworked in the course of it.

Of all the scarecrows erected by modern educational babble none consists of quite such flimsy rags in proportion to the panic it creates as that labeled "precocious mental development." Possibly it *would* be a fearsome thing if one actually came in contact with it, but I should be glad if all the teachers who have met with one genuine, properly certified case of it in the course of their professional life would hold up their hands. The general assumption seems to be that the early development of the mind must of necessity be followed by its premature weakening and decay, but I am unable to find that any instances on which to base the assumption are ever actually produced. On the contrary, biographies of most able men and women show them to have been what we are pleased to term "precocious" children; cases of late intellectual development among them are noteworthy for the very fact of being so rare. And I am not speaking of prodigies—Mozarts and John Stuart Mills.

One could wish that people would stop talking long enough to reflect that letting a child learn things as rapidly as it can and will is not "crowding," and that there would be absolutely nothing precocious or prematurely old about the child of ten if he were to study the things which our present school system places

three or four years later. Such children might be the rule where they are now the exception if, instead of the present waste of their time with the alleged great objects of "health" and "thoroness," their attention were concentrated from the beginning on the *essentials* of education. For there *are* essentials, and nothing is more mistaken than the very prevalent modern idea that one thing develops and trains the mind as well as another if done as thoroly; that, for instance, to learn to make a chair perfectly *educates* as much as to solve a mathematical problem or analyze a sentence. Even if it should be abstractly true that all studies are equally valuable to young people, methods by which to make them so in actual application have not yet been evolved by educators, and probably will not be by the present generation of teachers or the one to follow them. Because this is true, two points especially in Mrs. Gilman's argument must lose their force. In the first place, there is no real comparison between the "precocious development" of the child who advances rapidly in his study of books and that of the one who gains a premature familiarity with misery and sin thru work in a factory where all mental activity is subordinated to the acquisition of a certain circumscribed manual dexterity, and it is neither fair nor reasonable to attempt to make it. And, secondly, the introduction of an elective system into our primary and secondary schools, the possibility of which I understand Mrs. Gilman to hail as "an advance in methods of education," certainly can hardly appeal to one acquainted with the quality of youthful judgment on such points. It is a question whether we do well to give even to college students such wide and early freedom of election as we do; to trust a *child* to select, with his personal, preferences as guide, the studies which shall eventually prove the most beneficial for him would seem about as reasonable as to permit my sister's seven-month-old baby to chew up the yellow cover of THE INDEPENDENT, because he prefers it to all the rubber rings, rattles and other innocuous playthings that can be tendered him.*

*His grandfather did suggest that we allow him to masticate "The Mind of the Child," and see what the effect would be, but his father, who is a physician, insists upon trying it on the kitten first.

The experience of many generations has been that certain studies, either thru an inherent superiority or because thru long practice we have learned better how to use them, are peculiarly adapted to the early stages of mental training. This is partly because they contain the germs of actual knowledge which all who would not be put in the statistician's column of illiterates must possess, and partly because, so far as we are able to see at present, they surpass all others in power to produce mental efficiency and correct habits of study. I do not see how any thoughtful person can see cause for congratulation in the fact that our public school system has for the most part so diluted this mental tonic that it takes eight years or more to hold it, and, what is worse, an expert analyst to find any traces of the original educational material. For the truth is, candidates for admission to our high schools know little arithmetic and less grammar; they have been carefully guarded (of course) against the deadly effects of any language study but English, and the most of them cannot spell—even to suit the taste of the Simplified Spelling Board. I used to wonder what they *had* been doing in all their years' sojourn in primary and what with unintentional satire are termed the "grammar" grades, but of late years I have been going to expositions and other places given to "educational exhibits," and I know that they have been making doll's furniture, and school gardens, and manual-training-school pies (supposedly more digestible than the mud variety of their teachers' infancy), and models of locomotives and Paris gowns. If I seem to any one narrow-minded in saying that I should prefer a knowledge of percentage and the parts of speech to these more showy accomplishments, let me remind you that the much commiserated factory child also has learned to work with his hands —and skillfully.

My objection to the various things with which the lower grade courses are padded out is not that they are especially pernicious in themselves, but that they do take time, and that they do *not* produce a corresponding capacity for mental work. Mrs. Gilman is right in her complaint that too great pressure is put

upon boys and girls of high school grade, and precisely at the age when they are least able physically to endure it; she seems to me absolutely wrong in her assumption that the fault is in the high school and not in the preparation for it. The fact is, there *is* no preparation for it. Children enter it with very little actual knowledge, and, what is infinitely more serious, with no habits of study and no idea how to acquire them. Since pretty nearly everything that constitutes what may be called the academic part of education—certainly all that counts toward college work—has been left to be crammed into these four high school years, hard work is a necessity if the ground be covered, and children are pushed into it to flounder like untrained swimmers. If the high school chance to be one where thoro work is insisted upon, naturally a good many of the poor little flounderers must sink.

If it is not—and the sample graduates whom I encountered do not tempt me to place the percentage of thoroness inordinately high—the period of stress and strain is simply deferred to the time of college entrance. I do see some college students who break down under what they and their parents are pleased to name overwork, but they are never the "precocious" ones, and the thing that gives them nervous prostration is not *study*. It is the overwhelming consciousness, at an age most sensitive to failure and its accompaniments of ridicule and patronizing pity, of unfitness for the work attempted and of utter ignorance how to become fit. The combination of worry and loss of sleep in hours spent distractedly staring at lessons which to the properly trained student would leave time enough for slumber and recreation to satisfy almost any health crank does undeniably produce some physical breakdowns; but it is a very superficial estimate of the case which ascribes to "premature overwork" what every teacher of such students knows to be due to work too long deferred.

Such barbarity as Mrs. Gilman's tabulated "Working Day of a Boy of Fifteen" would have no cause for existence if some of that work had been done, as it might have been, six or seven years before. There is no reason why a system of primary and secondary education may not be devised by which children may begin, as soon as the most elementary stage is past, to acquire habits of independent and industrious study; in fact, it has been done by a few teachers blest with some ideas beyond the "system" prescribed by their superiors in the pedagogical machine—and I have never known a death from it yet! The teacher above quoted also said: "I don't believe that my three children missed any of the joys of childhood, or contributed much to the income of physicians, if they *were* all studying Latin and elementary algebra when they were ten years old."

As I happened to climb trees and play with dolls, as well as study Latin, as their contemporary, I can support his statement. I myself was one of a half dozen or more of children whom a teacher of independent ideas gathered into a class on which to experiment. Our ages ranged from nine to twelve years when we began Latin; two years later we commenced Greek, and we were more than ready for admission to college before one of us had quite reached that magic sixteenth birthday, when a sudden baptism of wisdom is supposed to prepare for freshman work the youth who, according to college catalogs, cannot possibly be fit for it at fifteen and a half. (Which pedagogical superstition is only matched by that other popular one which credits a like outpouring of omniscience to every young married simpleton on the birth of her first baby.) Yet none of us were phenomenal children—except in our good fortune in being taught by a *teacher*. It is not upon record, either, that any of us "went to pieces" in mind or body before we were twenty-one. I have used this personal illustration, not because it is the only experiment of the kind that I have ever seen successfully tried, but because my own childhood is the one that I know the most about, and I differ from Mrs. Harris in being able to recall very vividly my childish feelings. I was a healthy and happy little girl; I played on Saturdays and in the last hours of the afternoons, and I believed in Santa Claus and the fairies up to an absurdly advanced age. I do not say that my lessons did not cause me some tears, but it was because equations

with three unknown quantities sometimes refused to untangle themselves before I was sent to bed at 9 p. m., and not because I was inimically disposed toward equations *per se*. I felt it a horrible disgrace when I "flunked," but my early school successes have no superior among the blissful reminiscences of my childhood. Yet I studied at night always. And since Mrs. Gilman puts the question personally, I may personally answer: I do it yet, and I like to. Yet, as Mrs. Gilman happens to know, I am not a sallow and melancholy bookworm, nor a spectacled, flat-chested frump.

A reasonable amount of out-of-school study not only injures no child, but is as necessary a preparation for happiness in its later school life as any of the early moral discipline which is generally conceded to be required if a child would not in after life be crushed by the contact of its uncontrolled impulses with the laws of an untender world. Of this moral discipline I suppose that even the portrayer of the poetic flights of "The Mind of the Child" would admit the necessity. It is somewhat difficult to discover what, outside of the exhibition of a vocabulary, the writer of this article does desire, but it is to be observed that, in common with many who talk impressively on the "martyrdom" of school children, she has finally to admit the necessity of teaching children *something*. And, however it may be with professional literary folk, the rest of us seem obliged to know the rules of arithmetic and orthography, and so to stifle our pity for the objective case as to employ it not only with the "bulldozing transitive verb," but even after an insignificant "like." Therefore we should be glad to know what substitute Mrs. Harris would offer for these branches which she especially elects to condemn.

I wish that I could proclaim a general readiness among teachers to applaud Mrs. Gilman's censure of the working system and the periodical nightmare known to its victims as "exams," but I have mournfully to admit that these relics of educational barbarism are held in peculiar affection even by teachers from whom one would expect better things. I can only add as an excuse for their persistence in favor that the blame rests fully as much with the parents—"*who are the public*"—as with the teachers. Too many parents can only recognize a sign of their children's progress when it is in the shape of a per cent. or one of the first four letters of the alphabet. To all such, and the teachers who encourage the absurdity, I commend this portion of Mrs. Gilman's article as earnestly as I reprobate some other parts of it.

A Small Catechism

BY ELLIS O. JONES

SEE the Man. What does the Man want?

The Man wants work.

Why does the Man want work? Is it be-cause he is un-u-su-al-ly in-dus-tri-ous?

No. It is be-cause he needs the mon-ey.

Why does he want mon-ey? Does he wish to take a trip to Eu-rope?

No. He wants it to buy bread and pay the rent.

Why does the Man want to pay the rent?

The Man does not want to pay the rent. It is a mat-ter of ne-ces-si-ty with him.

Is there no work for the Man?

No. That is, none out of which any one can make a prof-it.

What then, do you suppose, will become of the Man?

God knows.

COLUMBUS, OHIO.

The Bank-Deposit Insurance Law of Oklahoma

BY GRANT FOREMAN

[The State guarantee of bank deposits will be much discussed during the present campaign, as it is one of Mr. Bryan's favorite measures. The following article, therefore, by a lawyer practicing in Oklahoma showing what Oklahoma has accomplished and hopes to accomplish by this reform should be of interest to the entire country.—EDITOR.]

FAR removed from the center of the latest financial storm and feeling its effect in a less degree than most of the other States of the Union. Oklahoma's initiative in banking legislation is not to be attributed to her financial distress.

The bill providing for the insurance of deposits in banks organized under the laws of the State of Oklahoma creates a State banking board composed of the Governor, the president of the State Board of Agriculture, the State Treasurer and the State Auditor, whose duty it shall be to make an assessment against every bank organized under the laws of the State of 1 per cent. of the bank's daily average deposits, which assessment is to be paid into what is known as a Depositors' Guaranty Fund.

When a bank becomes insolvent it shall, voluntarily or involuntarily, pass into the possession of the Bank Commissioner, who shall proceed to pay in full the depositors, drawing first on the bank's assets, and then, if necessary, from the Depositors' Guaranty Fund. If the latter is depleted additional assessments are made against banks subject to the provisions of the act, to make up the deficiency.

The bill provides a salary of $2,500 per year for the Bank Commissioner and a maximum of $1,500 per annum for each of his assistants, and it is made the duty of the Commissioner or one of his assistants to inspect each bank subject to the provisions of the act twice a year or more if he shall deem it advisable, and the result of the inspection shall be kept on file in the office of the Commissioner.

For the safeguarding of the funds on deposit in banks there are some wholesome provisions in the bill. For instance, no person may be a director in any bank organized under the laws of the State unless he is a *bona fide* owner of at least $500 worth of stock not hypothecated, and no "active managing officer" of any such bank may borrow money from his bank without courting a sentence to the penitentiary.

Naturally there are two principal viewpoints from which this bill is regarded—that of the depositor and that of the banker. And again the banks are divided in their opinion of the law. In the State of Oklahoma there are 400 State banks, and since the law was past all but one of them came in under the provisions of the act of the legislature, as the law permitted them no alternative. Most of the banks that have "come in" say that they are satisfied with the law and that bankers and depositors alike will be benefited by it.

Many of the larger banks, which happen to be nearly all national banks, are unfriendly to the law. It is evident that under the law the small banks will profit at the expense of the large banks. The legend "Deposits Guaranteed" over the door of a small bank is a stronger inducement to many depositors than the business acumen and success of the large national bank across the street, whose deposits are not guaranteed in the manner provided by the Oklahoma law. And under the construction placed upon this law by the Treasury Department and by Attorney-General Bonaparte, it is not possible for the 301 national banks of the State to take advantage of the State insurance law on an equal footing with the State banks even if they wished to, which the most of them say they do not, and they offer many reasons for looking with misgiving and disfavor on the new law.

To begin with, they say that the law is a dead leveler. The premium on good banking is destroyed. Under the law every bank is just as good as, and no bet-

ter than every other bank. The law creates a haven for "wildcat" banks and puts a premium on successful deception of the banking department. There, they say, is a fatal weakness of the thing. The law makes the strength of the whole fabric depend on the inspection of the banks. It has rooted out the incentive to good banking for the sake of good banking alone, and substituted an unnatural foundation—the inspection of banks—which has its greatest strength and greatest weakness in the fallibility of political appointees. It is suggested that bankers will speculate with their depositors' funds with less scruple, because they know that in the event of failure the insurance law will protect their customers from loss.

The act provides that the Bank Commissioner may close and wind up a bank if found by him to be insolvent, and he may cause any officer of a bank to be removed for improper conduct. The law provides for no appeal from the decree of the Commissioner acting within this broad discretion, but if exercised wisely this extensive power will give cause for no complaint.

Another objection urged is that the officers of a bank can never figure certainly on the amount of money they may have to contribute to the Guaranty Fund during a given time because they have no means of knowing how other banks are conducted. An effort is being made to eliminate this objectionable feature from the law by providing for maximum assessments at fixt periods. This would establish approximate certainty in the bank's future liabilities, or, in other words, the assessment would become a fixt charge and would better fit in with the scheme of banking business.

But whether or not the new law will give way when tested by the principles of good banking, or whether it will fail when tried by the next financial panic, for the present at least it has brought a feeling of security to depositors, many of whom, it is claimed, were not accustomed to depositing their money in banks before this law was past. The interests of the whole people are of the first importance, but it is still too early to say how the law will be regarded by a majority of them. Many of them know but little about it yet, and the growth of its influence is necessarily a matter of education. A large number of small banks have started since the law was past, and they all seem to be flourishing.

The friends of the law predict that much good will result from it. They say it will inspire confidence in banks that will bring forth from its hiding place much currency belonging to people who heretofore would not deposit their savings, and in that way aid business generally; that it will put in circulation a large amount of money belonging to depositors of other States, who would rather trust a bank in Oklahoma whose deposits are insured than their home banks. It is believed that the faith in the security of deposits will make impossible a run on a bank and the sequestering of much needed currency in the time of financial stringency.

It is pointed out that when a bank fails, no matter how completely, the depositors will be paid in full within a few days, thereby avoiding the suffering and inconvenience of the usual bank failures, where the depositor is compelled to wait for months and years for his money, if he is fortunate enough to receive it at all. This result will prevent the chain of dependent failures that frequently attend a bank failure, and the closing of a bank's doors will not affect in the least the business equilibrium of the locality in which it occurs. Time has not yet put these predictions to the test, but the achievement of half the beneficent results which, it is claimed, will follow the law will amply justify its enactment.

At the Denver Convention Governor Haskell, who is responsible for this law, exhibited a reply received from a depositor in an Oklahoma bank that was closed by the Bank Commissioner for violation of the banking laws. Within two or three days nearly all the depositors had appeared and received their deposits. One man, however, who was requested to come in, sent word to the Bank Commissioner that he was too busy with his crops to come for his money, but would try to come in in a week or so and get it.

Comment, the Governor found, was unnecessary.

MUSKOGEE, OKLA.

Public Playgrounds and Juvenile Delinquency

BY JUDGE BEN B. LINDSEY

[Judge Lindsey is the originator of the whole Juvenile Court system of the United States and has an international reputation as an authority on juvenile delinquency. He now presides over the Juvenile Court of Denver, Colorado. In connection with his court he has organized the Little Citizens' League, which puts boys on their honor, and whose records show that only three boys out of several hundreds have betrayed their trust. He succeeded in getting the Colorado Legislature to enact a law punishing negligent parents, employes, etc. He was the Democratic candidate for Governor of Colorado in 1906, and is the author of "Problems of the Children."—EDITOR.]

IT is no longer questioned that the best method of fighting crime is to begin where crime begins, and that we must look for relief thru measures that are preventive rather than punitive.

We shall make progress just in proportion as we appreciate the absurdity of limiting our remedies to the court, the hangman and the jailer. I recall some boys brought to my court in a typical kind of case. The trouble had started with the most natural thing in the world —their desire to play about some building in course of erection where men were doing things and where something was becoming a reality. They wanted to do things too. Since there was not much else to do they helped themselves to the lumber and the sand from the builder's pile. The irate builder appealed to the policeman. That dignitary swooped down upon the terrified culprits.

We have an interesting photograph of the back yard of the criminal (?). There the little sister was glorying in the sand pile and the lumber was transformed into the crude elevated railway where the soap box on wheels had already appeared as rolling stock. We cannot justify disobedience or excuse the wrongdoer. But we are unjust when we compel him to assume all the burden. If there was crime and no public playground in a congested neighborhood like that, may we not well ask if society was not as much responsible as the boy?

President Roosevelt has done our nation no greater service—as great as has been that service to our country—than by constant reiteration keeping us reminded of the importance of those greater problems that concern the home and the child in the home.

The great majority of that part of our so-called criminal class who are caught and confined are from the youth of the nation. I believe that the police and the courts are concerned with the lawlessness of more than a hundred thousand children every year in the citizens of this country, and that means a million in each generation of childhood. Should there not be some warning in this appalling fact? Some of you may think it is an indictment of the home and the school. It is rather an indictment of certain social and economic conditions with which the home and the school are powerless to contend. The child has no home where it has no play.

We cannot overdraw the picture of the increase in weakness and crime among the youth in the cities of this republic. It is not their fault; it is ours. It is largely due to that environment, to that condition that we have created. Cities and States are false to their duty to this child unless they furnish the best remedies for relief against the monsters that attack it. It is not pretended that any one remedy will suffice, but no one remedy proposed can be more serviceable than the public playground.

Perhaps the saddest thing in my experience is the cursing of heartless parents that I have heard from the lips of neglected boys and girls. May not the State suffer a similar penalty in that curse that comes to it thru increased crime among our youth that is at least in part due to its neglect?

Christ said of him who would do an

injury to one of these little ones that "It were better that a mill-stone be hanged about his neck and he be cast into the sea." We do an injury to these little ones just so far as we neglect to provide those agencies for their development and protection. Just so far as by lack of interest we compel our school boards to put fifty children in a room where there shouldn't be over twenty, deny a trade school to equip for industrial efficiency and a playground to equip the child for the advantages of the school and life beyond. It is no longer questioned that such agencies do more to prevent crime than jails, courts and policemen.

We must not encourage the parent to shirk. We may do much to help the child thru compelling the home to care for its own. Starting in Colorado about six years ago we established a new offense in this country. It is called contributory delinquency or dependency. It is spreading all over this country. Under these laws the State is exacting of the parent, where the parent is responsible, a more positive responsibility for the moral and physical welfare of the child. The parent who shirks may be punished. Justice demands that this responsibility be extended to all persons who might properly share it. We may all become guilty just so far as we fail to strengthen those whom we have burdened with this responsibility. That strength depends upon our support of these agencies, such as school boards, park boards, etc., to provide the equipment necessary to give the child a square deal thru the public playground and the school.

One obstacle to the public playground has been the cost. If the average citizen, if the average business man, if you please, would only wake to the fact that the most economic scheme for handling the problem of crime is that which prevents rather than that which at fearful expense is merely the engine to convict and punish after crime has become an established fact, we could make progress faster. Because the actual return in dollars are more or less invisible it is difficult for some people to see the necessity for public playgrounds. They have as little sense of real values as that boy whom I induced to go to Sunday school. He said: "It's a place where all the little kids go and give up a penny and don't get anything back." He was thinking of the substantial stick of candy he got at the corner grocery for that precious penny. When asked if he hadn't learned anything there he said: "I learned about angels, I did. I learned they had wings just like the chickens, but I didn't learn whether they laid eggs or not." One of the pitiful things of the past has been our confusion in dealing with the problem of crime.

Thomas Carlyle said there is a gregarious or sheep-like tendency in mankind to flock together and have a leader, and this tendency is first manifested in childhood. And this, of course, means the game—it means play. You cannot keep children from flocking together; neither should you. The responsible parent who thinks to solve the problem by keeping the boy away from his fellows is more likely to develop a mollycoddle or a milksop. He is frequently denied association with others, because that means the street. Let us provide a better place than the street for his playground. We want wholesome, vigorous citizens, with rich, red blood in their veins. They are to be recruited alone from our children. Let them mix with others, and learn to face and overcome the difficulties that come from the mixing, as well as to reap the joys and pleasures of the instinct to flock together, to play together. Our duty, then, is not to suppress, but to afford under the best environment the State can provide the opportunity for wholesome association and helpful expression of natural instincts.

It is only the thoughtless and uninformed who indifferently wave aside these important problems with the suggestion that the children of the past did not require such consideration. It is no answer to our demand for the public playground to say that all that is needed is the occasional vacant lot for the boy in the city. It is as absurd as to argue that because the boy of fifty years ago on the farm in this country was not in need of child labor laws such legislation is not necessary under present conditions. Even this vacant lot, either with or without a trespass sign, is passing away with the old swimming hole. If it exists its joys are mingled with the terrors of the

policeman, "Keep off the grass," the broken window, the grouchy neighbor and the dangers that come from the energy that is misdirected thru suppression and lack of wise direction. Our plea for public playgrounds is a plea for justice to the boy. We are literally crowding him off the earth. We have no right to deny him his heritage, but that is just what we are doing in nearly every large city in this country; but he is hitting back and hitting hard, when he doesn't mean to, while we vaguely understand and stupidly punish him for crime. Why shouldn't he rebel? The amazing thing is that he is not worse than he is.

Perhaps the boy needs to be taught where fun ends and the law begins, but his struggle for fun and adventure is met all along the line from the little seven-year old, who tries to reach the door-knocker of the neighbor's house, when the minister coming along lifted the little fellow up. He gave it a whang and a bang, and shocked the good man as he skooted down the street as hard as his little legs could carry him, only to turn and shout to his friend: "Hey, Mister, you'd better run like the devil, or you'll get caught." We must know where to meet this boy and how to understand him; and in teaching him where fun ends and the law begins we must have due regard both for his fun, his exercise, his bubbling energies and the law. I have found that when we do that he is the noblest little creature in the world. He is truthful, generous and honest. He will respect your rights even more than you respect his.

Three of the first culprits I ever tried were little fellows twelve or thirteen years of age. They had been captured by the police after a raid on the gang. In the center of the group stood little Dave, who made his tearful plea to the court. I said: "David, the officer says you are guilty of burglary." "But," said David, "I ain't no burglary." "Well," I said, "perhaps you don't understand. You are charged with going in a box car and taking things that didn't belong to you." David was quite typical of the constantly suppressed youngster. He was forced to live in that district that is a part of nearly all of our large cities, known as the Bottoms. Thru it comes the railroad tracks. A nice place indeed for the rearing of children. He was a typical, red-headed, freckle-faced boy, quite frazzled out at the elbows of his little coat and the knees of his trousers —and indeed some other places thereabouts; his stockings were down, and he dug his little fist into his tearful eyes, that had filled his face with rivulets of grime. "Judge," said David, "it's dis way. We lives down by the railroad tracks, we do, and we play among the box cars, and the kids said there was watermelons in one of them; didn't they, Ikey"—as he appealed to the boy at his right. "Well," I said, "that wasn't any excuse for taking things that didn't belong to you"—as tho the judge didn't know that fruit like that had offered temptations to other boys in other ages. "Well," continued David, "when we got in the car and didn't find no watermelons, Ikey said, 'gee whiz, kids, I'll bet there's something good in the car, for there was boxes in there that had figs painted all over them,' and Ikey said, 'Let's get something good, anyhow'—yes you did, Ikey, you know you did—and we got open the box and each one of us got out a bottle and it had figs painted all over it too, and each one of us drunk a whole bottle full, and"—to the accompaniment of tears and grimaces—"it was California fig syrup, and I tell you, Judge, we have suffered enough, haven't we, Swedey?" as he appealed now to the boy on the left, and Swedey chirped up in eloquent defense: "Sure we have Judge, because I drunk two bottles," and I accepted the plea of David that they had "suffered enough." I thought so too.

Of course it is a bad thing for the boys to be running on the railroad tracks. It is only a short step to stealing from the box cars and then perhaps from the corner grocery and finally to "tapping the till." Such is the progress of neglected childhood. A public playground will take care of that natural curiosity and disposition to play and do things and would save the railroad companies thousands of dollars annually they spend to keep the boys in the cities from making their property their playground. I know a railroad official who told me that they

had dispensed with one expensive officer in one district after a scheme of personal work and helpfulness thru the public playground had been built up. It had directed into better channels the otherwise misdirected energies of these children. A gentleman in one city of fifty thousand told me recently that the sixty boys who had robbed the box cars within the short space of one month were furnishing his road a more serious problem than the question of railroad rates that was then pending in the legislature.

I once talked to a young murderer nineteen years of age. He was then in the shadow of the gallows. He told me his lawlessness started down among the railroad tracks, where he went to play. It was a powerful magnet for curiosity when there was none other. And all this is aside from the wholesome character-building and the effect, both morally and physically, upon the average boy, who has the advantage of clean, well-directed helpful play that is now to be supplied alone in many cities thru the public playground.

I know a city of less than three hundred thousand inhabitants in which there were over three thousand arrests among the boys in one year. I walked into one of the courts of that city and found the time of the jury, the judge and the counsel taken up in trying a boy of twelve for throwing a brick at a citizen. The next day I met the boy in the bull-pen amid hardened criminals. He had chains about his waist and knees. I asked the boy why he threw the brick. He said: "I never meant no harm, Mister; we was just playing." I saw the miserable shack and crowded district where he lived. Can the boy be blamed if he continued to throw the bricks? Could we be blamed if we shed a tear at the absurdity and injustice of it all? Can we be blamed if we turn from the act of the boy to cry out against the shameful criminal State?

This child is a wonderful human creature—a divine machine. We have much to expect from him, but he has much to expect from us, and what he returns depends largely upon what we give.

We shall suffer with him whether we will or no, or we do not share his burdens. Let us not weary of the struggle till the child gets a square deal; and until he does we cannot have and do not deserve that glorious manhood, that splendid citizenship that will come alone from duty done in childhood's sacred cause.

We of the children's courts are optimistic because we see perhaps with clearer vision the most hopeful sign in this country. It is that awakened conscience of the State to its own responsibility for the child—that in caring for the child the State is simply caring for itself.

We have ceased in this country to question the duty of the State. It must provide free education and pass compulsory school and child labor laws and establish playgrounds, trade schools and juvenile courts, for the State suffers just as far as the child is ignorant or weak. We do not need more to emphasize our responsibility. This nation must take care of its children. From that duty it cannot and it shall not escape. It is only true to itself just so far as it is true to its children.

DENVER, COLO.

The One Question

BY SAMANTHA WHIPPLE SHOUP

This incident happened at the Trappist Monastery of Gethsemane, in Kentucky. Trappist monks are vowed to perpetual silence, and an old soldier under the Little Corporal had accepted the vow.

NAPOLEON! the name
That kings and nations rue;
The sun that set in flame
On blood-red Waterloo.

When the fatal fight was done,
And the endless ruin wrought,
And the bravest 'neath the sun
Lay on the field they fought,

Or wounded, lost and mazed,
Across a mocking world,
Bewildered, heart-struck, crazed,
Since he was downward hurled,

One of his Old Guard found
In the far and fertile West,
On the "dark and bloody ground,"
The convent's door of rest.

Those awful walls within,
In penance, prayers and tears,
With a soldier's discipline,
He lived for forty years.

But he lies a-dying now,
And the abbot bends above—
"I loose thee from thy vow,
O son of my dearest love!

"Speak, ere the shadow fall"—
For death o'er his features crept—
"The dearest thought of all
Thou hast in silence kept."

The flames of life enkindle
In the wan and spectral face;
The years of silence dwindle
To a point of time and space.

What dearest thought of earth
Is all things else above?
The mother who gave him birth?
The maid of his youthful love?

Or does his spirit shriven
Lose every earthly taint,
In the joy of opening Heaven,
The rapture of the saint?

What eager questions crowd?
What deathless memories strive?
His very soul cries out aloud:
"Is the Emperor yet alive?"

INDIANAPOLIS, IND.

Outfitting the Camper and Hunter

BY GEORGE E. WALSH

THE sportsman of today, whether an amateur or semi-professional, is confronted with the problem of an ever-diminishing supply of game, and he must travel much farther afield than formerly to find anything worthy of his skill; but, as if partly to counterbalance this handicap, the manufacturers of hunting equipments furnish the gunner or fisherman with such an array of implements that far better results can be obtained even under the most adverse conditions. The guns and rifles of today carry farther and shoot more accurately, and they are adjusted with sights and measuring devices so that the shyest game can be brought down. The fishing tackle is elaborate and complicated, but designed for special purposes, so that the shrewdest inhabitant of pond, brook or river can be deceived and inveigled into accepting the bait. And the comfort of the gunner and fisherman is catered to so that the pleasures of camp life are little less luxurious and enticing than those of the home!

A hunting trip today is therefore an undertaking that requires many preliminary arrangements and preparations, and usually in proportion to the completeness of these will our success and pleasure be measured. First, there is the question of place and time to decide upon. The various State game laws settle the time for us, and we must arange our plans accordingly. As to place, much depends

upon our ability to pay the cost. If big game only will suit us—deer, moose, caribou, bear, and possibly a wildcat or mountain lion—we must pass outside of the region of civilization and lose ourselves somewhere in Canada's forests, the great North Woods of the Empire State, or trek northwestward to the timberlands of Michigan, Minnesota or to the far borderland of Montana, the Dakotas or even to the regions bordering the Yellowstone. But if smaller game—the quail, the rabbit, the partridge, the wild duck, and the bass and pickerel of our Eastern streams—will satisfy our hunting propensities, then we are not yet so far removed from the haunts of the wild. Within a few hours' journey of our counting house we may pick up any or all of these creatures and return laden with the spoils of the chase within a few days.

But whether we choose to hunt for big or little game, whether we decide to penetrate the little explored wilderness of the far north or nearby, or whether we look upon the expedition more in the light of a pleasant outing than a serious attempt to capture trophies of great value, the necessary equipment must be carefully and religiously considered in advance. There are occasions in the life of hunters when a dry match is worth more than ten times its weight in gold, and when an ounce of salt would be eagerly purchased for twice the quantity of gold. Good drinking water to the thirsty man, or wholesome food to the starving creature, is worth more than the luxuries of silks and jewels.

The art of camping should first be considered, for camping is an essential preliminary to hunting or fishing. Camp outfits are of the most elastic nature, very simple and inexpensive or elaborate and costly. The simplest outfit, however, includes luxuries which a few years ago could not be purchased. The first consideration is the tent, which should consist of the best waterproof canvas or silk with reinforced seams and eyelets. If the tent is waterproof and strong more comfort can be enjoyed under it than if it was three times the size, but leaky and easily blown down. The wall tent type is the most suitable for camping purposes. The United States Army has selected this type for its men, and by common agreement it proves the most satisfactory.

A good waterproof tent of cotton, five by six feet, will cost about $22, and weigh only six pounds, or one of flax will cost $10 more. This is for the superior grades. Standard waterproof tents may be purchased as low as $6.50, but they weigh more and are not so serviceable. Khaki tents, 7 by 7, and weighing sixteen pounds, cost $11.50 to $18.50, and waterproof balloon silk tents are priced at $14 and $15 for the smaller sizes. From these prices the tents run up to $30 and $50 for the larger sizes, with special equipments. For instance, there is a new vestibule tent, used very much in Alaska and the North Woods, which costs $27 for a 7 by 7 size and a vestibule of 4½ by 4½. This tent is square, but it has a small canvas vestibule which opens on one side. By keeping this closed a blast of cold air cannot enter the main tent on cold nights, and by having mosquito netting in front of it pests are kept out. Insect-proof tents are also made with fronts of English bobbinet. The bobbinet can be purchased separately and attached to nearly any kind of a tent at a cost of $3 to to $5. The tents are packed in bags, so they occupy little space for shipment or carrying.

Camp furnishings should include a rubber and canvas floor cloth, a set of cooking and eating utensils, a few collapsible articles of furniture, and such necessary adjuncts as a hatchet, matches, twine, scissors and knife. Waterproof sleeping bags are invaluable to hunters, for they enable a man to crawl in one and go to sleep almost anywhere in the woods without getting wet. These sleeping bags cost from $5, weighing only six pounds and without any lining, up to $31, for bags weighing twenty-six pounds and having sixteen thicknesses of blanket, so that one can sleep comfortably in zero weather. Air beds and cushions designed for campers cost from $5 up to $25, and weigh only a few pounds when not distended and occupy ouly a few square inches of space in the pack. Folding chairs, camp stools and tables are made in various styles, and cost almost any price one desires to pay. A folding camp

table for seating four weighs only sixteen pounds and costs $3, and when packed for shipment defies breakage. Folding bathtubs and basins are provided for the camping outfit, and when packed they take up less space than a man's overcoat. Then we have folding lanterns, refrigerator baskets, looking-glasses, tubular match boxes, protected hatchet and balls of twine; but most important of all, a complete cooking and eating outfit.

The latter are made to fit snugly into each other, so that for an investment of $10 one can secure an aluminum set suitable for two persons that will weigh only five pounds, and when packed in a bag the extreme measurement of which is 9 by 8 inches. For four persons a larger set comes at $16, with a total weight of less than nine pounds. Such a set includes forks, knives, spoons, cups, plates, soup bowls, coffee pot, three cooking pots and two frying pans. Most hunters do their cooking before the open fire, but if preferred stoves can be carried along with the outfit. These portable stoves weigh only ten pounds and upward, and burn oil, gasoline, wood or coal. They can also be converted into tent heaters by attaching a cylindrical drum at the top. Pyro alcohol burners and heaters are furnished with some outfits at a cost of a few dollars, and complete campers' pyro outfits are made for all conditions and purses. Warm clothing and a few blankets should complete the equipment.

In itemizing the different essentials, it would seem as if the camper's outfit was rather a large and clumsy affair; but in reality it is small and compact. The total cost of such an equipment for four persons need not be more than $100, and the weight and bulk would not make it difficult of transportation. Indeed, it would be difficult to duplicate half the articles in ordinary purchase and not take up more space. Wading shoes and rubber boots should not be overlooked, altho they usually go with a hunter's wardrobe and do not need replenishing oftener than once in four or five years. The cost of a good camping outfit should not be apportioned for one year, but distributed over several. A good waterproof tent, for instance, should last indefinitely when properly kept in storage.

Like campers' outfits, the implements the hunter uses have been designed in endless variety, and the art of gunning and fishing have thus been brought down to a fine art. Take the repeating and single-shot rifles; the repeating and single shotguns; the revolvers and pistols for close range work, and the endless devices for securing accuracy of sighting and shooting. Compared with the flint locks of our forefathers or the long muzzle-loaders of a few decades ago, they stand in about the same position as our modern multiple printing press does to the old hand press of fifty years ago. A modern Winchester repeater will bring down its game with accuracy 200 yards away, and it can be shot twenty-five times per minute from the shoulder, or as a repeater in taking aim it can be shot two or three times per second.

The different manufacturers of rifles and shotguns for the up-to-date hunters have not only aimed at accuracy and reliability, but convenience and comfort. What is styled "take down" guns can be taken apart and packed away and conveniently carried in a suit case or packed in a trunk or with bedding. The theory of the trajectory of a bullet has been worked out scientifically, and sighting adjustments arranged so that the hunter can easily calculate the distance of game and then take an accurate sight. A bull's-eye can be scored nearly every time within a range of 300 yards. In addition to this smokeless powder cartridges are furnished, so that game cannot locate the hunter by the puff of powder after one shot has been fired.

In spite of all the remarkable improvements in rifles and guns of such standard make as the Winchester, Savage, Remington and Marlin, the cost has not increased, but rather shown a downward tendency in the past dozen years. There are, of course, fancy guns, with handsomely carved stocks and metal-decorated hand pieces, which may run up to several hundred dollars; but for $25 one can purchase a good serviceable rifle or gun suitable for ordinary hunting. Some repeaters run as low as $10 and $12, and "take down" guns begin at $21, and

featherweights at $22. These prices are for reliable implements, and contain all of the modern improvements in guns and rifles. With them go reloading and cleaning devices and instructions for taking apart and putting together again. One firm advertises its 1908 model as a "solid breech, hammerless take down, six shot, repeating shotgun." In hunting, the services of both a shotgun and rifle are really needed, for even when hunting deer and moose there are many days when duck hunting would make an agreeable change.

A gunner's outfit, in addition to his guns, gamebag and ammunition, should include stout shoes or boots, leggings, waterproof coat and shooting cap. A complete outfit of these should not cost more than $15 to $20, altho this may be stretched to $30 if all-wool shirts, warm gloves and ponchos are included. The rivermen and hunters of the Northwest use Mackinaw clothing, which is probably the most tough and durable of materials for roughing; but many other hunters have adopted Loden cloth, which the guides in the Alps wear exclusively. This cloth is made by the peasants in the Tyrol from the wool of the mountain sheep, and is then made rainproof by special process. It is comfortably light, porous and practically impervious to water. Swedish dogskin is also popular for hunters' clothing, which is windproof and sheds water like a duck's back, and imported English moleskin is of great value for hunters. Suits made to order in any of these suitable cloths cost from $35 for dogskin to $40 for Mackinaw and $50 for Loden cloth.

The hunter, even tho bound primarily on a gunning trip to Canada or the North Woods, invariably includes a fishing outfit. Split bamboo rods that can be disjointed and easily packed may cost $15 to $60, and a varied assortment of lines, flies and other tackle equipment costs $10 to $15 more. For an expenditure of $25 to $50 in a fishing outfit the hunter is ready for bass, pickerel, trout or bigger fish. The complete fishing tackle can be packed away in a small bag and shipped with the camping utensils without greatly increasing the bulk or weight.

There are many other little accessories that should be considered, depending upon the time of the year and the part of the country selected for the expedition. Snowshoes may have to be included. The Hudson Bay pattern shoes cost $12 a pair, but a smaller and lighter pair can be purchased for $3.50. A medicine chest is almost a necessity. These are prepared and packed especially for hunters and campers at a cost of $1.75, including twelve one-ounce bottles with screw tops and fitted in a leather case so they cannot break. A thermos bottle is designed for hunters, so that liquids can be kept hot or cold for a great length of time. A quart size costs from $5.75 up, according to the finish. An emergency wound clip is an excellent invention that goes with many hunters' outfits. With it any cut or wound can be disinfected and antiseptically dressed in an emergency without the aid of a doctor. Finally, a compass should be included to find the way around in the woods if lost or separated from the rest of the company.

To sum up so that one may reach an intelligent idea of what an outfit should cost, an experienced hunter and camper gives the following figures:

For the tent and camp equipments....	$60.00
For guns, rifles and clothing.....	75.00
For fishing tackle and outfit.....	50.00
For miscellaneous articles.....	25.00
Total	$210.00

About $100 of this would do for four hunters, and each should bear only a quarter of the expense. The guns, rifles, fishing tackle and clothing would be permanent investments, and would serve for five or six years. The actual cost for the equipments for one season would thus be comparatively small. These prices are for first-class goods and include many of the little luxuries of camping, and less durable ones could be purchased for about half the figures given. Plenty of hunters go to the North Woods and invest less than $25 in their equipment, but they already possess many of the needful articles.

NEW YORK CITY.

The "New Protection" in Australia

BY H. T. BURGESS, LL.D.

[Dr. Burgess holds a high position as a leading writer for the daily press in Australia, and has taken an active interest in public affairs for thirty years, but has not entered into political life. Our readers will recall many of his articles that have appeared in our columns. Now that our fleet is being so lavishly entertained in Australasia the article on how "Newest England" proposes to deal with the vexing tariff problem is of especial interest.—EDITOR.]

PRIOR to federation each of the five Australian States which are now included in the Commonwealth had its own fiscal system. These systems were necessarily diverse in detail, having been developed in each case according to the special circumstances by which they had been modified from time to time. They also differed in principle according to the economic theories which prevailed and governed the action of the several parliaments. New South Wales —the senior State and numerically the largest—having preponderating maritime interests at Sydney, its capital, clung to free trade, tho protection was favored by a large section of its people, and "the fiscal issue" figured prominently at its parliamentary elections. Victoria — the next in point of numbers, but territorially much smaller—having to find work for its people when the gold mining industry ceased to afford sufficient employment, set itself to establish and foster manufactures, with the result that protection became its settled policy. The other States, similarly influenced by local considerations, adopted protective tariffs which were adjusted to meet their individual requirements. As differentiating tariffs were not permissible, it followed that, so far as customs duties were concerned, the States treated each other as foreign countries. Victoria taxed Tasmanian jam, and West Australian importers had to pay duty on Queensland sugar, while travelers by the express between Melbourne and Adelaide had to have their luggage examined and past by customs officials as if they had come from Paris or Berlin.

One argument constantly used in favor of federation was that it would abolish these anomalies and inconveniences. The customs department was the first to be taken over by the Commonwealth Government, and the framing of a uniform tariff was one of the earliest tasks to be performed by the Commonwealth Parliament. Two opposing principles and five sets of schedules were cast into the melting pot, and the problem was not only to reduce the mixture to uniformity, but to do so in such fashion as to harmonize conflicting interests as far as possible, to secure the minimum dislocation of industry and trade, and to secure the largest amount of public approval and support. The process was long and difficult, but the antecedent circumstances rendered the result a foregone conclusion. The burden of the parliamentary work fell on the Right Hon. George Strickland Kingston, who held the office of Treasurer and was a strong man, besides being a staunch protectionist. The tariff then framed is spoken of by his name, and as it finally emerged from the Legislature it was protective in general scope, but modified at many points by the influence free trade representatives were able to exert.

This was the old protection as distinguished from the new. Being a compromise, it did not give entire satisfaction to either side. Free traders objected to the added imposts, while protectionists complained that it did not sufficiently protect. Successive elections showed that the latter was the stronger and more general feeling among the people, taking the Commonwealth as a whole, and accordingly a revision of the tariff was undertaken last year which has now been occupying the attention of the Parliament for several months.

Meanwhile other factors in the economic situation have been at work. Imperial preference has entered more fully into the domain of economic politics and established itself as a definite and guiding principle. If effect were

given to it by reducing the duties on British manufactures the protection of local industries would be impaired, and therefore the other alternative was suggested of raising the tariff on foreign goods, by which preference and protection were provided for in the same act. The menacing effects of trusts and combines, which, taking advantage of the shelter afforded by a protective tariff, exploit the necessities of the consumer to the disadvantage of the community, forced themselves on the attention of the Legislature, and laws were enacted which have not been entirely satisfactory in their application. As to this matter, therefore, further action on the same lines is regarded as necessary. Industrial disagreements and disputes have been frequent and sometimes disastrous in their consequences. These are within the jurisdiction of the several States as such, which have adopted different methods of dealing with them, either by the establishment of Conciliation and Arbitration Courts or the appointment of Wages Boards. In both of these tribunals employers and employed are represented by delegates, and their determinations have legal effect. Their general object is to inquire into alleged grievances on either side, with a view to their redress so as to prevent strikes and lockouts, and to secure for working people proper conditions of work with fair remuneration.

Hence, whatever novelty there is in the "New Protection" so far as Australia is concerned, consists largely in the embodiment of ideas that have gradually developed under existing conditions, and the comprehensive provision of adequate arrangements for carrying them into effect. Three classes of persons whose interests are not identical and may be conflicting are taken into consideration—manufacturers, employees, and consumers. It is proposed to encourage and reward the enterprise, energy and skill of the former by guarding them against what is regarded as unfair—or at least unequal—competition. This is done by the tariff. Employees are held to have an undeniable claim to protection which will ensure for them reasonable hours of labor, sanitary and similar provisions, which must be at the expense of their employers, and at least a living wage. These are within the scope of Wages Boards and similar representative tribunals. Outside the concentric circles in which factory owners and their employees may be arranged there is the very much larger mass of the general public, the purchasers of the commodities they produce, and by whom the dividends of the one and the wages of the other are really paid. As the producers may be grouped on one side and the consumers on the other, it is held that the shield of protection should be extended over both, and it is this expanded application of the term which has attracted the largest amount of attention.

From the foregoing it will be apparent that the cardinal principle of the new protection is that, while local manufacturing industries are to be protected against foreign competition, the workmen are to be protected against the manufacturers, and the consumers against both. In order to ensure what is contemplated under the first part of this proposition it is proposed to make the benefit of protection to a manufacturer contingent on the payment of a fair and remunerative rate of wages. The method of doing this is by the imposition of an excise duty on all goods manufactured in Australia equal to half the duty imposed on imported goods of the same class, with exemption as to all goods which are manufactured under conditions of labor that are fair and reasonable. The doubtful question as to what is fair and reasonable does not present any particular difficulty in Australia and will not have to be settled by rule of thumb, for in many—perhaps most—of the trades awards have been made by the Wages Boards or Arbitration Courts. Manufacturers who are working under such awards or agreements possess the right to have the Commonwealth trademark applied to their goods. Others may have the same right under the authority of the Minister if they can show that they are working under conditions which are declared to be fair and reasonable by both Houses of Parliament. All trades to which the system is considered applicable will be scheduled, and the goods which bear the Commonwealth trademark will be exempted from the excise.

Inasmuch as certain trades or industrial manufacturers are not working under industrial awards or agreements, a new tribunal, called a Board of Excise, will be brought into existence. It will consist of three persons, who may call assessors to their aid when expert knowledge is necessary, and will have large powers of inquiry. The information it receives will be confidential, but it will be authorized to inspect factories, books, documents, wage sheets, etc., and to take evidence on oath. All factories in which four persons or upward are employed, exclusive of members of the family, must be registered. The board, if it thinks fit, may refer any question to a State industrial tribunal to be dealt with, and it may declare that the conditions of the manufacture are fair and reasonable, in which case the Commonwealth trademark will be applied to the goods manufactured on its authority. It is probable that the Board of Excise will become an interstate industrial commission.

These provisions are expected to secure the continuous operation of the principles and practices which they are intended to make effective, and are designed in the interests of the workers, but in order to protect the consumers from extortion or overcharge the Board of Excise is to have still further duties and powers. The contention of free traders is that an increase of customs duties on imported manufactures imposes additional burdens on the community by putting up the prices of commodities, and that manufacturers can very well afford to pay high wages, if they get in return exemption from excise and the opportunity to make large profits under the shelter of a high tariff wall. The restricting effect of competition is declared to be insufficient under circumstances which almost compel organization among employers as well as employed, and are favorable to rings, trusts, and combines. Accordingly it is proposed to entrust the Board of Excise with the duty of inquiring into and reporting to Parliament on the general conditions surrounding production and trade, and especially on prices or combinations to raise prices. For the effective discharge of this duty it will be equipped with powers to inspect books, and obtain information in the most direct manner, instead of having to proceed by any roundabout process. Should it ascertain on inquiry that prices are unduly high, or that combinations exist for the purpose of raising prices in protected trades, it will have power to recommend to Parliament that the duties be lowered or abolished. It is claimed that in this respect the "New Protection" scheme is discriminating and impartial, while in all respects it is workable and effective.

NORWOOD, SOUTH AUSTRALIA.

The Everyday

BY EDMUND VANCE COOKE

Oh, one might be like Socrates
To lift the hemlock up,
Pledge death with philosophic ease
And drain the untrembling cup;
But to be barefoot and be great,
Most in desert and least in state,
Servant of truth and lord of fate!
Who does not marvel at the peak
Trod daily by the steadfast Greek?

Oh, one might nerve himself to climb
His cross and cruelly die,
Forgiving his betrayers' crime
With pity in his eye;
But day by day and week by week
To feel his power and yet be meek,
Endure the curse and turn the cheek!
How may one even hope to be
As was the Jew of Galilee?

Oh, one might reach heroic hights
By one strong burst of power;
He might emblaze the whitest lights
Of heaven for an hour;
But harder is the daily drag,
To smile at trials which fret and fag
And not to murmur nor to lag.
The test of greatness is the way
One meets the eternal Everyday.

CLEVELAND, OHIO.

Literature

Psychotherapeutics

In reply to a pertinent question from Mr. Hennessy as to what he thought of Christian Science, Mr. Dooley said:

"I think, Hinnessy, that if th' scientists had more Christianity an' th' Christians had more science, it wudn't matter which a man had if he had a good nurse."

To effect this very desirable combination of the two greatest forces of civilization may be said to be the aim of the movement started in the Emmanuel Church in Boston. Since we have published an account of this work by the associate director, Rev. S. McComb, May 21st, and have discussed it editorially June 25th, we need consider here only the volume,[1] which is intended to satisfy the widespread curiosity of the public.

In the present revival of mental therapy in many different forms there is little that is really new. Both the diseases and the methods of treatment have been known from the earliest antiquity. The phases of neurasthenia that we are apt to regard as peculiar to an age of automobiles and telephones we find to be equally or more prevalent in ages when people were living what we would call the simple life. And the cure of nervous disorders by suggestion has been a prominent feature of almost every religion in the world except modern Protestantism. The new thing about it is the word "suggestion," which is a bad one, being awkward, indefinite and inadequate, and liable to lead us into the temptation of using the still worse word "suggestionist."

To enter a field largely given over to charlatans and tainted with gross credulity, mercenary frauds and more or less conscious deception for thousands of years, required courage on the part of the leaders in the Emmanuel Movement, especially since they have discarded as illegitimate the means that have been most effective in the past, and are commonly believed to be essential, that is, mystery, personal magnetism and exaggerated expectation. A quotation will show the extent of their self-denying ordinance:

"Altho we try to awaken faith on the part of our patients, we do not desire blind or fanatical faith. We lay absolutely no claim to personal power, we explain as fully as possible the nature of the means we employ, and call attention to the imitations of such methods, and accept as patients only persons suffering from functional disorders. We encourage the patients to acquaint themselves with the principles involved, by maintaining a good library of standard works, which we freely lend them. We avoid all fetishes and material adjuncts as means of suggestion and rely only upon moral, spiritual and rational means."

In the Emmanuel Movement the peculiar feature is that science and faith are not adversaries or even rivals. Faith is employed not to supplant science, but to supplement it. The physician is urged to do all he can, and then the priest comes to his aid. It is recognized that medicine is a means of divine healing as truly as any other. "There is no peculiar piety involved in the use of suggestion."

Hypnotic Therapeutics[2] deals with the same subject and advocates in part the same sort of methods, but in tone and character it differs from *Religion and Medicine* as decidedly as could well be. Dr. Worcester and his associates of the Emmanuel Church are modest in their claims, reticent as to the extent of their practice, and reserved in regard to their most striking successes. Dr. Quackenbos, on the contrary, makes the most of his "seven thousand personal experiences," and his ideas are often extravagant and fantastic. He accepts as proved many things to which the cautious scientist would at most give the benefit of the Scotch verdict, such as telepathy, clairvoyance and pre-natal influence. He treats a case of diabetes by making the following suggestion to the sleeping patient:

"And if your pancreas be crippled in its production of the natural ferment, which is given off to blood and lymph, and which conditions

[1] Religion and Medicine. *By Elwood Worcester, D. D., Samuel McComb, D. D., and Isador H. Coriat, M. D.* New York: Moffat, Yard & Co. $1.50.

[2] Hypnotic Therapeutics in Theory and Practice. *By John Duncan Quackenbos.* New York: Harper & Brothers. $2.00.

the normal consumption of sugar in the body, or restrains the output of sugar from the liver and tissues, you will see that it forthwith pours into your blood or lymph a sufficient quantity of sugar-oxidizing ferments."

We have no grounds for challenging the correctness of Dr. Quackenbos's report of the cure of these cases, but we venture our belief that, even with a patient having "an intimate acquaintance with the theories of diabetes," any other form of incantation would have done as well.

But we do not mean to say that *Hypnotic Therapeutics* is a book without value. It is undeniably interesting, for the author has command of a double vocabulary, that of science and that of literature. It contains an immense amount of information, much of it original, about the mental and moral disorders of the day, and most of the suggestions it gives as to their cure can be accepted by the reader without being hypnotized.

The relation of the Emmanuel Movement toward what is popularly regarded as its chief rival, Christian Science, is best given by quoting what Dr. Worcester says about the attempts to discredit it by showing up its absurdities and contradictions:

"The more absurd Christian Science dogma is made to appear, the more difficult it becomes to account for men's faith in it. Unless we are prepared to confess ourselves utterly at a loss to explain this infatuation, we must be able to pass beneath the vulgar and repusive exterior of Christian Science and to find a truth in it, a gift for men, a spiritual power answering to men's needs which the churches at present do not possess."

Miss Georgine Milmine in *McClure's* has revealed a very distasteful and disillusionizing picture of Mrs. Eddy's past life and character, and the Rev. Mr. Powell, in his criticism of *The Faith and Its Founder*,[3] shows the exaggerations and inconsistencies of its doctrine and the dangerous tendencies of its practice. Both these authors can afford to rest their case without argument on the evidence of the quotations they have collected from the writings of Mrs. Eddy and her disciples, but, after all, they have only shown the weaknesses of the sect, not its strength. The Christian Scientists are unfortunate in that their leader happened to live in an age of photography, of magazine sleuths and of propaganda by journals, but they are to be congratulated on not having more to live down than they have. Many of our sects, now of unimpeachable reputation for orthodoxy, respectability and culture, distinguished for the learning of their preachers and the number of their colleges, had a less promising origin, and would be glad if they had nothing worse to apologize for in the lives of their early leaders than a nervous disposition, love of power, inconsistent ideas, and lapses from grammar and good taste. As a church grows and ages it sloughs off the idiosyncrasies of its founders, glosses over or idealizes its early crudities, relaxes its intolerance and retains and develops the features that prove to be permanently valuable.

We are glad to see that the first important step in this direction for Christion Science has been taken by Mr. Mars in his *Interpretation of Life*. In this volume of nearly 800 pages he ranges thru science, philosophy, ethics and theology, and brings it all to the support of Mrs. Eddy, in whose writings he finds the full revelation of the truths toward which the Buddhists and Vedantists, and Spinoza, Kant, Hegel and Swedenborg were striving. Curiously enough, he makes no use of Berkeley.

The work will not be of much value in proselyting, but it ought to exert a good influence inside the Church in checking the disposition to scoff at scientific methods and defy common sense. It represents a form of metaphysical reasoning which, in our opinion, is antiquated and unprofitable, but a man can adopt the system of Mr. Mars without stultifying his intellect, and the highest names in the history of metaphysics and theology can be quoted in favor of his method and much of his doctrine. The tone of the book is admirable. As Mr. Mars is to be regarded as the father of the Systematic Theology of the new Church it is gratifying to note that he does not use the old weapons of vituperation and wilful misconstruction of opposing views. He does not venture to criticise any of Mrs.

[3] CHRISTIAN SCIENCE. THE FAITH AND ITS FOUNDER. *By Lyman P. Powell.* New York: G. P. Putnam's Sons. $1.25.

[4] THE INTERPRETATION OF LIFE. *By Gerhardt C. Mars.* New York: D. Appleton & Co. $3.00.

Eddy's ideas; it would be unbecoming in an orthodox apologist; but he construes as many of them into rationality as he can. His attitude toward his leader may be shown by the following quotation:

"The first reading of his chief work 'Science and Health with Key to the Scriptures,' leaves the impression, in spite of much that is strikingly beautiful and true, that there is a prevailing tone of incoherence, contradiction, illogicality, and arbitrary, dictatorial assertion, with no regard for evident fact either in the realm of objective nature or of history." [But] "Get Mrs. Eddy's master concern, the main current of her thought, the end she is aiming at, and it will be found that she is more logical and more comprehensive than an Aristotle or a Hegel."

Mr. Mars's interpretation seems to offer quite a possible *modus vivendi* between the Christian Scientist and the physician. If anybody wants to say, with him, that the real cause of disease lies in an abnormal condition of unconscious mind, not in the mere physical symptoms resulting from it, and that the medicine simply regulates or adjusts the disordered action of the organism, while the cure is really effected, not by the medicine, but by unconscious mind, or *vis medicatrix naturæ*, which the medicine seems to arouse to a sense of its duty, nobody can prove he is wrong, altho this way of thinking seems to us to introduce some unnecessary mental machinery. If the Christian Scientist will allow the physician or surgeon to do what little he can in the way of patching up the organism when it gets to working wrong, and let him use sanitary measures to hinder it from spreading its bad habits in the community, he will be glad to have the Christian Scientist do all he can to bring unconscious mind into normal control of the organism, even tho he be enabled thereby to dispense with further medical services.

Apart from Christian Science and outside the churches for the most part is an extensive, tho somewhat indefinable, New Thought movement. Its followers are believers in the efficacy of optimistic affirmation, and they practice various methods of relaxation and auto-suggestion. Personally we have found their literature cloudy and unstimulating when it was not nonsensical, but we cannot deny that many persons derive from it spiritual and physical benefit. The best and most popular author is Mr. Henry Wood, whose latest book[5] contains a number of theses for meditation "in the silence room," and brief discussions of old and new forms of faith cure and mental treatment in a tolerant and comprehensive spirit. He recommends the following line of thought for the cure of local disorders:

"My (stomach) is good and true. My subconscious mind is active in restoration and in excluding worn-out material. My members all unite in a hymn of divine praise. I am a human magnet attracting all good. I vibrate in harmonious rhythm with all environment," etc.

Mrs. Vance Cheney, in her little book on *What It Is That Heals*,[6] gives a prescription that is still more difficult to follow, if one is troubled with an elementary knowledge of anatomy:

"Picture the outgoing breath as being emptied into the thorax and gently surging downwards thru the abdomen into the legs and down to the toes."

To do such things must require a great deal of practice, practice like that recommended to Alice by the Queen in the Looking Glass of learning to believe three impossible things every morning before breakfast.

But criticism of these formulas is aside from the main question, and it is a waste of powder to attack their metaphysics, which indeed is usually quite invulnerable from being so high in the air. It was long ago discovered that the fictitious bones of an imaginary saint worked as many cures as the best authenticated relics. Which particular form of suggestion is most effective in any given case depends upon the temperament of the individual and his education, religious training and environment. The chief evil to be avoided is intolerance, the refusal of the devotee of one system to recognize that other methods may be used by others to attain the same ends. They all achieve their greatest successes in the same classes of disorders—that is, functional and nervous diseases and pathological habits, such as hysteria, insomnia, alcoholism, abulia and obsessions. They have the same sort of failures too, but no one knows enough yet to set a definite limit to the power of

[5] THE NEW OLD HEALING. *By Henry Wood.* Boston: Lothrop, Lee & Shepard Co. $1.20.
[6] WHAT IS IT THAT HEALS? *By Mrs. Vance Cheney.* New York: Robert Grier Cooke. 75 cents.

mental medicine, and there is no reason for attempting to. Amateur experimentation along these lines is less likely to be injurious than indiscriminate dosing with patent medicines. Brief excursions into mysticism may be profitable to many persons provided they do not get lost there and become too disdainful of the prosaic methods of medical science.

Social Psychology

In his previous volume, "Sin and Society," Professor Ross appealed with great charm and cogency to all intelligent citizens; in *Social Psychology** he speaks primarily to his professional friends. It is a pioneer work, an attempt to "understand and account for those uniformities in feeling, belief or volition —and hence in action—which are due to the interaction of human beings, *i. e.*, to social causes." With engaging modesty, the spirit of the true man of science, he confesses:

"In spite of infinite pains and thirteen years of experience in university teaching of the subject, I feel sure this book is strewn with errors. Of course, I would strike them out if I knew which they are. . . . I have brought social psychology as far as I can unaided, and the time has come to hand over the results of my reflections to my fellow workers."

Tho it is intended as a college textbook, the adventurous reader who picks here and there some of this fruit from the tree of knowledge will be rewarded with more sweet mouthfuls than the grower promises. First, he will find much of that charm of style which made "Sin and Society" so effective. Dr. Ross, professor of sociology, could give lessons to most professors of English literature. Tho he is hampered by that unsettled and cumbersome terminology which makes a porcupine covering for the infant science, he makes his contribution comprehensible and interesting. By numerous examples drawn from every corner of the universe he both justifies his sub-title, "An Outline and Source Book," and breaks down the obstacles to the mind that are set up by such phrases as "the radiant points of conventionality," "the equilibration of culture," and "relation of custom imitation to conventionality imitation."

Rays of humor lighten the pages, as when the inquirer is set to justify by psychology the advice in "Joseph Vance": "When a chap thinks you know he believes in your solvensy, don't ondeceive him by orfering him cash. Then he'll know you think he believes you insolvent and never give you a brass farden o' credit." Social psychology clearly may be useful in business. Again, the author's consoling reflection that, "Man is not an entirely irrational animal. Occasionally he shows gleams of common sense"—is meant more to lighten the strain on the reader than to place the volume among the literature of skepticism. It is doubtful whether that concession would place Dr. Ross among the most honored majority of Americans, the optimists, but other of his generalizations would establish him there. For example, tho he is awake to the defects of democracy and quotes with approval Mark Twain's demonstration of the inability of four hundred and ninety out of every five hundred men "to examine competently either a religious plan or a political one," he defends the verdicts of public opinion because polling,

"after there has been time for free discussion and the maturing of a public opinion, reveals an intelligence and foresight far above that of the average man. It is, therefore, a slander to declare that manhood suffrage equalizes Socrates and Sambo. At its best estate a popular election merely records the outcome of a vast social deliberation in which the philosopher has a million times the influence of the field hand."

So, altho "campaigns of education" usually degenerate into appeals to prejudice and passion, in which processions, fireworks and music—means as irrational as savage incantations for rain—are liberally used, yet, since the work of education precedes the weeks of the campaign, the verdict of the ballot box on a matter like the use of injunctions in labor disputes will be wiser than the verdict of a group of lawyers or manufacturers.

Italica: Studies in Italian Life and Letters. By William Roscoe Thayer. Boston: Houghton, Mifflin & Co. $1.50.

Mr. Thayer has earned a right to claim our attention on matters literary and historical relating to modern Italy. His chief work, "The Dawn of Italian Independence," published a few years ago,

*Social Psychology. *By Edward A. Ross.* New York: The Macmillan Co. $1.50.

gave us much that we desired to know, gathering up as it did the loose and much tangled threads of many stories. Since that book, essays by him have been scattered among the magazines, and out of these he now gathers a fresh volume, fourteen essays in all, making what he calls *Italica* his latest contribution to the illustration of the peninsular kingdom. These essays are sufficiently diversified in subject. In "Venetian Legends and Pageants" he depicts the false glow of a material prosperity run mad with a more enthusiastic pen than one would look for in the sober historian. "Dante as Lyric Poet" and "Dante in America" take up an old theme in its new modern aspects. In the latter Mr. Thayer finds himself surprised that the great poet of that old century should be appreciated in America to the extent of three or four first-class translations, while Virgil and Homer are left untouched by the careful scholars and by the "larger throng who were driven thru them on the way to culture." Apparently he does not regard Bryant's "Odyssey" or Cranch's "Æneid" as scholarly renditions. Carducci, Leopardi, Mazzini, are among the personal sketches, all done with enthusiasm and yet with due discrimination. The worthiest selection is perhaps the "Thirty Years of Italian Progress," which is at once a clear historical *résumé* of the new conditions in Italy and a hopeful report of her progress. Italy, as he shows, has "declared war on the slums." She has introduced a "beneficent vandalism." Sanitation and water supply have gone far in their hostility to the miasmatic, lava-poisoned marshes. Illiteracy has become a thing of the past; it no longer exists to any great degree among the young. Peasants and servants no longer bow the knee for want of the three Rs or a vote in the commune. The present writer a few years ago was waited upon at table, as he might have been in New England thirty years ago, by the vice-mayor of an old imperial town. The mayor was at the same time busy in the garden of an ancient and decayed palace. From Carducci and Senator Fogazzaro down to the swarthy cranberry pickers on Cape Cod, Italy is everywhere looking up, and this fact rejoices the heart of Mr. Thayer and shines out in these fourteen essays.

The Distribution of Ownership. By Joseph Harding Underwood, Ph.D. **Studies in History, Economics and Public Law.** Edited by the Faculty of Political Science of Columbia University. Pp. 219. New York: The Macmillan Co. $1.50.

It would perhaps be difficult to find a title that would cover the wide field occupied by Dr. Underwood in his study of *The Distribution of Ownership,* but to the ordinary reader the title he has chosen would give little idea of the scope of the volume. Dr. Underwood attempts to give the history of ownership from the most primitive times, thru the eras of Hebrew, Greek, Roman and Teutonic civilizations, to the present day conception of corporate ownership and the beginnings of a return to restrictions of individual ownership, not only of land, but also of chattels. The new attitude toward ownership of land Dr. Underwood parallels with the attitude in the first half of last century toward the ownership of slaves. Just as nowadays unobstructed individual ownership of land is upheld by many as a necessary condition of liberty, so the advocates of slavery held with Aristotle that a free state could only be founded on the basis of a slave population. Ownership, unlike possession, is not a natural right, but one conferred by society. A man cannot possibly retain possession after his death, but society has within the last two hundred years conferred on him the right to retain ownership and to distribute his property according to his individual preferences. The right of ownership thus conferred by society may be modified by society. "Limitation of private ownership," Dr. Underwood writes, "is not only historically necessary, but it is a corollary to all theories of the right of property." "Given many men and small substance," he continues, "human nature and divine right cannot be monoplized without the infringement of an equal or potentially equal title." Dr. Underwood's thesis is a thoughtful and suggestive contribution to the philosophy which must underlie political principles and policies. It is to be regretted that it is not written in a clearer and more readable style, and that it marred by a number of historical errors which, while perhaps not of serious consequence to the substance of the work, shake the reader's confidence in its accuracy.

Positive Preaching and the Modern Mind. By P. T. Forsyth. New York: A. C. Armstrong & Son. $1.75 net.

One expects something good in the annual Yale lectures on preaching, but few recent volumes of that notable series embody a message more urgently needed by these times than is contained in these urgent deliverances of Principal Forsyth of London. The easy-going doctrine that man is pretty good anyway, that God is kind and gentle, and therefore that we need not trouble ourselves very much about the here or the hereafter, finds stern and merciless condemnation. The radical guilt of human nature is maintained in most vigorous style, and the message of the gospel to the deeper needs of our being is set forth with fitting emphasis. Principal Forsyth understands Christianity as a religion of redemption, rather than as a program of social improvement, and he advocates strongly those serious views of Christian truth which have given power and fervor to the preaching of the past. He insists that before all things Christian doctrine must be ethicized, but he holds that to regain its moral intensity it must win a more positive doctrine of the cross than now commonly prevails. His view of the atonement may seem old-fashioned, but in his hands the doctrine of vicarious sacrifice is freed from its objectionable features, and contains unmistakable religious truth. The conclusion must not be drawn that Principal Forsyth is a reactionary conservative. He yields Biblical criticism the fullest liberty, declares that inspiration is "the state of a soul, not of a book," evidently places small value on miracle, asserts that "the worship of orthodoxy is Protestant Catholicism, Protestant Romanism," and that "orthodox theology is canned theology gone stale." The author of such words is no mere *laudator temporis acti;* his eyes are widely open to modern light, but, as is evident from the whole tone and temper of these lectures, the man with the opened eyes has also intense moral feeling and deep spiritual conviction, and is resolved to do his best to resist the prevalent notion that the ills of the present age have a sufficient remedy in a little new information and a mild feeling of tenderheartedness and pity. It is the small and superficial man one can quickly classify as orthodox or liberal, and describe thereby his entire attitude on all current questions. These lectures reveal a spirit large enough to welcome truth that is new, without loss of elements of equal value which are at least as old as Paul. The book is stimulating and suggestive, and should especially be read by those liberal divines who will most dissent from it.

The Battle for the Pacific. By Rowan Stevens, Yates Sterling, Jr., William J. Henderson, G. E. Walsh and others. New York: Harper & Brothers. $1.25.

Jules Verne, in the hight of his fantasies, never dared write such visionary tales as these. Our reaching out into the Pacific has given a field for our most popular writers to speculate on the chances of war with Japan, and the war is waged with new engines of destruction unheard and undreamt of before. When an American battleship is about to be sunk by bombs dropped from Japanese airships, controllable lightning is brought to bear on the flying enemy. Wonderful torpedoes and submarines make havoc of the usual type of vessels. The stories are frolics of bright minds, and are well worth reading. There is a dramatic vividness and power of description that fascinates even the unimaginative critic.

A History of the Ancient Egyptians. By James Henry Breasted, Ph. D. With four maps and three plans. 16mo, pp. xiii, 469. New York: Charles Scribner's Sons. $1.25.

The historical series of which this is Volume V is intended for Bible students, and covers in nine volumes Jewish history, the allied nations, and the Christian period. It is a most valuable series, by Professors Kent, Riggs, Goodspeed, Purves, Sanders and President Rhees. This volume on the Ancient Egyptians is by our best American authority, and is as trustworthy as present study can make it, compiled as it is from the author's larger history, with the addition of the facts learned since. We observe that he follows current German chronology, makes Egyptian history begin a thousand years before Babylonian, believes the Hyksos empire was Asiatic as well as Egyptian, and was possibly Hittite, that

the Hittites were not Aryan, and that our other chief Egyptian scholar, Prof. W. Max Müller, is quoted only in the appendices to contradict him.

The Letters of Samuel Reynolds Hole, Dean of Rochester. Edited with a Memoir by George A. B. Dewar. Pp. liv, 279. New York: The Macmillan Co. $3.00.

To many admirers of the late Dean Hole anything that comes from his pen will be welcome. Hence there is perhaps a place for this volume of his letters. Otherwise it would be doubtful whether they would add much to his reputation, either as a literary man or as a dignitary of the Church of England. Many of them are so short that they might have reached their recipients on postal cards; and, as a whole, the collection is so miscellaneous—so lacking any thread to knit it together, and so largely made up of scraps—that any sustained interest in it is almost impossible.

Andrew Ellicott: His Life and Letters. By Catharine Van Cortlandt Mathews. Illustrated. New York: The Grafton Press. $2.50.

It is a matter for rejoicing when one of the real foundation builders of our republic is dragged to the front and made to tell—in rude sentences, it may be, and with the haphazard spelling of our colonial fathers—the story of a substantial section of that mighty national structure which America has become. Such a man was Andrew Ellicott, who, at fifteen, assisted his father to construct the most remarkable clock ever designed by man, and, at forty-seven, declined the office of Surveyor-General of the United States. Born in Bucks County, Pennsylvania, one of the three true Penn counties, his inheritance was the peace-loving doctrine of the Quakers, but he was quite early initiated into some of the mysteries of the military art and was a major of militia in Maryland at twenty-eight, and at the close of his life served for six years as mathematical head of our adolescent war college, West Point. For 350 miles he carried those implements which the red man of that day called "bad medicine" along the unfinished line then known as the line of Mason and Dixon, until he had set a white oak post in the southwest corner of the mighty State of Pennsylvania. It was he who ran the western boundary of New York, took the first measurements of Niagara Falls and the river. It was he who gave final form and shape to the District of Columbia and laid the lines of our national capital. With him worked that remarkable mulatto, Benjamin Banneker, the astronomer, almanac maker and mechanical genius, who received the compliments of the learned secretary of the French Academy. With him, also, but in a higher station, was that suggestive gentleman, Thomas Jefferson, who wanted the President's mansion set at least a mile from the legislative department, "to avoid any interference the one with the other." The great work of this foundation-builder was the demarcation, by a thousand-mile line thru untrodden wilderness, of the Spanish Florida possessions, which then stretched from the Atlantic to the Mississippi River. In this ticklish, semi-diplomatic enterprise he came upon another enterprise—that of the famous General Wilkinson, who, with a few congenial co-workers of the rebating order, was planning an empire for himself and company. Major Ellicott's report on this scheme is interesting reading. So also is his account of the original Judge Lynch, who was "a great stickler for equality and the rights of man as established by law." This revival, in a handsome book form, good print, and a fashion meant for a long life, of an old, honest, capable and useful member of a half-forgotten world, is a refreshing event. If the new "prosperity associations" would encourage such revivals, American libraries would be the better for it.

The Continental Congress at Princeton. By Varnum Lansing Collins. Princeton, N. J.: The University Library, 1908. Price, $3.00.

The local historian from time to time finds himself in the main current of historical development, when every scrap of evidence which he can gather becomes an illuminating contribution to the history of great events. It is one of the commonplaces of the history of the end of the Revolution that Congress was

driven from Philadelphia to Princeton in 1783 by a mob of mutinous and unpaid soldiers. What Congress did after it arrived at Princeton has been less well known. It quarreled over its place of residence, resisting the entreaties of Philadelphia to return thither. It thanked and complimented General Washington when he gave up his command. It received a Dutch Plenipotentiary in great state. It ate good dinners and enjoyed a pleasing country life. Nothing of unusual importance transpired at Princeton, yet it is desirable that every detail in the history of the Continental Congress should be known. Mr. V. L. Collins, sometime one of the librarians at Princeton University, has expanded this local theme in his careful and detailed study of the trifles of congressional life in the college town. He makes it possible for us to sympathize with the legislators as they listened to commencement orations from the college students, and to rejoice with them at the excellent green groceries that the frugal farmers of the neighborhood provided. Unpublished manuscripts have been utilized in great number by the author, whose work well fills a vacant niche in the history of the confederacy.

Essays in Municipal Administration. By Dr. John A. Fairlie. New York: The Macmillan Co. $2.50.

This is a reprint of a number of essays, written at various dates from 1898 onward; it does not profess to be, in any sense, a systematic and comprehensive discussion of municipal government. Some of the chapters are worth preservation in a book, but others are already out of date, and should have been allowed to slumber in their original magazine seclusion. The studies of the Public Works Administration and of the Revenue Systems, as well as of some of the Municipal Codes of American Cities, are exhaustive and judicial, valuable alike for the academic student and the practical lawmaker. Apparently the brief sections on Municipal Governments in Europe were written from notes taken on a vacation tour, and with the exception of the article on the Government of Vienna, they are too scrappy to be of scientific value. In the chapter on "Local Transportation in Berlin" it is a pity that, while the history of street railways is given from 1866, it is not brought within several years down to date. No mention is made of the dissatisfaction of the Berlin Administration due to the dogged efforts of the city railway corporation to evade its obligations and the consequent purchase by the city of a short strategic line and its resolve to grant no more franchises.

The Reminiscences of Albert Pell, Sometime M. P. for South Leicestershire. Edited, with an introduction, by Thomas Mackay. With portraits and illustrations. New York: E. P. Dutton & Co. Pp. lii, 370. $5.00.

Pell's achievements and fame were not of international importance. It is doubtful whether his name ever came westward in the cable news; and probably not one newspaper reader in a hundred thousand on this side of the Atlantic was ever aware of the existence of Albert Pell. None the less American readers who enjoy a really good book about England will find themselves indebted to Mr. Thomas Mackay for his introductory sketch of Albert Pell, and even more for the care with which he has edited Pell's autobiography. Pell was in Parliament for seventeen years, but politics occupy quite a subordinate place in his autobiography. Pell's interests were in rural England. He writes of rural economy and rural life as he saw it in his boyhood days, when his father's home was in Hertfordshire, within sight of the roof and towers of St. Alban's Abbey, and as he observed it later when he was lord of a fen country manor, and made his home in the hunting country of Northamptonshire. Pell was a typical country squire; typical of John Bull at his best. His autobiography stands in a class by itself; certainly nothing so distinctly good in English non-political autobiography has found its way into THE INDEPENDENT office for the last twenty years. There is a vividness about Pell's descriptions of farming and farm life in England before the introduction of machinery and when the rector's tithes were collected in kind that is as good as Cobbett's "Rural Rides," and the style is nearly as vigorous and as picturesque. The flavor and

aroma of the English country-side, and in particular of the fen country beyond Cambridge, has seldom been so admirably transmitted on the printed page as in this autobiography.

Literary Notes

....*How to Get a Position and How to Keep It* is certainly a timely book, and the advice of Mr. Roland Hall on the wording of letters of application and other points of office etiquet will be useful to the beginner. (Funk & Wagnalls, 50 cents.)

....*Essentials of Dietetics,* by Amy E. Pope and Mary L. Carpenter, is adapted both for use in schools of domestic science and as a household guide. It gives a concise and comprehensive discussion of the composition of foods and instructions for cooking, without being under the sway of any of the prevailing fads in regard to eating.

....*The Call of the Waters,* the latest volume of the Interdenominational Home Mission Study Course, by Katherine R. Crowell (Revell, 50 cents), does not make the most of its dramatic subject, the westward march of the frontier and the establishment of Christian institutions. If the style were less flowery and the details more definite it would produce more effect.

....Good collections of short stories by different authors are rare, particularly when as well selected as those *Stories Old and New.* Among them some like "Rab and His Friends" and "The Pit and the Pendulum" are well known; others like Wiliam Austin's "Peter Rugg, the Missing Man," and Shorthouse's "Marquis de St. Palaye" are not so familiar to us as they should be. The brief introductions by Hamilton W. Mabie add much to their interest.

....The late Ernest Crosby was distinguished from most men of extreme opinions by sweetness of disposition and imperturbability of temper. As a Tolstoyan and Single Taxer he was equally opposed to capitalistic monopoly and a socialistic régime on the ground that they were dangerous to human liberty. A small collection of his later essays, one of which first appeared in THE INDEPENDENT, is published by Louis F. Post, Chicago, under the title *Labor and Neighbor* (25 cents.)

....We do not recall any enterprise of a literary sort ever undertaken in America that can compare for splendor of typography and for historical value with that which is just now undertaken by Mr. Edward S. Curtis, of 437 Fifth avenue, New York, backed by J. Pierpont Morgan, and titled *The North American Indian.* The Indian is passing away, and such a work as this would be impossible by the close of another generation. The intent is to give the result of fifteen years of research and travel by Mr. Curtis and his associates, in twenty volumes, at a cost of $150 a volume. It will be a descriptive and illustrative treatment of all the Indians of the United States, who still retain their primitive customs and beliefs. Everything is to be perfect, from the tone of the paper to the portraits of the Indians. President Roosevelt forewords the undertaking with a hearty endorsement. Mr. Leupp, our Indian Commissioner, testifies to the accuracy of Mr. Curtis's work. For contents the work recalls no other similar enterprise but Audubon's monumental "Birds of America." Copies should be placed in the libraries of all the larger and older colleges.

Pebbles

"WHAT did you mean by this poem?" inquired a delegation of admirers. "I didn't mean anything," answered the great poet, frankly. "I wrote that poem for a monthly magazine. I did not expect it to be published in a book collection."—*Louisville Courier-Journal.*

MATES FOR THE MATELESS.

[THESE words are rhymeless: Almost, person, modest, corner, peril, coffin, chilblain, dainty, always, cleanly, outside, nervous, absence, hardly, pageant, language.—*London Chronicle.*]

Poets as we love to call most
  Every bard that writes a verse on
Any subject, it is almost
  Time to call this London person.

Tho I'm reticent and modest,
  As is every word-adorner,
This remark, of all the oddest,
  Draws me boldly from my corner.

"Rhymeless." Say it at your peril,
  Ere I order up a coffin.
Is there no such stone as "beryl"?
  Wide indeed the sleeve I scoff in.

Tho the mention of a chilblain
  Isn't beautiful or dainty,
"There's a rhyme," says Mr. Will Blaine,
  He's authority, now. Ain't he?

Be you smooth or wear you Galways,
  Or from Atchison or Henley,
Rhymes are very easy, always,
  And the sport is—oh, so cleanly!

Words are but a showy pageant;
  Bards are finishers of language
Union laboring—canst imagine 't?—
  For a small and daily gang-wage.

If a bard would only grab sense,
  And would think in manner bardly,
Would he rail at rhymes their absence?
  Would he do it? Would he? Hardly!

Turn 'em frontside, inside, outside,
  And the rhymes will surely serve us.
Why, if I had any doubts I'd
  Be considerably nervous.

—*Franklin P. Adams, in the Saturday Evening Post.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Mr. Bryan's Acceptance

At the beginning of his speech of acceptance, Mr. Bryan says that his third nomination, following two defeats at the polls, "can be explained only by a substantial and undisputed growth in the principles and policies for which I have contended." Among these principles and policies have been the free coinage of silver at the ratio of sixteen to one, anti-imperialism, government ownership of railroads, and the initiative and referendum. For these he has contended with much vigor. But if they have grown in the public mind, he now lays them aside. "A platform," he says, "is binding as to what it omits, as well as to what it contains." It is quite well known that the platform to which he refers (the one adopted by his party at Denver), if not actually written by himself, was made in obedience to his wishes. If any of the policies for which he had contended were omitted, this was done at his own suggestion.

He not only lays aside those we have mentioned; he virtually promises that, if elected, he will ignore them. "An official," he says, "is not at liberty to use the authority vested in him to urge personal views which have not been submitted to the voters for their approval." It is the complaint of certain Republican politicians who hope to prevent the renomination of Governor Hughes that in demanding the suppression of race-track gambling by law he insisted upon something which had not been mentioned in the party platform and "submitted to the voters for their approval." Who will say that the Governor was not "at liberty" to demand this reform and to work for it? Did the Republican platform call for all the reforms in support of which President Roosevelt has made his memorable appeals to Congress and the public? This is a narrow and an unreasonable rule that Mr. Bryan lays down for his own restraint. But it is for the time, at least, a convenient one, for in obedience to it he avoids the discussion of certain principles and policies which would not serve the present purpose of himself or of his party.

In the speech there is nothing about the currency, the use of injunctions in labor disputes, imperialism, centralization, militarism, or governmental extravagance. Mr. Bryan is preparing a series of addresses in which these and other topics will be discussed. It is surprising, however, that even brief references to them were omitted in this speech, which is mainly an answer to Mr. Taft's. Trusts and the tariff are considered only in their incidental relation to Republican policy and motives. There is no word of criticism for Mr. Roosevelt. Much of the speech is an attempt to show that the Republican party has refused to follow Mr. Roosevelt's lead. Mr. Bryan would convince the radicals of that party that only by the election of the Democratic candidates can they obtain such legislation and executive action as will make the Roosevelt reforms effective.

Mr. Bryan's criticism of parts of the Republican platform, of parts of Mr. Taft's speech, and of the Republican record in Congress is not entirely just. Much of it is in the form of questions which would lead an uninformed reader to believe that the Republican party is responsible for all the abuses as to which the national conscience has been aroused; that it has permitted them to go

unchecked; that it has sought to apply no remedies, has neither enacted new remedial laws nor enforced old ones. Now, this is not true. We have felt that Congress was not doing all that it should do, but it is misleading to say virtually that neither Congress nor the Executive has done anything. "Why have not these abuses been corrected? If existing laws are sufficient, why have they not been enforced? Are new laws necessary? Why have they not been enacted?" These are some of Mr. Bryan's questions which are intended to have the force of assertions. He also says:

"For ten years the Interstate Commerce Commission has been asking for an enlargement of its powers, that it might prevent rebates and discriminations, but a Republican Senate and a Republican House were unmoved by its entreaties."

He does not find space for admitting the enactment of the Hepburn Railroad Rate law, which is certainly a statute of some importance, but he does mention the rejection of "amendments" (to something), and especially of one providing for a valuation of railroad property. Mr. Taft has shown, however, that the Commission now has power to make such a valuation. By the way, this statute contains the very prohibition which the Democratic platform demands when it says that railroads should be "forbidden to engage in business which brings them into competition with their shippers." This was overlooked by the Democratic convention, as Mr. Bryan (and possibly Mr. Taft) also overlooked a few weeks ago the existence of a Federal statute forbidding corporations to contribute to campaign funds.

Mr. Bryan ignores not only such important legislation, but also the continuous enforcement of laws, both new and old, against rebating and against Trusts. Are there intelligent Americans who have not heard of the numerous suits of the Government against the railroads, the Standard Oil Company and other great combinations? From Mr. Bryan's speech of acceptance they can get no hint of these proceedings. It is this avoidance of well-known facts, and the attempt by means of such avoidance to present a misleading view of the situation, that are the glaring faults in this speech, which was prepared with deliberation.

As we have said before, Mr. Bryan has an advantage over his opponents in that his committee has decided to publish campaign contributions before the election. Mr. Taft's committee should take the same course. Much of what Mr. Bryan says on this subject is sound and just. But campaign fund virtue is not the exclusive possession of one party. We think it can be shown that the number of Republican States which have by law forbidden corporations to contribute exceeds the number of Democratic States which have done this. And it will not be forgotten that Mr. Bryan's brother-in-law, as an officer of the committee, gladly received in 1904 from Thomas F. Ryan a contribution of $20,000 or $25,000 to be used in Nebraska. Mr. Ryan has been called a "Trust magnate."

It is not strictly correct to call the popular election of Senators an issue which is the exclusive property of the Democratic party. Mr. Bryan says that Republican Congresses have voted for it. We think a majority of the States which have taken similar action are Republican. But it is opposed now by a Republican Senate, and it was disapproved by a large majority at the recent Republican convention. Mr. Bryan promises that (if elected) he will call a special session of Congress to act upon this question. The movement is surely one in the direction of reform, and such legislation as may be required should be promoted. But Senators are now elected practically by popular vote in the States where the people prefer this method and insist upon the use of it. Very recent examples are those of Kansas (where Bristow defeated Long), Illinois and Oregon.

Mr. Bryan attacks sharply the rules and methods by which the House of Representatives has been controlled under Speaker Cannon. His criticism is well deserved. This is known by Mr. Roosevelt, who sought during the recent session, with the aid of Democrats and a small minority of the Republican members, to break down the barrier erected against several of his reform projects by the ruling group. The Republican party has blundered by nominating a member of this group for Vice-President, and Mr. Bryan pertinently points this out.

Unquestionably he is denouncing an evil of considerable magnitude, for which the Republican party is clearly responsible, and we have no inclination to offer excuse for the guilty. Still, it is an evil which has also existed under Democratic rule. The despotism of Joseph G. Cannon and his allies has probably been no more offensive and harmful than was the despotism of the late Samuel J. Randall and the Democrats who stood with him.

Hereafter Mr. Bryan is to discuss in separate addresses the tariff, labor legislation, Trusts and some other topics. The obvious tendency of the Roosevelt policies toward centralization he cannot criticise with much force, because he is committed to a support of a majority of those policies and of others which tend in the same direction. His own platform restrains him from opposing the construction of a large navy, and in answering Mr. Taft's remarks about the great expenditures of the recent Congress he will find it difficult to prove that responsibility for the large appropriations was not shared by his own party. So far as the Brownsville affair is concerned, his opinions, substantially in support of the President, were published some time ago. What he said in a speech in New York shows that he would not express disapproval of the political condition of the negro in the South, even if his rule that a platform is "binding as to what it omits" did not enable him to avoid this subject. The Republican platform on tariff revision, and Mr. Taft's comments upon it, invite effective attack from a man whose most notable speech in the House was on this question.

We trust that these forthcoming speeches will not be marred by such defects are are to be found in parts of this one. It is true that the legislation of the Republican party with respect to the abuses to which the President directed attention has been insufficient, but Mr. Bryan helps neither himself nor his party when he asks the American people to believe that there has been practically no legislation whatever, and no enforcement of laws, old or new. The public has been permitted to know something about the new legislation and the prosecution of offenders under old statutes during the last two or three years.

Atlanta Outdone

WORSE, if possible, than the horrible Atlanta riot is that which has forever disgraced Springfield, Ill. In the capital of the State, under the very eyes of the Governor, a mob of passionate, drunken, crazed white men made war on black men. It was a race riot. Cheated of their desire first to lynch a brutal black criminal, they turned their rage on the whole race, burning, killing where they could. Unable to kill the guilty they tried to kill the innocent, to kill those who detested the crime quite as much as did they—but they were black. Because they were black they were hated; those they could catch they strung up and hanged; the property of those they could not catch they wrecked and burned.

To be sure there was a fearful crime made the excuse for this outbreak. But it was the excuse, not the reason. The reason lay in the mean racial malice of those who took part in it. They were ruffians. They were as low and contemptible as the lowest in the quarter which they sacked. They knew the criminal guilty of the assault on a woman had been caught and would get swift justice; but that was not enough. They wanted the chance to vent their hatred on other people who were not criminals, but who were black. It was not crime they hated, for they were criminals themselves. They were that lower and lowest level of a city's population that have no respect for law, who are kept down by force from open crime, but who sometimes break out and over all restraint of law and show their temporary power. There were just such people in the black quarter of the city; but black men are not all criminals any more than all white men are criminals.

It is a fearful thing to think of, that such a stratum of society can exist in a city, thousands who can thus create a mob to overturn law. It shows how much yet remains to be done to civilize our people. Laws and courts have not yet done it; schools and churches have not done it. After the Atlanta riot those who excused it said that were there similar provocation there would be just such riots in the cities of the North. It has now been proved true of one city in

Illinois; and Springfield will have to carry a heavier burden of shame than does Atlanta, for Illinois was never a slave State. The citizens of Springfield will date events as occurring so many years before or after the riot. We do not forget the draft riot in this city during the Civil War, when maddened mobs pursued black men thru the streets. The possibility that such a riot may occur in other cities oppresses us with fear and horror.

It is some satisfaction that the Governor of Illinois tried to do something to quell the mob. It is a further satisfaction that if men must be killed, those killed were not all black. There was a Gatling gun called out, but we do not learn that it was used. The way to end mobs is to disperse them relentlessly. If warnings are not heeded, if firing once over their heads does no good, then fire low; those will run then that do not fall. A man who joins a mob invites death. When a mob resists the officers of law, then is the time to shoot. When a mob tried to stop the Massachusetts Sixth Regiment as it was passing thru Baltimore the officer in charge bade the soldiers not to fire so long as no one of them was hurt by the shots that were fired from the crowd at the cars in which they were being drawn thru the city. At last one soldier held up his hand and showed that a bullet had struck his thumb, and the officer bade them shoot—and the regiment past thru safely. It would seem that the military at Springfield were afraid to awe the mob lest they might hurt somebody—but that is what the military are for.

The negroes have been fleeing from Springfield—what else was to be expected? The women and children ought to flee in such a case—perhaps the men. But when violent men, white or black, lawlessly attack other men, black or white, attempting to kill them or destroy their property, what should the attacked party do? Get protection from the police and the laws if possible; if that is not possible, defend, resist to the utmost of human power. That is good law and good morals. When a mob attacks a house or a quarter, those who are in it should make the invaders sorry they came, make them slow to come again. We are not followers of Tolstoy. We accept the direction, in case of danger: "He that hath no sword let him sell his cloak and buy one."

Yet, after all, the chief, solemn lesson from such a fearful tragedy is that of the obligation which rests on the better, the law-abiding, the decent elements of society somehow to reform, to civilize and Christianize the pagans in their own midst. It is not enough for the negroes to rail at the failure of law to protect them, nor for white men to rail at the crimes which provoke reprisal, or at the inefficiency of police and military. What is needed is that the well-behaved black men and white men should each invade their own slums with all the possible appliances of persuasion and enforcement to make them decent. After all, as Judge Lindsey says in this week's issue of THE INDEPENDENT, it is society, it is we of the people, who are to blame for the evil conditions which we do not correct.

"Culture, Thought and Beauty"

MIDDLEBURY COLLEGE is fortunate in its young new president, J. M. Thomas, D.D., a man whose writings are not unfamiliar to the readers of THE INDEPENDENT. His published inaugural treats wisely of Religion and the Higher Education, and anticipates with hope the future of this institution. Dr. Thomas enters into a succession of able and energetic men, such as Presidents Labaree and Brainerd, and he is unusually well fitted for the task before him, which is no small one.

But we are inclined to question whether, in his emphasis on the value of a small college, he has not underrated the product in men of larger countries than little Greece and little Judea. And somewhat, perhaps, does he underestimate the idealism of the American people. We are not all materialistic. If we have plundered our forests and wasted our soil, Greece and Italy and Palestine and France and Great Britain have done the same and worse before us. President Thomas says:

"We have had but one Emerson. The great Americans have been Edison, Morse, Fulton and their like, together with the masters of business who have heaped up the largest fortunes the world has known. Were all America to be blotted out, past and present, the loss to

the world of culture, thought and beauty would not equal the loss of one short year of Athens, or of one man of a dozen that might be named who lived their life with God in the hills of little Judea."

Even as specified, the steamboat, the telegraph, the electric light and the telephone have, we think, done not a little for "culture, thought and beauty," not to speak of comfort, good fellowship and civilization, which are not to be despised. Emerson has his value to literature and thought, but perhaps not more than Jonathan Edwards a century before him. Blot out America, and with it you blot out all the republics of the American continents, and half the influence that has given representative institutions to Europe and Japan; and liberty is worth something. America has been busy subduing the continent, and has done it grandly; but there is not on the face of the earth a country that has higher national ideals or more idealistic citizenship. Judea had the chance to develop monotheism and make the Bible. That task is done and is not for us; but, apart from that, little Judea had nothing of civic righteousness or God-fearing citizenship that surpasses what prevails here. And in no land is the composite spirit of little Greece, so practical and so idealistic, so given to games and pleasures, and at the same time to philosophy and poetry and art, richest of all lands in genius, more freshly and fully duplicated than in our own broad country.

It is because of this diffused practical idealism that little rural Vermont can boast two colleges, and President Thomas can hopefully look to its friends for its fuller endowment and its enlarged usefulness.

Our Confounded Education

We are not ejaculating expletives. We are speaking quite seriously and wish to be understood literally. Speaking precisely, our educational methods and institutions in America are confounded, and the practice called coeducation is the smallest part of the confusion. We are wasting money, energy and intellect in trying to run our colleges as universities and in managing our universities as if they were only overgrown colleges.

Our teachers, professors, graduate-students and "presidents" are all familiar with the facts. At every educational convention and in nearly every number of the educational journals comment is made upon our low and undifferentiated estate. Quite clear thinking on the subject, however, is somewhat rare and it is unusual to see the situation so clearly described as it has been in a recent paper by President David Starr Jordan on "The University and the College." Whether one accepts all of President Jordan's opinions or not, one will at least acknowledge that he has not made our confusion worse confounded.

In modern times the word "university" as the name of an educational institution means any one of four quite different things. The German university is a body of eminent scholars, investigators and advanced students pursuing highly special or professional studies. It concedes and secures to all who are legitimately a part of it a wide personal and a complete intellectual freedom. It knows nothing of that oversight and discipline which are essential features of school and college life. It may have many students or a few, but in either case it has ample laboratory facilities and large library resources. Its business is to advance knowledge, not to train boys.

The English university of the Oxford type is a mere group or collection of colleges, some better than others, none bad, and none attempting to do university work within the German meaning of the term. The English examining university, such as the University of London formerly was, is not a teaching or an investigating body. It is an examining and certifying board, with authority to confer degrees. The Regents of the University of New York are a university in this sense.

Finally we have that peculiarly American product, the exceptionally small and isolated denominational college, unknown even by name to any large part of the educated world, slightly above the average village high school in its requirements and achievements, but ambitiously calling itself a "university."

Not any one of these universities, however, corresponds to the institution commonly called a university in the United States. The Johns Hopkins University

at Baltimore more nearly than any other American institution in the first years of its existence approximated the German ideal. Somewhat less closely the Hopkins of today and Columbia University in New York, with its large number of graduate and professional students and relatively small number of undergraduate, or college students, approximate the same ideal.

The other great American universities, admirable, distinguished and wealthy as many of them are, hardly suggest the German reality. They are an unwieldy combination of college and university courses, college and university methods, college and university faculties. Their strong scholars—and they have some—are obliged to waste much time and energy in teaching college boys, and their college teachers are forced to work in an environment which exalts research above the instructor's art. Mature students, who should be left to their own devices to sink or swim, are subjected to college surveillance, while college boys have a degree of liberty and breathe a semi-university atmosphere that is not good for them.

This is the substance of President Jordan's arraignment of our higher institutions of learning, and we believe that, as we have stated it, it is well within the truth. An evil which President Jordan does not mention is the American attempt to teach college boys by the university lecture system. We have so often in these columns commented upon this particular phase of failure that we need not say more of it at this time.

We need in America a strong revival of faith and interest in the small college. The movement toward an absorption of the small college in the so-called university has, we think, spent its force, and the inevitable reaction will be wholesome. Were it a fact that all college graduates are going into professional schools, it might be well for the small college to cut off one or two years from the top end of its curriculum and take on a year from the high or preparatory school, as President Jordan recommends; but such is not the case, and the present college curriculum is not too high for those who there end their period of study. Training boys in manliness and in the humanities, it would decently fit them for the professional or research courses of the university, or for entrance upon a business career as educated men. And with the small college developed as such, and cut loose from the university, we should begin to have also universities worthy of being so called.

Political Organization

Some idea of the thoroness and completeness of the Republican organization thruout the country was brought out as a result of Chairman Hitchcock's recent visit to Chicago. In Indiana the city block in cities, and the school districts in the country, are the units of organization, and each unit is placed directly in charge of a reliable worker, who is held responsible for the results therein. He is expected to know every voter, his political affiliations and his susceptibilities. The Indiana organization, or "machine," as its opponents call it, has the reputation of being the most effective in the Central West. In Illinois the precinct is the unit, and ten men are placed in charge of each precinct. The State Committee has at its command 4,000 men, who can be depended upon at short notice to get into political action. These men make a careful canvass of the State at least every two years. In Pennsylvania there is a system of county leaders who are held responsible for the results in the counties. These in turn hold the city, town, village and township leaders responsible for results in these sub-divisions. The State leader is over-lord, seeing that his subordinates of various degrees perform their duties and "produce results."

Under the Nebraska system a careful card catalog record is kept. His place of residence, his political belief and characteristics and peculiarities are carefully noted, and are available at a moment's notice. As the Chicago *Tribune* illustrates the plan in this way:

> "When Mr. Hitchcock wanted to know how Bill Jones, of the Seventh Precinct of Posey County, State of Indiana, stood, all he would have to do would be to pull out the section devoted to Posey County, Indiana, find the Seventh Precinct, and there would be Bill Jones up to date, with full details of how he had married a new wife, bought fifty acres of land from Jim Simpkins, and now was going to church."

The Republican chairman is quoted as favoring this plan, and it seems likely to be adopted so far as local conditions will permit. This insight into the machines of the Republican party shows why that party is so uniformly effective and successful. It believes sufficiently in the principles it stands for to work and fight for them. It organizes its success just as von Moltke organized the German army before the Franco-Prussian War. Frequently the tide in the early part of a campaign seems all one way, but later on the effectiveness of compact, vigorous fighting, shoulder to shoulder, according to a carefully devised plan, manifests itself and the victory perches on the banners of the best organized army.

Sandals

SOME years ago a novelist devised a new attraction for his heroine, a well-shaped foot. Ladies with perfect eyes, noses, teeth, lips, hair, hands and even ears had always been common, at least in fiction, but the idea that one could have a perfect foot so took the world by surprise that the book had an unprecedented sale and as a play is still on the boards. Everybody except those restrained by their principles fell in love with Trilby.

Now this unique attraction of Trilby's was not due altogether to an exceptional gift of nature, but to the fact that she never had worn shoes. Weismann's theory that acquired characteristics are not inherited receives additional support in that in spite of artificial deformation of the feet of both sexes by hard and tight shoes for generations, the feet of the new-born are still constructed on the old model. Man's intent has been to make himself a hoof such as the horse has developed out of its digital paws. The horse of the Cretaceous period probably had five toes, soft-padded. His descendant of the present day has a compact bunch of bones bound in by a hard, horny integument. We accomplish the same end when we compress our toes into a rigid shoe.

The purpose is, of course, in both cases to increase the speed and reduce the wear and injury of walking on hard ground. Even the horse's hoof is not hard enough to stand our paved streets and we are obliged to reinforce it with an iron rim. Our tender feet have to have some protection against heat and cold and bruises.

There are two ways of protecting from wear and jar. The covering may be hard and enduring or it may be soft and replaceable. A fort can be protected with granite or with dirt. A wheel can be tired with iron or rubber. The progress of evolution, natural and industrial, has been generally toward the yielding rather than the resisting material. The early animals were encased in shell or scale armor; the later and more successful models have soft flesh and tender skin on the outside. The hoof we have already noted as an exception to this rule. Another is our own foot covering, which has remained of leather, altho we have long since discarded leather clothing and hats for lighter and more flexible material.

The Japanese and Chinese seem to have gone a step beyond us in this matter. We really need little or no foot covering in our houses, and for outdoor use the shoe best adapted to the double purpose of leaving the foot in its natural condition and protecting it against the heat, cold or dampness of the pavement, the jolt of the step, and the feet of others, would be an elastic felt shoe about half an inch thick with a waterproof coating. The Chinese shoe is the nearest approach to this, as it is light, soft and thick. But it makes the foot look big, and this objection, being an esthetic one, is invulnerable, so there is no use discussing it.

It is curious how long a piece of apparel remains in use after it has lost its reason for existence. Some of us can remember when boots reaching nearly to the knees were still worn in cities altho there were no mudholes or brier patches to wade thru. At the present time there is no reason for wearing heavy and high shoes in summer, yet only part of the urban population has adopted the lighter and lower styles. But the movement tho slow is continuously in this direction. Shoes get more decolleté every summer. This process of dematerialization will go on till there is nothing left of the shoe but its sole. Then we shall have the sandal, which is already coming into use, chiefly it is true for children, but the age limit is rising. This summer many women have

adopted them and even an occasional member of the more conservative sex. The sandal is in some circumstances the most satisfactory compromise between hard shoes and barefootedness, for it gives stiffness and protection where it is most needed and yet leaves the foot undeformed and aerated.

The Candidacy of Loisy

By the death of M. Jean Réville, the well-known author and writer, whose work on the Episcopate is doubtless the most exhaustive that has as yet appeared, the chair of the history of religions at the College of France is now vacant. The faculty of this great school is a self-perpetuating body, who elect not only their members, but also may abolish chairs, in both cases, however, subject to the approval of the Minister of Public Instruction. The death, therefore, of Professor Réville brings up the question of keeping up the chair of the history of religions and of electing a successor. After the opening of the next scholastic year, in November probably, the faculty will be summoned by the Minister of Public Instruction to vote on the first question. There is little doubt of their assent to maintaining the chair. Then will follow the choosing of a new professor. The College of France, in union with the Academy of Moral and Political Sciences, present to the Minister of Public Instruction the names of two candidates, of whom the Minister usually selects the first. Many are the candidates, among whom stands Loisy, around whose name is stirring almost as stormy a discussion as attended some of his writings. The Catholic press is indignant that a *defroqué* and an *excommunié* should be a candidate, the notorious *La Croix,* the paper of the Assumptionists, terming it "a hateful provocation of Catholics." It is curious that *La Croix* passes over in silence the candidacy of another unfrocked priest, the scholarly Amélineau. The Nationalist press have the same tone. *L'Echo de Paris* published over the signature "Junius" that Loisy was of all exegetes the least fit for the chair, and then went on to analyse the Loisyian methods of handling Scripture. "Junius" wrote for the galleries. He would not dare offer his comment to a scholarly journal. *L'Action Française* calls Loisy in his candidacy the protégé of M. Salomon Reinach, altho it is well known that that learned member of the Institute had nothing whatever to do with the candidacy.

On the other hand, a Hebrew writing in *L'Action* opposes the election of a parson or a priest, and holds that the two Révilles, Albert and John, were out of place in the College of France. The writer is silent of rabbis. He may have written in support of one among the many Jewish candidates. The success which followed Loisy's lectures at l'Ecole des Hautes-Etudes of the Sorbonne is a great argument in his favor. The College of France is free to all students, who are not even obliged to register, except they wish the diploma given by it. The professor must be the magnet to draw. And Loisy has proven already his magnetism. Again, his last work, *"Les Evangeles Synoptiques,"* has won the highest praise from learned critics. In fact, he stands a fair chance of winning out.

Louise Chandler Moulton

"They told me in England," said Louise Chandler Moulton years ago to the editor of THE INDEPENDENT, "that no one could claim the name of poet who had not written sonnets. I had never written one, but I wrote two; and they said they were good." She was a country girl, born in Pomfret, Conn., hardly more than a child when she sent contributions to a popular story-paper of the day, and made an early marriage with its editor. But she grew out of that kind of literary work, studied her art, had larger ambitions, and developed a power in poetic work which her early ambition presaged. She gained culture by annual residence in England and association with the literary lights of Boston, which was her residence. While purely literary and not devoted to reform, she was the intimate friend of the women who led in reform, and it was a rare sight to see her and Mrs. Bullard side by side on a private or public occasion, each the magnificent mate of the other. She was

the author of a dozen or two volumes of novels and verse, and will be remembered also for her chivalrous devotion to the blind poet, Philip Bourke Marston, whose poems she edited. A fair example of her poetic work, which showed more sympathy than genius, is to be seen in the following farewell to Robert Louis Stevenson, written for THE INDEPENDENT:

"Why does my heart ache so?
I've never seen you,
Yet now you're gone I know
What to me mean you.
All things most high and true,
All that I long for—
You kept them well in view,
Sang your brave song for.

"Now you have sped afar,
Ere we resign you,
Down from some distant star,
Look, while we twine you
Love-wreaths that shall not die,
Meet for your wearing,
Shout praise to scale the sky
Where you are faring."

Captain Hobson in Japan

We exprest ourselves pretty clearly as to the addresses of Captain Hobson at the Denver Convention. It is now interesting to see how the Japanese papers comment on the cabled reports of his speeches. The *Japan Mail* says that his statements about Japan eager for war with the United States "show either an almost inconceivable degree of imagination or a plainly disordered mind"; that "such talk is not that of a responsible man," that "if he believes it he must be demented, if he does not believe it he is criminal," and it rejoices that there is no Captain Hobson in Japan. The *Jiji Shimpo,* a leading Japanese paper, speaks in the same tone, but it adds that the anti-Asiatic plank in the Democratic platform commits the party to a policy entirely unworthy of the principles of liberty. We must relieve our country of the impression gained from his military title that Captain Hobson is connected with the navy. He is quite out of it, has since been a public lecturer, and now represents Alabama in Congress; and of all irresponsible people out of the madhouse a Congressman can be the most so; witness Tillman, Vardaman and Jeff Davis.

Chinese Students

That it pays in various ways to be decent and honest is illustrated in the case of the extravagant indemnity extorted from China and returned by Congress to that country. China recognizes the kindly justice by sending one hundred Chinese youth to this country to be educated. They will be the most promising youth that can be found. They will come from many prominent families, and will be chosen for their scholarship and ability. When they go back they will be put into official positions with every opportunity for advancement. The few who years ago were sent to this country have become men of mark, as we have seen in the cases of two Chinese Ministers to this country. They will be—they must be—cordially welcomed at the schools to which they are sent. They should be treated by their fellow-students—we do not say with special consideration, but with all good fellowship. They will be the full equals of their classmates in ability and promise. The good will thus established between the two countries, with its promise of undisturbed peace and the commercial advantages involved, are worth vastly more than the few millions which we have returned. It is well to let China and the East know that there is one Christian nation that means to be governed by those universal rules of honesty and justice which are not merely Christian, but control the conscience of all humanity.

A Vienna Restaurant

Dr. D. S. Phelan, one of the most brilliant editors of the Catholic press, has a habit of going to Rome nearly every summer to keep the Pope and the European Church straight. With the former he has no difficulty, for the Pope happens to be always right, but the European faithful do not please him. He finds they do not go to mass and do not otherwise practise their religion. It is a scandal, he says, that the rulers are, with two exceptions, irreligious. The laws of the Church are ignored. He went into a restaurant in Vienna on Friday, and there was no fish on the bill of fare; everybody was eating meat. He called ostentatiously for fish,

saying he was a Catholic, but people only stared. Dr. Phelan does not understand it. Possibly the reason is that the people are beginning to use their own reason, and they can see in Bible or nature no reason why fish is religious and meat irreligious on Friday, and they don't like any longer to take the word of command for it from men who are no better informed on the subject than themselves. The ladies and gentlemen, he says, who crowded that restaurant were Catholics, and we presume they thought themselves no worse Catholics for disobeying an arbitrary rule first laid down by somebody or other many dark centuries ago.

Church Unity in Australia

A plan of church unity often proposed but never yet accepted seems likely to be adopted in Victoria. For some time the Episcopalians and the Presbyterians have been engaged in correspondence, and both the Presbyterian committee and the bishops have agreed to it, and the Archbishop of Melbourne will present it to the Lambeth Conference for approval. The plan seems to be that the orders of all the present Presbyterian ministers are to be recognized as valid, and that hereafter all ministers will receive Episcopal ordination. Twenty years ago the Presbyterians and Episcopalians in this country were engaged in regotiations following the Episcopal proposal for unity based on the so-called quadrilateral, which embraced as its fighting fourth side the Historic Episcopate. Dr. Smith, of Baltimore, was chairman of the Presbyterian Committee, but after long correspondence the effort was given up as impracticable. We take it that in such a plan of unity—not union—the Presbyterians would not be put under the ecclesiastical rule of the Episcopal Church. The Episcopalians could invite Presbyterian ministers to take part in all religious exercises, while the Presbyterians would still be at liberty to invite Methodists and Congregationalists to their own pulpits. This plan would suit Dr. Newman Smyth, but to American Presbyterians it would, we suspect, seem to discredit their present ordination, and would thus be offensive. On the other hand, the English Episcopalians are discussing the plan with considerable difference of opinion, and the High Church party is decidedly opposed.

We are almost ashamed to answer the question of a correspondent who wants to know if Mr. Taft is a Unitarian, and who says it is reported in Indiana that many Methodist ministers will not vote for him because he belongs to that Church. He has himself said that his father, Judge Taft, was a Unitarian, and he follows his father. It is fortunate if a man in politics has any sort of practical religion; and the conservative Unitarianism which was professed by Presidents John and John Quincy Adams did not hurt them as statesmen. Mr. Taft's style of Unitarianism allows him to be in warm sympathy with Christian missions, as often exprest. But the religion of a good man, Protestant, Catholic or Jewish, ought not to be brought in question for public office.

It was Roger de Coverley's friend, Sir Andrew Freeport, who used to call the sea the British Common. It looks as if the Pacific might be made the Japanese Common. No one can properly blame them if by enterprise, economy, or even by subsidies, they take the whole Pacific trade. The same methods are open to other people, at least until subsidies become so burdensome that the nations have to agree to stop them, as they did in the case of the subsidies to beet sugar.

Some of the New York dailies are amused at the characterization of them by Henry Watterson in an editorial on the "Political Outlook," but some of them do not reprint it:

> "The ironclad partyism of the *Tribune* may be dismissed with the tag 'taken for granted.' But the complete indifference of the *Herald*, the pert cynicism of the *Sun* and the top-lofty turgidity of the *Times*, not to mention the frisky pomp of the *Evening Post*, which seems still to be edited on the heaven-side of Jordan, bode nothing less than a new sectionalism."

The English sparrow has long since taken his place among the American nuisances. Some of our insurance exchanges have recently discovered this same sparrow to be a fire menace, because one of them flew to its nest not long ago with a piece of burning string from a bonfire.

FINANCIAL

Investing in Railroad Bonds

RAILROAD bonds declined, with stocks, in last year's panic, but much of the loss was recovered before the end of the year, and the market values of such bonds have risen in 1908. For these securities there has been an exceptional demand from investors of small means who sought absolute safety, a comfortable rate of interest, and something for which there is a market at all times. There were bargains in railroad bonds during the panic months. Here are the figures for a few of the most trustworthy issues:

	High. 1907.	Low. 1907.	Closing. 1907.	Aug. 15, 1908.
B. & O. gold 4s.....	102⅜	88	97¼	99¾
R. I. gen 4s.....	100½	88	97	95
Atch. gen. 4s.....	102½	89½	96⅜	99¾
Ill. Cent. 4s.....	102¾	97	98	102½
Reading gen. 4s.....	98¾	86½	95¼	98
N. Pac. gen. 3s.....	74¼	62½	68½	73½
Un. Pac. 1st 4s.....	102½	92¾	101½	101¾
West Shore 4s.....	105	94	99	103⅛

United States Steel 5s, which had been 99¾ early in 1907, sold down to 78½ in November, rose to 85⅞ at the end of the year, and are now quoted at 100.

When an investor buys a railroad bond, he lends his money to the company on the security of a mortgage. If the interest is not paid, the bondholders can foreclose, as in the case of a loan on real estate. Absolute safety should be sought, but that goes with an interest yield generally not exceeding 4 to 4½ per cent. Returns running up to 6 per cent. or higher commonly involve more or less risk. Of course, the return to the investor is determined mainly by the price he pays. A 4 per cent. bond selling above par yields less than 4 per cent. in revenue; selling below par, it yields more than 4 per cent. The length of a bond's term is a factor. Tables can easily be obtained showing the net yield of almost any bond at current prices. Those who bought Steel 5s below 80 were fortunate; they are getting more than 6 per cent. on their investment. Gilt-edged bonds can still be bought at prices that will yield 4 per cent. or a little more.

Buyers of railroad bonds should ascertain upon just what property the mortgage rests; whether there are bonds that stand before their own, or others that come after; what the road's gross and net earnings are, and what proportion of the earnings must be paid for interest, rentals and taxes before dividends can be declared. Holders of stock are entitled to a share of the net profits of the business remaining after these "fixt charges" are paid. Here we see the difference between stock and bonds. Dividends vary in rate according to the condition of business and for other reasons; the bond interest rate remains unchanged so long as the road is solvent.

Some are unable to ascertain the facts of which we have spoken. It is not feasible for them to follow the current commercial and financial history of a road. Buyers of bonds should seek the advice of a trustworthy banker or broker. Such information as they themselves can get should be supplemented by his expert knowledge and judgment. If railway finance is a sealed book to them, they must rely wholly upon his advice. A trustworthy banker is within the reach of any one who wants to buy a railroad bond. But it is possible for any such investor to obtain from published manuals a few fundamental rules that will enable him to avoid dangerous risk when he seeks safety only. We have been talking of safe investments, not of speculation.

A New Bank Building

THE new marble building of the Importers and Traders National Bank is an ornament to the city of New York. It is six stories in hight and is entirely devoted to the business of the bank. The directors' room, finished in Circassian walnut and chestnut, is a beautiful one. The cages of the clerks are all of bronze. All the heating, ventilating and filtering contrivances are in the sub-basement, and the basement itself contains the main vault, considered to be the strongest in the city. The entire building is not only artistically finished, but is thoroly adapted to the business of a great New York City bank like the Importers and Traders. This bank was organized as a State bank in 1855 and became a national bank

NEW BUILDING OF THE IMPORTERS AND TRADERS NATIONAL BANK OF NEW YORK,
At the corner of Broadway and Murray Street.

in 1865. Since 1861 it has occupied the same location. Its presidents have been Lucius Hopkins, James Buell, Edward H. Perkins, Jr., and the present incumbent, Edward Townsend, who was elected in 1902. Mr. Townsend is a director of the Broadway Savings Institution and the Bankers' Trust Company, and is a member of the Clearing House Committee. He entered the service of the Importers and Traders as a clerk forty-two years ago. The cashier, H. H. Powell, entered the service of the bank in 1875 as a messenger, and afterward became loan clerk and assistant cashier. Of the three assistant cashiers, G. H. Hulin entered the bank in 1868, G. H. Blish in 1872, and C. F. Regan in 1887. The capital of the bank is $1,500,000. Its surplus is $6,000,00, and its undivided profits on July 1st, after paying $150,000 in dividends, were $1,208,302. The deposits on July 1st were $28,026,559 and the total resources $36,884,261.

INSURANCE

The Sale of the Provident Life

THE event of last week in insurance circles was the consummation of the sale of the Provident Savings Life Assurance Society to Arthur G. Langham, of Louisville, Ky. The primary result of this sale was to eliminate the interests of John J. Coyle, of Philadelphia, and the interests of the several New York banks with whom the stock of the company had been pledged by E. R. and O. F. Thomas. At a meeting of the board of directors, held at the offices of the society on August 12th, the following were elected directors to fill the vacancies caused by the resignation of the directors formerly representing Mr. Coyle and the banks, viz.: George C. Clarke, president of the Tefft-Weller Company; Douglas W. Mabee, paper manufacturer, 132 Franklin street, who lives at Saratoga; W. P. Boone, manager of D. S. Walton & Co., Mr. Mabee's firm; C. H. R. Compton, broker, of 10 Wall street; Arthur G. Langham, insurance, Louisville; C. N. Clarke, lumber, Lexington, Ky.; William B. Ellison, former Corporation Counsel of New York, and William D. Buckner, vice-president of the Prospect Park Bank of Brooklyn. The board will consist of these newly elected members, together with Timothy L. Woodruff; Ralph K. Hubbard, the comptroller of the society; Henry Moir, the actuary; John W. Vrooman, and Royall C. Victor.

Arthur G. Langham has been elected president; Douglass W. Mabee, Jr., secretary, and Ralph K. Hubbard, comptroller.

The Inter-Southern Life Insurance Company, of Louisville, which has been seeking the control of the Provident Life, now officially disappears from the deal, as President Langham, the new owner of 1,047 shares of stock, which carries control, has stated that the transaction is an entirely independent one on his part. The executive energies of the reorganized company are to be immediately directed toward the rehabilitation of the much buffeted concern, and it is hoped to disarm the criticism that has been justly applied to much of the past management. The most rigid managerial economies consistent with an adequate supervision of the interests of the society will at once be instituted. The new president will begin his administration on a platform containing a plank of welcome for suggestions from policyholders, and the interests of the policyholders will steadfastly have consideration. The idea is to make the company genuinely a policyholders' company.

The removal of the Provident from its present complications and inability to write new business will be the preliminary aim of President Langham. The agency department is to be placed at once in competent hands, and a spirited campaign looking toward the securing of new business is to be instituted as soon as the required arrangements to that end can be made.

Among the banks interested in the passing of the control of the Provident Life were the Consolidated National, the Mercantile National and the Metropolitan Trust Company. These institutions, and possibly some others, held the insurance stock as collateral for loans made to the Thomases during the late financial stringency at valuations ranging in the neighborhood of $500 per share. In connection with the transfer of control just made in the case of the Provident Life the remarks of S. Herbert Wolfe (F. S. S.), consulting actuary, who represented certain of the Denver policyholders on the New York committee who were opposed to the transfer, and with which THE INDEPENDENT agrees, are worth the most serious consideration. Mr. Wolfe said:

"It is manifestly improper to permit anybody who can raise sufficient funds to purchase $100,000 of stock to be the custodian of $9,000,000 of assets belonging to the policyholders of an insurance company, who in this way plan to leave something for their beneficiaries. This is not a new idea, for Section 20 of Article II of the stock corporation law of the State of New York specifically provides that policyholders, whether or not they be stockholders, shall be eligible to election as directors of an insurance corporation.

"With this in view, Mr. E. E. Rittenhouse, of Colorado, has proposed to Mr. Kelsey that he use all his power to have this permission made operative, and he has received from Mr. Kelsey assurances of his approval of this idea and his agreement to use every possible effort to carry it out. An attempt, therefore, will be made to have the directors agree to representation on the board by four or five prominent policyholders, who in this way can be trusted to look after their own interests."

VOL. LXV NEW YORK, THURSDAY, AUGUST 27, 1908 No. 3117

Survey of the World

Oil Trust Fine Defended

The Government's petition for a rehearing by the Circuit Court of Appeals in the case against the Standard Oil Company is a sharp criticism of the reasoning and the decision of Judges Grosscup, Baker and Seaman. It was filed on the 21st and is signed by Attorney-General Bonaparte and Special Assistant Attorney-General Kellogg as well as by District-Attorney Sims, who conducted the prosecution before Judge Landis. It was agreed by counsel for the Government at the conference over which Mr. Bonaparte presided that if the appellate court's interpretation of the law should be allowed to stand, successful prosecution of rebate cases would be impossible in the future, and this opinion is exprest in the petition. The Government says that on only one point involved in the trial up to the return of the verdict were Judge Landis's rulings attacked and reversed by the appellate court. This point was his ruling and charge as to evidence concerning the defendant's alleged ignorance of the lawful freight rate. It is shown that the appellate court misrepresented the record in saying that Judge Landis excluded evidence tending to show the defendant's ignorance; that in fact he did admit all evidence tending to show this, part of it being the testimony of Bogardus, which, the appellate court said, was excluded. There was ample evidence, the Government adds, to show that the defendant did know what the lawful rate was. Concerning the appellate court's rule as to what the Government must prove concerning the shipper's knowledge, the petition says it is an impossible one, contrary to the general rule applicable in criminal cases; that if sustained it will nullify the Interstate Commerce law, so far as shippers are affected, will make enforcement of that law impossible and "plunge the country again into the deplorable condition of railroad discrimination and favoritism which existed prior to its passage." The appellate court has "misstated the record as to what evidence was admitted, and misstated the construction which the trial judge placed upon the statute." It has also laid down a rule which "practically nullifies the law." The Government says the court ought to have submitted to the Supreme Court the question to which this rule relates. No tribunal lower than the Supreme Court "should undertake to wipe out" the Interstate Commerce law. Arguing that the appellate court's rule for determining the number of offenses is not the right one because it permits "the shipper and the carrier to elect for how many offenses they shall be prosecuted and how much they shall be fined," the petition cites against it a recent decision of Judge Grosscup himself (who wrote the appellate court's decision), in which "he laid down an exactly contrary rule." The petition says that the three appellate judges have "done great injustice to Judge Landis in misstating what he said and did in connection with the imposition of the fine" of $29,240,000, pointing out that the record shows he did not refer to the parent Standard Oil Company in the words wrongly ascribed to him in the Grosscup decision. It opposes the proposition of this decision that a defendant cannot be fined more than the value of his property, saying that if applied it would prevent the enforcement of many criminal statutes. It contends that the great fine was justified by the facts before

the appellate court. The defendant (the Standard Oil Company of Indiana) had a stock capital of only $1,000,000, but the record before the three appellate judges showed that in the four years during which the offenses in question were committed its net profits had been $33,583,208, while its assets, above all liabilities, ranged from $16,742,413 to $24,414,837:

"The punishment, therefore, is no more severe than that which is inflicted upon a letter carrier who steals a letter and is sent to the penitentiary for three years, thereby depriving him of his earning capacity for that time. It is not nearly so severe as the minimum penalty of five years in the penitentiary imposed upon a banker who misapplies the funds of his bank."

In conclusion the petition says that the appellate court's opinion, if permitted to remain unmodified, will tend to encourage disobedience to law, to impede the enforcement of salutary statutes, and largely to defeat their purpose.——It is reported that owing to opposition in Kentucky, manifested in part by the "night riders," the American Tobacco Company, or Tobacco Trust, will withdraw its buying agents from that State. The "night riders" continue to burn the property of farmers whose business methods they do not approve. On the 19th, Governor Willson pardoned two farmers who had been convicted of shooting and killing one Hazlett, reputed to be a leader of "night riders," saying they were brave men who had done their duty.

West Point Hazers Punished

A final decision has been reached as to the punishment of the eight West Point cadets who were found guilty of hazing. It will be remembered that several contradictory official or semi-official statements concerning the action of the authorities in this case were published. On the 22d, announcement was made by Secretary Wright that his recommendation for the punishment of the cadets had been approved by the President. The two cadets of the first class are dismissed from the Military Academy. These are William T. Rossell, Jr., son of Lieutenant-Colonel Rossell of the Engineer Corps, and Harry G. Weaver, of Illinois. The six cadets of the third class—George Washington Chase, of New York; James Gillespie, of Pennsylvania; Byron Quimby Jones, of New York; William Nalle, of Virginia; William Wellington Prude, of Alabama, and Isaac Spalding, of Oklahoma—are suspended for one year, without pay or allowances. At the conference of Secretary Wright and Superintendent Scott with Mr. Roosevelt it was suggested that all of the eight cadets should be suspended for a year, but the Superintendent insisted that the maintenance of discipline at the Academy required more severe punishment, especially for the two cadets of the first class, who had been ringleaders in the hazing. With this view Mr. Roosevelt and the Secretary finally agreed. In his report the Secretary points out that the offenses of Rossell and Weaver were greater than those of the six lower class men, not only because of what they actually did but also because they were older than the six, had been at West Point much longer and had a better knowledge of the rules. But he does not appear to be satisfied that any of the cadets were guilty of hazing. He consulted the dictionaries, and he says that none of the cadets' acts comes within the published definition of the term. Still, these acts were of an improper character, were in conflict with the regulations and called for severe punishment. In his judgment, however, the six cadets can be punished adequately without a resort to the extreme penalty of expulsion.

Campaign Speeches

Mr. Bryan made a long speech about the tariff, on the 21st, at Des Moines, Ia. The Republican party, he said, was under such obligations to the protected interests, owing mainly to campaign contributions, that it could not revise the tariff for the benefit of consumers. It had deferred revision until after the election, and was calling upon the protected manufacturers for more money. In addition to the old demand for duties equal to the difference in costs of production, it now sought "a reasonable profit," and this would probably be an excuse for raising the rates. Republican leaders admitted that the present duties had been made unnecessarily high to allow reductions for the promotion of foreign trade, but

reciprocal reductions had been prevented. The tariff tax was a great fund given to the manufacturers, and they did not share it with their employees. He explained and defended the Democratic tariff platform, attacked the theory and policy of protection, and advocated a tariff for revenue. Protection was neither right, necessary nor wise in public policy. A revenue tariff would not cause panic nor reduce wages, but would stimulate business and exportation. The Democrats proposed that the change from one system to the other should be made gradually.——On the same day, at Hot Springs, Mr. Taft in a long address to 4,000 Virginians attacked the Democratic party, reviewing its record. It had caused depression by its tariff legislation and had then offered silver coinage as a remedy. The Republicans had repealed the Democratic tariff and enacted the Dingley law. Great prosperity followed, and with it abuses appeared which Mr. Roosevelt had undertaken to suppress. Rebates had been abolished. Monopolies were no longer sustained by them. Additional legislation was needed to perfect the machinery for enforcing the principles laid down by Mr. Roosevelt. The Democrats had had little training in legislation. They would meet insidious and elusive evils by hasty statutory denunciation. Reviewing the last three campaigns, he asserted that the Democrats had insisted upon silver coinage and other issues, practically to the exclusion of remedies for the evils which Mr. Roosevelt had attacked. During the last four years they had proposed government ownership of railroads, the initiative and referendum, etc., but had now withdrawn these propositions. In 1904, their leader had held that the common law was sufficient for dealing with the Trust evil. A part of the speech was advice and encouragement to Southern Republicans. Republican policies, Mr. Taft said, had favored and developed Southern industries.——At Utica, on the 18th, Mr. Sherman was formally notified of his nomination. Among the speakers was Secretary Root, whose address was not political, but a personal tribute to the candidate. Mr. Sherman expounded and commended his party's platform, defended protection, denounced the Democratic tariff policy as an assault upon American industries and wages, and, replying to Mr. Bryan, asserted that the people do rule and have ruled by selecting the Republican party to execute their will.——Mr. Chafin, the Prohibitionist candidate, made his speech of acceptance on the 18th, sharply criticising the Republican and Democratic parties, both of which, he said, had the liquor traffic under their protecting care and were allied to the most gigantic crime that had ever cursed the world.

Railroad Freight Rates

It is said to have been decided last week by prominent railroad companies that there shall be no general increase of freight rates before the Presidential election. For some time past the arguments of the companies in favor of an increase have been widely published by the press, mainly in the form of interviews with leading railroad officers or of statements prepared by them. Strong opposition on the part of manufacturers and shippers has been manifested, and there have been indications of general public disapproval. In certain parts of the country, however, rates have recently been increased, and official protests against the advances, a majority of which were made on the 10th inst., have been received at Washington. The Texas Railroad Commission, with Senator Culberson and the State's Attorney-General, has filed with the Interstate Commerce Commission a complaint against sixty-three railroads operating in the South and Southeast. Oklahoma makes similar complaint. Alabama and Georgia have submitted protests of the same kind. The companies are required to answer promptly, and there will be a hearing in September. In these protests from the South it is alleged that the advances have been made by agreement, or by a combination of railroad companies, and that these companies in this way have violated the Sherman Anti-Trust law. Therefore the Department of Justice is urged to consider the evidence. It is also alleged that the roads are overcapitalized and that the additional revenue is sought in order that the companies may pay dividends on watered stock and interest on excessive issues of bonds.

Labor Controversies

The strike at the Alabama coal mines continues to be marked by much disorder. Since the railway train carrying non-union miners was fired upon, near Blocton, on the 9th (when three persons were killed and eleven wounded), thirty men have been arrested for that crime, one of them being the president of the local union. Fifteen more are in custody, on the charge that they destroyed with dynamite, last week, four houses occupied by negro non-union miners. On the 19th the house of a negro non-union miner named Davis, at Pratt City, was wrecked by dynamite, and two days later Davis was killed by men who shot him from ambush.——In the Jellico mining district (Tennessee) the white miners are driving out the negro miners, about 1,000 of whom have been warned to leave the mines. Near Anthras, last week, seventy negroes, pursued by several hundred whites, sought refuge in one of the mining company's buildings and were defended there by the sheriff and a hundred armed deputies. In that neighborhood a house occupied by a negro woman was burned on the 18th, and she and her five children perished in the flames. This is said to have been the work of white miners.——There has been no movement for a settlement of the dispute between the Canadian Pacific Railroad Company and its machinists, who are on strike. Notice was given by the company that all who did not return to work on the 18th would be regarded as permanently out of the service. This had no effect. On the 13th nearly $1,000,000 in wages earned before the machinists quit work was paid to the men on strike. The leaders of these men now assert that the company's officers conspired to break up the union. It will be recalled that the men struck against the enforcement of the decision of a Government board of arbitration to which they had appealed.——In Indiana, 10,000 coal miners are on strike mainly for the reason that their employers (owing to a hasty and unauthorized strike in one mine) refuse to withhold union dues from the weekly wages.—— The new scale accepted at the Pennsylvania iron and steel mills provides for a wage reduction of about 10 per cent.—— In New York, 5,000 coat tailors, who asked for a wage increase of 20 per cent. (alleging that their pay had recently been reduced) have quit work, a general strike having been ordered by the officers of their union, who predict that within a few days the number on strike in New York and neighboring cities will exceed 30,000. It is predicted by the leaders that within a few days there will be more than thirty thousand persons out on strike in New York and other cities in the neighborhood.

The Springfield Riots

Order having been restored in Springfield, Ill., the troops (one regiment excepted) were withdrawn on the 21st. The special grand jury has held long daily sessions, and at the end of last week fifty indictments had been found. Of the twenty persons indicted, two or three were leaders of the lynching mobs and thirteen are negroes who robbed and nearly killed William H. Bowe, the county treasurer's chief clerk. The prosecution is vigorously supported by the merchants and professional men of the city. Hundreds of negroes have been sheltered in the arsenal. Governor Deneen invites all who have fled to return, and also asks frightened negro residents of neighboring villages to come to Springfield, saying they will be protected there and supplied with food.——In Norfolk, Va., eight white citizens have been fined $100 each and sent to jail for sixty days for attacking the jail in Portsmouth on the 14th, when a mob attempted to take out and lynch two negroes, one of whom had assaulted an aged white woman. Several other men who participated in the attack have been punished by smaller fines and shorter terms in jail.——At Huntington, N. Y. (on Long Island), a mob battered down the door of the jail, a few days ago, intending to lynch a negro named Washington, who had committed an assault upon a white woman and also had attempted to kill her young child. They were driven away by armed deputies, and the negro was then secretly taken to a jail in another town. He had been convicted twice on account of similar assaults, and for one of these offenses had served a term of two years in the penitentiary.

THE FIRST PUBLIC FLIGHT OF WILBUR WRIGHT IN HIS AEROPLANE AT LE MANS, FRANCE.

Peace and Fraternity in Macedonia

The correspondent of the London *Times* in Salonika gives the following vivid description of the rejoicings in that city over the establishment of the constitution:

"Tall Albanians, lean and gaunt and powerful as the wolves of their own mountains; the members of the various insurgent bands, Greek *antartes* from Crete and the mainland, smart and spruce in their dark uniform; Bulgarian *komitadijs,* stalwart and determined-looking in their worn garb of brown, Vlach bandsmen, Servian bandsmen, all armed to the teeth; peasants of every nationality, among them the released prisoners—with the political prisoners all the criminals made good their escape as well—the usual Salonika crowd of Spanish Jews and Levantines, and, everywhere, mingling with their late antagonists, are the Turkish soldiers, admirably well behaved, interested, cheerful even; the old look of dumb endurance has given place to something like hope and animation. Some of them wear a blood-red crescent sewn on their white caps to mark the pioneers of the movement, who went to the mountains with Enver Bey. The Turkish officers, who before scarcely spoke in public, seem new men now that they are freed from that most insidious and horrible of all evils, the dread of espionage. Here and there comes a specially conspicuous figure. Sandanski, the chief of an independent Bulgarian band, captor of Miss Stone, and, last year, would-be captor of Colonel Elliott—dark and cruel and unscrupulous as his own reign of terror in the Perim Mountains; Panitza, his lieutenant, who shot the rival Bulgarian leaders, Sarafoff and Garvanoff, in Sofia; Hassan Chaoush, brigand pure and simple, a splendid person of gigantic proportions, splendidly dressed, who has spent twenty years on his own account in the mountains; a Vlach priest, himself a chief of bands, wearing his high pope's hat, and over his priestly robes a white kilt and all his arms; or Enver Bey, the hero of the hour, an attractive and sympathetic personality, handsome, calm, and intelligent. Hilmi Pasha, for five years the autocrat of Macedonia, appears more rarely, for he does not stand well with the Young Turk Committee; it is impossible to guess what he thinks of this strange and sudden upheaval, for his pale, intelligent face is as inscrutable as ever. Apostol, the most popular and the best of the Bulgarian leaders, is the last to arrive. 'If Apostol comes, then we shall know all is well,' say the Bulgarians. It is the most formidable-looking and yet the most well-disposed and the most perfectly behaved crowd imaginable. The walls of Salonika contain at this moment all the elements of hate and cruelty which have made Macedonia a hell on earth for all its inhabitants. These people, who come linked arm-in-arm, laughing together, drinking endless coffees together, dancing together, have schemed and plotted against each other's lives for years past; they have burned each other's villages and flocks and granaries; they have killed each other and each other's women and children with every refinement of cruelty; the problem of their reconciliation has baffled all the Cabinets of Europe. A fortnight ago, no one in Macedonia would have dreamt this thing were possible. Can these wild elements, the incompatible racial ambitions, be controlled and satisfied by the single expedient of a freely elected Parliament?"

Turkish Affairs

Izzet Pasha, the Syrian Secretary of the Sultan, who fled from Constantinople on the outbreak of the revolution, has taken refuge in London. He escaped from Constantinople on a British tramp steamer bound for the Mediterranean, and narrowly missed being intercepted at Genoa. He is supposed to have carried a few million dollars with him, and he announces his determination of remaining permanently

in England. He declares that both the Sultan and he had long desired a parliamentary government, and the first opportunity had been taken to establish it. He has been joined by his son, Mehmed Ali Bey, until recently the Turkish Minister to the United States. The Young Turks regard Izzet Pasha as the worst of the Sultan's advisers and the instigator of the Armenian massacre. It is possible that they may make some effort to secure his extradition on criminal charges.——The autopsy on the body of Redjib Pasha, the War Minister of the new Cabinet, revealed nothing suspicious as to the cause of his sudden death. The whole city of Constantinople spontaneously assumed mourning for him, and nearly 100,000 people witnessed the funeral ceremony. Osman Pasha has been appointed to succeed him as Minister of War.——The Grand Vizier has announced that the boundary difficulty with Persia will be satisfactorily adjusted. The Turkish troops can be immediately withdrawn from the disputed territory on the frontier.——The willingness of the Powers to give the new régime in Turkey a free hand is indicated by the announcement from Vienna that the Austrian officers in charge of the gendarmerie in Macedonia will be recalled. Russia will undoubtedly take the same action.——The Turkish Government has directed the Ambassadors at Paris and London to enter into negotiations with the French and British holders of concessions recently granted by Turkey, with a view to their annulment on the ground of having been obtained by bribery and fraud.——The Hedjaz Railway has been completed as far as Medina and will probably be extended to Mecca in the near future.

The Persian Situation

The chief danger to the Shah has been the possibility that his opponents would rally to the support of Prince Zill-es-Sultan, the uncle of the Shah, and a rival claimant to the peacock throne. This danger now seems removed by the departure of Zill-es-Sultan for Europe. He was Governor-General of Ispahan, but was deposed from that position in March, 1907. On leaving that city he had an audience with the Shah, August 15th, in which he gave him assurance of his loyalty and exprest approval of the action of the Shah in dispersing the Persian Parliament. His visit to Teheran must have been an exceedingly painful one, for his magnificent palace in the capital was in ruins, and all his papers had been destroyed. It was in this palace that the Anjumans, or political clubs, took refuge and defended themselves against the attack of the Cossacks under the Russian Colonel Liakhoff. After the bombardment, the palace was looted; the portrait of the Prince, after having been riddled by bullets, was sold to an Armenian merchant for three pence, and a bag full of his orders and decorations brought less than $50. Altogether the damage to the palace of the Prince is estimated at $1,000,000.——Ispahan is inclined to follow the example of Tabriz and revolt against the Shah. An attempt was made by the Shah to exile Gadjiaga Nurulla, one of the leaders of the Parliamentary party, but the people of Ispahan closed the bazars and sent out an armed party, which recaptured Nurulla from the guard and brought him back in triumph.——Tabriz is completely under the control of Sata Khan and the revolutionary party. Nobody knows what has become of the expedition of 6,000 men under the command of Ain-ed-Dowleh, the Military Governor of Azerbaijan, which was reported to be approaching that city.——The hatred of the Shah for constitutional government has gone so far that the Russian Minister, Mr. Hartwig, is reported to have warned him against reactionary measures, and to have advised the calling of a new national assembly in November modeled after the Russian Duma and elected by a class system.

Mulai Hafid Triumphs

On July 12th Sultan Abd-el-Aziz set out with 4,000 men from Rabat for Marakesh or Morocco City, the southern capital, which was held by the forces of the rival Sultan, his brother, Mulai Hafid. According to the reports received from the interior his march was a successful progress, troops were flocking to his standard, and he had defeated the troops of his brother in several engagements, but it appears that the truth was very different from the rumors that have been in

circulation during the last month. Abd-el-Aziz indeed reached a point within less than 50 miles of Marakesh, but his troops, altho more numerous than those of his opponent, failed to stand against them and were scattered by a night attack on August 19th. Many of his men deserted to the enemy and the rest were seized with a panic, fighting with each other over the supplies in their baggage train and for horses to escape with. The artillery upon which Abd-el-Aziz had relied proved useless, for some of the guns would not work and others exploded. Abd-el-Aziz, his Grand Vizier and the Minister of Foreign Affairs saved themselves by a hasty flight, taking refuge in Settat, where he is now under the protection of the French. The Chaouia tribes of that region, which had greeted his march toward the capital with such enthusiasm, plundered the defeated army on its retreat toward the sea. The Chaouias were with great difficulty suppressed a few months ago by the French troops under General d'Amade, and now they are likely to rise again. The German Chauvinist press has been accusing the French with supplying Abd-el-Aziz with military support in his attempt to regain the throne, but it is not known how much justification there was for this charge. A French military mission and two British officers, however, are reported to have accompanied Abd-el-Aziz. His downfall is a severe blow to the diplomacy of the French, for they can expect no favors from his successful rival, and they may be compelled to call another international conference to settle the new problems that have arisen. The Paris *Temps,* which ordinarily expresses the views of the French Government, speaks as follows:

"The Powers have always held the vanquished Sultan of yesterday to be the legitimate ruler, and they cannot abandon the position because of one defeat. But if he prove unable to recover from the blow and definitely abandons the struggle, Europe as a whole, and not one or two Powers alone, can validly indorse his rival. This recognition can be neither quickly nor easily effected. Mulai Hafid must, first of all, accept the act of Algeciras and all the treaties outstanding between Morocco and the individual Powers. It is a moot point whether Mulai Hafid, the Sultan of the holy war, can accept these without ceasing to be the anti-European leader to whom the natives have given their confidence."

As a result of his victory Mulai Hafid has been proclaimed Sultan of Morocco at Tangier, and the other coast towns will probably follow this example.

The Annexation of the Kongo

The long parliamentary discussion over the transfer of the Kongo from the personal control of King Leopold to the Belgian Government has been brought suddenly and rather unexpectedly near to a conclusion. The Belgian Chamber of Deputies past the treaty of annexation by a vote of 83 to 55 on August 20th. The debate on the treaty was begun in March, and has continued at intervals ever since, the Chamber being reluctant to assume the financial obligations, amounting to over $21,000,000, as stipulated by the King. Here Woeste, of the Right, secured the adoption of an amendment relieving Belgium of the responsibility of guaranteeing the payment of the interest on the Kongo debt. The colonial bill, which has already past the Chamber of Deputies, repudiates entirely the assumption of the financial responsibility for the Kongo by the Belgian Government, so it is in conflict with the treaty as past. The Cabinet, however, after a long meeting at which King Leopold was present, decided to accept for the present the action of the Chamber, and to remain in office in spite of this defeat of an important feature of the Government project, hoping to secure amendment of the bill in the Senate. The colonial bill as past contains new clauses abolishing the system of forced labor and prohibiting members of the Belgian Parliament from exploiting Kongo concessions. The Kongo Reform Association of Boston regards the treaty as unsatisfactory, because the terms of annexation utterly fail to give certain guarantees of: (1) The abolition of forced labor, which amounts to slavery; (2) the dissolution of the "Concessionary Companies," who monopolize a great part of the Kongo territory; (3) the restoration to the natives of their land and produce; (4) the institution of freedom of trade. The association urges the friends of Kongo reform to immediately telegraph Secretary of State Root at Washington to protest against annexation in this form,

The Abuse of Injunctions

BY SAMUEL GOMPERS

President of the American Federation of Labor.

IT is notorious that the abuses of government by injunction are flagrant and "cry to heaven." Only plutocratic attorneys and bigoted, power-lusting judges refuse to admit this. Even political trimmers are forced to give their approval to planks favoring some limitation of the use of the writ of injunction in so-called labor cases. Personally we have no doubt whatever that sooner or later the Federal and State legislatures will call a halt to the usurpations of the "equity courts" and restore trial by jury and orderly, rational, proper procedure, "due process of law," to those who have been deprived of those rights by the gradual extension of the scope of the injunction. State constitutions are pointing the way, and, as organized labor asserts itself more and more, legislators and candidates for office will see greater and greater light and prove more and more amenable to the voice of reason.

Yet there are some well-meaning men whose surroundings and associations are such that they are unable to appreciate the significance of the whole movement against the intolerable misuse of the injunction by predatory interests, who are so blind as to believe that modern society and industry cannot get along without the stretched injunction, and that if we were wise and "progressive" we would be clamoring for "more equity" instead of for less.

Justice Brewer, of the Supreme Court, is as upright and intelligent as any member of the highest bench, and he has often shown great courage and independence. On the injunction question, however, he is strangely behind the time, amazingly out of touch with reality, with the facts and conditions of life. He has not only protested against any limitations of the injunction power or even the propositions to prevent its abuse, but in one of his addresses he expressed the following sentiment:

"As the population becomes more and more dense and activities increase, the restraining power of the equity court is worth vastly more than the punishing power of the criminal court. It is in line with the highest thought of the day. We aim to stay the epidemic and not to cure the ravages of disease after it has gained headway."

What does this mean? That trial by jury should be still further restricted, that more arbitrary power should be conferred on judges, and that cherished common-law principles should be abandoned in the interests of corporate "property"? We cannot do better than to reproduce the following criticisms of Justice Brewer's dictum from the editorial columns of that able journal, the Springfield (Mass.) *Republican:*

"There seems to be only one interpretation for this, which is that equity jurisdiction should be substituted for the criminal law or more and more applied in that direction. In other words, equity should more and more be expanded beyond its original and proper functions and made to do service in the field covered by law as well as in that which the law could not define and cover beforehand.

"And this would be to merge in the equity judge the executive and legislative as well as the judicial agencies of government. Clothed with and exercising the power to restrain actions already criminal under the law, and actions complained of which the law has refused to brand as criminal, the equity judge becomes at once a potential executor of the law and a maker of law in his unlimited discretion, and in the execution of his own laws or those duly enacted he acts as prosecutor and jury as well as judge. Something of this power the courts of equity have been widely indulging themselves with, and Justice Brewer seems to say we ought to have more and more of it rather than less.

"We have lately heard much from judges and eminent lawyers of the rise of a dangerous one-man power in the government of the country—of an Executive who would merge judicial and legislative functions in himself, and make this a government of men and not laws. Justice Brewer himself, we believe, has shared these views and misgivings. But is he not here suggesting a government of men and not laws, an arbitrary government, a government of one man or group of men, an absolute government—and none the less so by reason of merging all the agencies of government in the judicial rather than in the executive department? The proposition is unthinkable. It is amazing that this great jurist should even seem to give his assent to a situation or arrangement leading inevitably to such an end."

Yes, amazing and unnatural. It would be alarming if the whole drift and tend-

ency were not decidedly the other way. The truth is that so-called equity jurisdiction had its origin in tyranny, "the king's conscience," benevolent despotism, and that if the law had not been unduly technical and uncertain in its early stages there would have been little chance for "equity." In our time, democracy being the law of our political being, and popular rule being assured of supremacy by all sorts of checks and safeguards—the referendum, the recall, direct primaries and direct elections—it is an absurdity to advocate the isolation and immunization of equity judges. The need is for greater simplicity and greater protection of popular rights in the courts, and these cannot be secured except through jury trials and strict responsibility of the judges to the people.

Prof. F. J. Stimson, of Harvard, an authority on legal questions, has something to say in a new work on "Federal and State Constitutions" on equity courts and their powers which we commend to the plutocratic editors, the attorneys of the anti-union labor employers, and the corporate champions of "equity" and "the integrity of the courts." Mr. Stimson shows that chancery jurisdiction was originally opposed as an interference with the common law, and that "our ancestors" had a profound dislike and distrust of courts of chancery. After citing many authorities Professor Stimson says:

"These are sufficient to establish the general principle that the injunction process and contempt in chancery procedure, as well as chancery jurisdiction itself, is looked on with a logical jealousy in Anglo-Saxon countries as being in derogation of the common law; and that, while an injunction to prevent irreparable injury to property or private rights will not be refused because the injury be also a crime or misdemeanor, yet the naked principle is undoubtedly true, as indeed is the history and the logic of the thing, that under the English legal system the power of the King's Chancellor may not be invoked to forbid or punish a crime as such, thus taking away the jurisdiction of the common law courts and depriving the accused of his trial by jury. The objection therefore to the abuse of the injunction is sound, and this in our country not only for the historical reasons we have explained, but because it tends to make the courts no longer judicial but in effect part of the executive branch of the Government. This is the sense of the popular phrase —and most popular phrases have some sense— 'government by injunction.'"

In line with the clear exposition of the intent of injunction process we find this from the gifted pen of that great legal authority, High, "On Injunctions," in the latest edition of his great book:

"Equity has no jurisdiction to restrain the commission of crimes or to enforce moral obligations and the performance of moral duties; nor will it interfere for the prevention of an illegal act merely because it is illegal, and in the absence of an injury to property rights it will not lend its aid by injunction to restrain the violation of public or penal statutes, or the commission of immoral or illegal acts."

The greatest legal authorities have held with labor's contention in the injunction process. The Supreme Court of the State of Montana, in a decision rendered last month, upheld in its entirety every contention which labor makes upon that subject.

The crass ignorance of corporation lawyers and a hostile press is so rampant on the position and attitude of labor upon the abuse of the injunction process that we deem it a public service as plainly and concisely as possible to submit labor's attitude and contention. It will be seen that labor neither questions the integrity of nor desires to "shackle" the courts; that it stands for and insists upon absolute equality before the law—nothing more, nothing less. We believe that we have the right to demand that the press, however hostile, shall not wilfully misrepresent or misinterpret labor's position. We ask a careful consideration of labor's contention upon this all-important question of our time, and we challenge a discussion of the points here submitted. Labor insists that:

The writ of injunction was intended to be exercised for the protection of property rights only.

He who would seek its aid must come into court with clean hands.

There must be no other adequate remedy at law.

It must never be used to curtail personal rights.

It must not be used ever in an effort to punish crime.

It must not be used as a means to set aside trial by jury.

Injunctions as issued against workmen are never used or issued against any other citizen of our country.

It is an attempt to deprive citizens of our country, when these citizens are workmen, of the right of trial by jury.

It is an effort to fasten an offense on them when they are innocent of any unlawful or illegal act.

It is an indirect assertion of a property right in men when these men are workmen engaged in a lawful effort to protect or advance their natural rights and interests.

Injunctions as issued in trade disputes are to make outlaws of men when they are not even charged with doing things in violation of any law of State or nation.

We protest against the discrimination of the courts against the laboring men of our country which deprives them of their constitutional guarantee of equality before the law.

The injunctions which the courts issue against labor are supposed by them to be good enough law today, when there exists a dispute between workmen and their employers; but it is not good law—in fact, is not law at all—tomorrow or next day, when no such labor dispute exists.

The issuance of injunctions in labor disputes is not based upon law, but is a species of judicial legislation, judicial usurpation, in the interests of the money power against workmen innocent of any unlawful or criminal act.

The doing of the lawful acts enjoined by the courts renders the workmen guilty of contempt of court, and punishable by fine or imprisonment or both.

Labor protests against the issuance of injunctions in disputes between workmen and employers, when no such injunctions would be issued when no such dispute exists. Such injunctions have no warrant in law and are the result of judicial usurpation and judicial legislation rather than of Congressional legislation.

In all things in which workmen are enjoined by the process of an injunction during labor disputes, if those acts are criminal or unlawful, there is now ample law and remedy covering them. From the logic of this there is no escape.

No act is legally a crime unless there is a law designating it and specifying it to be a crime.

No act is unlawful unless there be a law on the statute books specifying it to be unlawful, hence it follows that:

No act is criminal or unlawful unless there be a law prohibiting its commission.

It is agreed by all, friends and opponents alike, that the injunction process, beneficent in its inception and general practice, never should apply and legally cannot be applied where there is another ample remedy at law.

We assert that labor asks no immunity for any of its men who may be guilty of any criminal or unlawful act.

It insists upon the workers being regarded and treated as equals before the law with every other citizen; that if any act be committed by any one of our number, rendering him amenable to the law, he shall be prosecuted by the ordinary forms of law and by the due process of law, and that an injunction does not lawfully and properly apply and ought not to be issued in such cases.

The injunction process as applied to men engaged in a dispute with employers includes the allegation of criminal or unlawful acts, as a mere pretext, so that the lawful and innocent acts in themselves may also be incorporated and covered by the blanket injunction. And the performance of the lawful and innocent acts in themselves despite the injunction renders them at once guilty of contempt of the court's order, which is summarily punished by fine or imprisonment, or both.

In itself the writ of injunction is of a highly important and beneficent character. Its aims and purposes are for the protection of property rights. It never was intended, and never should be invoked, for the purpose of depriving free men of their personal rights, the right of man's ownership of himself; the right of free locomotion, free assemblage, free association, free speech, free press; the freedom to do those things promotive of life, liberty and happiness, and which are not in contravention of the law of our land.

We reassert that we ask no immunity for ourselves or for any other man who may be guilty of any unlawful or criminal act; but we have a right to insist, and we do insist, that when a workman is charged with a crime or any unlawful conduct, he shall be accorded every right, be apprehended, charged and tried by the same process of law as any other citizen of our country.

With our position so often emphasized and so generally known, it is nothing less than wilful untruth and misrepresenta-

tion for any one to declare that it is our purpose to obtain any special privilege, particularly the undesirable and unenviable liberty of creating a privileged class of wrongdoers.

When the real purposes and high aspirations of our movement and the legislation it seeks at the hands of the law-making power of our country shall be better understood by all our people, and the great uplifting work which we have already achieved shall find a better appreciation among those who now so unjustly attack and antagonize us, our opponents will be remembered for their ignoble work and course.

The injunctions against which we protest are flagrantly and without warrant of law issued almost daily in some section of our country and are violative of the fundamental rights of man. When better understood, they will shock the conscience of our people, the spirit and genius of our republic.

We shall exercise our every right, and in the meantime concentrate our efforts to secure the relief and the redress to which we are so justly entitled.

Not only in our own interest, but in the interest of all the people of our country, for the preservation of real liberty, for the elimination of bitterness and class hatred, for the perpetuation of all that is best and truest, we can never rest until the last vestige of this injustice has been removed from our public life.

In addition, I should add that the toilers do not wish to become, as Mr. Taft has declared "they desire to become, a privileged class of wrongdoers." Labor asks no right which is not accorded every other citizen. The workers are just as patriotic and law abiding, if not more so, than any other citizens in any walk of life in the entire republic.

Labor in its opposition to the abuse of the injunction is not acting alone for the rights and protection of its own men, but in the interest of the freedom of all the people. It recognizes that the rights and freedom of a people as a whole are not and never have been denied or invaded at one time.

It has always been the policy and tactics of reactionaries or oppressors to first deny or invade the rights and freedom of one set of people at one time, then another class at another time, and thus, by a subtle procedure, encompass the domination of greed, wealth and power of the few and practical slavery of the masses of the people.

Labor recognizes that our government, our republic, is one of law, not a government of whim, fancy or discrimination; that it is not, in theory at least, personal government. And yet the injunction process as used, or rather, abused, is government of whim, fancy, discrimination, personal government all combined in one.

Labor contends that equity power and equity jurisdiction—that is, discretionary government by the judiciary for well-defined purposes and within specific limitations—granted by the Constitution to the courts, has been so expanded and extended without statutory authority that it has usurped the functions of the legislative and executive branches of the Government, that it has invaded the fields of government by law and robbed the people of their personal rights and of their individual liberty.

Labor contends that in the same degree that government by equity (injunction)—personal, discretionary government—advances, republican government, government by the people, government by law, is forced back.

Labor asks no immunity, it demands for its men equality before the law with every other citizen of our country. It will be content with nothing less.

Labor proposes to secure this fundamental right, not for the toilers alone, but for all the people. Labor proposes to secure its rights, not only for the future, but for the people of our own time. It proposes not to wait or to defer action to another day, but to be up and doing to accomplish this righteous purpose now, *now*. And in that effort the workers will use every lawful agency, any political party, their every industrial and political activity, in abolishing the wrong and establishing the right for all time to come. In that effort labor appeals to the conscience and liberty-loving spirit of all the people.

WASHINGTON, D. C.

A Negro Town in Illinois

BY IVERSON B. SUMMERS

[There is one town in Illinois which is safe from a race riot. The author of the following article describing it is at the head of a college of commerce in East St. Louis.—EDITOR.]

SITUATED in the northwest corner of St. Clair County, Ill., within a half hour's trolley ride of St. Louis, Mo., is a prosperous, growing town, governed solely by negroes and populated almost exclusively by members of that race, who believe that a higher degree of civilization is attainable for them thru isolation from the whites. It bears the pretentious name of Brooklyn, and is just a span from the great national stock yards, that hive of human industry, where the inhabitants find profitable em-

BURTON F. WASHINGTON, MAYOR OF BROOKLYN, ILL., AT HIS DESK.

ployment while building up their community to greater proportions.

This municipal colonization of Afro-Americans apparently affords a striking refutation of the oft-repeated claim that negroes are born to follow and never lead—for it seems to have progrest to a degree of unusual prosperity, and its possibilities are yet only to be estimated. The executive heads boast, and county officials have been heard to say, that there is less crime, even fewer violations of the "city code," within the confines of this little corporation than in many of the larger towns of mixt population of contiguous territory.

In these days of race-question agitation when clash and clamor come from the colored clans, and speculation is rife as to what the eventual outcome will be, Brooklyn must prove a source of interest-

ing study to advocates of the colonization scheme as the final means of satisfactory adjustment.

Whites, as well as blacks, who have watched the place grow to its present population of 1,900, agree that a spirit of perfect harmony prevails there in every business walk; that the negroes are law-abiding to an extreme, self-supporting, honest, and proud of their achievements—characteristics which Booker T. Washington and other stellar lights of the race have tried to implant and impress ever since slavery was abolished.

The town has an annual income, from all sources, amounting to more than $10,000, and may levy additional assessments for needed improvements. The present policy is not to incur needless expense. Cash is paid or warrants issued for every investment of public necessity, and the municipal debt is not of sufficient proportions to depreciate the value of property. The heaviest taxpayers are the Wiggins Ferry Company and Terminal Railroad Association, two giant corporations, which have roundhouses, plants and stations in the town.

The mere handful of whites—probably fifty in number—who have habitation in the place live in evident peace with their colored brothers. There is never any race riot or even discord, but they have no voice in the municipal government other than to walk up to the polls each succeeding year and cast their ballots for chosen leaders. Only once in the history of Brooklyn, 'tis said, was a white man ever chosen to town office. That was several years ago, when an unpopular negro was nominated to represent his ward. The citizens banded together and elected his opponent by an overwhelming majority. Prior to and since that time the dusky denizens have held a tight clutch upon the governmental reins. The council meets in regular sessions and drafts ordinances in proper form to suit existing conditions. Civic improvement ideas have recently been taken up with a great deal

MADISON STREET, LOOKING EAST, BROOKLYN, ILL.

of enthusiasm and will probably be incorporated into town laws to insure more systematic consummation.

Two principal business streets, lined with well-kept shops owned by prosperous negroes, mark the merchandising avenues of the place. The town, covering an area nearly two miles square, is laid off in blocks that are filled with little houses, many of them tidy homes provided with lawns and gardens. It is said that a majority of the citizens own their property, and they apparently vie with one another in adding to its value. The streets are graded and the sidewalks before every building are maintained at public expense, a system differing from that observed in most municipalities.

The chief public structure, costing $5,000, is the City Hall, a somewhat pretentious two-story frame building that serves for many purposes. It occupies a conspicuous corner and is surmounted by a 1,000-pound fire gong which calls out the citizens when their services are needed to assist the volunteer fire department. The lower floor of the building is divided into a handsomely appointed council chamber, office of the mayor and headquarters of the chief of police, where the latter resides with his family and transacts official business. The second story is a large public hall, where dramatic and social functions are held, features which are by no means of minor importance in the community. Back of the hall building are the two fire stations, in which are kept ready for immediate use three hose reels and other modern equipment of like character that cost the town $1,500. A system of fire alarm boxes connects with the stations and arouses Chief Daniel Lucas and his twelve volunteers to speedy action when needed. The water supply is adequate, the service being obtained from East St. Louis, three miles distant. Hydrants are plentiful, and there has never been a serious loss of property by fire within the recent history of the town. The department chief draws a stipulated salary and his men are allowed $1.50 each for every fire.

Strange conditions exist here. The relative proportions of school buildings as regards the races, invariably characteristic in other towns, are exactly reversed. The educational abode of the Brooklyn negro is an imposing brick building, two stories in hight, surmounted by cupola and flagstaff, and attended daily by 150 to 200 children. It was built in the fall of 1878 at a cost of $5,000 and christened in memory of Elijah Lovejoy, a martyr for the race. Three teachers are required and the work in all departments is considered thoro.

Time was, in the early history of Brooklyn, when the half dozen white families then living there sent their children to the negro school, but there arose objections to the commingling of the colors, it is said, not from the whites, as is usually the case under such conditions, but from the negroes themselves. The Board of Education was appealed to, and it erected a separate building, a small frame structure, which it permitted the occupants to name "The Sherman School," where the "invaders" might find instruction at the hands of one of their own race for their offspring. It now has an average daily attendance of twenty. Tho the two buildings are in close proximity, there is never any trouble among the pupils. Both races mingle at play during the recess hour, and all meet upon that common plane of comradery known only to childhood. Prof. C. B. Jones, the negro principal of Lovejoy School, is also local superintendent of instruction and has complete control over the white teacher. There are no truant officers in Brooklyn, for the children attend school punctually and are in bed at nine.

Brooklyn has three negro churches, two of the Baptist faith and one of the Methodist, but there are no religious advantages for the whites unless they choose to affiliate with the colored brethren. Most of the whites who are devout enough after a week's hard toil to travel the distance on Sundays, go either to East St. Louis or one of the tri-cities—Madison, Granite City or Venice—a few miles away, where they may find sanctuaries of their choice.

Notwithstanding that there are eight saloons in the place, each of which pays an annual revenue of $500 into the treasury, the morals of the town do not appear to be seriously affected by their presence, so perfect is the police control. There are no restrictions as to the opening or closing hours, but they are held under

complete subjection and summarily deprived of license at the first justifiable charge of disorderly conduct.

Justice is meted out swiftly in Brooklyn. There is no tardy delay incident to the absence of a police magistrate or other presiding official. One can spend an entire day on the streets of the town without hearing a profane word or seeing a drunken man. The conduct is not tolerated under the existing administration. The populace seems to realize that the eyes of the world are upon its demeanor and recognizes the grave responsibility of its self-colonized government. When an offender is arrested for some petty offense he is given quick trial before a magistrate, is sentenced and assigned to the rock-pile, which is termed "workhouse," where he is compelled to pound out macadam at the allowance of fifty cents per day and his board. The result of this practical method of keeping up the town's thorofares has a salutary effect upon those of evil tendencies who are acquainted with Brooklyn justice. The jail records show that not more than ten arrests on an average are made each month, and the majority of these are said to be transient offenders. The big steel cell where the unruly are incarcerated is often unoccupied for weeks at a time. You can always see a Brooklyn policeman, because he is proud of his "harness." His trappings of gilt and blue are in conformity with the metropolitan style and there is quick response to every call for protection.

The local tendency is to educate the young, inculcate the spirit of industry, and to improve every opportunity for advancement that is offered. Secret societies abound here in profusion, the principal ones being the Masons, Odd Fellows, Knights of Pythias, Ladies' Court, Ladies' Chapter, Tabernacle Society; debating organization, which meets weekly to discuss current national topics; several church auxiliaries, and last, but not least, the True Reformers, whose object is to establish in negro communities co-operative banking, industrial and merchandising institutions. The future work of this

LOVEJOY SCHOOL FOR NEGROES.

society is watched with great anticipation by the inhabitants of Brooklyn, as it is expected to produce many solid business enterprises for the town. At various times a local dramatic and minstrel company, composed of the younger set, gives entertainments in the town hall, which as a rule net handsome returns, with which costumes and scenic accessories are purchased for subsequent events.

THE FIRE DEPARTMENT.

Business is conducted by the negro merchants in Brooklyn much the same as in any other place of like population, where the inhabitants depend upon their weekly or monthly wage to provide for their families. Accounts are run at the different stores and payments met with remarkable promptness. The majority of all other current personal transactions is conducted upon a credit basis, and there is not a "bad debt" collection agent in the town. Most of the inhabitants are married, and there is only one instance of miscegenation, the negro husband being worth $12,000.

The labor element find employment at $1.50 to $2 a day, and, as the larger proportion own their homes, where they raise vegetables and poultry, their lot is far from a hard one.

At the head of the administration is Burton Franklin Washington, who, altho confessing to the age of thirty-six, looks scarcely more than a youth. He is a well-groomed, polished negro and assistant teacher in the Lovejoy School. Washington is single, living with his aged mother in a comfortable cottage near the town hall. He bears his honors modestly, but predicts a bright future for his town. It is the one ambition of his life to see it grow to a population of many thousands, and he believes that it will yet become the Mecca of the negro race, when once its existence has become generally known. Mr. Washington believes in colonization of a municipal character, where negroes can be brought together, thrown upon their own resources under equal and fair conditions, and left to work out the race problem themselves. He is sanguine that negro colonies in the form of incorporated towns and villages will be

common settlements within the next twenty-five years, and hopes to make Brooklyn the metropolis of them all. While, in his opinion, it would be better to have complete isolation from the white race, he realizes that there will always be an element to invade the towns, and says there should never be any prejudice of the blacks against the minority. "There is none here," he said, "and there never will be. As an instance of the perfect harmony which has always existed in Brooklyn, a white man here shot and seriously wounded a respectable colored citizen without apparent cause. The assailant was locked up in our town jail, and, altho the injured man hovered between life and death for many days, there was no attempt at violence upon the prisoner. We give the few whites that are here the same show that we have ourselves, if they are determined to stay with us. We pay their school teacher $80 a month, furnish them adequate police protection, and look after their interests as well as it can be done with our means."

Mr. Washington was elected mayor two years ago by the largest majority ever given a candidate for the office, it is claimed—nearly all the whites voting for him. His views upon civic improvement matters, coupled with his personal popularity, was the reason assigned. He is a prominent factor in Republican politics and mixes with men high up in the party. He arises early every morning and goes to his office, where he transacts city business before entering upon his day's duties as teacher. His salary as mayor is $250 per year, together, as he puts it, "with expenses, which often foot up as much more." His "cabinet" consists of a town clerk and treasurer, who receive respectively $200 and $100 per annum, and two aldermen from each of the three wards, whose compensation is fixt at $1.50 a meeting. These have never been known to demur at called sessions. The police department, under command of Chief C. S. Dorman and Sergeant Hicks, would do credit to places of greater pretensions. The chief is paid $60 and the patrolmen $50 per month. The town is lighted by electricity from the plants at Madison and Granite City. There is no sewerage system, but it is the chief improvement planned for the town at an early date, when the revenue shall admit.

Brooklyn within the last two years, it is claimed, has increased 25 per cent. in population, and the ratio is growing as the colonization idea expands. There are not enough houses to accommodate the increasing influx, and efforts are being made to have a syndicate build others.

The busiest man in the place is Dr. W. R. Arthur, negro physician and surgeon, the only local practitioner, who attends white families as well as those of his own color. He is also postmaster and justice of the peace. His wife conducts a drug store that is noted for its neatness and completeness, and a negro prescription clerk compounds for the entire town.

Among the business establishments noted along the leading thorofares are five groceries, three barber shops, one dry goods store, two shoe shops, one furniture store, fish and meat market, poultry stall, two restaurants, drug store, and other establishments to meet the public needs. The biggest negro merchant in the place is James A. Beasely, whose stock is valued at $4,000, and which is looked after by two octoroon clerks. A negro lawyer attends to the local litigation and a negro undertaker buries the dead in a cemetery where only negroes lie.

The picture is simply a case of the bottom rail being on the top, where fate, fortune or whatever it may be termed has brought Afro-Americans together in complete civic organization, and placed the whites under their control in a peaceable, satisfactory manner of living.

Why do the whites reside in Brooklyn? you ask. Simply because of its accessibility to their places of employment —the big steel mills at Granite City and Madison, a stone's throw away; the stock yards in the northern part of East St. Louis, the Wiggins plant or the Terminal shops. It is presumably not a matter of choice that directed their footsteps here. The negroes, too, find paying work in these great industries; their wives look after the housework and raise chickens; while the boys and girls earn wages in the packing houses.

There is much wealth among the negroes of the place. Principal C. B. Jones, of Lovejoy School, is accredited with being worth $25,000; James Rollins, a retired merchant, is figured at $15,000, with

an income of $200 a month; James A. Beasely is believed to have at least $12,000 and George B. Ray $18,000. A bank, real estate firm and newspaper are among the enterprises most needed by the population, according to their opinion.

Stites Township, in which Brooklyn is located, is governed almost exclusively by negroes, and the organization works in harmony with the town.

The records of the founding of Brooklyn have been destroyed, but it is believed to have first seen the light of existence in 1858, when a band of fugitive slaves from Missouri crossed the Mississippi River and built huts on the present site of the town. Later they were joined by fleeing freedmen. For years the settlement was one of direst poverty and squalidness, but destined to become the modern Mecca of colonizing negroes. The place was incorporated in the year 1867 and ever since has been under complete dominance of the race.

East St. Louis, Mo.

Betrayed

(Concluded)

BY JAMES H. WILLIAMS

[This concludes the article begun in last week's issue and shows how Mr. Williams escaped from the ship and the crime he committed to do so.—Editor.]

THIS is a fair sample of consular justice in the early '80s.

I had now been nearly four months on board this notorious blood packet, and I had long been heartsick, sore and sorry for my foolish venture at Kobe. I heartily wished myself back in the "Redwood" or even in that round-bellied, slab-sided, old blubber hunter which I had left at Honolulu. I, therefore, determined to seize the first opportunity to desert at whatever cost, hazard or loss.

I still had my cherished money belt securely strapped around my waist, a fact which no one on board ever suspected, because I had prudently kept its existence a profound secret.

After the affair at the consul's office we were granted a little more freedom and treated with a little more leniency by the after guards. This was a matter of policy, of course, on the skipper's part, but we accepted it for what it was worth and made the most of it, like the true philosophers we were.

One fine morning, just after breakfast, we were all astounded by the sudden announcement that the port watch was ordered aft to receive their liberty money and go ashore for the day. We naturally thought that such welcome news was too good to be true, so we all started aft with palpitating hearts to investigate.

But, sure enough, there stood the old man at the companion way, where he doled out five Mexican dollars to each of us, telling us all to go ashore and be good, and be sure and return on board before turn-to time next morning. He also added that we should have free sampan fare both ways if we were on time. Then, with the generous, forgiving dispositions of deep-water sailors, we promptly forgot all our recent sufferings and sorrows and tribulations in our exuberant, overwhelming gratitude for one day's respite from our hardship and toil. So we left the ship's side as light-hearted and jubilant as schoolboys released for recess, with three ringing cheers for the "Inquisition," as tho she were the best ship afloat.

The little diversions we enjoyed that day are not a part of our story, but one little incident of my own experience is significant of what follows after. In Typhooshang I met a quartermaster belonging to an English steamer lying at one of the docks in front of the city. During the time we were conversing together I told him of what had occurred on board the "Inquisition" and of my present anxiety to leave her.

There is a sort of tacit freemasonry among deep-water sailors which always bids them help each other in distress, and which does not take race, nationality or color into account. The young Englishman promptly understood my meaning,

and offered to assist me or any of my shipmates who could manage to reach his steamer after midnight, when he went on watch, to the extent of stowing us away until they reached the next port. On that particular night, he explained, he would not be on board, as he was on twenty-four hours' leave. The steamer's name, he told me, was the "Sandon," of Sunderland; that, like our own ship, she was chartered for a term of years on the coast, and that she was scheduled to lay at Hong-Kong three days longer. We parted late that evening with many expressions of friendship, and I went directly on board and turned in.

Next morning all of our boys showed up punctually at turn-to time with the exception of one or two laggards, who were brought off later in the police boat and charged three dollars apiece for their ride.

That day the starboard watch went ashore and all went smoothly.

The idea of deserting grew upon me with the passing hours, and the more I thought about it the more determined I became to put it into effect. Of course, I might have slipped over the side unobserved in the darkness and swam ashore, but where was I going to stow away? The captain would undoubtedly offer a reward for my apprehension and return. For the same reason I considered it unwise to swim to the "Sandon" and take my friendly quartermaster at his word to stow me away, for once the reward was offered and the hue and cry was raised, every policeman and coolie in Hong-Kong would be on the alert for my recapture, and every ship in port would be thoroly searched.

Moreover, I had a splendid outfit of clothes, the result of eight years' gathering, and worth at least $100 in American money, which I hated to leave behind.

I had long since decided that the "Inquisition" was no place for me. I felt sure that the sudden show of kindness exhibited toward us by Captain Gammon was only the merest pretense, a temporary truce which would be declared off and the old *régime* of "turn to, knock down and drag out" resumed, more rigorously than ever, as soon as we left Hong-Kong and got out of earshot of the port authorities.

The more I became possest with the idea of desertion, the more determined I was to put it into execution at all hazards.

According to the universal custom in Far Eastern ports, Captain Gammon assigned a "bum boat" to the ship, to supply us with such articles as we needed or wanted, such as clothes, small stores, tobacco, food and even cash, instead of giving us the money to supply our own requirements.

The "bum boat" man, of course, took full advantage of the situation and charged the sailors three prices for his wares, and paid the captain 50 per cent. commission for the privilege of robbing his crew.

Our "bum boat" man was an oily-mouthed, smooth-spoken, two-faced Mongolian whom everybody detested but with whom everybody was obliged to deal, nevertheless. This "bum boat" man was known among the sailors frequenting the port by the somewhat opprobrious cognomen of "Cummshaw," which is pigeon English for *commission.* Like all of his class he was artful and cunning, utterly unscrupulous, cruel and treacherous, and as avaricious as old Shylock himself.

When "Cummshaw" came on board that particular morning I invested much more liberally in his wares than usual, and, craftily, induced some of my unsuspicious shipmates to do the same.

"Cummshaw" was so highly pleased with my unwonted interest in his behalf that he gave me a fine camphorwood box and a couple of small curios by way of "backsheesh."

Having thus gotten into the good graces of the crafty "Cummshaw," I took him aside and offered him ten Mexican dollars to set me ashore with my belongings that night, after midnight, at the same time exhibiting the money as an evidence of good faith. I could tell by the greedy twinkle of "Cummshaw's" wicked little almond eyes that it was a bargain; he simply could not resist the sight of money; it really was his god and high Joss.

So it was agreed between us that he should come after me that night at "two 'clock mornin' time" and take me "shore side." With this understanding we parted; "Cummshaw" sculled ashore and I went about my day's work as usual, with

a head and a heart full of plans for the impending adventure.

Punctual to the minute, "Cummshaw" sculled his sampan silently under our bows at 2 a. m., while I sat on the knightheads with my bag ready packed and slung to the end of the jib downhaul, ready for immediate departure.

I was soon in the boat, dun and dunnage, and we sculled away into the darkness silently, propelled by the long, half rotary sweeps of "Cummshaw's" oar.

"Cummshaw" sculled directly up to a small jetty or boat landing confronting the native settlement on the extreme outskirts of the town.

Making his sampan fast, he shouldered my heavy bag and piloted me thru a mystic maze of narrow, crooked, filthy, dark streets until he came to a small but neat native house, with two hideous-looking wooden images standing in front of the doorway, the diabolical grimaces which distorted their frozen features being accentuated and rendered more intensely horrible by the shaft of light which fell athwart them with unwonted brilliancy thru the glazed paper window.

Here "Cummshaw" dropt my bag, and, instead of knocking, gave a low call. The door was promptly opened by an aged Chinawoman, and we walked in. We were evidently expected, for the woman seemed in nowise surprised by our arrival, even at such an unearthly hour.

The ground floor of the house appeared to be divided into two rooms, and overhead was a loft which was reached by a ladder extending from the floor of the living room below to a scuttle in the floor of the attic room above.

The interior of the house was perfectly neat and clean, and all its internal arrangements showed constant attention, as well as care, and thrift and simple good taste. The furniture was a sort of compromise between the European and Chinese designs, evidently intended to suit all comers. For instance, there were European tables and chairs for the accommodation of white, and low tables and squat mats for the convenience of native guests. And so on thruout the whole household arrangements. A Yankee clock, made in Connecticut, ornamented a small shelf in one corner of the room, and a large American lamp with an enameled bowl stood upon an ordinary drop-leaf table and shed a brilliant light over the whole scene by the illuminating properties of Standard oil. The walls were decorated in the usual Chinese fashion, with painted paper flowers, fans, birds, dragons, etc., and further ornamented with hand-painted pictures of the familiar Chinese conception.

On the whole, the house was anything but forbidding.

After a brief conversation with the old woman who had admitted us, the exact import of which I could not understand, tho, of course, I inferred that it referred to myself, "Cummshaw" turned to me and said shortly, pointing toward the woman by way of introduction: "This my old mama; velly good 'ooman; s'pose you give two dollar, you can stop two day, three day, four day; mama give plenty chow—velly good chow. By'mby, morning time, my sister come; my sister go C'listian school, speak plenty Englese, you by'mby make plenty chin-chin. By'mby, s'ip go 'way, me come tell you, you take 'nother s'ip homeside gallow. Savvy?"

I savvied and paid "Cummshaw" the promised ten dollars and gave "old mama" three more for chow; then "Cummshaw" departed and I retired to rest on a bamboo couch in the loft aforementioned.

Next morning "old mama" called me to breakfast, and when I came down the ladder I saw a young Chinese girl, who might have been anywhere from ten to thirteen years old, seated demurely on a bamboo settee. This was the "sister" "Cummshaw" had referred to the night before. "Old mama" brought me clean water in an earthen basin, a ball of soap and a large towel. After a washup I sat down to breakfast, at which repast the little girl and "old mama" bashfully refused to join me. A good breakfast it was, too, and I did ample justice to it. It consisted of rice, boiled as only a Chinese *can* boil it, with every grain a separate, tempting factor of the meal; small fishes deliciously cooked in oil, fresh duck eggs, watercresses, vegetables, fresh wheat bread and excellent tea.

After breakfast "old mama" presented me with a package of cigarros and I proceeded to smoke and while away the time in an effort to draw the little girl

into conversation. She was very timid and shy at first, but by degrees her reserve melted, so that at the end of an hour or two we were on the most familiar terms.

She spoke excellent English, and with a very slight accent, and seemed to be in all respects entirely natural and childish. She said she had been attending one of the mission schools almost from infancy, and that she was anxious to learn to teach. She told me also that she was not "Cummshaw's" sister (I had suspected as much), but she *was* his niece, and that "old mama" was her grandmother and "Cummshaw's" aunt, and not his mother, as he had intimated.

It was rather irksome sitting in the house all day with nothing to do, and I was in hopes that "Cummshaw" would drop in in the evening and bring me some tidings about the ship. I dared not go out for fear of being observed, and information travels fast among the Mongolians, especially when you don't want it to.

After dinner the little girl returned to her school duties and left me more lonesome than ever, for "old mama" could neither utter nor understand a syllable of English. After a hearty supper I got a book out of my bag and sat down to read until 10 o'clock. Then I went aloft and turned in and was soon sound asleep.

I had not slept long, however, when I was suddenly awakened by the glare of a bull's-eye lantern shining full in my face, a rough hand shaking me by the shoulder, and a loud voice commanding me in good, vigorous Anglo-Saxon to "get up and dress."

I started up in bed and my astonished gaze fell upon two English officers in uniform, and "Cummshaw's" snakelike almond eyes peering at me exultantly in the background. Then the whole situation dawned upon me like a flash. "Cummshaw" had betrayed me and I was under arrest and would be sentenced without trial to three years in purgatory, on board the "Inquisition."

I got out of bed mechanically and began slowly and absentmindedly to dress.

"What is the meaning of this, officer?" I asked, as tho I didn't know.

"It means that you are under arrest," replied one of them, drawing a Queen's warrant about a fathom long from his breast pocket, "on a charge of desertion from the American ship 'Inquisition,' and we are under orders to convey you back to the ship and deliver you to the master. Do you want to hear the warrant read?"

"Yes," I said; "you might as well do everything in regular order." I was not at all anxious to hear the warrant, but I wanted to gain time to collect my thoughts.

So I let him wade thru the long rigmarole of legal dogmatisms while in the meantime I fumbled into my clothes. As soon as the officer had concluded the perusal of the warrant, of which I had heard not a word, I announced myself ready to go. While he was replacing the document in his breast pocket and buttoning up his coat, I asked how they came to know where I was.

"Why," said the officer, "as soon as you were missed the captain posted a reward of twenty dollars with the American consul for your apprehension, and this Chink here," indicating "Cummshaw," went up and split on you to claim the reward; not often these beggars see twenty dollars in gold, you know."

"How came you to leave the ship?" asked the other officer, who until now had remained silent.

"Because she was a living hell," I answered, "like too many of our American and Nova Scotia blood packets."

Then I mentioned briefly some of the horrors which had occurred on board, and how poor Staples had been paid off at Hong-Kong.

"It's a bloody h'outrage," said the first officer, feelingly, "an' h'I don't min' tellin' yer, pore chap, as we don't 'arf like this y'ere job; but duty is duty, you know, an' we must h'obey h'orders."

"I understand your position in the matter perfectly, gentlemen," I said, "and I sincerely thank you for your sympathy; so I'll go aboard with you without delay and face whatever is coming to me. I suppose you want to shackle me," I added, extending my hands toward them in token of humility.

"Naw!" exclaimed one officer, disdainfully. "We ain't got no darbies with us an' I wouldn't put 'em on you if we had. You don't look like a troublesome chap and you're a good lad, anyhow."

We descended the ladder and went out into the night. A drizzling rain was fall-

ing, a sort of "Scotch mist," and there was not a breath of wind.

I walked silently along between the two policemen, "Cummshaw" preceding us with my bag on his shoulder thru the maze of narrow streets leading by devious routes toward the Quay.

"Cummshaw's" sampan was moored to the same little jetty where I had landed the previous night. The surface of the water was as placid as a mill pond and the night was as dark as night ever was.

Without a word of ceremony we entered the sampan and cast off. My bag was placed in the bows, the two officers seated themselves together in the stern sheets, while I took my place on a thwart just in front of them. "Cummshaw" took up his position just forward of me, shipped his long, curved and jointed sculling oar on the little knob which held it to the gunwale, and gave way with long, regular sweeps back and forth in the regular Chinese style.

So we started up stream, our way illumined only by the faint glow from the little Colza oil lamp burning dimly at our bows.

Such a tumult of passionate thoughts as assailed my mind as I sat in that sampan I have never experienced before nor since. I knew that to return to the ship meant three years of actual slavery, constant drudgery, torture, humiliation and abuse. I knew the character of the men with whom I would have to deal, and I knew that for three years to come I would be entirely at their fiendish mercy without hope of succor, escape or redress, and without any assurance of being rewarded for my labor in the end. I would be triced up, shackled down, kicked, cuffed, beaten, maimed or starved, just according to the whim of Captain Gammon and his horde of "buckos." At every port we came to I would be chained to a ringbolt at night or locked down in the lazarette to prevent me from escaping again.

Such, in brief, was the prospect I conjured up in my mind concerning my future treatment if I returned on board, and from what I knew of American ships in general and the "Inquisition" in particular, I felt that in my mental picture I had not exaggerated my probable fate in the least.

These thoughts, in conjunction with my helpless, hopeless situation in the swaying sampan, almost maddened me, and I began to cast about wildly for some means of escape. To leap overboard and try to get away by swimming would be useless; to attack the two big, well-armed policemen would be equally futile and even more foolhardy.

But at length, as we wended our way through the assembled merchant fleet riding at anchor, I could discern the outlines of the "Inquisition" swinging lazily at her cable less than half a mile away. I could tell her even in the almost impenetrable darkness—partly by her position, perhaps, but mainly by long familiarity with her long, low, sneaking hull, the graceful outline of her bows, and the exact rake and slender, tapering symmetry of her lofty spars—so different from any other ship in the harbor, and distinguishable even in the darkness.

Yes, I saw her, a black, infernal specter, silhouetted against the night, and the sight aroused me to desperation.

Then my gaze rested for a moment on the dim figure of the Chinese traitor laboring strongly at his oar, as unconcerned about my future as tho I had been a mad dog.

And then my blood boiled with ungovernable rage and hatred toward this man who had accepted my bribe and then deliberately betrayed me, and who now would sell me into slavery for money earned with the wringing of my own heart's blood. And then as I regarded the swaying figure at the oar a desperate thought entered my brain and took full possession of my whole being: "If I could get rid of him and that infernal oar," I thought, "I would have just one chance."

Lying across the thwarts in the sampan was a short piece of a small English oar with the blade sawed off, leaving about six feet of the shaft. I had noticed it several times in the sampan before I left the ship, but had never been inquisitive enough to ask "Cummshaw" where he got it. I presume, however, that he had picked it up among the flotsam and jetsam of the stream.

This oar shaft was now within easy reach, and I clutched one end of it firmly with my left hand. Then, for a brief space, having made sure of my weapon, I watched the dim figure swaying back

and forth in the murky darkness with rhythmical precision, and the long queue waving with pendulumlike regularity with each stroke.

Behind me I could hear the two officers conversing in low tones, apparently satisfied that their task was to be an easy one and that it was about over.

I realized that any chance of possible success must be dependent upon my own quickness and sureness of aim, but I was young, strong and nimble, as well as desperate, and, therefore, ready to take a chance. So, watching my opportunity, just as "Cummshaw" started on an outward stroke, I suddenly arose and struck him on the back of the head with that oar shaft, exerting all the force I could muster in delivering the blow.

The Chinaman fairly flew over the edge of the sampan, taking the oar, which he still blindly clutched in a deathlike grip, along with him. Then, before the astonished officers could realize what had happened, I dived over the other side and swam away.

The sampan, impelled by her own momentum, continued up stream for a while until her momentum was spent, and then she went with the tide. There is a very strong current in Hong-Kong harbor, and since the officers had nothing with which to propel or control their craft they were entirely at the mercy of the elements.

As for me, I swam under water as long as possible to make a good offing from the sampan. When I came up to blow I could hear the officers shouting and shooting into the darkness, but I don't think they hit anything but the air and water. I am sure they didn't hit me.

As soon as I arose to the surface I made a tangent for the shore. I could tell the direction by the thousands of lights gleaming thickly along the water front and more thinly scattered up the slopes of the great hills overlooking the city.

As I swam toward the shore I could still hear the shouting and the shooting of the forsaken officers adrift in the sampan growing fainter and fainter as they drifted rapidly down stream. My only fear was that the racket they made might alarm some of the harbor police and that I might be pursued and recaptured before I could reach a place of refuge.

But, anyway, the darkness shielded me from view as well as from bullets, and whatever else happened in Hong-Kong harbor that I know not, but they did not get me.

As soon as I got near enough inshore to locate the "Sandon" I swam directly down to her and climbed up her gangway dripping like a drowned rat.

As I had surmised, it was past midnight and my new chum, the quartermaster, was on watch.

"Good God, man!" he exclaimed, as I stood wet and dripping in the glare of the gangway lantern, "is that you? How did you get off her?"

I briefly related my late experiences.

"Come down for'ard, lad," he said, "but be quiet. We'll gi' you a passage down to the Straits, and you'se 'll be clear o' the blame Yankee 'hell hooker.'"

Fifteen minutes later I was clad in a dry suit of clothes, and my wet ones were hung in the fiddley to dry. I was also supplied with food, a pipe and tobacco, and given a good, comfortable bunk.

Next morning at sunrise the "Sandon" cast off her shore fasts and steamed out of Hong-Kong en route for Singapore, 1,450 miles further down the coast.

And, dear reader, that is how I got out of the "Inquisition."

P. S.—I expect to be severely criticised, if not uterly condemned in some quarters, for telling such a yarn as this.

But "judge not, that ye be not judged." I could tell others still more horrible and equally true if I chose and no man could contradict them.

I was young and very reckless in those days; so, too, were the brutal mates who hazed and hounded me to desperation; so was the Chinaman who first accepted my bribe and afterward betrayed me, and so were the kind-hearted policemen who brought the warrant but forgot the handcuffs. But it is all ancient history now. The Chinaman is dead, the policemen have resigned, the ship is lost, and the warrant is outlawed. So I say again, *pax nobis.*

New York City.

Springfield

BY HARRY H. KEMP

In Springfield as the night came down
(Where the great Lincoln's statue stands),
An angry mob rose, murder-bent,
And took the Law in its own hands.

They seized upon a citizen
(Where gentle Lincoln's statue stood),
Whose only guilt was harmlessness,
Whose only crime was negro blood.

His only crime was negro blood. . . .
They left him swinging in the sky
(In Springfield town, in Springfield town,
With Lincoln's statue standing by).

Lawrence, Kan.

Syntony and Wireless Telephoning

BY LIEUTENANT-COMMANDER CAMILLE TISSOT

[Lieutenant-Commander Tissot, of the French Navy, is one of the most highly educated scientific officers of the French Navy. While still a young man and in active service, he took a university master's degree in the physical sciences, which subject he teaches at the French Naval School at Brest. As early as 1896, and while still ignorant of what Lodge and Marconi were doing in the same field, he was busy on the problem of wireless telegraphy, and in 1898 succeeded in establishing communication between the French coast and the Island of Ouessant in the Atlantic, thus creating the first wireless station in France. In 1900 he provided the French men-of-war with apparatus, which enabled them to communicate with one another at a distance of some sixty miles. Since then, he has been continually at work in efforts to improve the methods for the measuring of sound waves. In 1902 he was awarded a prize by the French Academy of Sciences, and in 1905 the University of Paris gave him the degree, on examination, of Doctor of Sciences, *summa laude*. His most recent scientific work has been in what he calls "Syntony," where he has obtained remarkable results, as will be seen in the pages which follow. At the present moment Commander Tissot is endeavoring to establish between the various war ships and submarines of the French Navy easy communication by means of wireless telephony, which highly interesting experiments are also described below.—Editor.]

ALTHO wireless telegraphy is a creation of yesterday, it is now solidly established in the world's industrial life. It will be remembered that its discovery was due to a happy chance. If you insert in an electric current a small glass tube filled with fine metallic filings and stopped by two metal corks or electrodes, the current cannot pass. But if, outside of and independently of this current, an electric spark is produced, the tube becomes a conductor and ceases to be an insulator. The passage of this current can be revealed by an instrument inserted in the circuit for this purpose, such as a galvanometer, for instance. It can also be made to act on a relay and produce registering signs. But in this case the receiving instrument or glass tube must be brought back automatically to its first state, for, having become a conductor under the influence of the spark, it will continue to act as a conductor unless it is given a mechanical blow, for the slightest shock will once more render it a non-conductor and cut off the current. It will suffice, therefore, to provide the apparatus with a sort of knocker, worked automatically by a relay, in order to render the instrument susceptible to new impressions. This knocker is a simple little hammer, put in motion by an electro-magnet, just as is the hammer of an electric bell. Then, by producing a series of short or long sparks, short or long impressions will be made on the receiving apparatus, and dots or dashes be marked on a Morse telegraphic ribbon, governed by another relay.

I have already said that this phenomenon can be produced at a distance, this distance being considerably increased if one of the points from which the electric spark emanates is in communication with a metallic conductor, fixed vertically over the ground, as in the case of the Marconi system. This same effect is produced if the glass tube of the receiver is also in communication with another vertical conductor, similar or identical to the transmitting conductor. Such are the grand lines of the system first thought out by Marconi and employed in the beginning by a large number of experimenters. But as wireless telegraphy developed and came into more general practical use, new methods were found necessary. The large augmentation of the number of stations and the increment of their power rendered the successful employment of the primitive system more and more difficult, especially as all wireless posts have but one common medium for carrying their vibrations — the boundless air. In a word, wireless telegraphy is a species of telegraphy with one common wire, or, to be more exact, it is an optical telegraph whose rays cannot be guided. That the electric spark can produce an effect at a distance is due to the fact that the electrical phenomenon spreads in space as does sound or light.

COMMANDER CAMILLE TISSOT.

The laws governing the transmission of sound are pretty generally known, and are roughly illustrated by the throwing of a stone into the water. Around the point where the stone strikes the water rings are formed, which go on growing wider and wider as they recede. This wave carries motion with it but does not carry matter, for an object floating on the surface of the water simply bobs up and down as the wave passes under it, but does not change its position. Thus we say, scientifically, that movement consists of waves, just as the diapason struck by a violin bow gives birth to a rhythmical movement which moves thru the air in the form of contractions and expansions called wave sounds. Young and Fresnel have shown that this is also the way that light travels, but the vibrations of luminous radiations capable of affecting the optic nerve are much more rapid than those of even a very loud noise. For example, a tuning fork striking the normal *la* makes 435 vibrations to the second, while the vibrations produced by the rays of light which we see run up to trillions! It is not thru the ordinary air that luminous waves travel, but thru a much more subtile medium, which penetrates all transparent bodies and fills all interastral space—the ether.

It is this etheral medium which makes it possible for electrical phenomena to be transmitted to long distances. The mechanism of this propagation is the same as that of light and it moves with the same rapidity, viz., about 186,427 miles per second. When Maxwell first advanced this theory, he was considered very bold. But the existence of electric waves has been experimentally proved by Hertz. Thus, the the spark employed in the Marconi system gives birth to electric waves which travel thru space, and, striking the receiving wires, are detected by the glass tube, just as the human eye or the photographic plate detects light waves. But in at least one respect wireless telegraphy is inferior to optical telegraphy. By the use of lenses acting as mirrors, rays of light for the sending of signals can be sent to stations some miles

away and to one station only. These rays can cross each other in every direction without one interfering with the other, thus permitting the simultaneous transmission of messages, each station receiving the message intended for it and for it alone.

As electric waves and light waves are so much alike, it was expected that the former could be given a special direction. But if an electric wave is to be sent to a long distance, great force must be put into it, and so the length of the wave is widely increased. The wave length, sent out from powerful stations, varies from 1,500 to 1,800 meters, whereas the length of a wave of light is only a few ten-thousandths of a millimeter. Consequently, the property of getting around obstacles, which is in a direct ratio with the wave length, is an important advantage in wireless telegraphy. This fact opens up the great possibilities of a regular reflecting system, but to accomplish this would require the use of great reflectors miles square, which could deflect the electric waves in another direction.

So science has had recourse to other means to remove the defect in wireless telegraphy just mentioned. In order that all stations within a certain radius may not receive a message really intended for but one of them, and in order that two stations may safely correspond with one another, the principle of syntony has been resorted to. By this means, the waves coming from a certain station affect the receiver of but one other station, which makes it possible for wireless telegraphy to defy intervening obstacles and to avoid worldwide publicity to its messages. Here, briefly told, is the way in which this grand feat is achieved. I call it grand, for besides its other advantages, we hope, eventually, thru it to be able to transmit by electric waves the sound of the voice.

To understand more clearly how this problem was solved, we should recall how Hertz proved the existence of the phenomenon of the electric wave producing an effect at a distance. To discover this wave he used a copper ring with a break in it. He found that by making this ring of a certain dimension he could tune it to the electric waves emanating from a certain source, that is, from the apparatus, an electrical oscillator, producing the initial spark. When properly tuned, currents of great frequency are formed in this ring, even at considerable distance from the emitting apparatus, and a stream of sparks are seen at the break in the ring. This phenomenon can be explained by the fact that this electrical conductor vibrates, electrically speaking, in unison with the oscillator, just as a vibrating chord is affected by the sound waves from a synchronous tuning fork, and this is why this Hertz ring is called a sounding-board or resonator. In wireless telegraphy, the emitting apparatus, or antenna, aerial wire or mast—all of these terms are used for the same thing—takes the place of an oscillator, and the receiving apparatus, the Hertz resonator.

This relationship to acoustic phenomena suggested the idea of having recourse to the principles of resonance. It is a known fact that the chord of a string instrument vibrates strongly when its vibrations have the same period as those of a tuning fork which is held near to it. But the chord scarcely moves when the periods differ. The same thing is produced in the case of an organ pipe when it is influenced by a vibrating body sounding its fundamental note. Helmholtz made use of the resonance of hollow spheres in order to analyze complex sounds and the pitch of different musical instruments. He found that when a hollow sphere, or resonator, as he called it, is brought near to a source of sounds, one only needs to listen to find out if a given sound, the only one which the resonator can produce, is to be found among those heard at this source, for this sound alone will be reinforced.

Now, if a selective process of this kind could be applied to electrical vibrations, we would be able to keep our messages absolutely secret, or at least to increase the number of simultaneous transmissions without any confusion resulting therefrom. But, unfortunately, the conditions bearing on electrical resonance differ from those bearing on acoustical resonance. While the synchronous tuning fork or the Helmholtz resonator responds only to the vibrations to which it has been tuned, the electrical resonator responds only a little better to those of its own period than to those of other periods. The reason for this is that electrical resonance is more deadened than

acoustical resonance. When a body of matter receives a blow which makes it vibrate or oscillate, the amplitude of the oscillations diminishes progressively and finally ceases. This is what happens in the case of the tuning fork or the string of a violin when set vibrating by the bow. The decrease in the amplitude of the vibrations is said to be due to this deadening effect. If the vibrations become deadened and the body comes to a standstill, it means that the energy which had been put into the body has been gradually lost thru the creation of internal friction and wave-sounds.

less importance of the deadening effect. This deadening of oscillations weakens the production of resonance.

It is plain that the quicker oscillations cease the more their action resembles a blow. Thus, if you strike an anvil with a hammer or fire a gun, you can set in motion a great number of Helmholtz resonators; but if, on the contrary, the sound came from a string instrument and was of a purely musical nature, its selective quality would become very accurate. Consequently, in this matter of wireless telegraphy, we must begin by reducing as much as possible the dead-

THE PARC-AU-DUC EXPERIMENT STATION AT BREST, WHERE M. TISSOT MAKES ALL HIS EXPERIMENTS.

The electrical oscillations produced by a Marconi transmitter grow deadened because the energy of the oscillations is also progressively dissipated. This deadening effect is distinctly shown when a photograph is taken of a flash of light dissociated by means of a rapidly revolving mirror. The plate shows not a single line, the reproduction of the flash, but a series of fringe-like figures of decreasing intensity. This series of fringes proves that the spark or flash was of an oscillatory form, while the more or less rapid loss of energy proves the greater or

ening effect of the oscillations, so as to have better syntony. In the early system, where the aerial wire and the transmitter are in direct contact, this deadening was very great. So the early system has had to be abandoned, especially as the creation of a great number of stations has rendered more necessary selective measures. This is obtained by providing the aerial wire with a closed oscillator or a circuit of independent discharges, instead of the old direct communicating system. This closed oscillator is composed of an apparatus which produces

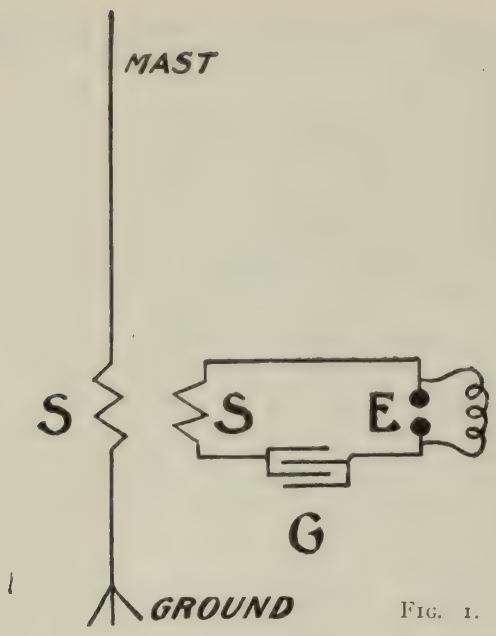

Fig. 1.

the electric spark, which is shown in Figure 1 by the letter E, a condenser G, and a primary circuit S, formed from a few coils of wire. This primary coil acts by induction on a secondary coil S°, attached to the aerial wire or mast, and which creates oscillations which are sent out in the form of waves. The special characteristics of this system do not spring wholly from the nature of the mechanism used—the closed oscillator attached to the aerial wire—but also from the way in which the two circuits are coupled.

If the coupling is sufficiently loose—that is, if the circuits S and S° are far enough apart—you can produce oscillations which are very little deadened. But the benefit to be derived from this diminution of the deadening tendency depends on the kind of receiver which is used. So far in this article I have spoken only of the tube filled with filings, called the coherer, as receiving the signals; but, tho this receiver is, in general, sensitive enough, it has the great defect of acting only when the wave reaches a certain maximum. In other words, it will register a wave only in case the intensity of the action of this wave is above a certain value, and if this value is surpassed the coherer will act in about the same manner, whether the wave be strong or feeble, which means that it will act only as tho it received a shock. This suffices to prevent the resonance from being clear and would render syntony quite imperfect if receivers had not been invented which are free from this objection. Among these I will mention two which bear on the subject we have under discussion.

One of these systems is known as the bolometer. Two fine metal threads—platinum wire a few thousandths of a millimeter in diameter—are balanced by proper resistances in accordance with the arrangement seen in Wheatstone's bridge. As shown in Figure 2, a telephone is connected with the diagonal *m n* of the bridge. When an equilibrium is established, no current will pass thru the telephone, which will remain silent; but when an electric wave is received by one of these fine wires—and this is secured by a very simple means—the wire becomes heated, and this variation of temperature causes a variation of resistance, which destroys the equilibrium of the bridge, thereby forming a current in the

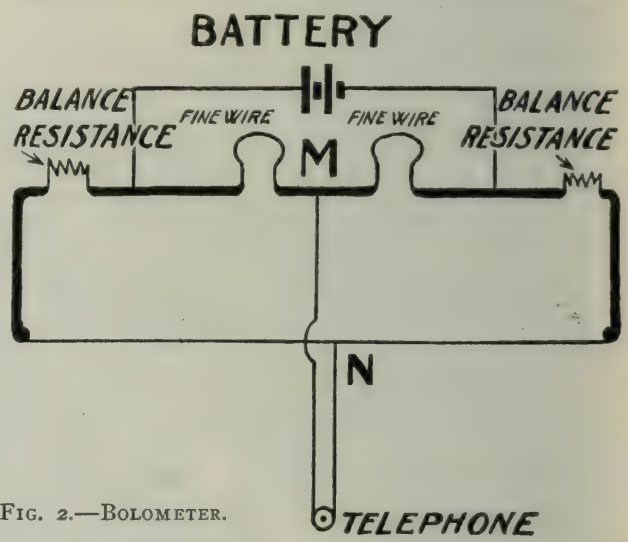

Fig. 2.—Bolometer.

circuit of the telephone. The arrival of a wave is then revealed by a noise produced in the telephone.

An entirely different receiver is that known as the electrolytic receiver, which consists of two platinum wires immersed in a solution of nitric acid. One of these wires is very fine, its diameter being but a few thousandths of a millimeter, and is inserted into a glass tube, which protects it from the liquid in such a way that its end protrudes, forming a sharp point. This apparatus and a telephone are both placed in the circuit of a battery. An electric wave striking this apparatus causes a sudden modification in its resistance, or, as it is said in more scientific language, a sudden depolarization is brought about, a current passes

thru, and the telephone gives forth a sound. Either of these two receivers can be used to replace the original one, but the electrolytic receiver, being much more sensitive than the bolometer, is now in more common use. But besides this sensitiveness, it has another important advantage over all other receivers in that it acts, in a large measure, proportionately to the intensity of the waves received.

The fact that the bolometer is a thermic receiver makes it possible to obtain the cumulative force of the waves, feeble ones and deadened ones not being lost, so that in this way a very acute resonance can be secured. In order to obtain the best results in the matter of resonance, the periods of the different circuits—those of emission as well as those of reception—should be made as equal as possible. Therefore these different circuits must be carefully tuned, which is easily secured by means of instruments constructed for this purpose, and thus really very remarkable resonances are obtained.

A variation of one-tenth in the emitting period will have the effect of reducing the registering power of the bolometer in the proportion of fifty to one, hence the importance of the greatest care being taken in tuning the different circuits. If this is done it is possible, for example, for two stations, tuned for a 300-meter wave length, which is the length of the international wave adopted at the Berlin Conference, to exchange messages without being troubled in any way by waves of equal power, but of 315 meters wave length, emanating from another station.

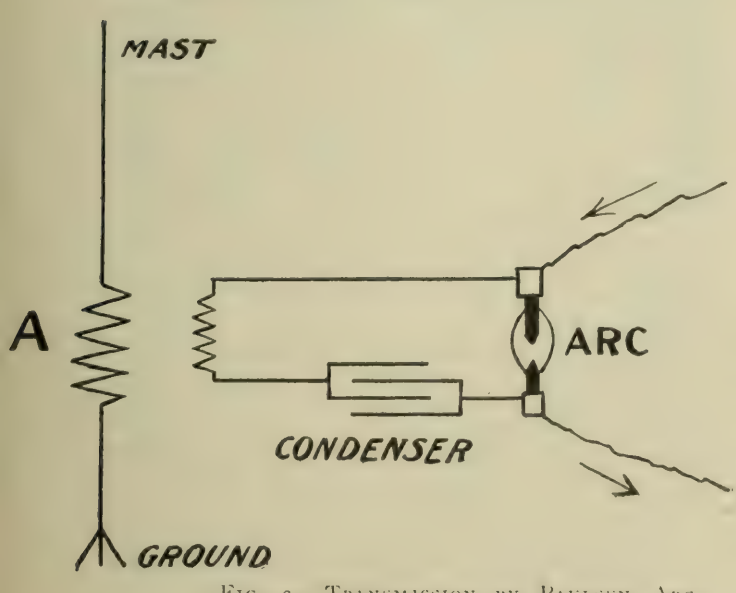

FIG. 3.—TRANSMISSION BY PAULSEN ARC.

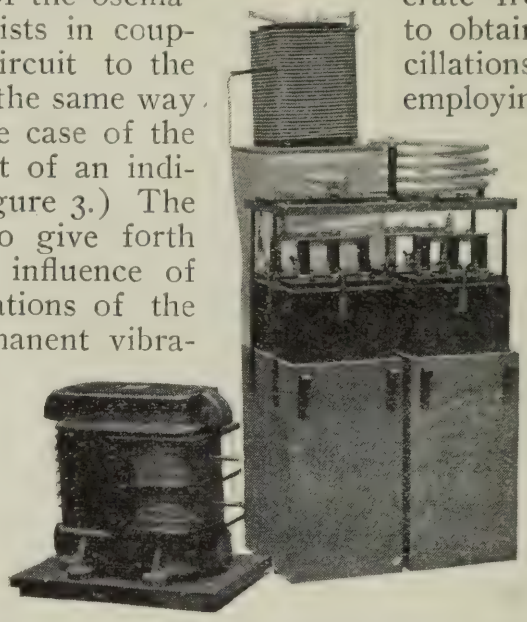
Accompanying this article is a picture of the transmitting apparatus of the wireless station of Raz de Sein, situated at the extremity of one of the wildest and most picturesque capes of Brittany, and which is conducted on the lines just described. It is really intended for the use of men-of-war, tho it has frequently aided the merchant service. I may add that this station receives the daily radiotelegrams of the Eiffel Tower, of Paris.

From what has so far been said, it is evident that a relative syntony can be obtained and a certain amount of secrecy secured for wireless telegraphy. But we have gone still further in this direction.



In order to obtain from the bolometer its maximum utility, we should multiply the successive groups of waves sent forth by the emitter, hold them together, and have a new group begin when the preceding one dies away. As the bolometer heats faster the greater the number of waves which reach it per second—that is to say, accumulates more calorific energy—there is an advantage in pushing this multiplication to the extreme limit by producing a series of sparks, one following the other as closely as possible. By this means, intermittent and deadened wave groups give place to continuous and non-deadened groups.

One of the most interesting experiments made in this field is that of Paulsen. A few years before Duddell had observed the following phenomenon: If you put in derivation, on an electric arc, a condenser and a self-induction coil of large diameter formed by several loops of the conductor, the arc will give forth, when properly regulated, continuous sounds of a musical nature. The pitch of the tone or the number of vibrations per second is determined by the value of the capacity of the condenser and of the self-induction coil. This curious phenomenon, known as "the singing arc," has been studied by different experimenters. It has been discovered that this phenomenon is due to the periodic expansion and contraction of the gaseous atmosphere which envelops the carbon points. In this fashion it is easy to ob-

tain from twenty to thirty thousand vibrations per second—that is, the limit of perceptible sounds.

Science had not gone further in this direction when Paulsen discovered a manner of greatly increasing the number of vibrations of the singing arc. By experimenting with this Duddell arc in hydrogen or hydrogen carbide, he has been able to bring up the frequency of vibration to the same point as that of Hertz oscillations, that is, from 800,000 to even 1,000,000 or more vibrations per second. The circuit of the arc is then capable of producing in the antenna or aerial wire oscillations capable of radiating.

One of the systems that can be adopted for the transmission of the oscillations of the arc consists in coupling the oscillating circuit to the aerial wire or mast in the same way as that adopted in the case of the closed emission circuit of an indirect emitter. (See Figure 3.) The wire is then made to give forth vibrations under the influence of the continuous oscillations of the arc, assumes a permanent vibratory state in which the oscillations are no longer deadened, and the aerial wire can then be likened to a tuning fork, kept electrically in continuous movement, while the methods which we have been speaking of up to this point may be compared to a tuning fork set vibrating by repeated impact, produced at relatively long intervals.

TRANSMITTING APPARATUS OF THE RAZ DE SEIN STATION.

From all that has been said we should be led to infer that a considerable reduction, if not an almost nearly complete disappearance of the deadening of the wave, must lead to a pretty exact resonance. In fact, it would have been possible for Paulsen to establish communications between two stations, as A and B, tuned for wave lengths of 600 meters, without being in the least troubled by the communications passing at the same moment between two neighboring stations, C and D, tuned for wave lengths of 606 meters, the exactness of the syntony attained in such cases being 1 per cent. Yet we must not forget that, whatever system is employed, the production of continuous waves demands a considerable amount of energy. When we compare the amount of energy required to emit waves of 300 meters in length, producing oscillations only slightly deadened, at the rate of thirty per second, with oscillations of the same amplitude which are not deadened, it will be found that 15,000 times more energy is required in the second case than in the first one.

It will be found more remunerative, therefore, to be satisfied with a less perfect syntony and to use only slightly deadened oscillations and waves of moderate frequency, instead of trying to obtain completely deadened oscillations. This I have done by employing for the excitation of the discharge circuit a transformer unprovided with its iron centerpiece and into whose primary is sent the current of an arc which "sings" at 3,500 vibrations per second. By multiplying the number of discharges you can intensify to a considerable degree the impression produced on the bolometer, for, this instrument being thermic, the impact of successive wave groups is cumulative, as has already been explained. Thus it happens that, while the coherer acts in the same way under the influence of 3,500 waves or of a single wave, the bolometer receives an impression 3,500 times greater in the first case than in the second. Finally, the results obtained are selective, like those given by the Paulsen system, but with a less expenditure of energy.

Tho syntonic wireless telegraphy is admirable, still more precious would be the wireless transmission of the voice. The problem, theoretically at least, has made satisfactory progress, but the distances covered have not been extensive enough to permit as yet a commercial application of the discovery. Before thinking of

using electric waves for the transmission of the voice, light waves had been used with some success, the methods giving the best results being based on the employment of selenium, which is characterized by the curious property of its resistance varying under the action of rays of light, a fact established by Graham Bell. In the case of Ruhmer's method, in the circuit of an arc of continuous current is placed the primary coil of a transformer whose secondary coil is inserted in a circuit of a microphone. The sonorous vibrations acting on the microphone produce variations in the current of the circuit of the arc, which then acts as a perfect photophone transmitter. The rays, which are rendered parallel by the use of a projector, influence, at the receiving station, a selenium element in whose circuit a telephone has been placed.

The fundamental principle of wireless telephony by means of electric waves is much the same as that by means of luminous waves. In this case, also, the transmitter of the wireless telephone is associated with an oscillatory circuit in which continuous non-deadened waves are formed independently of this transmitter. This oscillatory circuit is also in relation, as in wireless telegraphy, with an emission mast or antenna. We may use oscillations of constant intensity and have the sonorous waves act by means of a microphonic circuit on the emission system so as to modify the purity of the chord or period. You may also have a constant period, when you must modify the intensity of the oscillations by means of the microphonic circuit. In all cases, the transmission of the sonorous waves is obtained by means of the undulation of these groups of oscillations.

As to the receiving systems, they are always formed by receiving masts connected with a circuit of resonance, tuned as in ordinary wireless telegraphy, with an apparatus capable of registering the undulations of the groups of oscillations. Here it is that the electrolytic receiver becomes especially useful on account of its faculty of reacting proportionally to the intensity of the waves which it receives, so long as these actions are sufficiently weak, which is the case in this instance. When this electrolytic receiver is employed for telephones, it must be used without any auxiliary source of energy. While it is true that this system will be found a little less sensitive than certain others, it is much more regular and registers very exactly the variations of received energy.

As regards emission systems, Ruhmer uses the Paulsen arc in an atmosphere of hydrogen as his source for oscillations. But as the employment of the Paulsen arc requires great delicacy, it has serious drawbacks. Mr. Majorana has recourse to a rotative sparker formed of a disk of ebonite provided with two metallic rings which are in contact with two metallic brushes attached to the discharge circuit. The sparks are formed between two parallel steel wires connected with the metallic rings. When the disk is in movement, the sparks are separated by the force of the air, about 10,000 separate sparks being produced per second. These sparks are influenced by a rather curious hydraulic microphone based on the properties of liquid veins or jets. This apparatus is composed of a glass tube thru which flows acidified water, this tube being provided with a membrane so arranged as to transmit sonorous vibrations to the liquid. On issuing from the tube, the liquid falls on the plane surface of a collector formed of two platinum cylinders separated by a strong insulator. Now, when a liquid jet strikes a plane surface normally to its direction, it produces a liquid veil whose thickness varies according to the vibrations of the jet. It is the variation of this thickness which causes the variations of resistance and permits the action of sonorous waves on the spark.

It is thus seen that a number of different systems can be used for the wireless transmission of the voice, which fact shows that, tho we are on the right track, a practical and industrial solution of the problem has not yet been found. My object in this article has simply been to try and show how methodical is the development of the process, which has led to the discovery of a manner of rendering wireless telegrams secret, and then, logically, to the wireless transmission of the voice. Surely none of the patient conquests of modern science are more worthy of the attention of observers than this one.

Naval School, Brest.

Wildwood or Garden

BY E. P. POWELL

IN these days, when everything is improved, going berrying means going into your own garden and picking scientifically produced fruit that appeals more to your imagination than to your sense of taste. It is really going to school, for at every turn you are studying fertilizers, irrigation, cultivation, crossbreeding and handling for market. You are keen, also, for any chance development that has occurred without your assistance. You might call your garden the academy, where the alleys, berry-bordered, are the walks thru which Aristotle led his pupils.

The old-fashioned strawberry took five hundred to fill a quart and lots of time to gather them; the Marshalls and Mark Hannas and William Belts require from fifteen to twenty-five to fill your basket plumb over. But it is not the size only that you note so much as the quality. No wild strawberry ever had the delicious concentration of flavors found in some of these berries, one of which fills your palm. I know the charm of creeping low over the pasture grasses, to find stems of wild berries, while we kept a sharp lookout for Harding's bull. I tried it over again last summer, and—well, I did not have the same company, to be sure, but I soon found myself sitting on a knoll, pulling mints and listening to the goldfinches in the thistles, and away down in the valley I heard that same old mill grinding away that ground fifty years ago, and in the creek behind the dam I watched naked boys diving from the dyke bank into the approving water. A lot of naked boys, out under the willow trees that hang their limbs down around them, is the handsomest sight in the world—finer than rows of Greek statuary, by all odds. Spearmint is delightful rubbed between the hands, and altogether it is delicious when nature recognizes your individuality and lets you have a whole knoll to yourself. "The strawberries?" Oh, yes! I had forgotten them altogether.

However, I confess to still being susceptible to a wild blackberrying all-day of it. It appeals to whatever there is in me of the savage and Whitmanesque. (Whitman was only a poet with a stout, savage heredity. He had not lost his thorns yet, nor gained submissiveness.) I have myself a trace of such ancestry stirring in my blood, and am not sorry. When you have taken your dog and strolled along bypaths and no paths, over the hills and thru the pastures, until you are lost in the woods and forgotten in absolute wilderness; glens and gorges one hundred feet deep all about you, full of trees standing with the tips just level with your feet, rocks in sight, and a brook at the bottom; with its natural rustic bridges, and huge stones that have been rolled for thousands of years until smooth and round; with poems written in lichens and mosses over piles of hemlock logs, your other self, the old untrained self, comes to the front, and your blood jumps after a new fashion. A dam made by beavers one hundred years ago still shows a trace, and you know how the Indians felt, and why they did not take civilization with a gulp. With you and me this sensation will not last long and it will do no harm; however, it lasts long enough for you to resolve to go back to nature more freely than you ever have before. You plan bringing your friends to see these retreats, and why not build a cabin here? There is just the spot for it, on a little promontory over the brook, with a great spread of creeping juniper making a natural bed over the top of it. What, after all, is civilization but artifice, and a bungle of pretenses? Let us give it up and live a more simple life. Tolstoi tells us it is Christianity. Meanwhile my basket stands empty, and Rover has been around two or three times, looking up into my face with an interrogation. Evidently he does not consider that I am doing my duty. A mink peers out from between two rocks and also has a ques-

tion to ask. Squirrels, disturbed by our coming, are growing tired of waiting, and begin to run down the trees to get vantage places for better studying us. One of them drops a butternut just over our heads, and it rolls into the brook, starting the tiny fishes for a dashaway under the rocks. After all, do we really fit into this wild life? We will fill our basket and go home to consider—Wagner and Tolstoi to the contrary.

It is not garden-like to push one's way thru the brambles, tumble over slippery logs, and pull ourselves up the hillsides, yet that is the only way to find the fat and luscious berries—how they tempt us! Rover leaves us alone now, better assured of our sanity; only coming around now and then to make sure of our safety. He has adventures of his own, as you can tell by the growling and barking, and the rushes that end the battles. Curious it is that such an animal should have eternally attached himself to us and subjected his instincts to our reason. More curious still if he also should not learn to reason more or less. Rover is at least learning to dine on blackberries, drawing back his lips delicately, and selecting good, fat berries. Then he sits down by me for a few moments, as an apology for letting the wolf that is in him have had free play. I imagine we are feeling very much alike about this matter of going back to nature. We are both beginning to think of supper. I believe the fellow is studying me, for he looks out of the corner of his eye, in a way that says, "Haven't we had about enough of this Tolstoi business? Let's start for the house," and we do.

Raspberries are different; they grow in old pasture lots and lean against rotting stumps. There is no shade there, and hardly a bit of romance. We go for them as we do for wild gooseberries, only to see if somewhere we shall not find a cross-bred wilding of value; something that we can transfer to our garden. In this way I have myself secured a gooseberry of very high rank, evidently a cross that nature had made between the native and foreign sorts, and set it growing by first giving it to a bird to eat. The bird dropped the seed along the forest edge, where it grew until I found it. In this way nature turns about all the while to help our human wits, and does not any longer insist on quantity and thorns. Quality gets more consideration, and after that we all share together, birds, bees and men. My catbirds know as well as I do that I have a fine new gooseberry on which they dine, and my cows eat many a Bartlett pear—I confess it is without much appreciation. Does not the Bible say that all creation waits for its redemption thru man? Perhaps we shall go a good deal faster when President Roosevelt gets hold of us with the lever of that commission; but for the present we are certainly making decent progress. During the past summer I went for wild raspberries just once. It was exactly at the top of the year, and at the hour when the crickets who had been singing all night were just retiring to sleep. The air was transparent, and a few of the leaves, tired of growing, were softly yellowing as they faced autumnward. What a wonderful thing is this annual renewal of everything! No leaf the same, no sprig of mint, no combination of shade and sunshine over the valley is the same as last year, or even the same as yesterday, and yet the same sweet life-love is over all and thru all. The cows were just stirring in the pastures, and the goldfinches were beginning to pull open the thistles for breakfast. Bumble bees were still asleep in the flower cups, and as for me, I gathered more poems than berries. I am seventy-five, but the calm, fragrant peace of the wooded slopes and the fern smell of the deep glens has the same satisfying influence as in boyhood. There is nothing old about them, nor can one grow old who is much with them.

The relation between berries and birds and bees seems to me more close the more I observe it. The rose-family fruits came into existence geologically at the same time with the fruit-loving singers; all of the older birds were flesh eaters. Monkeys, squirrels, robins and parrots, as well as you and I, opened our eyes about the same time as the cherries, apples and pears. We have moved on together, and now civilization means a very decided mutual understanding with each other, and interdependence. Imagine all the rose-family suddenly obliterated, and you would have to give up nearly all our familiar birds as well.

The tie has become intellectual as well as material. The berry garden is a library by itself. Our boys and girls ought to be taught to study what is said and done there by Nature. The story of evolution is the story of life, and life forms the one all-important study of living beings. The strawberry is a sort of freak in the family, for it is a swelling of a receptacle of seeds, retaining its seeds lightly all over the surface. There was no object whatever in this swelling but to tempt birds to eat them and so carry the seed about for sowing. Now that man has come and likes big fruit, the little strawberries have to pass away, and the big ones are puffing out with importance. The raspberry is an enlargement of the separate seed sacks, until a cap of these sits on the receptable or fruity stem. This cap we pull off for eating, leaving the receptacle on the bush; but in the case of the blackberry the receptacle also is sweet and eatable, and it comes off with the rest of the berry. The seeds of all these berries are simply kinds of nuts, with the shell surrounded by attractive sacks of juice. It was a shrewd piece of business on the part of Nature, for otherwise there would not have been the least chance for any protracted survival or any general spread of such delicate fruits. You will note that it is those things everywhere that tempt the birds that get the best chance to be propagated and sowed everywhere. When wings were only fins in the water there was a poor showing for this rose-family. Rodents like the fruit well enough, but they eat the seeds and throw away the pulp. We are obliged to kill red squirrels because, besides killing young birds, they will strip a tree of pears inside of three or four days, leaving only a mass of gnawed refuse. This puts an end to their usefulness in that direction.

We join with the birds in rejecting the seeds and scattering them about the soil. Evolution has not so far got any good grip on the wild cherries and haws and sloes, yet they serve as food for birds, and they get sowed, but so far without acquiring any useful development. They probably will at some time get a start, after which they will be of value to ourselves, and under tutelage will be made over into valuable fruits. At any rate you can hardly get a prettier small tree on your lawn than a red-fruited wild cherry. I have also a very rare yellow-fruited specimen. So far only one member of this family has rejected the sack and become a nut—that is the almond. Others may follow on the same line, and occasionally a peach comes very near to it.

The most hopeful movement of our time is the industrializing of education; it teaches honor for work. It is bringing about an alliance between the garden and the school. Going berrying means, nowadays, not scooting to the woods and pastures, and accepting just what Nature has prepared for birds and mice, but it means making for ourselves something that stands for brains. I do not think that history has a finer passage than that of the Roman Emperor who invited those who wished to restore his crown to come into his garden and "see his cabbages." If you will come and see my strawberries and raspberries you will do me a real kindness, and you will understand why city delights are in no way comparable. There is a chuckling pleasure in going up and down my rows of Silver Queen raspberries, because I made that splendid variety myself. It is as big as a Cuthbert, and it carries its grand loads of golden berries as proudly as if a member of my family. Among the currants our own Giant Red stands six and seven feet high, and outbears all its rivals. I advise you to try to *make* something. In this way religion as well as the school comes into your garden, and you are a child of the Creator.

There are just defects enough all along the line to provoke you to try your wits at betterment. We need a strawberry about the size of a butternut—say two bites—rich red, solid meated, uniform shape, and standing on a stalk fifteen inches high, and strong enough to hold half a dozen ripe berries at once. This plant should be matched by roots that feed at least two feet away and six inches downward, for the chief trouble now is that the strawberry dries up quickly under a hot sun and without showers nearly every day. The red raspberry should be just a little bigger than it is, not much larger than the Schaffer, but of a brighter red, and a cane that can endure thirty degrees below zero. Among my seedlings I have the hardy

cane and the hardy berry, but the color is not quite right, or there is some other difficulty to keep me busy. Loudon is a delicious sort, and a real acquisition, but it melts in the crate within ten hours after picking. When E. P. Roe sent out "The Pride of the Hudson" it was so fine a berry that it seemed to me strange that he stopped selling it. He replied, "It is not hardy enough, and I have withdrawn it from the market." We are still on the road, and we probably ever shall be on the evolution road with this wonderful family. The charm of it all is, about the same as in our social struggling, we aim at perfection, but never quite touch it.

We began our currant picking June 28th, sending one hundred bushels to market; followed immediately with fifty bushels of red raspberries and seventy-five of blackberries. You do not need more than three to four acres for this crop, and meanwhile you will have had your cherries and plums and pears and apples overhead. The raspberry likes considerable shade and the currant likes more of it. Berrying requires close application from daylight till dark. It requires some Sunday work as well, for the berries will ripen without consideration of our religious feelings and customs. It is a grand lesson, for the pickers are trained to quick vision, steady movements and the entire suppression of nonsense. Marketing is the chief difficulty. A small fruit farm has to be not more than fifteen miles from the city, in order to deliver the fruit early enough for the customers to dispose of it before decay. We must load up the night before and be ready to start for the city by half-past four. An economic electric motor should shorten the two hours' drive to twenty minutes, and that will surely come about. The demand is not only good, but it is greatly increasing, for all the berry fruits, and as the red raspberry cannot be shipped to any distance, it offers a splendid chance for those who cannot do extensive farming to pay their way thru the world.

I tell you plainly that I will not quite give up rambling about the hills and crawling thru the thorny bushes. But I am afraid my grandchildren will know nothing about these things. I am afraid that the world is going to be smoothed all over and patted down into little suburban homesteads. I am afraid that fashion will have its trademark on the hillsides as well as in the valleys, and all our wild glens will be laid out with careful formality by landscape artists—instead of poets. But what of it? Nature knows how to take care of herself, and in one way or another will always restore a reign of common sense.

CLINTON, N. Y.

Cities of the Sun

BY ROSAMUND MARRIOTT WATSON

THE battlements of sunset flame and fade;
Whelmed in wild fires they sink and crumble down,
Like the high walls of some beleaguered town
Falling before a fierce besieger's raid.

Bower and pavilion, court and citadel,
Pleasuance and palace and temple—all lie waste;
Buried in darkness, barren and defaced,
The painted chamber and the marble cell.

Yet when the hosts of darkness pass outworn,
Frail phantoms wrapt in misty shrouds, behold
A city of peace, a city of pearl and gold—
The shining mosques and minarets of morn!

GUILFORD, ENGLAND.

Literature

Modern Spiritistic Phenomena

THE appearance of another book by Mr. Podmore[1] on the supernatural is especially welcome just now, when there is a revival of interest in that subject. Altho it follows the lines of his earlier works and contains little that is essentially new or different, and altho he is disappointingly inconclusive in summing up the argument and stating his own opinion of it, yet his care in collecting his evidence and fairness in discussing it make the volume useful to those who wish to form their own opinions. Mr. Podmore's *History and Criticism of Modern Spiritualism* is the most valuable work of the kind published, largely because no one else has shown so much patience in working over the voluminous and unattractive literature of the subject, and so much persistence in following up the careers of prominent mediums. He is not at all a hostile critic of the phenomena in question, as the very awkwardly worded announcement of the publishers on the cover-slip would imply. He has been one of the most active members of the Society for Psychical Research from the beginning, and draws most of his material from the published and unpublished investigations of the society. He collaborated with Gurney and Myers in the preparation of "Phantasms of the Living," the biggest volume of documentated ghost stories in existence.

He is convinced of the reality of telepathy, including the production of hallucinations by spontaneous thought transference, but is skeptical of the physical manifestations of spiritism which are now returning to popularity. He recalls that Professor Sidgwick in his first presidential address to the nascent Society for Psychical Research, in 1882, stated that evidence of this kind was the most abundant and would hereafter be more extensively brought forward for investigation.

"That hope was not destined to be realized. In the twenty-five years which have elapsed, while few opportunities have been afforded to the Society's representatives for continuous investigation of any sort, no positive results have been obtained worthy of record. In short, just when an organized and systematic investigation on a scale not inadequate to the importance of the subject was for the first time about to be made, the phenomena to be investigated diminished rapidly in frequency and importance, and the opportunities for investigation were further curtailed by the indifference or reluctance of the mediums to submit their claims to examination. The researches of the Society have not, however, been entirely fruitless. On the one hand, some of us have had the opportunity of witnessing in private circles physical movements and other phenomena, claimed as due to occult forces, which on further examination have proved to be produced fraudulently. In two of these cases at least the medium was a well educated man, with no apparent motive for deception, and the deception itself was of a systematic kind, involving careful preparation."

Dr. Alfred Russel Wallace was convinced that the writing on locked slates held by the investigator, as performed in Davey's seances, was proof of supernatural powers, but Davey afterward explained the whole trick. Eusapio Paladino, the Italian peasant woman, who is still puzzling many prominent scientific and literary men in Europe, is known to use trickery whenever she can. Professor Richet in France, Professor Morselli in Italy, and Dr. Hodgson in England detected her in the act of freeing her hands from those who held them in the darkened room where she throws furniture around, slaps the faces of the sitters, and leaves face impressions on putty. But the Italian and French investigators, while admitting that she helps out her manifestations with fraud when she gets a chance, believe that it cannot all be so explained, and they incline to the theory that she has the power to extrude from her body at will extra limbs, and that she moves objects about with these materialized pseudopodia. We should add that on that hypothesis she must also have at her command pseudostomata when she bites the thumb of a sitter who puts his hand on the curtain of her cabinet at a distance from where she is supposedly confined.

[1] THE NATURALIZATION OF THE SUPERNATURAL. *By Frank Podmore.* New York: G. P. Putnam's Sons. $2.00.

The latest volume by Dr. Hyslop[2] differs very little from his three other volumes on psychical research. He begins with some ill-natured sneers at the motives of those who do not agree with him as to the significance of his experiences, and in particular those who declined to aid him to raise money for his investigations. He discusses among others the case of Mlle. "Smith," of Geneva, who is under the control of a peculiar association of spirits—Cagliostro, Marie Antoinette, a Hindu princess of the fifteenth century, and a young man who lives in Mars; and the case of Mrs. "Smead," of New York, who also writes the language of the Martians and draws with the planchette pictures of their dresses and airships. The Swiss and American mediums must be in communication with different continents of our neighboring planet, for their information does not agree. Mrs. Smead further gets messages, very faulty in spelling and grammar, purporting to come from Christ himself, and explaining difficult points in theology. Dr. Hyslop does not credit such revelations as these, but from Mrs. Smead and other mediums he derives additional support for his belief, based chiefly on Mrs. Piper, that the spirits of his deceased friends are endeavoring to communicate with him. Among the most persistent of those who are knocking on the other side of the partition is, as was to be expected, Dr. Richard Hodgson, the late secretary of the American branch of the S. P. R. Mrs. Piper inherited the whole group of five spirits which used to haunt the Rev. Stainton Moses, and it was thru her that George "Pelham" made his famous communications. The latter does not seem to care about preserving his pseudonym, for he will appear before almost any medium in the country for a dollar or two and "prove his identity" by giving George Pellew as his real name.

Mr. Podmore finds the later manifestations of Mrs. Piper, in which Dr. Hyslop has been specially interested, too irrelevant and inaccurate to give any evidence even in support of his own theory of telepathy. In this we agree with him. There is no need to bother about explanations until we are sure there is something to explain.

What is there in the reports of such seances as these to prove the existence of the discarnate spirit of a deceased friend? Assuming that the medium is trustworthy and the report is complete and accurate, we have a long series of somewhat confused and inconsequential remarks and replies purporting to come from the deceased; some of the traits revealed or incidents referred to are recognizable as relating to the alleged personality; some incomprehensible at the time can by later inquiry be plausibly identified as genuine; some are known to be false or uncharacteristic; some cannot be proved either true or false; while much of the communication is so vague and general as to be applicable to almost any other person as well. Now what is the evidential value of the bits? Nobody can say. Each person evaluates them according to his own inclination. There is no objective standard.

Mr. Bruce in *The Riddle of Personality*[3] takes about the same standpoint as Mr. Podmore—that is, he regards telepathy as an established fact and an adequate explanation of the phenomena of spiritism in so far as this is genuine. To us it seems neither necessary nor adequate. It does not, for example, help Mr. Bruce and Mr. Podmore to explain Eusapia Paladino, or how Lord Crawford came to see Home float out of a window and back again, eighty-five feet above the ground, or the materialization of Katie King in the presence of Professor Crookes, which we discussed editorially December 12th, 1907. If one says these are due to trickery, or lying, or self-deception, or hypnotism, or something else of the kind, why not say the same of the alleged evidence for telepathy and clairvoyance?

But perhaps Mr. Bruce's book would be less useful if it were more skeptical. No other volume of its size gives such a complete survey of this debatable ground, or tells in such an interesting way of what is being done to explore it. He discusses not merely the phenomena of spiritism, but the subconscious in general, the dissociation of personality, and the cure of disease by hypnotism and suggestion, concluding with an admirable bibliography.

[2] PSYCHICAL RESEARCH AND THE RESURRECTION. *By James Hyslop.* Boston: Small, Maynard & Co. $1.50.

[3] THE RIDDLE OF PERSONALITY. *By H. Addington Bruce.* New York: Moffat, Yard & Co. $1.50.

Ten Years of English History

At the time of his death, in July of last year, Sir Spencer Walpole had almost completed his *History of Twenty-five Years,** the first half of which—1856 to 1870—was published in 1904. The final chapter, with its adieu to the readers, was already written; but Sir Spencer Walpole had intended to add two chapters—one on the Transvaal, the Zulu War and Afghanistan, and one reviewing the condition and progress of the working classes in England during the period from 1856 to 1880. These chapters, to the regret of every reader of Sir Spencer Walpole's history, remain unwritten; but his editor, Mr. A. C. Lyall, has been able to present to the public the remainder of the work much in the form in which it would have appeared had its illustrious author lived to see it thru the press. Some misprints there are which may perhaps be attributed to the proofreader, and in the table of contents—a most excellent compilation and summary—there is the curious omission of 100 pages, covering parts of Chapters XIV and XV, which are left without a single entry.

The clear, incisive style and the complete mastery of the English language, the rapid movement of the story, and the able yet never impertinent criticism which the author, as a student of politics and an actual observer of events, is able to pass upon the actors in the political drama, all combine to make these volumes far more interesting than the average novel. The outlines of the story are, of course, familiar to every well-read man and woman. All who have passed middle age have themselves lived thru the events described. And yet it is difficult to find a satisfactory and readable account of this recent history. The reign of Queen Victoria, as a whole, has been well described by Messrs. Brodrick and Sanders in the final volume of the "Political History of England"; by Franck Bright in his "Growth of Democracy," and by Justin McCarthy; and most of the events described find their place in the biographies, which have now been published, of the statesmen who took part in them. None of these books, however, occupies the place of these volumes, and in none is there the vivid interest of action and detail which gives so great a charm to Sir Spencer Walpole's story.

Sir Spencer Walpole was born at the opening of the reign of Queen Victoria, and was just over thirty at the time these volumes open. Gladstone and Disraeli were both considerably his seniors, and he had no active political share in any of the events he describes. He entered the civil service at nineteen; and for eleven years—1882-1893—he held the easy office of Lieutenant-Governor of the Isle of Man. As his book plainly shows, his sympathies were always with the Liberal party, and probably the greatest shortcoming in his volumes is his inability—in his dislike and distrust of Lord Beaconsfield—to make the reader understand how it was that Beaconsfield gained so strong a hold over a large part—approximately one-half—of the British nation. It may probably be that posterity will indorse the severe judgment which Sir Spencer Walpole passes on both the domestic and the foreign policy of Lord Beaconsfield; but the historian ought to make plain the reasons which led to Disraeli's ascendancy in the early seventies, and the great Conservative majority in the election of 1874, without leaving the reader to conclude that the nation was suffering from a temporary aberration of intellect.

A large part of the two volumes is necessarily taken up with England's foreign policy. No clearer account of the Eastern question and of the part played by Turkey in European affairs between the Crimean War and 1880 is anywhere to be found, and a very fair and unbiased account is given of the Alabama claims and their settlement. These subjects, however, have been fully treated by other writers, and nothing really new is added by Sir Spencer Walpole.

A chapter which is a real addition to English history—a chapter that throws new light on English life in the sixties and seventies of the last century is the one devoted to Ritual and Religion. The connection of Church and State, the position of the Prayer Book as a schedule of

*The History of Twenty-five Years. 1856-1880. Vol. III, 1870-1875, and Vol. IV, 1876-1880. *By Sir Spencer Walpole, K. C. B.* Pp. xv, 331; xii, 410. New York: Longmans, Green & Company. $8.00.

an act of Parliament, and the right of secular courts to pass on matters of doctrine as well as of ritual are all brought out, not by exposition, but in the course of the narrative. Sir Spencer Walpole shows the great forces that were arrayed against the conservative position of the church—the new knowledge of astronomy, geology and biology that were being summed up by Herbert Spencer in the great formula of evolution; the Oxford movement with its Romeward tendencies, exciting the fear and contempt of the laity; the rise of the Broad Church and the opposition it had to encounter. He gives an account of the trials and prosecutions of churchmen—Colenso, on the one hand, Purchas and Mackonochie, on the other; and he gives a glimpse of his own deep interest in the great revolution which took place in English religious thought in the fifty years between 1830 and 1880 by his sympathetic description of the way out of doubt and difficulty revealed to Tennyson when he was writing his deeply religious poem "In Memoriam."

The Young Malefactor. A Study in Juvenile Delinquency: Its Causes and Treatment. By Thomas Travis, Ph. D. With an Introduction by the Hon. Ben B. Lindsey, Judge of the Denver Juvenile Court. New York: Thomas Y. Crowell & Co. $1.50.

Dr. Travis has furnished a volume which will enable a more careful study of causes of juvenile delinquency and dependency, and consequently of better trained application in the development of these youths toward straight paths in life. He says: "At least 90 per cent. of court offenders are normal"; "the morbid offenders are not more than 5 per cent. of first court delinquents," and some of these are insane; "not more than 1 per cent. or 2 per cent. of the whole can be called criminal by nature." Dr. Travis has applied the results of the studies of the Italian school of criminology, and he concludes that "the stigmata named by the Italian school as marks of crime and type of crime are not such, but only stigmata of degeneracy or abnormality." Such of those that have committed crimes should be isolated and studied as to condition of blood, soundness of mind, congenital abnormalities, teeth and the like, and classified. Until this is done Dr. Travis thinks it unwise to put much emphasis on the general theory of Lombroso in the treatment of the delinquent. It is regrettable that the author has not put his matter in somewhat better style, so as to be attractive to the general reader and to those who are not students. One practical conclusion that he draws is that children taken from parental care should be placed out among families rather than in an institution.

The New Encyclopedia of Social Reform. Edited by William D. P. Bliss, editor-in-chief, and Rudolph M. Binder, Ph. D., assistant editor. New York: Funk & Wagnalls Co. $7.50.

Mr. Bliss's *Encyclopedia* is not the best possible. Clippings have been too freely used. Instead of quoting at length from articles or books, matter for an encyclopedia should be condensed succinctly. Those who make use of the volume for reference want well-digested information. The source from which this information is obtained can be supplied in footnotes. On the other hand, some of the articles, specially written by one familiar with the subject, are admirably presented. Such, for example, are the following: "Child Helping," by C. R. Henderson; "Child Labor," by Owen R. Lovejoy; "Civil Service Reform," by John T. Doyle; "Domestic Service," by Lucy M. Salmon; "Municipal Progress in the United States (Recent)," by Clinton Rogers Woodruff; "Poverty in the United States," by Robert Hunter; "Profit Sharing," by N. P. Gilman; "Trade Unionism," by John R. Commons. The article on "Immigration," by Prescott F. Hall, might be included in this class were it not for the fact that it has emphasized the bad effects of immigration. It dismisses the good effects as follows: "The good effects of immigration in building up the country and developing its industries are so obvious as not to need discussion." Another defect of the encyclopedia is old data. Articles evidently compiled some years ago have not been revised so as to bring their dates up to the approximate present. For instance, the article on "Evening Schools" gives figures referring to New York City for 1904. An encyclopedia published in 1908 should have more current informa-
